Where the tractor has power enough to pull three plows, it is safe to say that it will displace as many as six horses. On stubble land it will turn nine or ten acres a day and disk thirty-five or forty acres. Many cases have been called to our attention where such a tractor has been used in harrowing as much as eighty acres in ten hours, and every man of practical experience knows it would require six horses and two men to do the same amount of labor in the same time. The tractor never gets tired, neither does it sweat, and no collar galls are produced, calling for the special care and attention of the driver. The tractor never gets sick, and even though there is an occasional breakage, all parts of machines that are made by reliable companies are forthcoming at short notice, whereas the horse does not always get better. Even the critics of the tractor will have to concede that from the standpoint of reliability, it measures up well when compared with the horse.

Those who are holding back because they regard the tractor as an experimental proposition, must remember that manufacturers are taking advantage of all the mechanical skill that has been developed in perfecting carburetors, clutches, transmissions, differentials, etc., these having been brought to perfection in automobile construction. These are the vital parts and they are used in tractor construction in the highest possible state of perfection. Our most substantial manufacturing concerns are therefore placing upon the market a machine of known durability and of tested efficiency. In most cases hundreds of records of field service are available, so that data is accumulated on cost of operation, as well as upon general serviceability.

The Wisconsin Farmer views the tractor conservatively, believing as it does, that the horse will still remain, but nevertheless it sees an important place for the tractor on Wisconsin farms. The soil can be stirred deeper with the steel horse, and in the case of short seasons, the tractor can be put through much more strenuous paces than the horse. Under certain conditions its use means the multiplication of man's efficiency in addition to the economy that it spells in the cutting down of horse power.

Wisconsin Live Stock Situation Promising.

THAT the future for the Wisconsin farmer looks very bright, is the opinion of Mr. J. Fisher, of Eastman, Wisconsin, breeder of Chester White swine. He writes to The Wisconsin Farmer under date of August 14th, as follows:

The live stock in this part of the state looks very promising. Prices on cattle, hogs and horses are very high. Pastures are getting pretty dry, but most farmers will have their meadows to turn into and when the fall rains come on grass always grows up very quickly when we pass through a dry spell. Threshing is now in full swing and small grain of all kinds are turning out very well and corn now promises a good crop. The future for the farmer certainly looks very bright. There will not be as many hogs to sell this fall as usual. On account of scarcity of feed last fall there was not the usual amount of brood sows kept over, but hogs are healthy and a very fair size for their age. The demand for breeding stock of all kinds will be great this fall. All the breeder will have to do will be to let it be known that he has them for sale. A good many young colts are being raised this year. The great demand for horses has brought this about. The quality of horses has improved greatly in the last few years. A good many young cattle are in the country and are changing hands at good prices. I want to take the opportunity now of saying to The Wisconsin Farmer that I am pleased to see the great interest that is taken in the development of the live stock in Wisconsin and it justly merits the great support the farmers are giving it. J. FISHER.
Crawford county, Wisconsin.

The future of the general farmer, especially the farmer who has a good sprinkling of live stock, has never looked brighter than now. We are peculiarly fortunate on account of the general good health of live stock in this state and the improvement of herds due to breeding. The Wisconsin Farmer does continually harp on the value of good stock. Experience has proved that practically every farmer who makes a success with his stock, makes good money. And the great aim of this paper is to point the way to bigger profits for the farmers of our state.

Horticultural Exhibit at State Fair.

ALTHOUGH the Wisconsin fruit crop does not come up to the standard of former seasons this year, Mr. Frederic Cranefield, secretary of the Wisconsin Horticultural Society, assures us that this fact will not interfere to any degree with the fruit exhibit at the Wisconsin State Fair the second week in September. Wisconsin, in the worst fruit years, always produces much good fruit and Mr. Cranefield, who has now begun collecting the apples for the state societies' exhibit, is sure he will find good fruit for his display. The society will use the same space in the horticultural building that it occupied last year, and indications are that there will be an especially large showing by individual fruit growers.

Mr. Cranefield reports that the apple crop is less than half a crop this year with considerable scab. The season has been against the fruit men throughout, although the season opened with great prospects, the trees being heavy in bloom. In certain sections a better crop is assured than in other sections, but as a whole, the yield promises to be far below the average. However, there is no tendency to discouragement by the fruit men, as they realize they must take their lean years with the fat years, and it must be remembered that in 1915 the Wisconsin apple crop was bumper. The cherry crop turned out well for the growers, although the earlies yielded very little and the late cherries only normal. Prices were good, though, so that the growers in the end got about as much money out of the crop as they would have gotten with a heavy yield. This will, no doubt, be true with the apple growers who have good, clean fruit, as the small yield and the scabby condition prevailing in many orchards will cause a tendency towards higher prices.

Success of Walworth County Picnic.

WHAT a well-organized federation of farmers' clubs means to the social and rural life of a county was indicated on Wednesday, August 16th, when between 2,000 and 2,500 persons gathered at Lake Geneva, Walworth county, for the first annual joint farmers' club picnic in that county. More than 300 automobiles were counted at one time and, despite the fact that it was during the busy threshing season, farmers and their families poured in from every part of the county, a general invitation having been extended to all. The day was just suited for such an occasion; the weather was ideal and the Otto Young farm, on the shores of Lake Geneva, was all that could be desired as a place for holding such an affair.

Walworth county now ranks second in Wisconsin in the number of farmers' clubs, Sauk county still leading. However, in Walworth county the clubs are still in their infancy and the growth they have made the last year is remarkable. The clubs of Lyons, Linn, Bloomfield and Como acted as hosts on this occasion, assisted by the Commercial Club of Lake Geneva where the business men have splendid co-operation.

The affair was an outing in every sense of the word—an occasion on which neighbor meets neighbor around the picnic basket, and was so successful that it will undoubtedly be made an annual event. There was all kinds of sports that go with a picnic of this kind; plenty of fine music and just enough speaking. Most of the crowd came from the towns of Linn, Bloomfield, Geneva and Lyons, but large delegations were also present from Elkhorn, Darien, Troy Lakes and Delavan.

T. L. Bewick, state leader in the boys' and girls' club work, and Prof. G. C. Humphrey, of Madison, were the speakers. Mr. Humphrey spoke on "The Dairy Cow" and told of the great increase in dairying in Walworth county and how it is forging ahead in dairying. He pointed to the breeders' associa-

tions; the cow-testing association; the large amount of semi-official testing as evidence that the county is pushing ahead in this line. He also called attention to the necessity of paying more attention to the use of pure-bred sires; of dams from high butter-producing cows. Mr. Bewick explained the boys' and girls' club work in Wisconsin which has gained impetus until it is now state wide, and told of the state round-up which will be held during the state fair. This work includes the corn-growing, tomato-growing, calf-raising contests, etc.

The music was supplied by an orchestra from Lyons and by the members of the entertaining clubs. The boys' and girls' club of the Linn club, gave a song "On Boys' and Girls' clubs" to the tune of "On Wisconsin," which was one of the big hits of the day. Miss Edith Hatch and Mrs. L. Buell, of the Linn club, gave a vocal duet; Mrs. H. D. Bannister and Miss Rice, of the Bloomfield club a piano duet; and Mr. and Mrs. Doane gave the music for the Como club. The sports included foot races, sack races, jumping and all other kinds of contests and afforded much amusement.

Too much credit cannot be given the committees in charge for the success of the picnic and The Wisconsin Farmer wishes to congratulate the Walworth county clubs on the great part they are playing in the rural life of that community.

Rye as Profitable as Oats in Wisconsin.

THE STUDY and comparison of crop reports and statistics, if one will take the necessary time, usually results in the discovery of some very interesting things, and among them t e fact that the rye crop in Wisconsin was last year almost as profitable per acre as oats. According to the government report on Wisconsin's farm crops for last year, the rye crop based on December prices at the markets, was rated as worth $16.10 per acre, while the oats crop was rated as worth $16.74 per acre, thus showing that rye was almost as profitable a crop as the bumper oats crop of 1915. An average of the values for the past three years from government reports shows that oats were worth only $13.95 per acre, and rye worth $13.70. With a difference of only 25 cents an acre, the farmer raising oats will not have much to brag over the man who has been raising rye.

These figures have been compiled by Mr. R. A. Moore, secretary of the Wisconsin Agricultural Experiment Association, who wishes to draw to the attention of the farmers the above facts. If a large yield of oats is not secured, Mr. Moore points out that the oats crop comes very near being unprofitable, a fact which perhaps few realize. A yield of winter rye or wheat would need to be about one-third that of oats to bring the same amount of money and the harvesting and marketing of one-third less grain is much cheaper and easier than a bulky crop, although the feeding value of rye on the farm, it must be conceded, is not equal to that of oats. However, these figures are based on the market prices of the crops.

Mr. Moore expects a larger acreage of the winter grains than ever before this fall. Since the pedigree winter rye and wheat with their high yields have been disseminated by the experiment station, there has been a growing interest in the winter grains. Each extra bushel's increase in yield coming from the improved grains means a clear profit and most every farmer can use the extra profit.

Reports indicate that the small grain crop in Wisconsin this year will be good, although the oats are not up to the yield of the bumper crop of last year. Oats yielded well, but are light; barley is coming along nicely, but will also be light and the hay crop has been splendid, while corn is doing nicely, and with frost holding off until the normal date, considerable mature corn will be picked. Grain men who have visited some of the early county fairs report a good showing of corn at this time. Of course, it is in a very immature state, but these displays speak well for the crop.

Harvesting Crops With Live Stock

STOCKMEN are more and more being convinced that more economical gains can be made from the grazing of live stock than from heavy grain feeding in the dry lot. One of our Minnesota subscribers, Mr. Guy S. Ellis, sends a communication dealing with this subject in which the results of experimental work at several stations are given. Mr. Ellis writes:

Several crops can be harvested more cheaply with live stock than in the usual way, when they are fed to stock for the production of meat. Among the number are grass, Dwarf Essex rape, peas and corn.

Grass in the green form is virtually in itself a balanced ration. In the dry form it lacks succulence, hence the better gains from grazing as compared with feeding grass in the cured form. Assuming a pasture charge of 75 cents per head per month for yearlings, Waters, of Missouri, finds their gains costing $1.60 per 100 pounds, while the two-year-old steers at $1 per month per head cost $1.90 per 100 pounds gain. When we consider this cost that of the cost of gains in winter feeding which are three to four times as great, the importance of wisely utilizing the pasture in summer whenever and wherever possible is self-evident.

To be sold on the market to the best advantage, however, it is desirable to feed some grain or concentrates as, while the gains on grass alone are cheaply made, the cattle do not usually get fat enough for market and must either be turned into the feed lot in the fall or sold as feeders to someone else at a figure which will give him a profit to further fit them for market.

At the Iowa Experiment Station, ten pigs were allowed the run of a clover pasture for sixteen weeks and they were fed corn in connection with the clover, consuming 416 pounds of corn to 100 pounds gain. An acre pasture of clover under these conditions produced 400 pounds pork, a good argument in favor of clover. Timothy under similar conditions produced 278 pounds of pork. Ten pigs on this pasture consumed 451 pounds of corn per 100 pounds' gain. Hogs on clover made 87 per cent more rapid gains than those fed expensive concentrates in connection with corn in the dry lot, 30 per cent more rapid gains than the lot on timothy pasture and fed corn as a grain ration.

Rape may be harvested with live stock by grazing it off where it is grown. Cattle, sheep and swine may all be used, but sheep have the highest adaptation for it, as when they graze upon it there is practically no waste. When swine graze on rape they should get a supplement of other food. Sheep may or not be given such a supplement according to the object of the owner. Sheep will fatten in good shape on rape without grain, but if fed a substantial grain ration when thus grazed, they will add just as much fertility to the soil. An acre of rape should furnish from 200 to 300 pounds of mutton, and should also increase the value materially of the sheep and lambs grazing upon it, because of the improvement made in their condition.

Rape is practically equal to clover as a forage crop for hogs. It should be used more as a catch crop than as one to be depended upon exclusively for green feed. Sowing rape in the cornfield is becoming quite common, especially where the corn crop is to be harvested by sheep or hogs, a practice that is coming more and more into use and one which is proving to be very profitable in these times of scarcity of labor.

The mistake must not be made, however, to rely altogether on green forage crops, as this will not give satisfactory results. Some grain must be fed in connection with it. Healthier and more vigorous stock will thus be obtained. The pigs should be fed grain twice a day and not more than they will clean up quickly. They will not eat more than about two-thirds as much grain as though they were fed no green feed at all. These facts should convince any hog man that it pays to provide pasture of some kind for swine.

The field pea, may also be harvested with swine in the field after the crop is matured, and with decided profit where the autumns are dry, but the straw is, of course, sacrificed. Peas may be harvested with more profit by sheep because of the relatively large consumption of vines, as well as of grain along with the pods.

In regard to "hogging down corn" it may be said that the returns are equally as good in pork produced where hogs gather their own feed as where they are hand fed in the usual way. The hogs develop good constitution and considerable strength and are in the best of condition for quick fattening feeds after coming out of the field. When properly handled the hogs harvest the crop without waste, even cleaning up many of the weeds in the field. All in all the green forage crops furnish the most feasible way of obtaining very rapid and profitable gains with all classes of live stock and should be used much more than they are being used at present.

The stockman who does not emphasize the value of succulence in the ration and who does not utilize to the fullest extent rich pastures and forage crops creates for himself a tremendous handicap as compared with the individual who understands the value of these crops. It will surprise many of our readers to be told that 100 pounds of gain could be made at a cost of $1.60 on yearling steers running in pasture, and that even two-year-old steers gained 100 pounds at a cost approximating $2. per 100 pounds.

Tractor Show at Madison.

THE WISCONSIN FARMER again calls especial attention to the tractor demonstration at Madison, September 4th to 8th. In this issue will be found information concerning this show, and also interesting and valuable facts concerning several makes of tractors and accessories.

The writer was privileged to visit the tractor demonstration at Cedar Rapids last week. President J. B. Bartholomew and General Manager A. E. Hildebrand of the National Tractor Circuit Association were present at Cedar Rapids and expressed great interest in the show to be held in Madison. Cedar Rapids had its first tractor demonstration this week and it was a good one, and if the Iowa demonstration is any sample of what we may expect to see at Madison, certainly our readers will not want to miss it.

The plowing demonstrations given daily are certainly an inspiration and no one can understand just how interesting this sight is unless he is present to see it.

The Wisconsin Farmer will have a tent on the tractor grounds and our readers are invited to call and make themselves at home.

Why Fence Posts Decay.

THE annual cost of replacing decayed fence posts in this country runs into many millions of dollars. In fact, the cost is so great that every farmer knows from experience that it is a constant drain on his income. With the exception of two or three kinds of wood, which are scarce and practically impossible to obtain in a few sections, fence posts do not last to exceed from four to eight years, and during part of that time they are so poor that the staples pull out very easily, as a result of which constant attention must be given to fences around pastures and other fields enclosing live stock of all kinds. Thus, it is plain to be seen that not only must fence posts be replaced with new ones every few years, but repairs must be made almost constantly.

The cause of the short life of fence posts is decay of the wood, brought about by two classes of low plants—bacteria and fungi. Both classes are microscopic in size and cannot be seen with the naked eye. In their life processes they do not differ essentially from higher plants. For their growth and development they need heat, air and moisture. Remove any one or more of these essentials from wood and decay is impossible. Place a fence post under water so that practically all the air is excluded from the wood and it will remain undecayed for centuries, as has been demonstrated many times.

Similarly, if wood is kept perfectly dry, decay is also greatly retarded. If bacteria and fungi, the agents of decay, cannot get moisture they cannot grow and multiply. In a similar manner, if the temperature can be kept below that at which these plants are capable of living, decay is again arrested, even if the other agencies—air and moisture—are present. This is known from the fact that posts decay but slowly in cold latitudes.

We all know that it is impossible to control temperature, moisture, and air in the soil, but we have called attention to these things to impress upon the minds of our readers what it is that causes our fence posts to decay, so they may more clearly understand how certain wood preservatives that may be forced into the wood greatly retard decay.

The reason why fence posts decay most rapidly at the surface of the ground is because at that point the right amounts of moisture and air are nearly always present during the summer season when the weather is warm. Below the surface, especially in some soils, too much air is replaced in the posts by water for decay to proceed very rapidly, and above the ground there is usually not enough moisture for fungi and bacteria to grow. When these low plants grow, they use the cells of the wood as food and thereby destroy them, the same as the tree itself uses the minerals in the soil and certain elements in the air as food, building them into wood cells and other products. We designate this change, which these lower plants bring about in wood, by the term "decay."

Viewing decay or rot in this light, one can readily understand why seasoning or drying out the posts before setting is beneficial, expelling, as it does, a large amount of moisture from the wood; and also why charring, whitewashing, painting, and creosoting, when done under proper conditions, tend to prevent decay; or, in other words, to preserve the wood.

Why Use Grade Bulls?

ONE OF THE puzzling things to comprehend is the reason why so many farmers use grade bulls. Most intelligent farmers nowadays use the best registered sire they can find to breed their mares; very many of them are also quite particular about the selection of their boars, but when it comes to cattle, anything that will get a calf seems to be the rule. This is true of breeders of beef as well as of dairy cattle. Now why is the grade bull used on cattle when the best pure-bred sires that can be obtained are used on mares and sows? Surely cattle are of as great importance in the economical management of the farm as are hogs and horses. If pure-bred sires are better than grades, and no intelligent man will dispute it, why not use a pure-bred on your cows?

Take steers for example: Suppose a man raises one carload each year and has twenty-five cows from which to raise them. The difference in price between the better class of cattle and the ordinary lot is from seventy-five cents to $1.50 per hundred pounds. Suppose your cattle weigh 900 pounds, at $1 advance over an ordinary load, this means $9 per head or, on twenty-two head, about $200. We believe we are conservative when we say that a load of twenty-two steers sired by a good, pure-bred beef bull will sell for $10 per head more than a load sired by a grade bull. This means $220 a load in additional profit due to the service of a registered sire. A good, pure-bred sire may cost you $150 to $250, but you can use him for several years, and you will get more than the additional money invested in him, as compared with the cost of a grade or scrub bull, back every year. Furthermore, by using registered sires, you can develop a uniform herd and, other things being equal, this uniformity will bring you more money, too.

Take a dairy cow and there is a vast difference in the returns of the herds of pure-breds or high-grades produced by pure-bred bulls, and the herds produced by grade bulls. The extra profits in one year will much more than pay the cost of the pure-bred sire. It is not too much to say that a good dairy sire, with heavy producing dams back of him, will give you daughters that will average 100 pounds of butter fat per year over and above the offspring of a grade sire. His heifers will also sell at a big advance over the heifers produced by a grade bull. They will easily bring from $25 to $50 more than those from a grade bull.

With twenty-five cows you can count on eleven heifers per year, which would mean an additional profit of $275 over and above what heifers from a grade bull would bring. You can buy a good pure-bred bull of one of the dairy breeds at $150 to $200, and if that is true, which it certainly is, you will be making a nice profit each year from the registered sire. In fact, you cannot afford to use grade bulls even if somebody would supply them free of cost. The grade bull is a mighty expensive animal to keep on any farm, no matter whether you raise beef or dairy cattle. The increased yield in butter fat alone from the first cross can be safely estimated at 100 pounds, or $25 per year on the same feed. Surely no farmer can afford to use a grade bull no matter how rich he may be. Think this over and see if it is not to your advantage to use only pure-bred bulls in the future.

Alfalfa Tests in Monroe County.

Report on Experimental Work Taken Up by Commissioner of Agriculture C. P. Norgord Six Years Ago in Wisconsin.

SIX years ago while with the agricultural experiment station, Commissioner Norgord took up the matter of carrying on field experimental work with the Indian school at Tomah. Superintendent Compton kindly agreed to co-operate in carrying out this work and Levi Hancock, superintendent of the farm work, took direct charge. The field tests with alfalfa have been conducted each year. Much valuable information has been obtained and this information has been demonstrated to be of value by continuing the work under actual field conditions and on a large scale.

The methods to be followed in growing alfalfa will vary to some extent according to local conditions of soil and climate. The soils at the Indian school farm at Tomah are the natural sandy loam, fairly fertile and well drained. In the beginning test plots were run in order to test the need of lime and inoculation. Plots without either lime or inoculators; plots with lime, but no inoculation; plots with inoculation, but no lime, and plots with both inoculation and lime were seeded. The results were that the alfalfa was a failure on the plots which received neither lime nor inoculation and a failure also on the plots which received lime, but no inoculation, indicating that inoculation was essential. Inoculation gave material increases in yield, although the alfalfa grew to some extent without it. Several kinds of lime were used, but Mr. Hancock prefers the finely ground limestone and thinks it ought to be applied at from two to four tons to the acre, depending upon the degree of acidity and the fineness of the stone. From the plots for testing inoculation Mr. Hancock obtained the following data:

	Lbs.
First cutting, inoculated plot	2,400
First cutting, uninoculated plot	1,600
Second cutting, inoculated plot	1,600
Second cutting, uninoculated plot	600
Third cutting, inoculated plot	800
Third cutting, uninoculated plot	400

These results convinced Mr. Hancock that inoculation was absolutely necessary for the successful production of alfalfa, and, since liming is essential to maintain thorough inoculation, that it is necessary to apply plenty of lime to correct any acidity.

Many varieties of alfalfa were tested. Montana seed, Kansas and Colorado seed, common and Grimm alfalfa were sown. All of these varieties gave practically the same results with the exception of the Grimm. The southern or southwestern-grown seed gave equally as good growth and production as did the seed from the northwest. The Grimm showed up better than any other variety. Last year Mr. Hancock had about fifteen acres of alfalfa, a splendid stand and free from weeds. This was common alfalfa. In one corner of the field he had about a rod plot of Grimm alfalfa. The severe winter, accompanied with the ice sheet, completely killed out all of the alfalfa with the exception of the small plot of Grimm. This was very good evidence that the Grimm was more resistant to winterkilling than any other variety thus far grown. The chief difficulty with growing the Grimm seems to be that the seed supply is very limited; this last year it was quoted as high as 90 cents a pound, which made it practically prohibitive. Another thing is that it is very difficult to tell the Grimm seed from the ordinary alfalfa seed and unscrupulous dealers are likely to sell common alfalfa seed for Grimm. For the present it seems that we shall be obliged to depend upon the common alfalfa until we have a sufficient supply of genuine Grimm from which we can obtain reliable seed at a more reasonable price.

Mr. Hancock emphasizes the importance of getting the land in proper shape for alfalfa. He thinks that the preparation of the land and the method of seeding it are perhaps the most vital points in producing the crop. He sums up the important steps in preparing the seed bed in this way: Get the land to be seeded to alfalfa as free from weeds as possible. To do this grow to some cultivated crop and keep all weeds down thoroughly, or, if necessary, summer fallow; get the land in a state of high fertility by applying plenty of farmyard manure, plowing under a clover crop or a rye crop. Prepare the seed bed by plowing in the fall and if necessary replow early in the spring. Get the soil thoroughly compact by rolling, harrowing, dragging, or any method that will do the work. Often the spring rains will sufficiently compact the soil that it need not be rolled and thorough harrowing is sufficient, but if the spring rains do not compact the soil it is necessary to roll and a corrugated roller has given the best results at Tomah. This roller not only compacts the soil but it leaves this sandy soil somewhat rough, which will materially assist in preventing blowing and will also provide a better covering for the alfalfa seed.

In sowing the seeder attachment has given the best results. This attachment sows the seed just ahead of the hoes of the drill (a hoe drill is used at Tomah); the hoe covers the seed. No claims or press wheels or other apparatus for covering the seed is used. The land is harrowed ahead of the seeder, but no harrowing is done after the seeder. If the seed bed is rather loose and dry when seeding is done it may be necessary to roll just after seeding. In such cases the corrugated roller is the best implement to use. If necessary to roll after seeding in order to properly cover the seed, the corrugated roller is the best implement to use. Mr. Hancock has used a hay rake to good advantage for this purpose. Never harrow after the seeder, for this tears out more seed than it covers. If the seed is broadcasted instead of drilled in with a seeder attachment the land should be harrowed thoroughly before planting and harrowed at least once after planting. Use the corrugated roller if necessary. Never seed the alfalfa when the soil is wet. The tests at Tomah indicate the best time to seed on soils there is from the 10th to 25th of June and seed without a nurse crop. A fine stand has been obtained when seeded the 18th and 19th of July, but it should never be seeded later and earlier seeding is ordinarily to be preferred, as the later the seeding the greater the chances. Dry weather may occur which will prevent the germination of the seed, as is the case this year, and when the seed does not come up the crop will get such a late start that it will not be able to go through the winter. For these reasons it is important that the seeding be done in June. Late seedings have been tried—from the 10th to 20th of August. Failure has resulted in each case, as the plants are too small to withstand the winter. The reason alfalfa is seeded in June rather than early in the spring is in order that the land may be thoroughly freed from weeds and put in good physical condition so that the alfalfa may have full opportunity to make a rapid growth. Mr. Hancock has tried several ways of handling the soil preceding alfalfa. As a result of his wide experience he prefers to precede the alfalfa with a rye crop, plow the rye under early and deep, roll thoroughly, disk and harrow, and keep the land disked and harrowed until seeding time. By doing this the weed seeds which are turned up in the spring sprout and are killed by the disking and harrowing. The continued disking and harrowing until seeding time will keep all additional weeds killed which germinate before seeding is done. The soil should be kept moist by surface cultivation in order to insure immediate germination. If the soil is allowed to dry out to a depth of several inches the seed may lie in the soil for several weeks after it is planted and sprout so late that the crop will not be able to withstand the winter. After the alfalfa is up it should be carefully observed from time to time and if weeds appear in considerable numbers they should be cut back with a mower before they have made an advanced growth. These weeds can be cut back with very little injury to the alfalfa by setting the sickle bar high. Some alfalfa will be clipped off. The weeds are likely to be troublesome if the weather is dry. Under favorable conditions a crop of one-half ton per acre should be obtained the first year. If the weeds are very numerous in the young alfalfa, so that it has to be cut early, it is better to leave this material on the land than to remove it. Do not mow late in the fall during any year.

If the soil is not naturally very fertile it should be top dressed with manure the first year. Apply from six to eight spreader loads per acre of good manure that does not contain much litter. No crop will return as much profit from the application of manure as will alfalfa and the best time to manure alfalfa is to top dress in the fall or early winter.

The stage at which alfalfa should be cut is of great importance. Cut when the new shoots appear at the base of the plant and pay no attention to the bloom—cut whether it blooms or not. If cutting is delayed until the young shoots have made considerable growth these young shoots will be put back and the crop will be delayed at least two weeks and the yield may be decreased by half. The crop may be clipped as close to the surface as the height of the young shoots will permit. The important thing to learn is to keep a lookout for the young shoots and to let this be a guide for cutting. When the young shoots have made their appearance and before they are very far advanced the crop should be harvested.

Mr. Hancock has given special attention to handling the hay after the crop is harvested and as a result of his experiments he has adopted the following method. Leave the alfalfa in the swath just long enough for it to thoroughly wilt and not until the leaves are dry, then rake and put in cocks. The cocks should contain from seventy-five to 100 pounds of hay. The cocks should have a small base and be built fairly high. Cover these with hay caps. These hay caps are made by the Indian boys at the school and cost for material from 17 cents to 18 cents each. Good, heavy, unbleached muslin has given better results than the canvas. The caps are forty to forty-eight inches square and will last for many years when properly cared for. The caps should be taken from the cocks when the hay is loaded and after they are thoroughly dry stored in sugar barrels. Cover these barrels thoroughly so that the mice and rats will not be able to get in.

After the hay is placed in cocks it should be left in the field from two to three days if the weather is good. If rains occur it may be necessary to leave in the field longer and to turn the cocks over occasionally. In turning over the cocks two men or two boys can do much better work and accomplish much more than one man or one boy, as by standing on either side of the cock it may be turned over completely at one simple operation. After the hay is left in the cocks until well cured it should be taken to the barns. Curing should be done in the field and then it will not spoil when placed in the barn. Green hay which has heated after storage does in no wise compare with hay that is well cured in the cock before storage.

Many farmers have undertaken to grow alfalfa on the sandy soils around Tomah. Some of them have succeeded, many of them have become discouraged. The unquestionable success that Mr. Hancock has had with growing this crop indicates that alfalfa can be grown and grown profitably and that good stands and good yields can be obtained practically every year. But due attention must be given to certain details. These details are not difficult and can be thoroughly attended to by any grower. It is hoped that Mr. Hancock's experience of many years may be made of material practical value to the people in Monroe county who are interested in growing alfalfa on the more sandy types of soils.

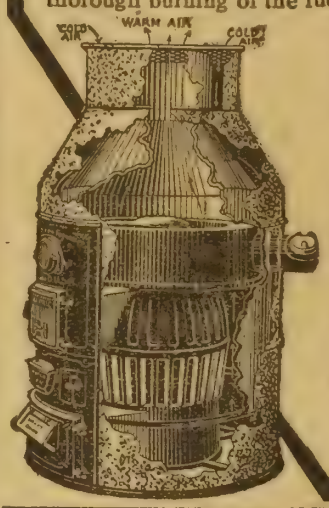
As ONE Sun Heats the Entire Earth—So ONE Register Heats Your Entire House

The Caloric way is Nature's way—most sensible, economical and healthful. No unsightly, expensive pipes and flues to cause fire danger, waste heat and clutter the cellar. The absence of pipes prevents overheating the cellar, hence produce is not spoiled. Its great heat radiation will save you at least 35% of your fuel.

PIPELESS CALORIC FURNACE (TRADE MARK)

The Original Patented Pipeless Furnace

There are three reasons for this big saving. 1st, The warm air reaches your rooms by nature's direct method of circulation and there are no pipes to absorb or resist the heat. 2nd, Our double ribbed firepot and specially patented combustion chamber produce perfect combustion, thus insuring thorough burning of the fuel and a much greater heating surface. 3rd, Our specially patented triple casing, insulated with two air spaces, prevents any heat from radiating into the basement. This is the only successful, patented, one-register furnace and no other furnace can claim these three big features.



Sold Under Guarantee

Put the Caloric Pipeless Furnace in your house and give it a fair trial. Its successful operation is guaranteed and we'll make right any defect in material or workmanship. Our firepot is guaranteed for five years.

Write for Our Book Free

If there is no dealer at which you can see this furnace, we'll gladly send you our free illustrated book, with the name of our nearest dealer. Write us today.

Good Word For the Morgan Horse.

To the Editor:—Please allow me just a little space in your most excellent paper. There are so many good things to write about that I wish to add my mite, and it will be in praise of the Morgan horse. I have raised them for twenty years and have known of them for a considerably longer time, so I speak from experience as well as gathered knowledge.

A horse like the Morgan with so many good qualities is badly neglected for something larger or faster, but not better. The first thing asked about a draft horse is: How big is he and, if of road blood, how fast is he? We have them big enough and fast enough, but if you want the genuine horse it is found in the Morgan.

I know of a man who had a very large horse and he got hold of a Morgan colt. When the colt was four years old he would not put the harness on it on account of its being so small. Finally he concluded to try plowing corn a half day at a time and to his surprise the colt went into the field, did the work required and came in playing and ready for the balance of the day and for the days following. I was called to this same place, and found this same Morgan on the evener with horses that looked twice as large and when they went to the barn the Morgan was saddled and sent to round up a bunch of cattle, while the others stood at a manger of hay. When we were through with the work there was a trip to be made to town and the Morgan made the trip. The owner told me that when a trip was made to town under the saddle he had known his boy to go across lots and jump the fences just for amusement. I afterward wanted to buy this horse for a banker and the owner would not so much as put a price on her, but said, "Bailey, do you want me to be kicked out, for that is what I would get if I sold the Morgan."

This is only one out of many I could tell of their good qualities and add to that the saying, "Behold, how he loved him." And these are only grade Morgan crossed on common stock. It matters but little whether you cross a draft or road or fancy horse, the Morgan always predominates, or, if you please, the finishing touch is always from the Morgan side, as they possess the greatest store of prepotency of any horse ever sired in America. And when you come to an old-time Morgan possessing a large store of old Justin's blood, and the more the better, you have beauty and style and finish and a horse, too, that will be a good one at twenty-five or thirty.

How would you like, kind reader, to own a horse that you could throw off his everyday work harness, throw on the saddle and go twelve and a half miles and back in 1:40 and then be an extra good one at twenty years old? Suppose you cross a thoroughbred with an 1-800-pound drafter, would you be afraid to road him or pull him all day? And if the roads were so bad that the Ford could not go, he would be the horse to make the trip. If the farmers in some locality would combine and cross their largest and best dams with a Morgan you would in a few years have the best horse center in the country, for I have known just such to sell as high as $750 a team. Then you would get a large per cent of vitality that the big horse is shy of.

But, says someone, the tractor for the farm and the car for the road; we don't have so much need for the horse. But we need a better horse. I know the cry is, get them big and fat and sell them. I knew a man going to a market sale with a horse and as he passed his neighbor he called to him and asked what he thought the horse would bring. The answer came back, "$200." "But," says the owner (for well he knew what he had) "what is he really worth?" "Ten dollars," was the neighbor's reply. I have seen many such cases, but is it to be wondered at when there is so much cry about imported stock? Why, bless you, America does not have to take off her hat to any nation when it comes to horses, and with the over-water nations at war now is the time for hitting the iron and hitting it while it is hot. Go at it with an understanding and produce a better horse. Pour oil on the troubled waters and produce a horse with better vitality and endurance.

There are scores of veterinarians turned out every year to look after and care for sick and ailing horses and every year you find more dead ones than in the past. If the real truth was brought out it would be largely traced to a loss of vitality and in my estimation it is growing less in the common horse every year. Then why not go back and get a fusion of the good old Morgan and put some of that genuine old-fashioned horse into the breeding and do away with a multitude of ills? I know it can be done. Quit breeding ills and ailments and get some genuine horses that the old New Englanders are so proud of and have held to these many, many years. Long may the Morgan live, until the younger generations and the present and future generations may know him. His starting point was shortly after the revolutionary war and he, being endowed with that true American spirit, I sometimes think that every barn that contains a pure-bred, old-fashioned Morgan ought to be decorated with the Stars and Stripes.

If more interest was taken in the betterment of our best friend in order to get more of that good quality, style and vitality it would be far better in the time to come, for we will always have plenty of use for him. Why not have the best first, last and always?

J. E. Bailey.

Andrew Boss, University Farm, St. Paul, urges early plowing to increase yields. He says repeated trials have shown that early fall plowing gives much better conditions for a crop of grain the following year than late plowing gives. While August is a dry, hot month and other farm work presses, it is advisable to do as much plowing as possible. On clean land no further treatment is needed. On weedy land the August plowing should be followed by occasional disking or harrowing, or by replowing in October. Such treatment destroys many of the weeds and pulverizes the soil, so that good supplies of plant food are available during the next season. In addition, it gives a longer plowing season and a chance to do better work. Early plowing and good plowing are important steps in getting better than the average yield.

Twice What You Require in the Hudson Super-Six

Records Prove Power and Endurance

What Power is Wanted?

THE HUDSON SUPER-SIX is a light car, as a modern fine car must be. In ordinary driving 40 horsepower would be ample. That's what motors of this size heretofore developed.

But the Super-Six—our patented motor—delivers 76 h. p. Yet we add no size, no cylinders. We don't increase fuel consumption. We have simply lessened vibration, reducing friction to almost nil. And we thus save the power that was wasted.

That extra reserve power means much on hills. It means much in flexibility and in quick response. It saves much changing of gears. Would you want an engine of equal size which lacked it?

What Speed is Wanted?

The Super-Six speed records—quoted below—have never been matched by a stock car. You perhaps don't want such speed. We made those records to prove the motor's supremacy. Also to prove its endurance.

But they mean that in ordinary driving you will run the Super-Six at half load. And that means a long-lived motor.

What Endurance is Wanted?

Nobody knows how long a high-grade modern car will last. All we can do is to compare the endurance by extreme and prodigious tests.

A Super-Six stock chassis was driven 1819 miles in 24 hours, at an average speed of 75.8 miles per hour. The same car previously had been driven 2000 miles at average speed exceeding 80 miles an hour. No other car ever has matched that endurance test. It would take five years of pretty hard driving to equal those top-pace strains.

But this Super-Six motor, after all those tests, showed no appreciable wear whatever. So the Super-Six is likely to last years longer than any man expects.

What Luxury is Wanted?

You find in the Super-Six all the beauty and luxury that we know how to put in a car. You find a luxury of motion—due to lack of vibration—which you never before have experienced.

You will find fine engineering, with all the satisfaction that comes of it. For this is the crowning effort of our great engineering staff, headed by Howard E. Coffin.

You will find pride of ownership which comes from owning a car of the Hudson repute. A car which outrivals other cars in performance. A motor which by every test holds unquestioned supremacy.

Where else can you find what you find in the Super-Six? Or anywhere near what you find here?

You will find fine cars and great cars, according to former standards. But the Super-Six invention has set some new standards. And Hudson controls that by patent.

Think of these things when you buy a new car. Prove up the differences by road comparison. If you are buying a fine car, and buying to keep, you don't want a second-place car.

Some Hudson Records

All made under American Automobile Association supervision by a certified stock car or stock chassis, and excelling all former stock cars in these tests.

100 miles in 80 min., 21.4 sec., averaging *74.67 miles per hour* for a 7-passenger touring car with driver and passenger.

MANY USES FOR TRACTOR.

Dane County, Wisconsin, Farmer Finds It Increases Efficiency and at the Small Operating Cost of 25 Cents an Acre, Based on 10 Cent Gasoline—Experience on a Small Farm.

EFFICIENCY is the cry on the modern farm today. Increasing costs of production have turned the eyes of the farmers to the more economic methods with the result that there is scarcely a farmer in Wisconsin today who has not had his interest more or less aroused in the farm tractor. This is true not only with operators of the large farms where there is much heavy work to do during the whole crop season but it is also true with the dairy farmers with small acreage who see in the tractor a machine that can be put to many uses aside from plowing, disking and harrowing in order to increase the farm efficiency and reduce the production costs. What can the farm tractor do for me; how will it increase farm profits in anything like an appreciable degree; what is it doing in farm affairs and how will it lessen my work are the questions usually asked. The dairy farmer who has only an eighty under cultivation is especially anxious to know how the tractor will benefit him while the large farm operator who is thinking of substituting motor for horse power desires to see where the saving in horse labor is to come in. Prediction, therefore, makes scant appeal to these men, so it is necessary to look to the men in Wisconsin who are handling farm tractors day in and day out, under ordinary conditions and upon ordinary, everyday farms, for the answers.

MR. BICKLEY FOUND THE TRACTOR SERVICEABLE FOR PULLING THE BINDER, THE SPREADER, ETC.

The experience of J. C. Bickley with a 5-12 tractor on the farm of his father, J. J. Bickley, near Stoughton, in Dane county, answers the questions of many in Wisconsin whose interest has been aroused. After operating a tractor three seasons Mr. Bickley has found that it has given him splendid service and a more enthusiastic tractor operator could hardly be found. As Mr. Bickley expresses it, "I could hardly get along now without this tractor," which he says works better this spring than it has ever worked. The expense for repairs has been practically nothing and he feels certain that its cost of operation has been much less than horse labor would have cost him, in addition to saving him much time that every reader knows is required each morning to get horses ready for the day's work.

The situation that confronted Mr. Bickley three years ago was to get his crops in and his tobacco land prepared with the least delay and without additional horse labor. Four horses were kept permanently on the farm at that time, but to do the work laid out it would have been necessary to either buy more horses or depend upon neighbors to help him out. So he decided on the farm tractor. These four horses are still on the farm today, as there is considerable light work for which they are needed, but the saving in horse labor he figures results from not having to buy additional horses or pay a high cost per day for extra teams and men.

One of the first tasks was the preparation of his corn land and he soon found that he could break old ground seven inches deep, using a gang with two fourteen-inch bottoms, at the rate of about six acres in eight hours. On several occasions he has plowed six and a half acres to the depth of seven inches in eight and a half hours and our readers may calculate for themselves how much horse labor would have been required to do a similar amount of work. Every man will concede that it would have taken at least two five-horse teams drawing two-bottom gangs each and to do this the horses would have had to step right along all day. In other words, ten horses would have been required to do what this tractor did and it would have been a hard, steady pull on the horses. In hot weather the horses could not cover nearly so much area and the saving on the horses by the tractor relieving them of such heavy work is one of its pleasing features to Mr. Bickley, who, like every horse lover, has his feelings hurt when he is obliged to push them hard.

MR. BICKLEY'S TRACTOR, DRAWING TWO FOURTEEN-INCH BOTTOMS, DOES THE WORK OF TEN HORSES IN PLOWING SEVEN INCHES DEEP.

After the plowing Mr. Bickley turns his attention to disking and harrowing old ground and has discovered that with two eight-foot disk harrows he can do splendid work and do it rapidly. This cuts a strip sixteen feet wide every trip across the field and our readers can see at a glance the saving in horse labor here. On medium work Mr. Bickley has operated this tractor for an average of 25 cents an acre for gasoline, it requiring about two and a half gallons of fuel for each acre. This cost he estimates on the basis of 10-cent gasoline, but, of course, the cost would increase proportionately per acre as the price of gasoline increased. The cost of lubricating oil is very small; in fact, so small that Mr. Bickley has kept little data along this line, having figured out for himself long ago that the tractor was an inexpensive machine for his purposes. When it came to plowing Mr. Bickley found that on the 5-12 two bottoms were far more practicable than the three, although he has used three bottoms to good advantage in preparing his ground for oats. He has never broken any native sod with this tractor, but during the 1915 season he experimented with a 7-20 on several occasions and found it did splendid work in sod ground with two bottoms. He believes this type would be far more practicable on a farm more rolling than his or where the soil was heavier, making it necessary to use three bottoms and possibly under-cutting disks. The Bickley farm is typical of thousands of acres in Wisconsin and his experience answers many of the queries of the small farm owner who fears he has not enough land under the plow to warrant the purchase of a tractor, but who would like to have one as an efficiency proposition. There are only 100 acres in this farm, eighty of which is under cultivation and twenty in pasture. Ten acres are usually in tobacco and the remaining seventy in small grains, corn and hay. The soil is a black loam top with a clay subsoil, typical of thousands of acres in the state, and an occasional "niggerhead" that sticks its nose in the way has not interfered to any extent with tractor operations. There is a slope through the center which makes it necessary to plow crosswise and the longest stretch in plowing without a turn is forty-three rods. There is a dairy herd of eleven cows on the farm.

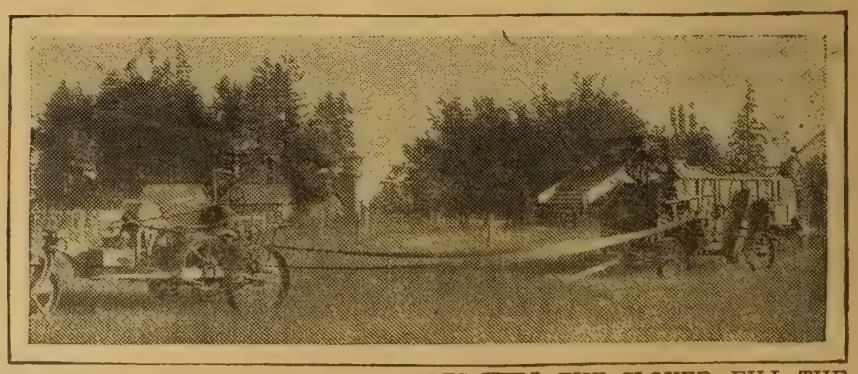
The greatest difficulty seems to be in adapting the tractor to the needs of the small farm, but this Mr. Bickley accomplishes by using it in other operations aside from the field work. Success with small tractors he feels depends to a great extent upon the owner and operator and his experience with gas engines prior to his owning a tractor enabled him to handle his machine, no doubt, a little better than the man who has to learn all these things after buying his tractor. However, his success with it has aroused an interest in his own neighborhood that will probably result in tractors going onto several neighboring farms this season.

One objection heard from the farmer with short fields is the frequency of turns, but Bickley has found that he can turn wherever a four-horse team with two bottoms can turn and he guarantees to make any turn that a three-horse team with a sulky makes. It has been an easy matter for him to get within ten feet of the fence.

Plowing and spring operations concluded, Mr. Bickley turns his tractor to other uses, among which is dragging with a split-log drag the road between his farm and town. For this purpose he finds it gives good service at low cost.

The horses have also been relieved of pulling the corn binder which work has been transferred to the tractor. Nothing is prettier working than a tractor drawing a binder when all is working well and Mr. Bickley has helped neighbors out with their binders when their horses had given out. One of his neighbors last year had a binder which the horses couldn't pull. The discharge arms bound tight. With that steady pull the tractor affords it worked perfectly all day. The binder not only run hard but when the bundles were ready to be thrown out it choked and the horses would naturally halt. But not so with the tractor which kept grinding right away all day

PLOWING AND HARROWING IN THE SAME OPERATION WITH THE TRACTOR.



FOR BELT WORK THE TRACTOR HELPS HULL THE CLOVER, FILL THE SILO, ETC.

without any rest and with only an occasional filling of the oil cup.

Filled with a wet, heavy manure Mr. Bickley hauled his spreader, hitched to the tractor, over a harrowed, well-pulverized field that had been plowed five inches deep. Our readers who have had such experience with horses can realize what a pull this would have been on the horses, but the tractor went through easily and the spreader was an old one and hard running at the best. At silo time it is used in filling the silo and has given good results in all forms of belt work. It is not surprising that he is pleased.

Madison Ready For Tractor Show

Demonstration September 4th-8th Winds Up 1916 Tractor Show Season---Plans For Entertaining Those Who Visit Madison.

PLANS have been completed in practically every detail for the Wisconsin Farm Tractor Demonstration at Madison the first week in September, beginning Monday, September 4th, and indications are that this, the last of the eight national shows this year, will be among the best from the point of interest and attendance. There will be a total of about eighty-five exhibitors of farm tractors and accessories. No effort has been spared locally to make the demonstration a decided success.

Every type and kind of tractor will be on exhibit and will be seen in actual operation at field work and the farmer who has had his interest aroused in the least in this kind of motive power for the farm can hardly afford to miss this event. It will afford the opportunity to see the various types of tractors in actual use; in the service to which they would be subjected daily on the farm and the plowing grounds arranged by the Madison Rotary Club, under the auspices of which the demonstration will be held, are all that might be desired. There are approximately 800 acres of plow land and the headquarters and exhibit tents will be just across the road from a good part of it. This is important to the visitor, as it is possible to keep close tab on the exhibits and the field work at the same time and the farthest piece of plow land is less than a mile and a half from headquarters grounds. There is one field of 175 acres of gently rolling land seeded to oats and barley; eighty acres of very heavy alsike clover sod also gently rolling, and other fields that range between sod and heavy quack grass sod. There are also 200 acres recently drained which will require a breaking plow to turn and, as there is some 7,000,000 acres of this type of soil in Wisconsin, it will be interesting to the visitors to see it plowed. The selection of these different types of land followed the desire to make this a Wisconsin event and it will, therefore, be of more benefit to the farmer than if the tractors were working under one condition. As it will be at this demonstration, they will be working under conditions at one time or another that exist on the farms of the state and thousands of farmers are expected during the week.

The official program has just been announced by Mr. F. M. White, manager of the show, and in brief is as follows:

Monday, Sept. 4—Opening Day.
Tuesday, Sept. 5—Merchants' Day.
Wednesday, Sept. 6—Implement and Vehicle Dealers' Day.
Thursday, Sept. 7—Road Builders' Day.
Friday, Sept. 8—Wisconsin Drainage Association Day.

The forenoon of each day from 8:00 to 11:30 o'clock will be devoted to private demonstrations by the exhibitors and on each afternoon from 1:00 to 3:00 o'clock there will be the public plowing demonstrations. The remainder of the days will be devoted to inspection of the tractors and accessories on exhibit and all these will be grouped about the headquarters grounds on the shore of Lake Monona, just across from the city and accessible by either boat, street car or auto busses and jitneys. The grounds are ideally located and boats accommodating 1,200 persons an hour will be operated continually across the lake at a fare of 15 cents per person. The street car company expects to have its extension to the corner of the grounds completed and arrangements have been made for 300 jitneys and automobile busses at a fare of 25 cents per person.

Madison is leaving no stone unturned to entertain the great crowds that are expected and on each night at 8 o'clock there will be free band concerts on the lawn of capitol square, surrounding the new state capitol which is now almost completed. On Wednesday night, which has been set aside as "Venetian night," there will be a monster pageant on the lakes with fireworks and music, all free of cost. Lake boats, sail boats, yachts, etc., will be lighted with colored lights and lanterns and drawn through the lakes in true Venetian style and this entertainment in itself should attract thousands to the city on that evening. Free rest rooms have been arranged for the women and children and the committee on hotels assures rooms for everyone, as the entire city has opened their homes to the visitors with rooms at nominal charges. These rooms will be assigned from headquarters of the committee at the Park hotel in the city or at demonstration headquarters on the grounds and visitors are invited to call on this committee on arrival and arrange for their accommodations. There will be accommodations on the grounds for those who wish their meals there.

Another free entertainment for the visitors will be the free motion pictures every forenoon at the Fuller, Grand and Majestic theaters. They will be started early and those who do not wish to go to the grounds in the morning may see these pictures free by dropping in at any time before noon. The committees have also arranged for special guides to conduct visitors at all hours through the new state capitol, one of the finest in America and just being completed at a cost of $7,000,000. Capitol square will be especially decorated at night and the building will be aglow with light in addition to the lighting effect on the big dome, produced by powerful searchlights.

On the demonstration grounds there will be many interesting exhibits aside from tractors. For instance, the farmer interested in lighting and water supply systems will find these on exhibit; on road builders' day the state highway commission will construct a stretch of road; on drainage day special attention will be given to the tractor on drained lands; the use of explosives in stumping land will be explained and shown, and the accessory exhibit will occupy a huge tent at the head of the exhibit grounds.

Thousands are expected to attend in their automobiles and special parking space has been arranged for and set aside on the demonstration grounds so that cars may be cared for safely. Everything points to a very successful and well-attended demonstration.

The Wisconsin Live Stock Breeders' Association has an exhibit at the various county fairs showing the value of raising blooded stock. The exhibit contains, in adjoining stalls, fine specimens of pedigreed stock with all the fine points that delight the breeder and spindle-legged scrubs which serve as horrible examples. Beef and dairy cattle and hogs are shown.

Wisconsin crop reports showing combined condition of all crops August 1st, shows this state to be in the 100 per cent of the ten-year average class. The only other states of the grain belt which make a 100 per cent showing are Iowa and Nebraska when splendid improvement was made in July in the corn.

Mow the tall weeds and summer grasses in the orchard, allowing them to lie as a mulch under the trees.

Champion
"TOLEDO MADE FOR THE WHOLE WORLD'S TRADE"
Dependable Spark Plugs

Give Your Machinery a Chance to Make Good

Farm tractors and Stationary Engines must stand up under a taxing grind from dawn till darkness—day after day.

Farm machinery that stalls or is only partly efficient is always annoying and frequently causes a serious money loss. Investigation shows that faulty spark plugs are often at the bottom of such trouble.

Champion Spark Plugs *can't* go wrong. They bring out the best your engine has—and put an extra "punch" and "go" into it.

And the countless explosions to which they are exposed do not crack or weaken Champions. They "stand the pace" unflinchingly—and never fail to deliver their sparks.

It is such reliability—such super-endurance—such all round ability to "produce" that has made Champions stand out supreme.

Four out of five of the stationary engines and tractors built in this country are now equipped by their makers with Champion Spark Plugs—a striking testimonial to Champion efficiency.

Be sure and get Champions when you replace *your* spark plugs.

Champion Spark Plug Company

511 Avondale Avenue — Toledo, Ohio

Make Your Farm Pay Larger Dividends

By means of a well conducted game farm you can greatly increase the cash return from your land.

Game farming is profitable for many reasons—the chief of them being that the demand for game birds and for eggs is much greater than the supply.

A game farm may be made to pay not only by the sale of birds and eggs but also, if you wish, by leasing the right to hunt over your land to sportsmen who will be glad to pay for the privilege.

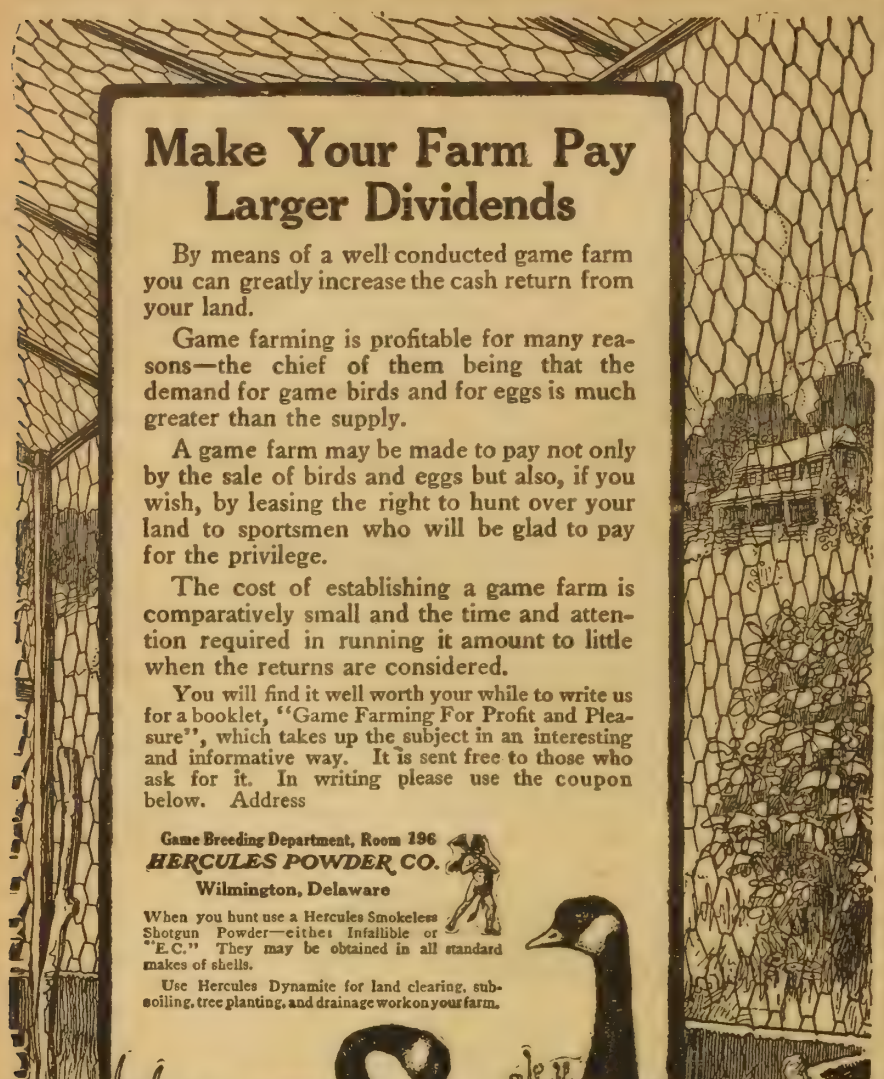
The cost of establishing a game farm is comparatively small and the time and attention required in running it amount to little when the returns are considered.

You will find it well worth your while to write us for a booklet, "Game Farming For Profit and Pleasure", which takes up the subject in an interesting and informative way. It is sent free to those who ask for it. In writing please use the coupon below. Address

Game Breeding Department, Room 196
HERCULES POWDER CO.
Wilmington, Delaware

When you hunt use a Hercules Smokeless Shotgun Powder—either Infallible or "E.C." They may be obtained in all standard makes of shells.

Use Hercules Dynamite for land clearing, subsoiling, tree planting, and drainage work on your farm.



Game Breeding Dep't., Room 196

CURRENT EVENTS

PRESIDENT WILSON was making every possible effort the first of the week to avert the threatened rail strike which, for a time, bade fair to tie up every train on 1,285 railroad lines of the country, affecting 400,000 men. Frequent conferences are being held at Washington between the president and members of the railroad brotherhoods and railroad directors and managers, the president trying to arbitrate the differences. The men threatened to strike for an eight-hour day and "time and a half" for overtime. The railroad employers were willing to make some concessions, but not all, and for a few days it appeared as though practically every line in the country would be tied up, crippling industry more seriously than anything else, short of war, could possibly do, just at the time of the year when big crops are to be moved and the railroads play a most important part in our national prosperity. It is expected that congressional action will be taken shortly to protect the public's rights in such an emergency and to prevent a repetition of the situation, which is serious in the extreme.

CHARLES E. HUGHES, republican nominee for the presidency, continued his western tour last week, having passed out of the grain belt and traveled into the Pacific Northwest. He made a very favorable impression here in the central West, exerting himself in particular in North Dakota, where it is rumored that he is hopeful of securing the support of the Farmers' Nonpartisan League, recently organized. He delivered notable speeches last week in Spokane, Portland, Seattle and Tacoma. His views on war in general and American preparedness in particular were expressed in this manner: "A nation must be ready for every emergency. We are not militarists. I cannot but be amused at some of the bogies my good friends conjure up when we speak on that subject. There is no reason why we should not be prepared. There is no reason why we should invite disrespect and contempt. Reasonable preparedness is simply national common sense. I confess I do not like the way the present administration has dealt with this matter. It learned its own mind too late, and even then wasn't sure of it."

THE anti-Teutonic allies continued to make good progress last week, the Russians harrying the Austrians in Galicia and the British and French making big dents in the German lines in northern France. King George, of England, President Poincare, of France, and the German kaiser visiting their respective battle fronts during the week and exhorted their men to renewed efforts. The allies' bombardment of the German trenches continues to be fearful, as many as 90,000 British shells being dropped on the German lines in an hour, the average for one twenty-four-hour period being more than 1,000,000 shells. Naturally, the resultant loss of life is terrific, although the gains are measured in yards and feet. The allies appear to be slowly, but surely, pushing the Germans back, having the advantage of men and munitions for the first time in recent weeks.

A BOND issue of $130,000,000 to meet extraordinary government expenses during the Mexican crisis has been recommended to congress by democratic leaders of the senate finance committee. In addition to this enormous amount it is stated that $86,000,000 more will be required if the state troops are kept in service until January, 1917. This bond issue will be in addition to the immense sum anticipated from the internal revenue bill and the tax on various luxuries. It has been definitely decided not to reduce the income tax exemption to $3,000 for married folks and $2,000 for single, but to increase the levy to 2 per cent on all incomes above $3,000 for single and $4,000 for married folks, up to $20,000.

A Plow for the Tractor.

WHAT plow shall I buy to use with my tractor? is a question that many farmers will be asking between this time and fall or spring plowing. They can answer the question for themselves if they attend a tractor demonstration and see the Grand Detour plows turning over the sod in clean, deep furrows as they smoothly follow the tractors to which they are attached. These plows fit any tractor. Whether you go to the demonstrations or not, it will pay to send for particulars about these wonderful plows. Write to the Grand Detour Plow Co., 2645 Depot Ave., Dixon, Ill., who will gladly furnish complete information. See page 17.—Adv.

Oliver

We all know that ability to do good work is the most important consideration in the purchase of a tractor plow. When attending a tractor plow demonstration, ask Oliver representatives to fully explain why:

Oliver tractor plows scour under the most trying conditions

The bottoms raise or lower in a short space of travel and so enable the plows to do even plowing at the ends of the field

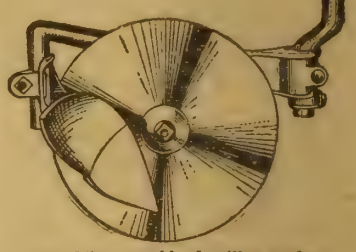
Wide range of adjustment assures even depth plowing

Trash and weed seeds are buried on the bottom of the furrow by the combined rolling coulter and jointer and why this is an important part in the preparation of the seed bed

Time and labor is saved by means of the quick detachable share that permits share changes without the use of a wrench

The bail construction of the No. 62 tractor plow eliminates hitch adjustments

The lifting mechanism of the No. 78 power lift operates instantly at the pull of the trip rope



The Oliver combined rolling coulter and jointer plays an important part in good plowing.

Whether you can attend a tractor plow demonstration or not, write us for circulars on the Oliver No. 62, two and three bottom plow and the power lift, No. 78, two or three bases. We will give you the name of the nearest Oliver dealer where you can see these plows.

What Shall We Expect of Tractor?

Wisconsin Farmers Give Some Pointers on Their Notion of Tractor Performance on the Wisconsin Farm.

THE Wisconsin Farmer has asked a few readers what they think of the value of a tractor on a Wisconsin farm and what in their judgment a tractor may be expected to do. The answers to these inquiries indicate considerable interest in the subject in the state and suggests some things which our readers might have in mind when they visit the Wisconsin demonstration at Madison, September 4th-8th.

Mr. T. H. Campion writes us from La Crosse county that the 8-16 and the 12-25 are in most general use in that locality. Of course, La Crosse county has a good many hillside farms where the use of the tractor is not practical at all. Mr. Campion says that the popular tractor in La Crosse county is one which may be used for both belt and draw-bar service and one which has sufficient power for silo filling and threshing. Mr. Campion has watched a number of machines at work and says there is no question about the tractor being a success on a Wisconsin farm. Weight and cost are uppermost in the minds of the farmers of La Crosse county, according to Mr. Campion, who says that his section of the state needs lighter machinery.

Ernest D. Wheeler, of Rock county, writes as follows:

My farm is only forty acres and three horses will do my work. If I had use for five or more horses I would say keep three of them and a tractor of capacity to pull three fourteen inch plows and a belt which would have power enough to run almost any machine which I would use on the farm except, of course, the large thresher.

W. F. Whitbeck, La Crosse county, writes:

I have had no experience with tractors. I could use a tractor on my place very handily for drawbar pull, but not much for belt work. A neighbor of mine bought a tractor last spring, but had only partial success with it, as the soil on his place is sandy and loose.

Otis D. Gooch, of Rock county, writes:

I believe that a tractor of sixteen to twenty horse power is the best for the farmer. I have seen them pull five plows with a tractor of this size. You can also use such an engine to run the threshing machine, silo filler, feed mill and cut up your corn fodder. It might be a good plan for two or three farmers in a neighborhood to go in together and get a machine. I think it would be less expensive to all concerned. As the place I work is small, I do not think I could economically use a tractor, but they are a fine thing for larger farms or where several farmers can club together and use the same machine.

J. H. Greene & Son, Clinton Stock Farm, Portage county, writes:

We have two small farms and have not found use for a tractor. We think in our case that a small, light tractor would be the most suitable. We would want one that would plow and at the same time fill silo and grind feed. This sort of a combination would about suit us if we had any at all. We have seen tractors at work and consider them a success where one had good, long fields and not too much turning.

C. P. West, Sawyer county, writes:

For some sections of Wisconsin I think the tractor will be a big help in general farming. In Sawyer county one man is using a tractor for breaking cut-over lands after the stumps have been removed. He uses a twenty-four-inch breaking plow and does far better work than could possibly be done with a team. Generally speaking I think tractor farming produces better crops than the old method and I consider it a progressive step in agriculture.

L. H. Davis, a truck farmer in Monroe county, writes that he could not use a tractor on his place, but that he has talked with his neighbors about tractors and believes a light, medium-priced machine will be the most popular in his vicinity. He believes the heavy tractor would not find much sale in Monroe county. He thinks that the machine which does the work of five horses in the field and will fill the silo is the one in which the majority of farmers will be interested.

We quote the following from a letter received by The Wisconsin Farmer from Ira L. Peterson, Walworth county, Wisconsin:

I am sorry to tell you that I have not had any experience with a farm tractor to any extent. Inquiring into the matter I find that a few farmers around Whitewater own tractors and are very well pleased with them. A few others are contemplating buying. I consider the farm tractor a very useful machine to have on the farm and the only objection the farmers seem to have is the cost. Of course, all the farmers around here could not use the farm tractor if they had it, there is some land so hilly that the machine would use more fuel than the work would be worth and again there is some land too low that can only be worked during the driest seasons. Some farms are too small to pay to have a farm tractor. Our farm consists of 140 acres and is on the low order, but if we had a light tractor, we could make use of it in both drawbar and belt service. I have not any idea of the saving it would be, but I have heard others say that it saves a great deal in time and labor.

Oscar W. Hafs, of Maplewall Stock Farm, Walworth county, writes:

I am very much interested in farm tractors. My ideas are rather unsettled however. I have seen only one tractor in actual use outside of the exhibits at the fairs. It was an 8-16. I think that a tractor of that size or perhaps a little larger would be of the most use on a farm of 160 acres. I have never been interested in the larger farm machinery such as shredders, threshing machines, etc. If I had them I am sure that the most economical way to operate them would be with a tractor and less horseflesh. I hope to be present at the tractor meet at Madison. Just at present I am of the opinion that tractors are too expensive for the tractor service in fields exclusively, and think that to be an economical machine they should have other uses.

R. H. Ells, Walworth county, Wisconsin, writes as follows:

I think a tractor should not weigh to exceed 5,000 pounds. It should be of the three-wheel type with a caterpillar drive and the operator should sit on the machine he is using, and drive the tractor from the seat. The farm where a tractor is used, in my judgment should be about 160 acres or larger. There is no doubt that a tractor could be used for both drawbar and belt work on most farms, as they almost all have a silo. The price doesn't matter so much just so the buyer gets his money's worth. I am inclined to think that the farmer will demand a high speed motor, that is if gasoline doesn't soar too high. I have a tractor myself, but don't consider them a very great success on a small place, but mine brings me in about $100 a year for outside work, mostly silo filling. I expect to attend the demonstration at Madison.

Hugh H. Brereton, of Chippewa county, gives the following opinions:

I think that the tractor for the Wisconsin farmer is the three or four-plow rig running around two tons in weight and costing about what three or four horses would cost. It would be used chiefly for plowing in the rush of spring work and after the grain was off the land when it was too dry and hot for horses. The gain would not be all in getting the work done on time. It would also be in getting better and deeper plowing and a better looking crop the next year. The tractor ought also to be able to stand up under a lot of belt work such as threshing, filling the silo, feed grinding, etc. It cannot be a general-purpose machine, as the light and irregular work will have to be done by horses. The horseless farm may be here, but not every farmer can make it produce. Not a great deal of hauling will be done with the tractor, as most farmers do not haul in large enough quantities to make it profitable. The Wisconsin tractor should be a one-man affair, preferably with a close coupled machine with plows detachable and hung right in the tractor frame. They should be in front of and in sight of the operator all the time. A self-steering machine ought to help out a great deal. Here's hoping the September demonstration brings out something new and practical and will be a big success.

Irwin C. Brown, Columbia county, Wisconsin, writes:

I look for a tractor on every 160-acre farm of good, fairly level land and maybe on some smaller farms inside of ten years. That is provided the price of fuel stays within reason. If we had a tractor we would want to use it for belt work. I do not feel that the tractor would save so very much in labor, but think it would enable the farmer to do more and better work, as all good machinery has done. I have watched the tractor at work and feel it should be a success on a farm such as

See the Real Kerosene Tractors

Of course you are going to attend one of the tractor demonstrations this year.

Before you go, get the local prices of gasoline and kerosene, so that you will have the difference clearly in mind, because, at any demonstration you will be shown two kinds of tractors—those that operate on gasoline and those that operate on kerosene.

The kerosene tractors can be divided into two classes. One class consists of engines originally designed for gasoline. To these, special attachments have been added, and, under favorable circumstances they will operate on kerosene, or gasoline mixed with kerosene, but they require so much kerosene that there is no economy over gasoline.

The other class are the real kerosene tractors. They are designed throughout to operate on kerosene without special attachments, and do operate on the cheaper fuel so successfully that they pay for themselves with the fuel they save.

Moguls and Titans Are Real Kerosene Tractors

Remember the difference in the prices of the two fuels. Remember that a tractor uses two or more gallons of fuel every hour it works. **See the kind of work Mogul and Titan tractors do on the cheaper fuel.** Compare their work with that of any tractor, either for quantity or quality. **Compare the amounts of fuel consumed in doing equal work.** Then decide which of all the tractors you see will give you the most value for your money.

In preparation for your visit to the demonstration, let us send you our horse and tractor book, "Farm Power." It contains almost a hundred pages of closely packed, verified information about power on the farm.

Studying Tractor and Automobile.

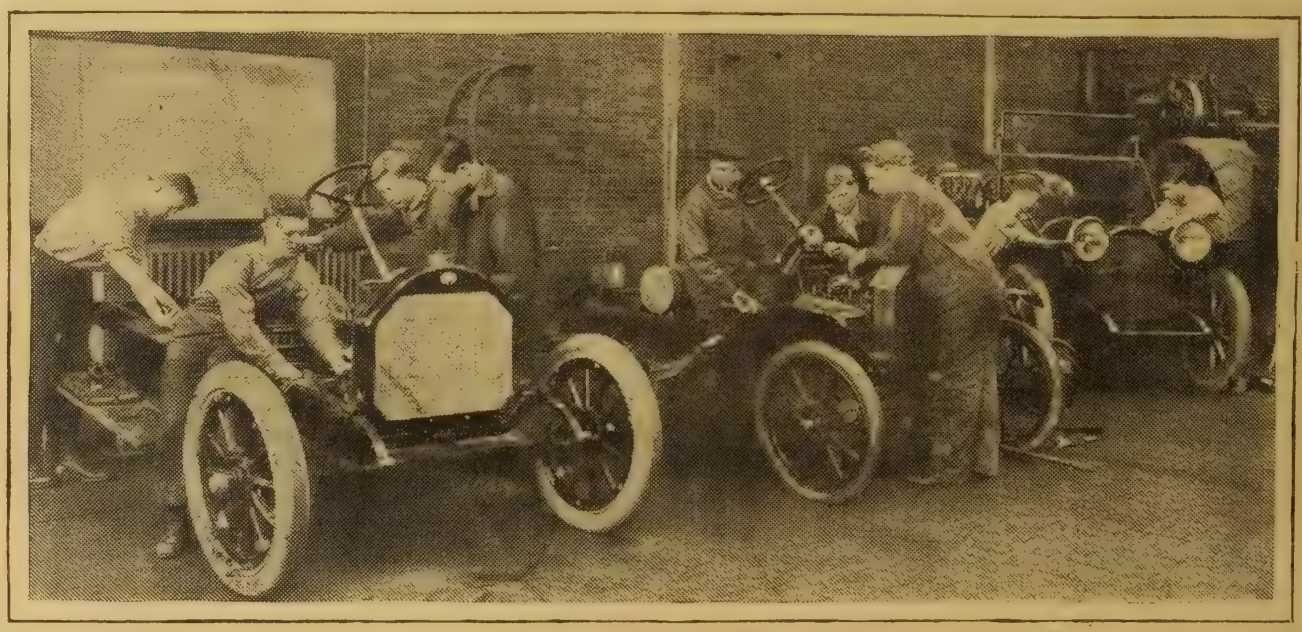
Minnesota and Wisconsin Farm Boys Take Great Interest in Farm Power Courses and Demonstrations at University Farm, St. Paul—Power For Farm Work a Live Topic.

MAY CLASSES TAKE A GREAT DEAL OF INTEREST IN THE STUDY OF STEAM THRESHING OUTFITS.

INTEREST in farm power is reflected by the attitude of our agricultural experiment stations in endeavoring to provide special courses on this subject. A few days ago the writer visited the University Farm, St. Paul, Minnesota, and found a large class under the direction of J. L. Mowry, studying tractor problems. A special course in gasoline engines and a short course for tractor engineers is given under the direction of the division of agricultural engineering of the University of Minnesota. The May class in previous years has been confined largely to farmers who have wanted instruction in steam engineering. The proportion of those who were anxious to have instruction in gas-engine operation was considerably increased this year. Mr. Mowry states that there is an exceptional increase in interest in the small gas tractor, from ten to fifteen horse power. The winter course in farm power subjects attracted an unusual number the past season. Most of the young men from the farms who attended these courses were from Minnesota. There was a good attendance, however, from North Dakota and Northwestern Wisconsin.

The instruction given is extremely practical. For the May course this year at least one year's experience in the use of tractors was required for all who entered. The state provided a dozen different engines, covering the most commonly used makes and models. Manufacturers were glad to co-operate in this respect and to assist in demonstrating the uses to which their machines may be put.

Interest in the farm power division of agricultural schools is increasing rapidly. A good many farmer boys attended the automobile course at St. Paul last winter. It was surprising to know the technical knowledge which farm boys, as a rule, have of all kinds of machinery. A few of those who attended these mechanical courses expect to become machinists by trade and either work in garages or as engineers for gas tractor outfits or for steam tractor outfits in threshing in the Northwest. The majority of those who attend the winter courses are interested in the gasoline power of machinery and the majority of those who attend the May courses are interested in preparing themselves for working with steam threshing outfits.



AUTOMOBILES, GAS TRACTORS AND STATIONARY GAS ENGINES ARE STUDIED INDOORS IN THE WINTER CLASSES.

Most of the new courses which are established at the agricultural stations are the result of some special demand on the part of farm boys. This is especially true in the machinery line. The automobile has given the farmer boy a keen interest in machinery propelled by gasoline power.

These efforts to cultivate the interest which it has been found the farm young man has in machinery are the beginnings of more elaborate plans which will be worked out in the future. The primary object of this school work is to instruct in mechanical operation, but there are many other points of value which come up in this work. The student is taught the location and purpose of bearings in machinery. He is shown the difference between the old type machinery with no ball or roller bearings and made acquainted with the value of bearings both as to the effect of operation of machinery and length of service. Another matter which is given attention is the fuel consumption and the most practical methods of reducing fuel cost to the minimum. Above all things the young farmers are instructed that machinery, though ordinarily fool-proof, demands some attention by other than the "common tinker." A great deal of farm machinery has lost considerable of its efficiency by neglect and tinkering. Modern machines are built for service and are readily responsive to good treatment.

The farmer and his sons are compelled by virtue of their varied occupation to know a good many things. It is only in recent years that a mechanical knowledge has become a necessary accomplishment on the farm. On the modern farm of today the young man grows up with a knowledge of gasoline engines, shafts, and drawbars, pulleys and belts, magnetos and self-starters, batteries, etc. These things come as a part of his experience in farm life and are getting to be just as natural as it is to learn how and what to feed the live stock or how and when the corn should be cultivated. For the first few years the automobile on the farm seemed to create a desire in the young men to become automobile mechanicians, and this led to a good many seeking employment in garages. Of course, most of these soon found that a job as machinist in a garage in a small town, or even in a city, was not nearly so good a business proposition as a part ownership in a profitable farm, so many of the boys who have had their experiences in garages have gone back home. They know how to look after the family car and they are proud of it. This means a big saving to the farmer on garage bills.

GAS, OIL AND STEAM TRACTORS ARE DEMONSTRATED TO INTERESTED STUDENTS AT THE UNIVERSITY FARM, ST. PAUL, MINNESOTA.

In and Around Wisconsin.

Under the state aid law passed by the last legislature, 2,540 teachers in Wisconsin will receive bonuses from the state, ranging from $2 to $8 per month, depending upon the time the teacher has been in the same district. This aid is being distributed this month and totals $69,963.33. It is paid from the 7-10 mill tax.

Reports on the cabbage crop of Wisconsin to July 1, 1916, indicate 76 per cent of a crop and this fell off to 73 per cent of a crop August 1st. Condition of cucumbers which is quite an important crop in Wisconsin improved from 80 to 83 per cent during the month of July. Peas July 1st indicated an 80 per cent of normal crop and fell off to 76 per cent August 1st.

Tobacco growers in Dane and Rock counties have been pleased at the raise in price which has come down almost out of a clear sky. It seems that big sales have been made by the tobacco manufacturers for foreign shipment, and at rather fancy prices and bidding on the late crop has been lively. Farmers who didn't think much of tobacco growing last year are pleased at the present bids of 12 to 16 cents and they expect to make a good profit this year.

The annual summer meeting of the Walworth County Jersey Breeders' Association will be held on Saturday, August 26th, at the farm of Sec. F. F. Showers near Delavan. There will be a cow-judging contest at 10:30 and Prof. A. C. Oosterhuis, of Madison, will give his famous cow demonstration and place the stock and make the awards. It will be a picnic affair and every breeder is invited to bring his basket and enjoy a day with the Walworth county breeders.

Danger of the spread of white pine blister rust in Wisconsin has caused the placing of a strict prohibition on the importation into this state of all pine nursery stock. This disease, prevalent in the white pine forests of the East, has been found in Wisconsin, and this action was taken as a precautionary measure by J. G. Sanders, state entomologist. Mr. Sanders says if this disease spreads to the native timber in Wisconsin, it would in a few years make the growing of white pine hopeless.

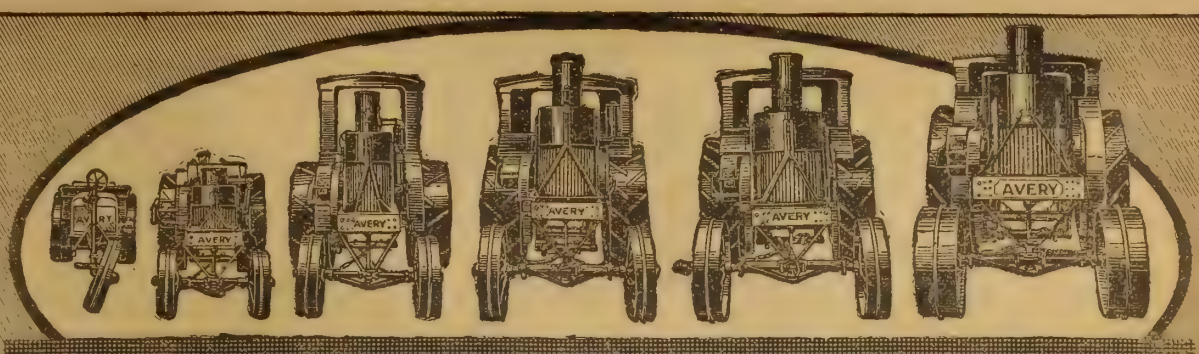
The threshing season is in full swing in the southern part of the state and some splendid yields are reported. In Walworth county oats are yielding from sixty to seventy bushels to the acre and in some instances more and barley is running from thirty-five to fifty bushels. Twenty acres of oats on the A. D. Smith farm yielded 1,400 bushels and barley yielded fifty bushels to the acre at fifty-two pounds per bushel machine measure. On the Frank E. Fox farm, Waukesha county, oats went eighty-five bushels to the acre because the land was well fertilized and cared for. With a large herd of dairy cattle this was done at minimum cost.

The Wisconsin Tobacco Reporter, at Edgerton, in speaking of conditions in the tobacco belt, says:

Once more tobacco has proven itself able to withstand more trying weather conditions than any other crop produced from the soil. The withering effects of four weeks of hot July sun which shortened the grain crops and fired the corn on light soil and withered the gardens, pastures and lawns, has caused less damage to the tobacco fields than anything else about the farm. The tobacco plant sent its root still deeper into the soil and simply held on waiting for the drouth to pass. Only the more forward fields which prematurely budded have suffered any serious injury from the hot, dry spell, and it is yet to be shown whether after topping such fields do not reach a fair spread of top leaves. A wonderfully recuperative plant is tobacco and the fact is so well recognized that we scarcely need call attention to it.

The Rock county calf-feeding contest, which began February 1st and closed August 1st, turned out even more successfully than the originators even anticipated. Thirty-six boys and girls were entered and the awards have just been announced for the various districts, there being district as well as county prizes. The county winners will be announced later. Each boy or girl took a calf at birth and fed it through the contest, the final awards being based upon the gain, cost of the gain, profits, etc. The district winners were announced as follows, with their respective markings, 100 being considered perfect:

Rock Prairie—George Arnold, 95; Erma Hall, 86; Gladys Morton, 83. Clinton—Frank More, 81; Frank Stoney, 87; Wesley Stoney, 86. Milton Junction—Leman Rood, 90; James Wixom, 89; Glen Cary, 88. Janesville—Lucy Kellogg, 89; Elmer Gestland, 88; John Whinger, 86.



Pick the Size AVERY Tractor to Fit Your Size Farm

THESE six sizes of Avery Tractors make Tractor Farming a success on any size farm—large, medium or small. Avery Tractors are built in sizes for pulling any number from two to ten plows. You can get an Avery Tractor in the size that exactly fits your size farm. The Avery line of Tractors in six sizes, Plows in six sizes and Separators in seven sizes, gives you the opportunity of selecting a complete Plowing or Threshing Outfit in a size to exactly fit your needs, from the most complete and up-to-date line of Power Farming and Threshing Machinery built.

No Other Outfits Have Met Such Tests

Avery Tractors and Plows have been entered in every important Contest and Demonstration ever held. Avery's are the only make entered in every Winnipeg Motor and Plow Contest. They were introduced by being sold on approval. Proven successful by thousands of owners. They have been put to the hardest tests known and have proved by every kind of test known that they are successful machines.

THE five larger size Avery Tractors shown here have exactly the same design. Here are six special reasons for their success: Slow speed special opposed tractor motors; renewable inner cylinder walls; two-speed, double-drive transmissions; sliding frames which eliminate the intermediate gears; no pumps or fan; double carburetors for burning either kerosene or gasoline. Avery Plows are the original "Self-Lift." Avery Threshers have made the best proven grain saving records threshing on canvas ever made.

Sold at Low Prices

Avery Tractors are sold at these low prices: 5-10 h. p. $365 cash; 8-16 h. p. $795 cash; 12-25 h. p. $1195; 18-36 h. p. $1775; 25-50 h. p. $2190; 40-80 h. p. $2625. All built and backed by an established company owning a large factory and many branch houses, which insure your getting well-built machines and prompt and permanent service after you get them. Write for latest free complete Avery Tractor, Plow and Thresher Catalog and Get ALL the Facts about Tractor Farming, Threshing, Road Building, etc., with an Avery Outfit.

What Shall We Expect of Tractor?

(Continued from page 11.)

mine. I hope to be able to attend the demonstration and shall be interested in both drawbar and belt work and the construction of the machines.

W. H. Cooper, of Walworth county, writes:

The use of a tractor in this state is hardly continual enough to justify too great an investment in an outfit, especially as an equal amount will need to be spent for other equipment to make use of the power at various times. I should want a tractor for belt as well as drawbar service, especially for silo filling, etc. I think that for drawbar service plowing would be most important. We have a number of brood mares, and plowing often comes at times when they are unfit for continual heavy work. Last fall the ground was so hard that four 1,600-pound horses could do little with a gang plow. At such times a tractor should be valuable, although a tractor supposed to pull three bottoms had hard work to pull two. Last spring our bottom lands, black loam and our best soil, were so sticky that plowing was difficult, but I doubt whether a tractor could obtain sufficient footing to be serviceable. I believe that a large saving could be made by getting plowing done on time, if the tractor could operate, that is, in a wet season. Another large saving would be in being able to fill silos when the corn was fit and not when a filler was available. I do not see why a tractor should not be a success on a farm like ours (160). We have four fields of twenty to twenty-five acres each, and others from ten to fifteen acres. Provided that the tractor could operate successfully on black soil during wet weather. Personally I lean toward the light, multiple cylinder tractor, of about 10-20 or 12-24 horse power, as I think that such a tractor is best for both belt and drawbar service under Wisconsin conditions.

Charles Solveson, of Linden Home Farms, Waukesha county, writes:

I can give you a little of our experience that should be of some value to real farmers. We have had a 12-25 tractor for two seasons. We have 230 acres and keep about seventy head of cattle and but five horses, yet it is comparatively easy to get in the crops in good season. The tractor is practical. We pull but three plows and this is desirable dry or wet. On the level we pull this on high gear—a fast walk, then when we get to a grade we pull up on slow gear and go right along. Do not attempt, however, to work a tractor on a hilly farm. There is much talk nowadays of getting light tractors. We have just turned over fifteen acres of alfalfa; our tractor weighs about 7,500 pounds, and the drivers are twenty inches wide with large lugs, yet we had to use a 2x4 piece of oak to put under the wheels occasionally to pull out, that too on heavy soil. We also make good use of the tractor pulling two large disks and a large harrow and in one operation prepare a seed bed better than any we have ever by working horses. We do all our seeding with horses. We filled eight large silos last fall and so far it has cost us nothing for repairs, but a farmer must be able to make nice adjustments, grind valves, etc., or do the work with horses.

An Economical Furnace for the Home.

THE Mueller pipeless furnace can be installed very cheaply in houses that are already built or it can be installed for small cost in houses that are now being built. It does not require cutting holes in the walls and floors and putting in a large number of pipes, for the Mueller furnace is pipeless. One large register built in the floor directly above the furnace furnishes heat for the whole house. The warm air from the rigister forces the cold air downward, so that it passes into the furnace, through an outer chamber, becomes warmed, and then passes up through the warm air register into the house. Large houses may be heated by this furnace with complete satisfaction and the fuel required is said to be less than stoves would burn to furnish the same amount of heat. A free book on heating, which takes up the subject of heating homes and the different systems in use, will be sent free to those who write for it to L. J. Mueller Furnace Co., Milwaukee, Wis. Get a copy because it will help solve next winter's heating problem. See page 15. —Adv.

Ann Arbor Baler
30 Years' Leadership.
"THE BALER FOR BUSINESS"

And leadership for the Ann Arbor owner means not only popularity, but the biggest income. He is sure of work and sure of profits.

It's built by men who have taken the time to study your needs; men who have first-hand knowledge of what's needed in a hay baler, and who have the factory and equipment to give you what you need, which accounts for the extra big capacity of the Ann Arbor Baler, its low up-keep cost, neat baling at high speed, smooth even bales

Especially adapted for baling hay, alfalfa, sudan grass and straw.

Power presses in separate or combination outfits. Use any engine. Hitch your tractor to the Ann Arbor.

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

QUESTIONS AND ANSWERS.

Cause of Engine Noise.

Please give me some information in regard to autos. I have a 1915 Buick car. When the engine is running idle, you can hear a "chung, chung, chung," noise. It seems to me that this noise is in many Buicks. Is it the natural sound of the motor? If not, could it be fixed? What causes a car to pound when pulling hard, and also when speeding up quickly? I have been thinking that maybe the bearing in the connecting rod, or one of the crankshaft bearings may have worked loose.

Answer.—The "chung, chung" noise is probably only the exhaust in the muffler. The working of the valve springs will sometimes produce a noise of this kind. A dull, heavy pound on a hard pull indicates that a rod or crankshaft bearing fits the crankshaft too loosely. A crankshaft bearing will pound if only 3-1,000 of an inch larger than the shaft. In this case there is no serious trouble. The bearing should be adjusted, however, as soon as the pound becomes decided enough to be bothersome. A loose connecting rod bearing also produces a rather dull pound. This is a sign of coming trouble. If a rod bearing becomes very loose the hammering action is likely to break the rod bolts. Then the cap comes off and the rod plunges through the side of the crank case.

Clutch and Gear-Shift Trouble.

Should Buick gears be harder to shift than others? We cannot give our car very much speed before shifting, or the gears will grind. What causes a clutch to "grab"? Do all multiple disk clutches grab? When the clutch is released to shift the gears, should the clutch come to a standstill right away? Should there be a brake to stop it as soon as it is released? How many years will a storage battery last?

Answer.—Buick gears are no harder to shift than others, though the clutch on some of the earlier cars has a tendency to spin. Of course, the gears on these cars were hard to shift, as the clutch should be nearly stationary when the gears are shifted. Many cars are fitted with a brake to slow down the clutch as soon as it is released. The brake is usually nothing but a leather-faced disk so placed as to bear against the outside edge of the cone when the clutch is released. If you have a cone clutch it might be well for you to install such a device. If you have a disk clutch, running in oil, it may be that the oil is too heavy or that the disks are adjusted so that they are too close together in released position.

Both cone and disk clutches must be "cushioned" to prevent grabbing. In a cone clutch the cushion consists of a set of springs under the leather or asbestos facing. These springs push the facing out somewhat and allow the clutch to take hold gradually. Disk clutches have bowed disks, or disks with projecting parts that act as springs. If these springs become worn the clutch will grab. A disk clutch should not grab.

Many owners are getting only one year of service from their automobile storage batteries. This kind of service is very hard on the battery. The battery on a house lighting system should last three to five years or even longer if it has the proper care.

Setting Traction Engine Valve.

Please tell me how to set a valve with Marsh reverse on an Advance traction engine.

Answer.—The following instructions are taken from the Rumely Co.'s instruction book for operating Advance engines:

First, locate the two dead centers exactly. To do this, make a mark with a sharp prick punch on the side of the engine frame between the crank disk and the cross-head and about six inches from the disk. Place the crank pin about three inches above the center line. With one point of a pair of compasses in the center punch mark make a mark on the edge of the disk with the free end of the compass. Make a mark on the guides at the end of the cross-head. Then turn the crank pin below the center line until the cross-head returns to the line on the guides, and make a mark on the disk with the compass as before. Then make a point on the disk half way between the two marks. With one point of the compass in the mark on the frame turn the crank pin toward the center line until the free end of the compass will just enter the half-way mark on the disk. The crank pin will then be on dead center. Locate the opposite dead center in the same manner.

Having found the dead centers, place the crank pin on the center nearest the cylinder. Place the reverse lever in the center notch. Turn the reverse gear on the crankshaft until the crank pin of the reverse gear shaft is on its center nearest the crankshaft. This position you estimate by eye. Then tighten the screws in the reverse gear on the crankshaft slightly and temporarily. Then set the screws that are in the top and bottom of the stop plate so that they will project inward about one-half inch from the lugs on the stop plate. Then move the reverse lever down until the reverse box strikes the screw in the bottom of the stop plate. Fasten the reverse lever in this position. Now, with the engine on the center nearest the cylinder, set the valve on the valve stem with the edge of the valve even with the edge of the port in the valve seat, or so that the valve just covers the port. Then tighten the screws slightly that hold the valve to the valve stem. Then move the reverse lever in the opposite direction until the reverse box strikes the screw in the top of the stop plate. Fasten the lever in this position. If the edge of the valve does not return to the edge of the port, or if it overlaps the edge, make a mark on the valve seat even with the edge of the valve. Make another mark half way between the edge of the port and the first mark. Then loosen the screws in the reverse gear on the crankshaft and turn the gear until the edge of the valve at the middle mark just made. Now tighten securely the screws in the reverse gear on the crankshaft.

Next, loosen the valve on the stem and set it so that there will be about one-thirty-second of an inch opening. This opening is called "lead." Fasten the valve securely on the stem in this position.

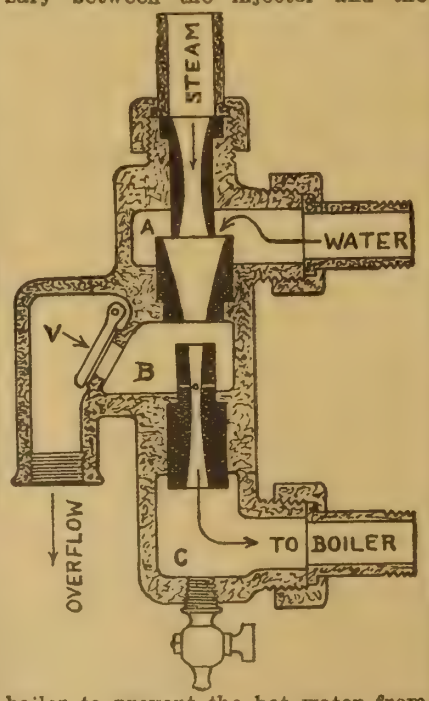
Place the engine on the opposite dead center. When doing this turn the engine "over," with the reverse lever in the top notch. If the lead on this end is more than one-thirty-second of an inch turn the setscrew into the lug at the top of the stop plate until the proper lead is secured. Turn the setscrew out if the lead is too small. Lock the setscrew securely with the jam nut.

Put the reverse lever in the bottom notch and turn the crank pin a few inches below center; then return it to the center. This is done to avoid lost motion. Make the lead one-thirty-second of an inch by moving the set screw in the bottom of the stop plate. The valve is then properly set. If wear occurs in time take up the wear by adjusting the dogs and catches on the quadrant; do not change the screw in the stop plate.

Principle of an Injector.

Please explain high and low pressure injectors.

Answer.—The figure shows the principle of a high-pressure injector. In practice the parts are proportioned somewhat different from the illustration, so that they may be made more easily. The illustration shows an injector cut open so that the internal construction may be easily seen. The nozzles are shown in black. The steam enters at the upper nozzle. As the steam blows into the middle nozzle it creates a partial vacuum in chamber A, thereby drawing the water through the water pipe and carrying it into chamber B. The first steam that blows through has no cold water to condense it. It then raises valve V and escapes through the overflow into the air. As soon as the steam mixes with enough cold water to condense it the water begins flowing through the lower nozzle into the boiled and valve V closes, as the rapidly flowing water produces a partial vacuum in chamber B. A check valve is necessary between the injector and the



boiler to prevent the hot water from flowing backward into the injector. This check valve must work perfectly. The injector is often blamed when the check valve is at fault. As a rule an injector will not work well if the boiler pressure is less than forty pounds. The feed water temperature should not be over 100 degrees Fahrenheit. In order to keep the steam flowing the water must be cold enough to condense it. Steam flows at an enormous velocity, and, therefore, has a large amount of inertia. This inertia is sufficient to drag a large amount of water into the boiler along with the condensed steam.

In the figure the middle nozzle is the lifting nozzle and the lower nozzle is the forcing nozzle. A low pressure injector has one or more lifting nozzles, but no forcing nozzle.

WHY shouldn't quality count in *your* tobacco too? Give the quality test to W-B CUT Chewing. Use half as much as of ordinary tobacco—it's rich tobacco, chuck full of satisfaction. No need to hide good tobacco under sweetening. Notice how the *salt* seasoning brings out the flavor of the fine tobacco —no need to use so much, no need to grind and spit so much.

A 10c pouch goes as far as 20 cents' worth of ordinary chewing.

The "Best" Potato Digger

Must Satisfy You or Money Back.

Here is a time-saver and money-saving Potato Digger so successful in its work that we can safely ship it on a "money-back" guarantee. Try it at our risk. If not perfectly satisfied, the test of the "BEST" POTATO DIGGER costs you nothing. The "BEST" POTATO DIGGER is the result of many years of experiment. Hundreds of tests were made in all kinds of soil before the machine was perfected. It is perfectly balanced. Lifting device enables one man to lift 500 lbs. on the shovel with ease. Adjustable seat to suit height of operator. Positively no injury to the crop no cutting or bruising as with hoe or fork.

The Waite Tractor

Light, Simple, Practical, Durable, Efficient, Powerful, Economical

IMPOSSIBLE TO STRIP GEARS

"I plowed 65 acres in less than 8 days with a Waite Tractor. It can do the work of 8 horses in the field."—R. H. Jones, Hartford, S. D.

"I averaged about 9 acres a day plowing and the Waite Tractor will do the work of 8 mules."—M. A. Sharp, Woodlawn, La.

"The Waite Tractor handled an 8-foot binder easily, and made it possible for me to cut 26 acres of wheat in 7 hours and 30 minutes."
A. H. Rippberger, Dundee, Ill.

The Waite Tractor is a general purpose tractor; will do your field work, your belt work, your road work, your hauling, at less cost than any other tractor on the market.

$800 F. O. B. Elgin, Ill.
(Subject to change without notice)

The Waite Tractor is light, sure and speedy—the fastest-going, quickest-working Tractor you ever saw. Write for descriptive circulars and name of nearest dealer.

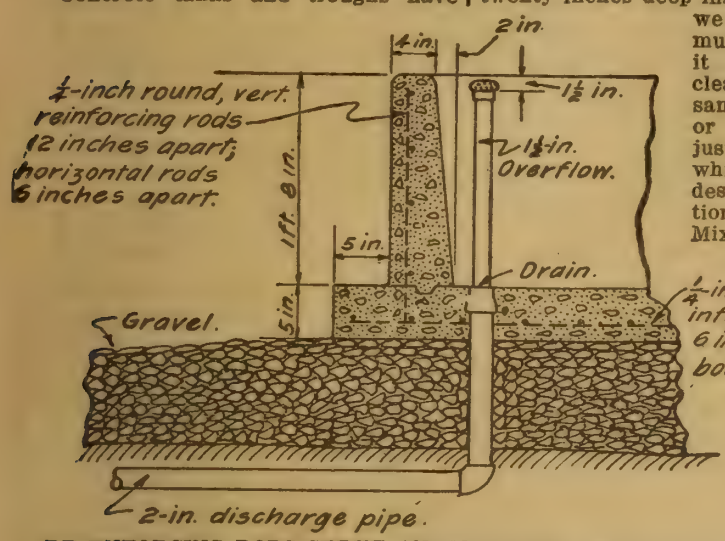
Concrete Troughs and Tanks.

Some of the Details of Constructing Various Types Which Mean Permanency in Improvements---By H. Colin Campbell.

PROBABLY most farmers who have been looking to concrete as a material to aid them in some of their farm building problems have thought of making their first attempt with its use in constructing a concrete tank or watering trough.

Nothing will build a better watering trough or tank than concrete, but there is a possibility of failure in the use of this material unless one follows certain principles that have been proved necessary to success. However, this is true of all building materials and the precautions that one should take in using concrete are simple. Anyone can observe them and if they are observed success is certain.

Concrete tanks and troughs have many advantages over those built of other materials. They may readily be kept clean, and, unlike those built of wood, do not require painting to keep them in condition fit for use, do not require tightening of hoops, will not rot, and if left empty will not go to pieces in the sun and wind as will wood construction. Concrete is rotproof and rustproof, always ready for use, easily kept clean and permanent. Most of the necessary materials required to build concrete troughs or tanks may be found on the farm or near by. The soil where the structure is to rest must be firm, so as to provide a good support or foundation.

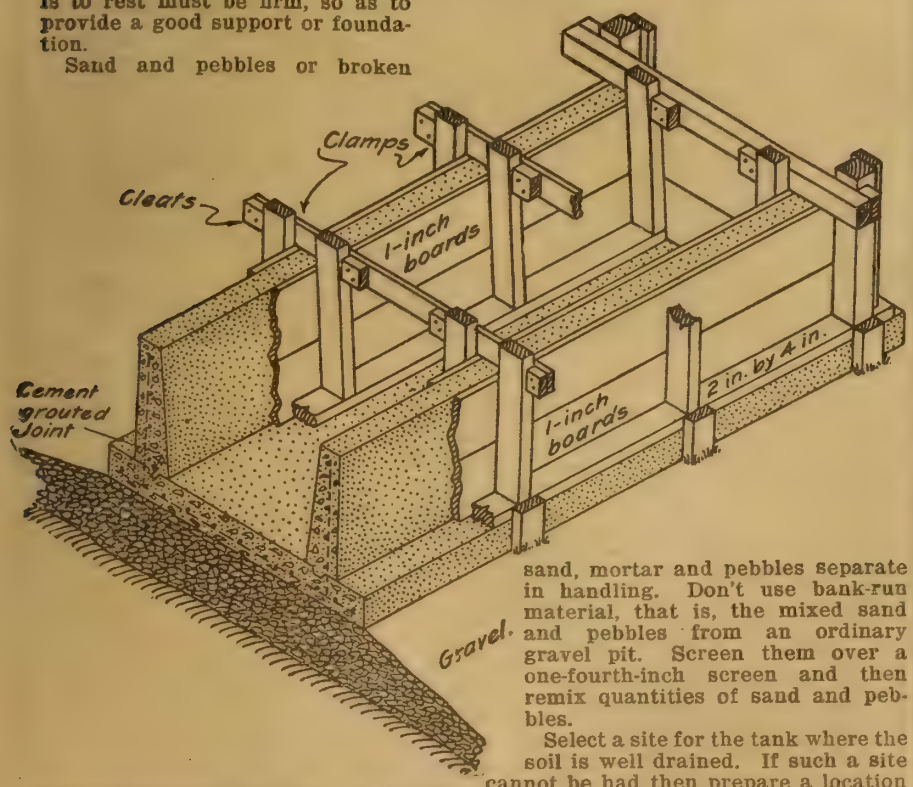


RE-ENFORCING RODS SERVE AN IMPORTANT FUNCTION IN CONCRETE CONSTRUCTION.

Sand and pebbles or broken stone must be clean and properly graded. Re-enforcing in the form of steel rods or wire mesh fabric must be properly embedded in the concrete to prevent cracks due to temperature changes and from pressure due to expansion if water in the tank should freeze. After concreting has been finished the work must be protected against too rapid drying out.

Tanks must be watertight. Therefore, a 1-2-3 concrete mixture should be used. This means one sack of Portland cement, two cubic feet of clean, well-graded sand and three cubic feet of well-graded pebbles or broken stone. The sand should range in size from one-fourth-inch particles down to the finest permissible, excluding dust. Pebbles or broken stone should range from one-fourth to three-fourths or one and one-quarter inches, depending upon the wall thickness or section in which the concrete is to be used. For most tank construction pebbles no larger than one inch are best.

Take, for example, a watering trough or tank such as would be used in the pasture lot. Let us suppose this is 5x12 feet outside dimensions and twenty inches deep inside. How shall we build it? How much material will it take? Select clean, well-graded sand and pebbles or broken stone just like those which have been described. Proportion them 1-2-3. Mix the measured quantities of cement and sand on a watertight platform until the mass is of uniform color. Wet the measured pebbles or broken stone, then add it to the combined sand and cement. Add water and keep turning the materials together and over, using square-pointed shovels until all the materials have been thoroughly mixed together and the consistency of the mixture is jellylike, that is, just wet enough so that when the mixed concrete is placed in a pile it will gradually flatten of its own weight. Be sure not to use so much water that the cement,



CROSS SECTION OF BOTH TANK AND MOLD.

sand, mortar and pebbles separate in handling. Don't use bank-run material, that is, the mixed sand and pebbles from an ordinary gravel pit. Screen them over a one-fourth-inch screen and then remix quantities of sand and pebbles.

Select a site for the tank where the soil is well drained. If such a site cannot be had then prepare a location by digging out eight to twelve inches of the soil and refilling the excavation with clean, well-tamped gravel. Have the forms built before starting the work. The accompanying illustration, although for a tank of slightly different proportions illustrates the method of form construction. Concreting should be carried on continuously to prevent a construction seam or joint, yet sometimes continuous work is impossible. If this is the case build the floor of the tank first in the form of a slab on which the side walls will afterward rest and when building the slab or floor insert beveled strips all around the slab along a line where the center of the side and end walls will come.

After the concrete has hardened these strips may be removed and will leave a groove that will assist in forming a watertight joint between floor and walls when the latter are concreted. Set up forms for the side walls. Then before placing concrete mix a paint of pure cement and water to the consistency of cream and apply it in and along both sides of the groove formed in the floor slab by the strips. At once place concrete for the walls before this cement paint has commenced to harden. This will thoroughly seal this joint and prevent leakage Concrete must be well spaded in the forms while placing for the purpose of settling it to proper density and particularly must this spading be done against form faces so that the surface after forms have been removed will be smooth, dense and watertight. Re-enforcing in the shape of one-fourth-inch round steel rods, spaced six inches center to center should have been placed at the center of the floor slab when this was concreted. Similar re-enforcing six inches center to center horizontally and twelve inches center to center vertically should be placed in the ends and side walls when these portions of the tank are built.

It will be noticed that the illustration shows tank walls thicker at the bottom than at the top. This slope or battering of the sides will prevent the bursting pressure of ice from cracking the tank walls if re-enforcement has been placed as described. In forming, ice will tend to slide up against this sloping face and relieve the walls from pressure.

Do not remove forms until the concrete is at least twenty-four hours old; then do so carefully and if there are any pebble pockets or holes on the surface immediately fill them with a 1-2 sand-cement mortar, that is, a mortar mixed in the proportions of one sack Portland cement to two cubic feet of sand. Now cover the concrete with wet hay or straw or some other similar covering that will keep it from drying out too rapidly. Leave this covering in place for a week or ten days and keep it wet by frequent sprinkling. At the end of this time the tank may be filled with water and put to use.

When planning the construction it is necessary to arrange for inlet and outlet pipes so that the tank may be supplied with water and emptied when necessary to clean it. Another illustration shows how this work should be planned.

For a tank 5x12 outside dimensions and twenty inches deep inside, the walls to be six inches thick at the bottom and four inches thick at the top, the volume of concrete required is three and three-fourths cubic yards. This will take about twenty-seven sacks or approximately seven barrels cement. There will also be needed two cubic yards of sand and three cubic yards of pebbles or broken stone. Re-enforcing necessary will be about eighty-three pounds of one-fourth-inch round rods. The cost of the work may readily be figured from the above estimate when one knows the price of materials in his locality.

FROM THESE

Replace your stoves with a Mueller Pipeless Furnace

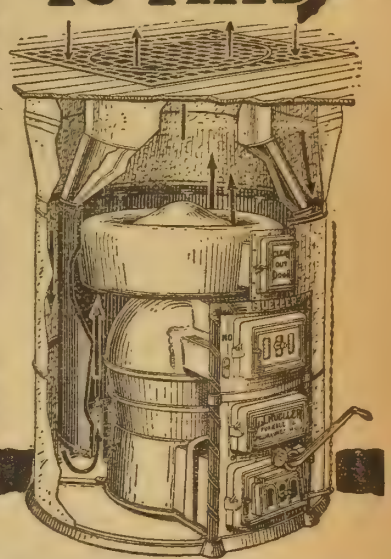
Cheaper, Healthier, Better Heat, Greater Comfort, Less Work

THE MUELLER Pipeless Furnace was designed to improve the heating facilities in houses already built and to reduce the cost. This furnace can be installed without expensive alterations. No pipes or flues. Can be placed in any cellar, no matter how small, or used in houses without cellars, by digging a pit. A Mueller Pipeless in your home means more uniform heat than stoves, purer air, better health, less dirt and less work. An all-round better heating system than stoves at lower cost.

Mueller Pipeless Furnace

The Mueller Pipeless is a new idea in furnace building. Heats whole house from one register, keeps warm air in constant circulation and all the rooms in your home warm and cozy in the coldest weather. Keeps house ventilated as well as heated. Burns coal, wood or coke. Nearly 60 years of furnace building experience is back of the Mueller Pipeless Furnace. It is scientifically and substantially built of solid cast iron and will last a lifetime. Why you should consider the Mueller Pipeless Furnace above all others is fully explained in our free book on heating.

TO THIS



Write for Free Book on Heating

Gives you all the facts about the Pipeless System of heating and the Mueller Pipeless Furnace. Gives full details of construction and shows pictures of installation. Tells how to apply it to your own home, old or new; how to tell the difference between good and poor furnaces—the things to look out for and the things to avoid. Booklet sent free on request.

ON THE TRACTOR GROUNDS.

Some of the Interesting Sights Which We May Expect to See at the Great Tractor Demonstration to Be Held at Madison, Wisconsin, September 4th to 8th.

UPPER WISCONSIN

Value of the Record For the Dairy Cow.

County Representative G. M. Householder reports that over 500 cows are being tested in Rusk county, and the farmers are weighing the milk from each cow four times a month. Milk sheets are sent in at the close of each month and butter fat computed. Mr. Householder says that some farmers have had sad experiences in buying cows which have not been under test. Several cows brought into the county and then put under test showed only 2.4 per cent fat, which, as Mr. Householder truly states, is by no means a good record for a cow. It is mighty hard for a cow giving milk of such low test to give sufficient quantity to make her profitable. Mr. Householder says "better be safe than sorry" and see to it that you get a record with the cow you buy.

Activity in the Woods.

At a recent meeting of the Hemlock association, members reported stocks running low owing to the large demand created by prosperity in the country. Great activity was predicted for the woods country this winter and Upper Wisconsin will, of course, receive the good effect. There is little doubt that the settler who depends upon the woods to help him through the winter will have plenty of work this coming season.

Minnesota Man Secured.

H. H. Humphrey, who has served as field representative of Marathon county since August 1, 1915, has resigned and has been succeeded by his brother, Robert Humphrey, of Chatfield, Minnesota, who has been doing extension work in the schools at Chatfield. Mr. Humphrey leaves the work to take charge of the stock feeds department of the Dodge-Hooker Mills at Wausau.

JERSEYS COWS ATTEND BANQUET.

Sanitation and cleanliness are watchwords in the Thomas S. Griffith dairy barn, Glen Tara farm, Spokane, Wash. Recently this breeder gave a banquet to his friends and this scene in the cow barn shows the cows interested spectators at the feast.

Strawberries Profitable.

Strawberries are a profitable crop, according to T. D. Van Buren, of Ladysmith. He had a half acre in strawberries this year and shipped 200 sixteen-quart crates at an average rate of $2 a crate, making $400 from his half acre of strawberries. This does not include the berries used by his own family.

LAW QUESTIONS.

Parents' Custody of Minor.

A Subscriber, Butternut, Wis.—A boy fifteen years old was mistreated by his parents and his brothers, and a young lady coaxed him to leave home. (1) Can the boy's parents force him by law to come home? (2) Can the young lady be punished by law, and if so what is the penalty?

Answer.—The parents are entitled to the custody of their boy and can compel him to return home. (2) The young lady cannot be punished by law. Her act was not a criminal offense and there is no penalty.

Debt of Wife—Husband Not Liable.

A Subscriber, Wilmot, Wis.—A loaned B's wife a sum of money, and she gave her promissory note to A for the same, without her husband's knowledge. In case of her death would her husband be responsible for the debt to A?

Answer.—The husband would not be liable for the debt in case of his wife's death.

Bull in a Man's Own Pasture.

A Subscriber, Rubicon, Wis.—I have a young bull a year and a half old, He is very gentle and would not harm anything, and I allow him to run in pasture with my other cattle, The pasture is well fenced. My neighbor threatens to have me arrested and fined if I continue to allow my bull to run in the pasture. Have I a lawful right to do so?

Answer.—You have a lawful right to let your bull run in your own pasture and your neighbor has no right to object to it. He cannot have you arrested and his threats to do so is mere bluster and bluff.

Landlord and Tenant.

Mr. John Kenney, Basco, Wis.—I have a renter on my farm, and I own all the live stock on it. I have a contract with the renter, by which he agreed to work out the road tax, and each of us is to pay equally for the seeding, threshing, shredding, etc., and he is to pay me my share of any stock sold. He refused to work or pay the road tax, on the ground that he was not notified or called out to work, and I had to pay it. He sold two hogs and failed to turn over my share of the proceeds. He buys material for repairs, and expects me to pay for the same. Our contract calls for three months' notice to quit. (1) Has he so violated the contract so as to make it void, and give me the right to put him off the place?

Answer.—(1) The renter has not so violated the contract as to make it void unless there be in the contract a written stipulation to that effect. You have not stated the terms of the contract sufficiently to enable us to determine whether or not you could put the renter off the place. (2) You can sue the renter and recover judgment against him for the amount of the road taxes he failed to work out and also for the value of your share of the two hogs he sold.

Right to Grass on Streets.

A Subscriber, Ingram, Wis.—In an incorporated town of two or three hundred people, in Wisconsin, have property owners the right to mow grass in adjacent streets and use it for feed, or have the town authorities a right to take it and sell it, and use the proceeds for town purposes?

Answer.—If the title deeds of the property owners include land in the street they have a right to mow the grass thereon and use it for feed like the owner of a farm whose boundary line is in the center of a road, the public in each case having only an easement in the land. Otherwise, if the fee of the street is vested in the town.

Ask your neighbor to subscribe for The Wisconsin Farmer.

GRAND DETOUR PLOWS
AT THE
NATIONAL
TRACTOR FARMING
DEMONSTRATIONS

What Plow Shall I Buy?

You can answer that question most easily by going to the Tractor Demonstrations.

You can answer it *best* by following the Grand Detour Plows at the Demonstrations.

Watch them turn over the sod in clean, deep furrows—they'll do the same in your soil. Watch how perfectly they fit every tractor—they'll fit yours just as well.

Notice especially the Grand Detour "Junior." Lightest, strongest, best—it's the plow of the year for small tractors. Solve the plow question by buying a Grand Detour.

Make yourself at home at the Grand Detour tent—we'll be at Madison and all the other shows—and write now for particulars about these wonderful plows.

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. Thoroughly good and reliable veterinary remedies are advertised from time to time on these pages. If they were not good and reliable they could not appear in our paper. Our readers are requested to look them over. You may find here some remedy which will exactly fit your case. All veterinary inquiries should be addressed to this office.

AILING ANIMALS.

Inflammation of the Bag.

I have a couple of cows with caked bags and I would like to have you tell me what to do for them.

Bathe the udder or bag twice daily with either hot or cold water and then apply camphorated oil over the entire udder. Also give two teaspoonfuls of fluid extract phytolacca in a pint of water every four hours for two or three days.

Indigestion in Pigs.

I have some pigs that are on full feed, but are still sucking. They seem to get poor and get the thumps.

These pigs are troubled with indigestion, which is probably brought about through feeding. You had better cut down the feed and better yet gradually change the feed and also give half a teaspoonful of baking soda to each pig in slop once daily for a few days.

Infected Milk.

I have a cow that gives a matter-like substance in her milk. She is to come fresh some time in September. Would like to know cause of this.

This trouble is probably the result of infection of the udder with some organism. These cases are sometimes not very responsive to treatment. The internal administration of two drams of bisulphite of soda once daily may be of some benefit.

Milk Fever.

We have a cow that had milk fever. We secured a veterinarian and he helped her some but her legs are swollen and she is unable to use them. She will not eat nor drink but just a little now. We would be glad to have your advice on this case.

Your cow as well as having had the milk fever may be bothered with paralysis of some kind. You had better just keep on with the treatment the veterinarian prescribed and, if necessary, have him see her again.

Navel Ill.

I had a mare a short time ago which had a fine, large colt. It was weak when born and had to be helped up for a few days, but seemed all right otherwise. The fifth day it began to be stiff in the fore parts, refused to help itself at all, and died the next day. It seemed in no pain whatever. A week later another mare had a colt. This one was quite strong and after the first day could get up alone and walked to pasture. The third day it was well when I left the barn at night, but the next morning it lay dead. Could you tell me what could have been the trouble?

Your description of the cases does not give one much to judge from. However, the first mentioned case may have been a case of navel ill which was of very acute nature, thereby causing death of the animal on short notice. We would be unable to say what caused the death of the colt in the second mentioned case.

Severed Tendons.

A short time ago my horse was cut with a mower. The neckyoke came down and the mower ran onto his hind leg, cutting him on the inside of the right leg about three or four inches above the ankle. The cords were cut, but I do not know whether or not they were cut entirely off. He puts some weight on that leg, but the foot from the ankle lies forward, so that he walks on his ankle. The cut is about two inches long. What can be done for this horse? Will he get better? Should he be tied up or left loose? Can these cords be held together in any way so they will knit? Should the leg be put in splints to hold it in shape?

This animal should have been treated intelligently immediately after injury. It being an old wound and somewhat infected now the treatment will have to be somewhat different. You should first know what structures are injured before treatment is begun. It may be this animal will need a shoe with a leg brace attached, but we would not advise treatment further without knowing the exact nature of the wound. Would it not be possible for you to have a competent veterinarian look this animal over?

Warts.

I have a mare about five years old that is bothered with warts around the mouth, lips and nose. You can find a hundred or more on a very small place. My neighbors tell me that they will go away, but she has had them a year or longer. Can you tell what makes this, or give me a remedy?

If you will take this animal to your local veterinarian and have him cut these off with the scissors and touch each one with caustic you will have little trouble with them returning.

Poll Evil.

I have a four-year-old iron gray gelding which has poll evil. He showed signs of something being wrong with hi head about the first of June. I began putting cold water packs on his head for about two weeks, then put liniment on for a week or two. Then it broke and in a few days formed a hole about the size of a lead pencil. The hole is about an inch below the mane on the right side and runs across toward the left side, slanting downward, and about an inch and a half deep. Since the hole formed, which is about three or four weeks, I have syringed it out twice a day with stock dip and liniment. For the last week I have been using salt. It does not discharge very much, but does not seem to get any better.

This should be examined by a veterinarian before treatment is begun, as he will be able to tell the extent of the trouble and advise intelligent treatment. However, if a veterinarian cannot be had you might try the injection of tincture of iodine in the opening once or twice a day for a few days. If this does no good try some caustic, such as chloride of zinc, one ounce to a half pint of water. Use two or three times in one week. The region below the opening should be greased or oiled when caustics are used. After caustic has acted use daily a solution of lysol 1 per cent.

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning disease, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Bacterial Enteritis.

One of our subscribers, Wisconsin, is losing her fowls, and writes this description of the trouble:

We are losing our fowls at an alarming rate, and do not know in the least what is the matter. They get listless, feverish, and after sitting around for a few days die. About the first symptom we notice is that they become lame in the right leg. Can you help us? Is the trouble contagious?

Bacterial enteritis is contagious, and that is about the size of your trouble—and certain it is that it is large enough.

Many times a similar question has come to this department, and in most instances the lameness was described as being in the right leg. This incident, of itself, differentiates the symptoms between bacterial enteritis and the other forms; there are several. The lameness is caused, not from any injury or disease in the leg, but from the soreness coming from ulceration of the pouch which corresponds to the appendix in the human race. Notice a patient troubled with attacks of appendicitis, and in almost every case he is slightly lame in the right side.

The trouble first starts through contagion, and develops rapidly in hot, damp weather. If a fowl were to be examined, there would probably be found ulcers in the intestines and liver. Indeed, this ailment more nearly represents in a chicken what blackhead does in turkeys.

In common with other germ diseases, everything that has been in touch with the flock should be burned and disinfected. Rake and burn everything burnable. Then spray with stock dip, until the houses and yards are reeking. Get after those "bugs" just as if it were something that you could see with the eye. Clear the boards from droppings each morning, then do some wholesale culling and destroying of the flock.

To destroy a chicken that does not look so very bad requires a good deal of nerve, but it pays in the long run. A bird in the first stages can transmit the trouble to any or all of the others, varying with the condition of the individual. At least, if you cannot bring yourself to make a wholesale clearance, then do place all that seem moping in a house where they cannot have access to the flock.

Give salad oil, which will remove the irritating matter, and feed only well-cooked rice, or milk. Stale bread dipped in sweet milk is a good diet, too. Scald all drinking and feeding vessels to prevent contagion in that quarter, and place permanganate potash in the drinking water. Try to study out the numberless ways in which the contagion may be spread, and then do your level best to "head it off."

Tractors With Quality and Pull.

THE Nilson tractors have quality and pull. They are light, compact, with steel construction and easily accessible parts and have plenty of power and ample traction. They are the product of careful, efficient work by the Nilson Farm Machine Company, Minneapolis, Minn., and good work can be expected of them. Two sizes are on the market-Nilson Senior made for four fourteen-inch plows and Nilson Junior for two or three fourteen-inch plows. Either of these sizes may be seen at work at any of the tractor demonstrations which will be held this year. If possible, see them at one of the demonstrations, also, write for complete catalog to the company named above. See page 17 and kindly mention this paper when you write.—Adv.

In Fuel Economy--Pulling Power And Easy Operation

The Rock Island Heider 10-20

Burns Kerosene and Gasoline

Will Open Your Eyes At The Demonstrations

This four-wheel, four-cylinder tractor is equipped with tanks for both kerosene and gasoline, and you can switch from one to the other without having to make a carburetor adjustment.

It will drive your smaller machines such as cream separator, washing machine, pump, and saw wood, and do it economically using no more fuel than is absolutely necessary for the work.

Here is a real all-purpose tractor that has proven by eight years of actual field work its ability to do all the power work on your farm easily and economically

It will furnish belt power for a grain separator, clover huller, ensilage cutter, feed mill, hay baler, road grader, etc. It will pull three 14-inch plows under normal conditions or four under favorable, plowing about an acre an hour.

Speeds Forward--Seven Reverse

Owing to the specially patented friction transmission this tractor has seven speeds forward and seven reverse. As a result of this style of transmission, the Rock Island Heider has less gears than other tractors which means less trouble, less complications and your repair expense cut to a minimum. Investigate the Rock Island Heider carefully for it will do your work the way you want it done and burn the least amount of fuel. Write for the catalog and SEE IT WORK AT ONE OF THE DEMONSTRATIONS

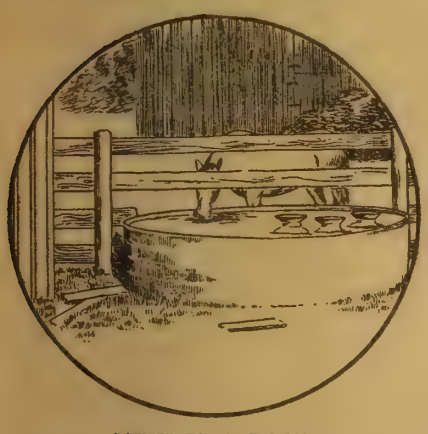
It Will Pay to Keep Milk and Cream Clean and Cold.

Wisconsin Agricultural Experiment Station.

PURE and wholesome milk fit for food can be produced only from well-cleaned, healthy cows. The milk must always be handled in clean pails, strainers and cans cooled quickly, kept cool and protected from dirt. The sooner milk is cleaned after it is drawn the better. The longer it is left in the stable the more odors it absorbs. Bacteria or germs grow rapidly in warm milk. A well-planned milk room lessens labor and helps greatly to improve the quality of the milk and cream produced. If a gasoline engine is used to furnish power it should be kept where the odor will not taint the cream. Germs thrive in dirty, moist places. A damp and greasy separator bowl makes one of the best bacteria breeding places. Improve the quality of your product by keeping the separator clean and dry.

Cleanliness and cold are the two most important requirements of a good dairy. Remove immediately the milk drawn from clean, healthy cows in a clean stable to a clean, cool milk room. Separate in a clean separator. Place the cream in a clean can in cold water. Deliver cream at least four times a week in summertime and three times a week in cold weather.

The Poor Way.



MILK IS A FOOD.

So no matter how clean the barn may be it is a poor place to keep milk. The stock tank or the watering trough, too, is a poor place to hold milk or cream. Therefore the cans should be removed to the milk room immediately after milking.

A POOR PLACE FOR IT.

When milk is separated in the stable it absorbs the odors of the barn and takes any dirt which may be in the air.

JUST RINSING WON'T DO.

Merely running even hot water through a separator will leave it dirty and unfit for use. It is well, of course, to flush the separator with milk or warm water when through using it for separating.

The Better Way.

COOL MILK QUICKLY.

On many farms the water for the stock passes through a small tank in which the cans are placed soon after milking. This tank can be covered or, at small expense, enclosed in a milk house.

IN ITS PROPER PLACE.

A well planned milk room should have a well-drained cement floor, so that it may be cleaned easily.

BE THOROUGH IN CLEANING SEPARATOR.

To produce clean cream, the parts of a separator should be carefully washed with warm water each time, use a brush and cleansing powder, then scald with boiling water and spread tinware to dry in the sun.

FILL SILOS QUICK

Three sizes, 6 to 18 H. P., direct drive to main cutterhead shaft, 2¾ in. in diameter, powerful 6-blade fan on same shaft. Emery wheel attached.

Farmers' Open Forum

Bigger Profits on Beef Cattle.

To the Editor:—The hot weather has left its effect on live stock of this section. The pastures, while exceptionally good the fore part of the season, are now dry and hard, while the flies have also done their part. The number of market cattle I think is somewhat less than a year ago, but will probably be marketed in better condition, as our corn crop promises considerably better than a year ago, although it is hardly an average crop and needs more rain. We have had some showers lately, but everything is so dry that it has been only a partial help. Owing to the shortage of crops last year and the overstocked condition of this section I think less sales of pure-bred breeding stock were made and I am inclined to think more of these are for sale now than a year ago. A great change in the beef cattle industry has taken place here in the last ten years. At that time I think nearly three times as many breeders bred Short-horns as any other beef breed and now I believe the Aberdeen Angus breeders are most numerous. Conditions as compared with last year could be summed up like this: There are less market cattle, but probably better feeding conditions which means that they will be marketed in better condition and owing to better prices (which are in prospect at this time) will probably bring greater returns than last year. What applies to cattle will, I think, also apply to hogs only in fattening in a more pronounced degree.

Parke Gelbach, Breeder of Aberdeen Angus cattle, Grant county, Wis.

Never Such a Hay Crop.

To the Editor:—Never before have we had the hay crop that we have had this year. As to the condition of our stock the farmers were not carrying a lot of stock owing to the condition of corn last season. There will be a number of cattle marketed this fall. However, we are not going to be rushed any on account of the dry weather.

L. P. Martiny.

Chippewa Co., Wisconsin.

Kellogg Travels in Iowa and Minnesota.

To the Editor:—Fruits, apple and plums, are very scarce, probably owing to overbearing last year. Except two orchards at Pocahontas and a few trees at Algona I have scarcely seen an apple. Perhaps the cold, wet weather of May and June may have affected the bloom the same as strawberries. In this part of the county a severe hailstorm last Monday injured the trees and destroyed what little fruit there was. In Iowa, planters of fruit trees expect the trees will take care of themselves until they go to pick the fruit. It is all corn, hogs, oats, hay, a few horses and cows. I rode 200 miles and saw but one silo. There is very little dairying. The report is an automobile for every thirteen inhabitants; this doesn't say how many have mortgaged their homes for an auto. Drouth prevails over almost all this country, but still the corn crop is looking well and will be heavy if we can get rain in time.

Threshing from the shock is quite general and some oats are 100 bushels per acre, but sixty is about the general expectation.

As soon as I crossed the Minnesota line I wanted my coat on, as the weather was cool and there was a nice looking rain. I am visiting Clarence Wedge, of the Wedge Nursery Company. Their thousands of roses and Hydrangea and millions of evergreens are very fine. They had to import twenty-five men from Minneapolis last spring to help them through their busy season.

I am making my way to Minneapolis where I will write you later.

Mr. Wedge called in sixty of his horticultural friends for a picnic yesterday on the lawn. There we met in his new hall built to accommodate the friends and neighbors for social and prayer meetings and I had to tell them what I knew about horticulture and my trip over the plains and digging gold in California.

Geo. J. Kellogg.

Albert Lea, Minnesota.

A TEAM of Pabst Percheron stallions. Many of the stallions to be sold at the Wisconsin State Fair Horse Sale are broke to work. See advertisement on page 28.

Water For Cows.

All animals require plenty of good, pure water. This is especially true of the milking cow, as water constitutes more than three-fourths of the volume of milk. The water supply, therefore, demands the dairyman's most careful attention. Stale or impure water is distasteful to the cow and she will not drink enough for maximum milk production. Such water may also carry disease germs which might make the milk unsafe for human consumption or be dangerous to the cow herself. During the winter, when cows are stabled the greater part of the time, and unless arrangements have been made to keep water before them all the time, they should be watered two or three times a day. If possible, the water should be 15 or 20 degrees above the freezing point, and should be supplied at practically the same temperature every day. When water well above freezing temperature is stored in tanks and piped direct to the cow, there is probably little occasion for facilities to warm it; but when it stands in a tank on which ice often forms, it usually pays well to warm it slightly. This can be done by a tank heater, by live steam, or by hot water from a boiler. If a boiler is used for running a separator or for heating water to wash and sterilize utensils, steam from it can readily and cheaply be used to warm the water.—[Farmers' Bulletin 743.

UPPER WISCONSIN FARM LANDS.

ONEIDA County Lands: I have four hundred acres in solid body on a main road, 4 miles from city with groves of timber and several small lakes, very desirable property, can divide if necessary into four pieces. Ask for map and prices. Also have an improved farm, 160 acres, good house and barn, full of clover and timothy hay, big field of fine oats, 70 acres of clover growing, pasture, running water, timber, only half mile from school and cheese factory. Ideal dairy farm. Want $3,000 cash, balance on time. Address C. P. Crosby, Rhinelander, Wisconsin.

WE ARE selling a part of our 10,000 acre tract, located in Oneida County on beautiful lakes with the best known soil in upper Wisconsin, in the heart of the choicest dairy spot on earth. To see these lands is to buy them. Write or inquire Oneida Farms Co., E. M. McVicker, Prop., 120 First National Bank Bldg., Milwaukee, Wis.

Come to Detroit
The Automobile Center and
LEARN THE AUTOMOBILE BUSINESS

33,000 sq. ft. of Additional Floor Space

Detroit trained men get preference and get jobs quickly. No other city can give what Detroit offers. Think what it means to learn in the Michigan State Auto School. Factories endorse our school, glad to employ our graduates or offer them territory in which to sell cars and start garages. Unlimited opportunities. You're right in the middle of the greatest auto activities. Men are needed everywhere as testers, repair men, chauffeurs, garage men, and salesmen. Hundreds of our graduates start in business for themselves.

Earn $75 to $300 a Month

We teach you to handle any auto proposition. You graduate in from eight to twelve weeks. Our equipment is complete. Students actually build cars from start to finish, getting factory training in assembling, block-testing, road testing, everything. Special complete course in Oxy-Acetylene brazing, welding and cutting, separate from regular course. All leading types of starting, lighting and ignition systems in operation. Learn to time motors, adjust carburetors, magnetos, valves and bearings quickly and accurately. Six-cylinder Lozier and eight-cylinder King are used for road instruction. We have a new Chalmers "6-30" chassis with 3400-r. p. m. motor, the latest thing out, also a 1917 Detroiter-6, and an Overland. Just added Delco System as used in Buick, Hudson and Packard Twin "6." We have also installed a 1917 Willys-Knight complete chassis in the shop for students to work on.

Detroit Is the Place to Learn—Start Any Time

There are 44 auto factories in Detroit and 140 accessory and parts factories. Our students have the privilege of going thru any or all of them. We now operate Westinghouse Auto-Lite and Bijur Service Stations. After careful consideration the Westinghouse Electrical & Mfg. Co., the Auto-Lite Co., and the Bijur Co. decided that our school was the best place in Detroit to handle their service stations. This has added thousands of dollars' worth of equipment and makes our electrical department unequaled. These are special advantages offered **by no other school.** Students get actual experience and training in handling all kinds of electrical auto equipment and taking care of trouble. We have just installed a Sprague Electric Dynamometer for block-testing purposes for students' use. The Michigan State Auto School is the only Auto School having this equipment. Auto factories need Dynamometer men constantly. We have a greater demand for our graduates than we can meet. Factories and Garages are paying big salaries to men who know how to handle electrical equipment quickly and properly. Detroit is the automobile center. You get practical instruction. Come to our school and learn the auto business right. School open all the year. Enter classes any time, any day. Three classes daily: morning, afternoon, evening. You can work in the factory in the daytime and take course at night.

There is a great demand for Michigan State Auto School students. Garages throughout the country write us for men. Auto factories write and phone for men constantly to fill permanent places. Why not fit yourself for one of these good paying positions?

Follow the Crowd to the Michigan State Auto School. Come to Detroit.

THIS IS ONE OF THE 1916 CLASSES

Factory Co-Operation

We have completed arrangements with the Auto factories to put them in touch with men who intend going into business for themselves. Think of getting inside information as to the best territory and where the garages will make the most money. The factories are looking for trained men to represent them. Men who know the auto business from A to Z are in biggest demand. Come here and start right—get the information first-handed and don't wait.

Act Quickly - Now - Don't Wait

Fill in the coupon and mail it now; get full particulars; get "Auto School News" and New Catalog. They are both absolutely free. Or better still, jump on the train as hundreds have done, and come to Detroit, the "Heart of the Automobile Industry," and learn right. Remember you can enter classes any time, any day. The price of course is based on giving full value. Therefore we cannot give another course free. Graduates in the complete auto course are competent to handle farm tractors. Act quickly—now. We have no branches. Write or come direct to to this school.

Additional Building and Equipment

33,000 sq. ft. of additional floor space in our new building, thousands of dollars' worth of new equipment, plenty of room for students to work. This comes with our new building at 687-89-91 Woodward ave., which we will occupy about Sept. 1st. Our school has grown by leaps and bounds, students come from all over the world. Men have left after graduating and started in business for themselves; others have accepted good jobs both in Detroit and over the country. Their work has proven that we train them rightly. We are constantly adding new equipment. Our students get the best and latest things to work on. Our electrical department is thorough and complete. It is in charge of one of the most competent electrical instructors.

Money Back Guarantee

We guarantee to qualify you in a short time for a position as chauffeur, repair man, salesman, tester, demonstrator, garage man or automobile dealer, paying from $75 to $300 monthly, or refund your money. We have constantly more requests for Michigan State Auto School Graduates than we can supply.

Grass and Corn Helped by Rains.

Pastures Show Improvement---Prospects For Silage and Some Mature Grain Are Good---Threshing Is Beginning.

WISCONSIN.

Adams County.—August finds the ground well soaked with rain, with a continuation of heavy showers at short intervals, interfering greatly with the stacking of grain and practically putting a stop to the making of wild hay. Rye is mostly in the shock with very little stacked, as yet. Oats mostly are being harvested. Corn has improved greatly since the rains. Many fields of early corn have been practically ruined, the excessive heat killing the tassel. Late potatoes are looking good. Threshing is just beginning. The weather being unfavorable for it.—W. B. B.

Brown County.—Harvest is nearly over. Most of the grain is cut and in barn or stack. The returns will probably be light, oats about 65 per cent, barley 65 per cent, rye 60 per cent and potatoes 40 per cent of the normal crop. Corn has made a wonderful growth here and makes one of the best showings in the state. Several fields in this vicinity eight to eleven feet high are tasselled and silked. If the weather continues good there will be a great corn crop. Pastures are very poor, consequently the cream check is small. Threshing has not begun.—J. D. McAllister.

Buffalo County.—Small grains are good with corn exceptionally heavy. Pastures and meadows are good. Potatoes are backward, but fruits and vegetables are plentiful. Cattle and hogs are scarce although prices are high. Horses are plentiful, but there is no demand for them. Many automobiles are being sold in this locality. Gasoline sells for 22 cents a gallon. A large amount of cheese is shipped from this section. Roads are fine. Many new bridges were built this summer, most of them cement.—John Wald.

Burnett County.—Black rust on wheat diminished the crop outlook considerably. Drouth and scorching winds caused the oats to wither before mature. Winter wheat and rye were normal when cut. Late rains have redeemed the cornfields and pastures; potatoes show no inclination to thrive, but may, if frosts stay away till October 1st. Cattle, horses, sheep and hogs are in fair condition and healthy. Farmers are shipping already, and in spite of the bumper hay crop will reduce herds on account of the satisfactory prices prevailing.—Erick H. Johnson.

Clark County.—Several weeks of extremely warm weather hastened the maturity of oats and barley, as well as all small grains so that harvesting is now done and threshing has begun. Present indications are that the small grain crop will be inferior in quality to that of last year, oats especially filling too rapidly to be heavy. Corn has grown wonderfully and may mature, if frost holds off. Many cattle have been sold throughout the county. The northern part suffered severely from the late storms, corn and grain being completely destroyed in some sections and many barns were burned. Potatoes are good, but not producing as abundantly as was expected.—Louis Buddenhagen.

Crawford County.—A splendid hay crop was put up during the dry weather, and the grain was gathered in good condition. Threshing is now going on with fair yields. Pastures are very dry and milk production has fallen off greatly. Recent rains did much good, but missed some sections. Pastures need heavy rains in order to revive. Some of the corn was damaged beyond help, the rains coming too late. There will hardly be half a crop. Potatoes are very scarce. The tomato crop is badly injured also. Quite a good many cattle have been shipped from this county during the last two weeks. The great need is more rain.—A. M. Laird.

Door County.—The long dry spell cut down the oats crop about 10 per cent, as they did not fill out well. Since the rain corn and potatoes are doing well. The late potatoes will set much better on account of the rain. Corn is looking well and if frost stays off will be a bumper crop. The cherry crop was cut down at least 60 per cent because of blight. Spraying, properly done, will control the blight, but is not of much use if the blight is well started. Apple trees are well loaded, but scale is bad and will cut the crop 25 per cent.—John Aznoe.

Dunn County.—Threshing is under way in this locality. The yield is about 60 per cent of last year's. Corn needs rain badly. Potatoes are almost a complete failure. Pastures are drying up, and receipts at the creameries are falling off. Flies are very bad.—J. D. Millar.

Iowa County.—Corn is doing fine and ears are forming well, but the ground is getting dry. Most of the grain in the shock has been threshed. Oats are making forty bushels of fair quality grain. Barley is good. Late potatoes will be a failure if rain does not come soon. The meadows have not started to grow since the hay was cut. Pastures are dry.—John M. Blotz.

Iron County.—Haying is about completed, the crop running about 10 per cent ahead of last year. The weather has been hot and favorable for haying. Potatoes are looking well and should yield a heavy crop. Oats are about ready to harvest. The oats crop looks well. There has been plenty of rain and all pastures and meadows are in fine condition. Live stock are also in fine condition.—J. A. Becker.

Jackson County.—The extreme heat of July and early August has developed the corn beyond expectations and just about made up for the late start caused by the cold, wet spring. With fairly good conditions from now on, much corn will be ready to cut by September 15th. Harvest is over and threshing has begun. While oats and barley will not give the big yields of last year, they are fully up to average.—P. W. Jones.

Juneau County.—The rains of the last week have started the pastures. Fruit has been greatly damaged by the drouth and heat, and is poor in quality and quantity. Stacking has been done to some extent, but is going slow on account of rains. The wet weather has also held the threshing back. Hardly enough threshing has been done to get an estimate, but it is probable that rye and barley will prorve to be of as good quality as last year's, but oats will be of poorer quality, running only about one-third as good as last year. Stock has suffered some from heat and flies.—C. E. Haskins.

Langlade County.—Haying is done, a big crop having been put up without rain. Rye, oats and barley are light crops on account of hot weather and lack of rains. Corn looks very promising. Potatoes are looking well, but are few in a hill. Second crop clover and alfalfa are short on account of hot weather and lack of rain. Pastures are drying up. Apple crop is light and small in size. Harvesting will be about finished next week. Threshing has begun.—Charles Lade.

Lincoln County.—Small grains, oats and barley are being cut and are very poor as compared with last year. They will probably not yield over 60 per cent. Potatoes looked very well until about the middle of July, but after a month without rains the prospects are for a poor crop with not many salable potatoes. The meadows and pastures are good considering the long dry spell and cows are doing very well. Hay was a very good crop.—G. A. Patterson.

Manitowoc County.—Harvesting of small grain is now in progress. The local showers arrived too late to be of any benefit to oats, barley, spring wheat and peas, and, as a result they are poor both in quality and quantity. Peas will not be half a crop compared with last year. Due to the showers and warm weather corn generally is in fine condition and is making an immense growth daily. Potatoes also are doing well. Pastures are drying up and the milk production is rapidly falling off. Vegetables are growing fine since the rain. Live stock are doing well.—Edward E. Straka.

Outagamie County.—The wheat crop is very small in acreage and what is left will make only about one-half of last year's crop. Oats are about all cut, but are light in weight, about two-thirds of a crop compared with last year. Barley is very poor quality on account of the drouth. Rye is about one-half a crop, but is of fair quality. Corn is improving quite a little since the rains and looks more promising. No threshing has been done. Early potatoes are very poor. Late ones are doing fairly well under present conditions. Pastures have been dried up, but will probably improve from now on. The hay crop is light on old meadows. Grain crops will be very much below last year's average.—Harry Lepplu.

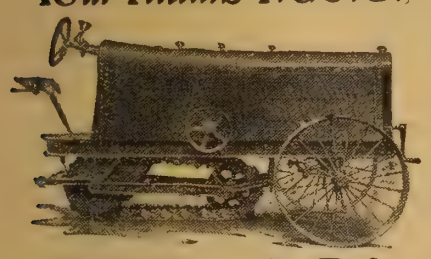
St. Croix County.—The grain has all been cut, some stacked and a little threshed. The wheat crop is so light and thin that it cannot be used for milling purposes. Rye is fairly good, but the quality is not so good as last year and a considerable portion of it will not grade No. 2. Early sown oats are a good crop on light, sandy loam soil, but almost a total failure on heavy clay land. All late sown oats are a failure. Early potatoes are half a crop and late potatoes do not promise much. The corn crop looks as well as could be expected. The stalks are not large, but seem to be eared out well. The hay crop was the best we have ever had and was cut and stacked in prime condition.—Stephen Everson.

Sawyer County.—Dry, hot weather has cut small grain probably 20 to 25 per cent according to the soil upon which it was grown. About 80 per cent of the harvesting is done and stacking is under way. No harvesting has been done. Corn has been doing fine during the recent hot period and has made up to some extent for the time lost during the fore part of the summer. The potato crop is an uncertain factor. The vines and top growth are good, but many complaints have been heard in regard to the setting, the general complaint being that there are too few set, indicating a comparatively light crop. Live stock are doing well, although some pastures are getting short. There is considerable increase in the number of cattle pastured in this vicinity this year.—Jens Uhrenholdt.

Walworth County.—Pastures, potatoes and late sown grain look very poor. Early sown grain is turning out good. Corn is very uneven, depending largely upon the number of local showers the section received. Corn is from two to twelve feet tall.—O. Taylor.

Wood County.—July was very dry and hot with only one shower during the month. Hay and grain were damaged by the drouth. Timothy and clover hay made about three-fourths of a normal crop. All was saved in good order. Marsh hay was a full crop. Pastures are drying up and the milk supply is about one-third less than it should be. There will be no second crop of hay this year. Oats are about 75 per cent of a normal crop. Rye is poor. Barley is very good. Corn is backward, but has been doing better the last two weeks on account of rain. The outlook is for a small yield. Early potatoes will be a small crop. Rains from now on will make late potatoes a fair crop. The acreage is about the same as last year. Threshing will begin this week. The grain is all harvested in good order. Cabbages are a failure because of insects and heat. Other garden vegetables are fair. A few horses died from heat, a great many were made useless for work. A number of chickens were killed by the heat. Cattle are scarce and high. There are no cattle on feed for the markets in this locality. Hogs are very scarce and high priced. All kinds of live stock are healthy.—P. B.

Tom Thumb Tractor



20 H. P. on the Belt
12 H. P. on the Drawbar
GUARANTEED

Bridges the soft spots, lays and runs on its own steel track. Will not slip, mire or pack the soil.

"ALLWORK" Light Tractor

A Four-Wheel Tractor Dependable as a Horse

Pulls Three Plows Easily

A simple, durable, powerful machine selling at a price you can easily afford. Equipped with four-cylinder vertical engine 5x6, developing 25 h. p. at belt, 12 h. p. at drawbar. Two-speed transmission working in oil, automobile type front axle, roller-bearing rear axle, steel gears thoroughly protected from dust and self-oiling, radiator and fan that cool absolutely, 16-inch face rear wheels, weight 4,800 pounds.

A sensible, practical tractor, built by a company with an established reputation and numerous machines at work in fields today. See the ALLWORK at the leading demonstrations this year.

ELECTRIC WHEEL CO.
Box 65A QUINCY, ILL.

Farmer Plows More Than Eight Hours a Day With Tractor.

R. H. JONES, Hartford, S. D., reports plowing sixty-five acres in eight days with a Waite tractor. This is a good example of the work that the Waite tractor can do. It is a general purpose tractor and, besides doing rapid, efficient plowing, can disk, pull the binder, haul loads to market and run all farm belt machinery from a pump to a thresher. Those who attend the tractor demonstrations will have a chance to see the Waite tractor at work. Information and specifications may be had on application to the Waite Tractor Sales Co., Dept. V, Westminster Bldg., Chicago, Ill. See page 14.—Adv.

Letters intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Editor Home Dept., Wisconsin Farmer, Madison, Wis.

Can Fruit Without Sugar.

Fruit for use in pies or salads or as stewed fruit can be put up or canned without the use of any sugar at all, according to canning specialists. They, therefore, advise those who, because of the high price of sugar, have been thinking of reducing the amount of fruit put up, to can as much of their surplus as possible by the use of boiling water when sugar sirup is beyond their means. Any fruit, they say, may be successfully sterilized and retained in the pack by simply adding boiling water instead of the hot sirup. The use of sugar, of course, is desirable in the canning of all kinds of fruits and makes a better and ready sweetened product. Moreover, most of the fruits when canned in water alone do not retain their natural flavor, texture and color as well as fruit put up in sirup. Fruit canned without sugar to be used for sauces or desserts must be sweetened.

Can the product the same day it is picked. Cull, stem or seed and clean the fruit by placing it in a strainer and pouring water over it until it is clean. Pack the product thoroughly in glass jars or tin cans until they are full; use the handle of a tablespoon, wooden ladle or table knife for packing purposes. Pour over the fruit boiling water from a kettle, place rubbers and caps in position, partially seal if using glass jars, seal completely if using tin cans. Place the containers in a sterilizing vat, such as a wash boiler with false bottom, or other receptacle improvised for the purpose. If using a hot-water bath outfit, sterilize for thirty minutes; count time after the water has reached the boiling point; the water must cover the highest jar in container. After sterilizing remove packs, seal glass jars, wrap in paper to prevent bleaching, and store in a dry, cool place.

If you are canning in tin cans it will improve the product to plunge the cans quickly into cold water immediately after sterilization. When using a steam pressure canner instead of the hot-water bath, sterilize for ten minutes with five pounds of steam pressure. Never allow the pressure to go over ten pounds.

Good Bread.

One of our readers, Mrs. E. B., writes to us for a recipe for good light bread. Let us begin with a definition of good light bread.

Bread should have a nutty and sweet odor. Bread with a sour taste or smell is decidedly not good bread.

It should be of fine, even texture with no large holes in it. If the finger is pressed against the bread it should dent easily, but the dent should spring back to the level surface. If it does not spring back it means that the bread has not been sufficiently baked, or if you cannot press it in easily it means that too much flour has been used.

The crust shuld be uniform in thickness on all sides of the loaf. Use a separate pan for each loaf of bread so that it will rise easily and so that there will be a crust on all sides. The crust should be rather thin and should not be hard or tough.

First in importance in making good bread is to have good flour. You cannot make good bread with an inferior grade of flour. Next in importance is the yeast. The yeast plant requires sugar for food. The growth of the plant on sugar produces a change called fermentation, breaking the sugar down into two new substances, alcohol and carbon-dioxide gas. This gas is the substance desired to make the bread light. The fermentation is arrested by baking the bread, the yeast plant being killed and the alcohol and gas driven off. Dry yeast cakes, compressed yeast or liquid yeast may be used. One cup of liquid yeast in a good lively state is equivalent to one cake of compressed or dry yeast. Salt is added to bread to improve the flavor. The sugar improves the flavor also. An excess of sugar affects the tenderness of the crust and crumbs and darkens the color of the crust. For shortening, either butter or lard may be used. Lard is said to produce the whiter loaf and butter to give the better flavor. The shortening tends to make the crumb more tender.

Now for the recipe. Here is one made with dry yeast that we know makes good bread. Set the sponge at night. When you start your evening meal put a yeast cake to soak in lukewarm water. Cook your potatoes without salt and save the water from them and two medium-sized potatoes. Run the potatoes through a fine sieve while they are still warm. When the evening's work is finished stir into the potato water about a quart of flour and the well-soaked yeast cake. There should be nearly a quart of water. If the sponge should be too thick, add a little water until it is the right consistency. It should be considerably thicker than cake batter. Beat thoroughly and set away until morning. If the weather is cool, put the sponge where it will keep reasonably warm. It should be light and bubbly.

In the morning add to the sponge a tablespoonful of lard, two tablespoonfuls of salt, two tablespoonfuls of sugar, and flour enough to make dough of proper consistency, which should be about a quart and a half. Knead until the dough is quite smooth and elastic. The dough should not be sticky. A difference in flour will make a difference in the amount to be used. Place the dough in a greased bowl, grease the top of the dough lightly to keep crust from forming, cover and let rise in a warm place.

When the dough has doubled in bulk, knead down. Do this three times, then make out into loaves. Let rise again and bake from forty-five minutes to one hour in an oven that will brown white paper in five minutes. The bread should be an even color and have a crust about one-eighth of an inch thick.

Small loaves can be more thoroughly baked than large ones. When several are baked in one pan, the inside loaves are rarely baked thoroughly, so it is best to bake each loaf in a pan by itself.

The Call of the Hour to the Farmer

Mrs. Cora G. Lewis Gives Reasons For Drift Away From the Farm in Talk at Country Life Conference.

THE call of the hour to the farmer is not a call to his pocketbook or to his material prosperity, although the most serious question before our American farmers today is the saving of the land. The preservation of the soil, that it may be a rich heritage to each succeeding generation, should be a part of the religion of every landowner.

The call, as I hear it, comes from the hearts of the women and children asking for a higher ministry to the spirit of those who live in rural neighborhoods. Until you answer it in terms that transform farm environment, so that it gives peace and happiness through more leisure and more color and expression to life, the drift from the farm will continue.

The farmers of your state and mine have been tremendously prosperous the past few years, and yet the drift away from the farm is increasing. It is because there are too many starved hearts in the homes. There is too little companionship in the neighborhood on the plane of spirit, with books and art and music and the joyous things of life; those things that recreate and vivify life through recreation. The answer is more leisure, more beautiful and convenient homes, more care for women and a brighter social life for the young people, a finer type of community life with more of an intellectual and artistic flavor to it and a new neighbor line which runs like a silver thread through the lives of all.

The farmer and his family need more playtime. Coming across the country this week, I enjoyed the beautiful scenery, the streams and wooded hills, and I wondered if anywhere there were bits of it set apart for playgrounds for the people, as cities buy and set apart valuable tracts of land for community use. Playgrounds are public utilities in municipalities today calling for big budgets to provide recreation and music for the people, but I know of no country community willing to do anything to promote play, although it would be a comparatively simple thing.

Every schoolhouse could have and should have a campus of forty acres, well planned, landscaped and cared for. This campus should house a teacherage—a home for the teacher—and should be, besides a playground for the neighborhood, a laboratory for the teaching of agriculture and other sciences. The best of the young life is leaving all of the country neighborhoods as soon as it can escape. The most precious possession, the jewels—the children—do not want to remain in the life made for them on the farms longer than is necessary. This is a tremendous indictment of the farmer that his young will not root beside him in the civilization he, as a citizen, makes. It is true that the cities need these vigorous, finely poised young people from the country, and that almost every city enterprise, banks, stores, railroads, newspapers—are run by this splendid brood which flows from country to city. But the country community should keep for its own future some of it at least. The solution is easy if you will turn aside, lay by a few Puritanic ideas as to recreation and do some planning for culture, happiness, social advancement and amusement.

Wherever possible the small town should be the community center for the country neighborhood, and if that is not possible, make the center the country schoolhouse. In that schoolhouse put a library—for the grown people and for the children—a moving picture machine, a standard to use standard films, and the Pathescope for films with lectures. Further promote visual education with the stereoscope and slides and constant exhibits.

One week there may be an exhibit of pictures by American artists, the next month or week English art. Reproductions of all the famous pictures of the world may be had for almost nothing. Have a pottery exhibit from some kiln, and another week exhibit jewelry and other fine handicrafts. Have an exhibit of rugs of all kinds, not omitting the beautiful rag ones, perhaps woven in the shadow of the community center.

Let the farmers get behind a movement for rural traveling libraries and supplement the one established in the community center. Have a home lecture course on subjects of local interest and given by the people in the neighborhood. Have a lyceum course with the current history and the world's development, and for special occasions choose as your speaker some person of state or nation-wide reputation. These things will make a community feel a part of the country, rather than a lonely country neighborhood.

Have literary societies and debates with neighboring societies, entertaining on formal occasions societies from other neighborhoods. Let these country organizations have pennants and banners and an identity. Make historic exhibits of family heirlooms and possessions, securing many things from societies which make loan exhibits. If it is ever possible to lay your hands upon a man or woman who has written a little for magazines, stand him up as "Exhibit A" that the people may be interested in better reading, especially if the writer has ever written anything of your community. Develop in every way the local color in a community; that tends to develop community pride—a thing that too many country neighbors lack. The growth of country clubs for women, of parent-teacher organizations, will bring much of value into the country.

Every neighborhood will be able to get help in arranging exhibits from their state university. Do not forget the handicrafts and industries of the neighborhood. Many children today have never seen a blanket for which the wool was carded and spun by hand and woven on a loom at home, or a bit of linen made by someone from the flax in the field. These things are good for the young people to see and will create a respect for the handicrafts, arts and industries that are yet an interesting part of farm life in so many countries.

I remember once, in a little art exhibit held in the small town where I live, we had a corner called "the development of light," beginning with the old whale-oil lamp, traveling the entire trade up through the candle, kerosene lamp, gas and to electricity. China exhibits may be held, showing the fine pieces of china belonging to the old neighborhood families, giving the young people a new reverence for home craftsmanship that used to exist, the historic background of the home. Athletic meets of all kinds, joined in by young and old, will do much to bring color and life and happiness to the young people on the farms.

Jane Addams has written of the spirit of youth in the city streets, and I beg of you to give heed at your rural life conferences to the spirit of youth on the country trail—that golden irresistible tide that is ebbing away from the land to the city. In a spirit of kindliness encourage every manifestation of that youth in music and in dramatics, in art and in works of all kinds; let it learn leadership at home.

I wonder how many country communities with beautiful scenery have interested their young people in out-of-door plays?

Some of you people who live in the midst of beautiful old woods would laugh if you could see the little out-of-doors theater in the town where I live. It consists of a few cottonwood trees growing on the bank of a muddy stream. That stream is not beautiful in daylight. It has no gravelly banks and the water is not clear. But when our young men build up a stage and screen it with transplanted trees and light it, and our young people gather there to put on a Shakespearean play, we think it the most beautiful place in the world.

It takes much time to supervise these plays and costs some money for effective dramatic training, but all the time the young people are tremendously interested in something that is intellectual. They are doing teamwork and they are coming in contact with fine literature.

A group of our young people hired a young man to come from a distant city to put on the finishing touches to a Shakespearean play which was given for the library. Besides giving the people a great deal of pleasure and an interesting summer it netted several

hundred dollars and was a financial success. I have seen Forbes-Robertson in Shakespearean plays and the Ben Greet and Coburn players out of doors, but I have never seen a Shakespearean performance as beautiful to me as that put on by the young peopl and children in my own community. Our ladies made costumes, one lady having a talent for designing doing all the planning, and our houses were full of scraps of cotton flannel, cheesecloth and paper flowers for weeks that of itself was a recompense.

You cannot interest young people after they are entirely grown and their minds are set. I do not know why, but there is something that will not change after we are grown!

Every state should have a censorship of moving pictures, but should be careful not to censor the entire life and interest of everything. The world really goes astray, loses spiritual tone during its leisure hours. Everyone must work, but when the day's work is done and the young person comes to his hours of leisure the forces that are devastating grip him and ruin him unless his soul is filled with something that keeps him alive to the things of the spirit.

It is most necessary to take care of the amusements and entertainments of the people, not only in the country but in the city. Commercialism in the city is taking care of these entertainments, and one of these days, with automobiles, trolley lines coming into the country, commercialism will step out and build little theaters all over the country, having in its grasp the entire sources of entertainment provided to our people. But the field in the country today is clear and we should build our schoolhouses with a stage, and arrange to develop the dramatic element in our own communities and give a chance for self-expression along artistic lines to those who have talent. Any sort of community gathering on some other plane than that of gossip or criticism will itself have made a start toward building a better environment and better atmosphere and make people more contented and happy.

Mock Angel Food Cake.

To the Editor:—I am sending my recipe for the lady who wanted to know how to make mock angel food cake. This recipe requires the whites of only two eggs, but it will make cake that will melt in your mouth. You cannot fail if you follow directions carefully.

Set one cupful of milk in a pan of boiling water and heat to the boiling point. Into a sifter put one cupful of flour, one cupful of sugar, three teaspoonfuls of baking powder, a pinch of salt and sift together four times. Into this pour the cup of boiling milk and stir smooth. Then put in the well-beaten whites of two eggs. Do not stir or beat the eggs into the mixture, but fold them in carefully, drawing the spoon through the mixture toward you, then shoving it back with the back of the spoon; next draw the spoon from right to left, folding in the eggs carefully.

Do not grease the tin nor flavor the cake. Bake in a moderate oven. Ice with frosting flavored with lemon or orange. Mrs. Stella S.

Three Good Recipes.

To the Editor:—In answer to Mrs. E. R.'s request for mock angel food cake I am sending two.

Mock Angel Food No. 1.—Cream one cupful of sugar and butter the size of an egg. Sift together three times one and one-half cupfuls of flour and one and one-half teaspoonfuls of baking powder. To the sugar and butter add alternately the flour and two-thirds of a cup of cold water. Then fold in the stiffly beaten whites of two eggs.

I bake this cake in a long, narrow loaf tin and frost with any desired frosting.

Mock Angel Food No. 2.—Mix and sift together one cupful of sugar, one and one-half cupfuls of flour, three teaspoonfuls of baking powder and one-third cupful of scalded milk. Fold in the beaten whites of two eggs. Flavor with one teaspoonful of vanilla and bake forty-five minutes. Use an angel food tin to bake in.

Here is a very good recipe for a cheap sponge cake. Beat until light one cupful of sugar and the yolks of four eggs. Add three tablespoonfuls of cold water. Put one and one-half tablespoonfuls of cornstarch in a cup and then fill cup rounding full of flour. Add one-half teaspoonful of baking powder and sift three times. Add to yolks and sugar. Flavor with one teaspoonful of vanilla. Fold in the whites of four eggs beaten stiff. Bake in very slow oven for one hour, having the oven a little hotter the last fifteen minutes. Bake in angel food tin.

Could some reader give me a recipe for pressed corned beef? I should like very much to know how to make it and I am sure some of the readers of the Home page can help me out.

Mrs. G. F. P.

Recipes.

Pickled Onions.—One peck silver skin onions, two tablespoonfuls mixed peppers, two tablespoonfuls sugar, two cupfuls salt, white wine vinegar. Peel onions and put in crock; cover with cold water, add salt and let stand four days in a cool place. Drain and wash well in cold water and put into bottles or jars, being careful to drain off all water. Estimate amount of vinegar necessary to fill bottles. To this add peppers and sugar and let boil ten minutes. Let it cool and when perfectly cold pour over the bottled onions, being careful not to allow too many peppers in any one bottle. It is very important to use white vinegar and to pour it on the onions cold if white, crisp onions are desired. They are ready for use in two weeks. It is not necessary to seal the bottles.

Raison Puff—Work one-half cupful of butter until creamy, and add two tablespoonfuls of sugar gradually, while beating constantly, and two eggs well beaten; then add one cupful of milk alternately with two cupfuls of flour, mixed and sifted with two teaspoonfuls of baking powder and one-fourth teaspoonful of salt. Seed and chop one cupful of raisins. Dredge with one-fourth cupful of flour, and add to mixture. Beat thoroughly, turn into a buttered mold, adjust cover, and steam one and one-half hours. Remove to hot serving dish, and serve with whipped cream sweetened, and flavored with grated nutmeg.

Grape Frappe.—Put two cupfuls of sugar and four cupfuls of water in saucepan, bring to the boiling point and let boil fifteen minutes. Remove from range and add two cupfuls of grape juice, two-thirds cupful of orange juice and one-fourth cupful of lemon juice. Cool, strain, and freeze to a mash, using equal parts of rock salt and finely crushed ice. Serve in frappe glasses and garnish with whipped cream sweetened, and flavored with vanilla.

Waffles.—Mix and sift one and three-fourths cupfuls of flour, three teaspoonfuls of baking powder and one-half teaspoonful of salt. Add one cupful of milk gradually, while stirring constantly. Then add the yolks of two eggs, beaten until thick, one tablespoonful of melted butter, and the whites of two eggs, beaten until stiff. Cook on a greased hot waffle iron. Serve with maple sirup.

Cherry Lacto.—Two and one-half quarts sour milk, three and one-half cupfuls sugar, two eggs, one cupful cherry juice, juice of two lemons. Freeze and pack this mixture as any ice cream. This recipe makes one gallon.

All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

A Wood Nymph.

Dear Young Folks:—I am going to write to the Young Folks for the first time. I certainly enjoy our page very much.

I have one more year in the rural school, then expect to go to high school.

We live on a farm where there is a great deal of timber. I always was a wood nymph. Sometimes when I ramble in the woods I almost think there are real fairies, there are so many beautiful things to see. My sister and I like to walk in the woods in the early spring. We gather flowers of all kinds and also mushrooms. The first flowers that bloom here in the spring are Easter lilies, then come the May flowers, blood roots, blue bells and many others. In the fall we gather nuts. The trees are all so beautiful and the different shades of the leaves look so pretty together. Really wouldn't you like to visit Forest Farm?

Guess my riddle, Young Folks. Which state is the merriest of all the Union? —Ruth.

Dexter Plays a Joke.

Dear Young Folks:—I am going to tell you of a joke that our old horse, Dexter, played on me.

Mamma wanted him to drive and I went to the pasture to catch him. As I approached him he just put back his ears and ran to the farther end of the pasture. When I caught him I put the halter on him. I took him to the water tank and watered him. Then he jerked the rope from my hand and ran as fast as he could down the lane. When he got some distance from me he turned around and just looked as though he was laughing at me. Papa had to go and catch him. Dexter is about twenty years old.

I think the answer to Blanche's riddle—what is there on a wagon that is of no use—is "nothing."

Can you answer my riddle? Round as an apple, flat as a chip; it has four eyes and can't see a bit.

—Another Gladys.

Thinks Willie's Bird a Woodchuck.

Dear Young Folks:—I am a boy eight years old. I live on an eighty-acre farm. We have a dog, eight cats, seven head of horses, nine sheep and two cows.

My sister and I have a tent we can play in. We each have our own room for our playthings. We can both milk.

I am a lover of flowers and I have a row in the garden that are in bloom now.

The name of the red-headed bird described by Willie is woodchuck.

Lydia asked the riddle, round as the moon, teeth like a cat; guess all your life and you can't guess that. But I can. The answer to it is a circle saw.

—Hunter.

Sorry For Gladys.

Dear Young Folks:—I enjoy the Young Folks' page very much. I have written before, but it was not in the paper and I am going to try again.

I am thirteen years old and I go to German school. Our school was out the Fourth of July and we had a school picnic and marched to the woods.

I live in a small town where no train runs through. It is away out in the country. I spent a two weeks' vacation at my grandfather's house and my two cousins were there, too, so we had lots of fun. I have two little brothers, but no sisters.

I feel very sorry for Gladys. I have my own dear papa and mamma and I am very glad. My papa is a cheesemaker.

We have an automobile, one horse and some chickens and pigs. I can tat, crochet and do fancywork.

—Loraine.

Sends Spice Cake Recipe.

Dear Young Folks:—I live on a 254-acre farm. We have twenty-one head of horses, thirty-four head of cattle. I help milk every morning. I like the country best because I like out-door work. I have a pet pig that I call Reddie.

I live a mile and a half from school. School begins again very soon. I am twelve years old and in the sixth grade. I enjoy my school very much.

I can crochet and I am keeping all the patterns in a book. Won't some of the girls send in some samples and tell how they make them so we can all get some new patterns?

I am going to give my spice cake recipe. Five eggs, two cupfuls of sugar, one cupful of butter or lard, one cupful of buttermilk, three cupfuls of flour, one teaspoonful of soda, two teaspoonfuls of cinnamon, two of cloves and two of spice, one of nutmeg and one of baking powder. Mix well and bake in a moderate oven. Put caramel icing on top.

The answer to Bertha's riddle—which hen lays the longest—is the one that died. —Vyrel.

International Sunday School Lesson.

Lesson for August 27, 1916.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Journeying to Jerusalem.

LESSON TEXT—Acts 20:16-38.

GOLDEN TEXT—I commend you to God and to the word of his grace.—Acts 20:32.

After his experience in Ephesus Paul went to Corinth, where, amidst much sickness and affliction, he cared for the churches, corrected their wrong conduct and probably wrote several of his letters and epistles (II Cor. 4:7-11; 11:28; 12:20). From Corinth he journeyed by way of Philipi to Troas where he preached his famous long sermon (v. 5-12), that sermon which had such a tragic result. It is recorded as a witness to the power of the prayer of faith and Paul's readiness to serve in time of need. In his haste to reach Jerusalem before the Day of Pentecost (A. D. 58) Paul did not return to Ephesus, but, in order to save time, he had the

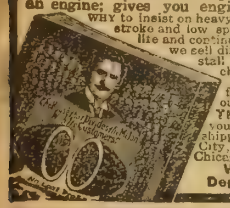
LOVE MANUFACTURING COMPANY
Dept. 30 Lincoln, Illinois

WANTED

Ten men or more in every township and county to get my big new book about engines. My new model is a mechanical masterpiece, built by master engine builders after the leading engine designers. It develops away above rated horsepower; bearings adjustable, special economy carburetor, worth $15 more on any engine, but costs nothing extra on a Galloway, cuts down fuel bills; uses any fuel, perfect vaporizer; valves in the head like all the modern automobile engines; large fly wheels, a big bore, long stroke, heavy weight, your choice of ignition systems, an easy starter, no cranking.

GALLOWAY'S ENGINES

Get a genuine Galloway, then you won't be disappointed as thousands of its users have testified. My new 250-page book tells how to pick out, size up and judge an engine; gives you engine secrets and facts, WHY to insist on heavy weight, large bore, long stroke and low speed, which mean long engine life and continuous user's satisfaction; WHY we sell direct at wholesale; HOW to install an engine and hook up machinery; HOW Galloway engines are built in our own factories in Waterloo; WHY our engine prices are so low.



THIS FREE BOOK will save you from $50 to $250. Engines shipped from Waterloo, Kansas City, Council Bluffs, St. Paul or Chicago.

elders of that church meet him at Miletus (See a good map).

1. A Great Review (vv. 17-28). Paul's statesmanship and genius for organization is nowhere more clearly set forth than here. He had plans for a great evangelistic campaign of Latin lands, (Ch. 19:21). Before pursuing his plan he decided to visit Jerusalem, carrying with him the collections which had been systematically taken up in the various churches on this tour (Rom. 15:26; I Cor. 16:1-5; Acts 24:17) and he was accompanied by a considerable number of pilgrims. (See v. 4.) It is a good thing to pause occasionally and to take stock, to review our lives and to see what progress we have made. This Paul did, and to this Ephesian delegation he enumerates (1) his character among them (vv. 18-19). They knew his manner of life, how that, as a bond servant, and "with all lowliness of mind," he had served their church. They also knew that with tears he had wept over their hard and impenitent hearts (v. 31) and all of this amidst many testings; (2) his method of work (v. 20). Paul not only worked at his trade of tent-making, but found time for the public proclamation of the gospel and also house to house visitation. He was after men, not notoriety. He was always and ever at it, amidst trials, self-denial and the "lying in wait," (Am. R. V.) of men; (3) his methods (v. 21). He had the same message for Jew and Gentile, "repentance toward God and faith toward our Lord Jesus Christ." Repentance is not for Jews alone. Paul shrank not from declaring all that was profitable for their encouragement, reproof, warning, help, training in service and hard study. He had taught them publicly in classes, and had visited them from house to house and had invited them to his own home. Paul's aim, as is the teacher's aim, was to make all people patriotic citizens of the kingdom of heaven while on earth, that they might fight the good fight of faith against all evils, even the principalities and powers of evil.

It was a great undertaking, and he knew not what might befall him, but he did know that bonds and affliction awaited him; however, none of these things could move him from his purpose.

He "counted not his life as dear unto himself" if so be he might hold out until the end and accomplish his course and ministry. This epoch-making journey, one of the greatest in history, suggests in many points our Savior's last journey towards that same city (Luke 9:51). Like his master, Paul knew that ahead of him were trials, but he also knew that God was leading him in obedience to the Spirit's guidance, though it was over the protests of his friends.

II. A Great Charge (vv. 28-38). It is a great experience when one can declare himself pure from the blood of all men (v. 26), and that he has not shrunk from declaring the whole counsel of God. Such conduct always brings an obligation upon those who know and hear such men, viz., that it should be emulated. These elders were to return to the church at Ephesus, not to be servants of themselves but to feed the church of God (v. 28). Paul knew, as a prophet, what would be in store for them (vv. 29-30). Therefore he exhorts them to watch, and warns them how by his own hands he had supported himself and had lived a righteous life among them (v. 34).

We have here rescued from oblivion a new saying of our Lord Jesus Christ, "It is more blessed to give than to receive," one not found in the gospels.

It is this giving which produces a higher quality of happiness and a more noble character.

It is the blessedness of Christ, of heaven, and of the Christian religion.

It is also the blessedness that endures.

Paul then poured forth his prayer on their behalf (vv. 36-39).

Blessed is the Sunday-school class and the church which has such a teacher and such a leader.

These friends sensed the significance of this final separation from Paul (v. 38), and their greater sorrow seemed to be to miss his personality than to lose the help of his teaching.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and inclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery.

CATALOG OF FALL AND WINTER FASHIONS.

Send 10 cents in silver or stamps for our up-to-date 1916 large fall and winter catalog, containing over 400 designs of ladies', misses' and children's patterns, as well as the latest embroidery designs, also a concise and comprehensive article on dressmaking, giving valuable hints to the home dressmaker. Address all orders for patterns and catalogs to THE WISCONSIN FARMER, MADISON, WISCONSIN.

1504—Ladies' combination camisole and envelope skirt drawers. The pattern is cut in 3 sizes: Small, medium and large and requires 3¼ yards of 36-inch material for a medium size.

1266—Set of baby's one-piece long clothes with front closing. It will require for the sack, ¾ yard of 27-inch material; for the slip, 2¼ yards of 36-inch material; for the wrapper, 2¾ yards of 27-inch material; for Barra coat, 1⅛ yards of 40-inch material.

1364—A simple and becoming dress, suitable for house, porch or business wear, with sleeve in either of two lengths. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 7 yards of 36-inch material for a 36-inch size.

1812—A smart dress in Empire style. The pattern is cut in 4 sizes; 2, 4, 6 and 8 years. It requires 2½ yards of 36-inch material for a 4-year size, with ¾ yard for the bolero.

1799—A practical easily-made apron. The pattern is cut in 3 sizes: Small, medium and large. It requires 4¾ yards of 36-inch material for a medium size.

Waist 1574-Skirt 1575—A new and very chic costume. It comprises ladies' waist pattern 1574, cut in 6 sizes: 32, 34, 36, 38, 40 and 42 inches bust measure, and ladies' skirt pattern 1575, cut in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. To make the dress of one material will require 6⅞ yards of 44-inch material. Two separate patterns, 10 cents for each pattern.

1652—Girls' dress, with sleeve in either of two lengths, and collar in either of two outlines. The skirt is a three-gore model. The pattern is cut in 4 sizes: 4, 6, 8 and 10 years. It requires 2¾ yards of 44-inch material for a 6-year size.

1789—Ladies' negligee or dressing sack. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 3⅜ yards of 44-inch material for a 36-inch size.

1813—A quaint and attractive frock. The pattern is cut in 3 sizes: 16, 18, and 20 years. It requires 7⅞ yards of 36-inch material for an 18-year size.

1793—A neat dress for mother's girl, with sleeve in either of two lengths. The pockets may be omitted. The pattern is cut in 4 sizes; 8, 10, 12 and 14 years. It requires 3¾ yards of 44-inch material for a 12-year size.

1801—Girls' apron and cap. The pattern for this combination is cut in 5 sizes: 6, 8, 10, 12 and 14 years. It requires 2½ yards of 36-inch material for a 10-year size, for the apron, and ¾ yard for the cap.

Waist 1814-Skirt 1816—A charming gown for many occasions. The waist pattern 1814 is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. The skirt pattern 1816, is cut in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It will require 6⅛ yards of 44-inch material for the entire dress in a medium size. Two separate patterns 10 cents for each pattern.

SYNOPSIS OF PRECEDING CHAPTERS

The scene is laid in the Kootenai country, in the Pacific Northwest, where Genesee Jack is prospecting for gold. A neighbor, named Hardy, comes to his camp looking for someone to guide a party of easterners through the country and Genesee Jack volunteers. He becomes well acquainted with his employer's sister, Rachel Hardy, who takes a great interest in him and is much in his company. Genesee Jack overhears a conversation between Miss Hardy and her aunt, from which she learns that he is not "fit company for a lady"—this is the aunt's view—and the relations between Rachel and the guide become strained. Disobeying his strict orders to stay with the party, Rachel Hardy rides ahead, her horse throwing her as it scares at a bear cub. She is severely hurt, but Genesee Jack finally finds her, and succeeds in getting her safely back to camp. Next morning Jack leaves the camp without a word of good-bye to the women folks. Two weeks later Rachel and Jim, while looking for lost sheep become lost and wander into MacDougall's shack and cook their supper, only to be surprised by Genesee walking in. Later they were again surprised by the appearance of an Indian maid whom Rachel thought Genesee introduced as his wife. Rachel and Jim return to the ranch and Jack leaves the cabin to Talapa, the Indian maid, until spring.

PART III. "Prince Charlie"

CHAPTER I.

In the Kootenai Springtime.

IN THE spring that followed, what a spirit of promise and enterprise was abroad on the Hardy ranch! What multitudes of white lambs, uncertain in the legs, staggered and tottered about the pasture lands! and what musical rills of joy in the mountain streams escaping through the sunshine from their prisons of ice! The flowers rose from the dead once more—such a fragrant resurrection! slipping from out their damp coffins and russet winding-sheets with dauntless heads erect, and eager lips open to the breath of promise. Some herald must bear to their earth-homes the tidings of how sweet the sun of May is—perhaps the snow sprites who are melted into tears at his glances and slip out of sight to send him a carpet of many colors instead of the spotless white his looks had banished. It may be so, though only the theory of an alien.

And then the winged choruses of the air! What matinees they held in the sylvan places among the white blossoms of the dogwood and the feathery tassels of the river willow, all nodding, swaying in the soft kisses sent by the Pacific from the southwest—soft relays of warmth and moisture that moderate those western valleys until they are affronted by the rocky wall that of old was called by the Indians the Chippewyan Mountains, but which in our own day, in the more poetical language of the usurper, has been improved upon and dubbed the "Rockies." But all the commonplaces of those aliens cannot deprive the inaccessible, conservative solitudes of their wild charms. And after those long months of repression, how warmly their smile bursts forth—and how contagious it is!

Laugh though the world may at the vibrations of poet hearts echoing the songs of the youngest of seasons, how can they help it? It is never the empty vessel that brims over, and with the spring a sort of inspiration is wakened in the most prosaic of us. The same spirit of change that thrills the saplings with fresh vitality sends through human veins a creeping ecstasy of new life. And all its insidious, penetrating charm seemed abroad there in the Northern-land escaped from under the white cloak of winter. The young grass, fresh from the valley rains, warmed into emerald velvet in the sunshine, bordered and braced with yellow buttons of dandelion; while the soil was turned over with the plows, and field and garden stocked with seed for the harvest.

Energetic, busy days those were after the long months of semi-inaction; even the horses were too mettlesome for farm drudgery—intoxicated, no doubt, by the bracing, free winds that whispered of the few scattered droves away off to the north that bore no harness and owned no master. All things were rebellious at the long restraint, and were breaking into new paths of life for the new season.

Even a hulking Siwash, with his squaw and children, came dragging down the valley in the wake of the freshets, going to the reservation south, content to go any place where they could get regular meals, with but the proviso to be "good Injun."

They loafed about the ranch two days, resting, and coming in for a share of rations from the Hardy table; and the little barefooted "hostiles" would stand about the gate and peer in around the posts of the porch, saying in insinuating tones:

"Pale papoose?"

Yes, the spirit of the hills and grazing lands had crept under the rafters and between the walls, and a new life had been given to the world, just as the first violets crept sunward.

And, of course, no other life was ever so sweet, so altogether priceless, as this little mite, who was already mistress of all she surveyed; and Aunty Luce—their one female servant—declared:

"Them eyes o' hers certainly do see everything in reach of 'em. She's a mighty peart chile, I'm tellin' ye."

Even Jim had taken to loafing around the house more than of old, and showing a good deal of nervous irritation if by any chance "she" was allowed to test her lungs in the slightest degree. The setter pups paled into insignificance, and a dozen times a day he would remark to Ivans that it was "the darndest, cutest, little customer he ever saw."

"Even you have become somewhat civilized, Rachel, since baby's arrival," remarked Tillie in commendation.

Yes, Rachel was still there. At the last moment, a few appealing glances from Tillie and some persuasive words from Hen had settled the question, and a rebellion was declared against taking the home trail, and all the words of the Houghtons fell on barren soil, for she would not—and she would not.

"They will never miss me back there in Kentucky," she argued; "there are so many girls there. But out here, femininity is at a premium. Let me alone, Clara; I may take the prize."

"And when am I to tell the folks you will come back?" asked Mrs. Houghton, with the purpose of settling on a fixed time and then holding her to it.

"Just tell them the truth, dear—say you don't know," answered the girl sweetly. "I may locate a claim out here yet, and develop into a stock-grower. Do not look so sulky. I may be of use here; no one needs me in Kentucky."

"What of Nard Stevens?" was a final query, at which Rachel no longer smiled—she laughed.

"Oh, you silly Clara!" she burst out derisively. "You think yourself so wise, and you never see an inch beyond that little nose of yours. Nard needs me no more than I need him—bless the boy! He's a good fellow, but you cannot use him as a trump card in this game, my dear. Yes, I know that speech is slangy. Give my love to Nard when you see him—well, then my kind regards and best wishes if the other term conflicts with your proper spirit, and tell him I have located out here to grow up with the country."

And through the months that followed she assuredly grew to the country at all events; the comparative mildness of the winters proving a complete surprise to her, as, hearing of the severe weather of the North, she had not known that its greatest intensity extends only to the eastern wall of the great mountain range, and once crossing the divide, the Chinook winds or currents from the Pacific give the valleys much the temperature of our middle states, or even more mild, since the snow-fall in the mountains is generally rain in the lowlands. Sometimes, of course, with the quick changes that only the wind knows, there would come a swoop downward of cold from the direct North, cutting through the basins, and driving the Pacific air back coastward in a fury, and those fitful gusts were to be guarded against by man and beast; and wise were growing those eastern prophets in their quickness to judge from the heavens whether storm or calm was to be with them.

But despite Clara's many predictions, the days did not grow dull to Rachel, and the ranch was not a prison in winter-time. She had too clearly developed the faculty of always making the best of her surroundings and generally drawing out the best points in the people about her.

It was that trait of hers that first awakened her interest in tha splendid animal, their guide from the Maple range.

He had disappeared—gone from the Kootenai country, so they told her. But where? or for what? That, none could answer.

Her memory sometimes brought her swift flushes of mortification when she thought of him—of their association so pregnant with some sympathy or subtle influence that had set the world so far beyond them at times. Now that he was gone, and their knowledge of each other perhaps all over, she tried to coolly reason it all out for herself, but found so much that contained no reason—that had existed only through impulses—impulses not easy to realize once outside the circle of their attending circumstances.

Those memories puzzled her—her own weakness when she lay in his arms, and her own gift of second-sight that gave her an understanding of him that morning when she turned champion for him against himself.

Was it really an understanding of him? or was it only that old habit of hers of discovering fine traits in characters voted worthless?—discoveries laughed at by her friends, until her "spectacles of imagination" were sometimes requested if some specimen of the genus homo without any redeeming points was under discussion.

Was it so in this case? She had asked herself the question more than once during the winter. And if she had been at all pliable in her opinions, she would long ere spring have dropped back to the original impres-

sion that the man was a magnificent animal with an intellect, and with spirituality and morality sleeping.

But she was not. A certain stubbornness in her nature kept her from being influenced, as the others were, by the knowledge that after all they had had a veritable "squaw man" as a guide.

Hardy was surprised, and Tillie was inconsolable.

"I never will believe in an honest face again!" she protested.

"Nonsense!" laughed Rachel. "Pocahontas was an Indian, and Rolfe was not hustled out of society in consequence."

"N—no," assented Tillie, eyeing Rachel doubtfully, "but then, you see Rolfe married Pocahontas."

"Yes?"

"And—and Ivans told Hen he heard that the squaw you saw at Genesee's was only a sort of slave. Did he tell you and Jim that she was his wife?"

"I—I don't know;" and Rachel suddenly sat down on a chair near the window and looked rather hopelessly at the questioner. "No, I don't believe he said so, but the circumstances and all—well, I took it for granted; he looked so ashamed."

"And you thought it was because of a marriage ceremony, not for the lack of one?"

"Yes," acknowledged the girl, inwardly wondering why that view of the question had not presented itself to her. Had she after all imagined herself sighting an eagle, and was it on nearer acquaintance to develop into a vulture—or, worse still, a buzzard—a thing reveling only in carrion, and knowing itself too unclean to breathe the same air with the untainted! So it seemed; so Tillie was convinced; so she knew Clara would have thought. In fact, in all the range of her female acquaintances she could think of none whose opinion would not have been the same, and she had an impatient sort of wonder with herself for not agreeing with them. But the memory of the man's face that morning, and the echo of that "God bless you, girl!" always drifted her away from utter unbelief in him.

She heard considerable about him that winter; that he was thought rather eccentric, and belonged more to the Indians than the whites, sometimes living with a tribe of Kootenais for weeks, sometimes disappearing, no one knew where, for months, and then settling down in the cabin again and placidly digging away at that hole in the hill by the little lake—the hill itself called by the Indians "Tamahnous," meaning bewitched, or haunted. And his persistence in that work was one of the eccentric things that made some people say significantly:

"They allowed Genesee was a good man, but a little 'touched' on the silver question."

And for Tillie's benefit Hen had to explain that the term "good" had nothing whatever to do with the man's moral or spiritual worth; its use was in a purely physical sense.

After the snows fell in the mountains there were but few strangers found their way to the new ranch. Half locked in as it was by surrounding hills, the passes were likely to be dangerous except to the initiated, and there were not many who had business urgent enough to push them through the drifts, or run their chances with land-slides. But if a stray hunter did come their way, his call was not allowed to be a short one. They had already become too thoroughly Western in their hospitality to allow the quick departure of a guest, a trait of which they had carried the germs from old Kentucky.

What cheery evenings there were in the great sitting room, with the logs heaped high in the stone fireplace! An uncarpeted room, with long, cushioned settees along two sides of it—and mighty restful they were voted by the loungers after the day's work; a few pictures on the wall, mostly engravings; the only color given the furnishing was in the pink and maroon chintz curtains at the windows, or cushions to the oak chairs. There in the firelight of the long evenings were cards played, or stories told, or magazines read aloud, Rachel and Hen generally taking turn about as reader. And Tillie in the depths of the cushioned rocker, knitting soft-wool stuffs, was a chatelaine, the picture of serene content, with close beside her a foil in the form of black Aunty Luce, whom only devotion to her young miss would ever have tempted into those wilds; and after the work was over for the night, it was a usual thing to see her slipping in and snuggling down quietly to listen to the stories told or read, her big eyes glancing fearfully toward windows or doors if the Indian question was ever touched on; though occasionally, if approached with due ceremony and full faith shown in her knowledge, she would herself add her share to the stories told, her donation consisting principally of sure "hoodoos," and the doings of black witches and warlocks in the land of bayous; for Aunty Luce had originally come from the swamps of Louisiana, where the native religion and superstitions have still a good following. And old Aunty's reminiscences added to the variety of their evening's bill of entertainment.

A mail carrier unexpectedly sprang up for them in the winter in the person of a young half-breed called Kalitan, or the Arrow. He had another name, his father, an Englishman, and agent for a fur company, had happened to be around when his swarthy offspring was ushered into the world, and he promptly bestowed on him his own name of Thomas Alexander. But it was all he did bestow on him—and that only by courtesy, not legality; and Alexander Junior had not even the pleasure of remembering his father's face, as his mother was soon deserted. She went back to her tribe and reared her son as an Indian, even his name in time was forgotten, as by common consent the more characteristic one of Kalitan was given him because of the swiftness of foot that had placed him among the best "runners" or messengers in the Indian country—and the average speed of a runner will, on a long march, outdistance that of cavalry. At the military post at Fort Missoula, Kalitan's lines had first fallen among those of Genesee, and for some unexplained reason his adherence to that individual became as devoted as Mowitza's own. For a long time they had not ranged far apart, Genesee seldom leaving the Kootenai country that Kalitan did not disappear as well. This last trip his occupation was gone, for word had been left with MacDougall that the trail was not clear ahead, but if Kalitan was wanted he would be sent for, and that sinewy, bronze personage did not seem to think of doing other than wait—and the waiting promised to be long.

He took to hanging around Scot's Mountain more than of old, with the query, "Maybe Genesee send lettah—s'pose? I go see."

And go he would, over and over again, always with a philosophic "S'pose next time," when he returned empty-handed. Sometimes he stopped at the ranch, and Rachel at once recognized him as the youth who had brought her the black bear-skin months before, and pretended at the time utter ignorance of Chinook. He would speak Chinook fast enough to her now if there was any occasion, his white blood, and the idea that she was Genesee's friend, inclining him to sociability seldom known to the aristocratic conservatives of the Indian race.

The nearest mail station was twenty miles south, and it was quite an item to find a messenger as willing as was Kalitan; storm or calm, he would make the trip just the same, carrying his slip of paper on which all the names were written and which he presented as an order to the postmaster. A big mail was a cause of pride to him, especially magazines or packages. Letters he did not think of much account, because of their size.

To Aunty Luce he was a thing of dread, as were all of his race. She was firmly convinced that the dusky, well-featured face belonged to an imp of the evil one, and that he simply slid over the hills on the cold winds, without even the aid of a broomstick. The nights that he spent at the ranch found Aunty's ebony face closer than ever to the side of Mistress Tillie's chair.

Another member had been added to the visiting list at Hardy's, and that was the soverign of Scot's Mountain.

Along in midwinter, Kalitan brought a scrawled note from "Ole Man Mac," asking for some drugs of which he stood in need. The request brought to light the fact that Kalitan one day while paying visits had found "Ole Man Mac" sick in bed—"heap sick—crank—no swallow medicine but white man's."

The required white man's medicine was sent, and with it a basket with white bread, fresh butter, and various condiments of home manufacture that Tillie's kindly heart prompted her to send to the old trapper—one of their nearest neighbors.

The following day Rachel and her henchman, Jim, started on Kalitan's trail, with the idea of learning personally if any further aid that the ranch could give was needed at the cabin. A snow three days old covered the ground, in which Kalitan's trail was easily followed; and then Rachel had been over the same route before, starting light-hearted and eager, on that cultus corrie.

They reached Scot's Mountain a little after noon, and found its grizzled, unshaven owner much better than he had been the day before, and close beside him on the pillow lay his one companion, the cat.

"Well, well! to think o' this!" said the old man, reaching a brawny hand to her from the bunk. "You're the first white woman as ever passed that door-post, and it's rare and glad I am that it's your own self."

"Why myself more than another?" she asked, rather surprised at his words. "I would have come long ago if I had known I was wanted, or that you even knew of me."

"Have I not, then?" he queried, looking at her sharply from under his wrinkled, half-closed lids. "But sit ye down, lady. Kalitan, bring the chair. And is that a brother—the lad there? I thought I had na heard of one. Sit you down close that I can see ye—a sight good for sore een; an' I have no heard o' ye? Ah, but I have, though. Many's the hour the lad has lain lazy-like on the cot here, an' told me o' the gay folk frae the East. Ye know I'd be a bit curious o' my new neighbors, an' would be askin' many's the question, an' all the tales would end wi' something about the lass that was ay the blithe rider, an' ever the giver o' good judgment."

The girl felt her face grow hot under those sharp old eyes. She scarcely knew what to say, and yet could give no sensible reason for such embarrassment; and then—

"The lad—what lad?" she asked at last.

"Oh—ay. I clean forgot he is no lad to you. Kalitan, will ye be building up that fire a bit? When we have quality to visit, we must give them a warm welcome, if no more. An' the lad, as I was sayin'," he continued, "was but Genesee—no other; though he looked more the lad when I called him so first."

"You are such old friends, then?"

"No so old as so close, ye might say. It's a matter o' five year now since he come up in these hills wi' some men who were prospectin', an' one an' another got tired and dropped down the country again till only Genesee was left. He struck that haunted hill in the Maple range that they said was of no good, an' he would na leave it. There he stuck in very stubbornness, bewitched like by it; an' the day before his flittin' in the fall found him clear through the hill, helped a bit by striking into an old mine that nobody knew aught of. Think o' that!—dug into a mine that had been abandoned by the Indians generations ago, most like."

"I did not know that the Indians ever paid attention to mining. They seem to know no use for gold or silver until the white men teach them it."

"True enough; but there the old mine stands, as a clear showin' that some o' the heathen, at some time, did mine in that range; an' the stone mallets an' such like that he stumbled on there shows that the cave was no the result o' accident."

"And has he at last given it up as hopeless?"

"That's as time may happen to tell," answered the old man sagely; "an' old Daddy Time his ownself could na keep his teeth shut more tight than can Genesee if there's a bit secret to hold. But o' the old mine he said little when he was takin' the trail, only, 'It has kept these thousand o' years, Davy—it will most like keep until I get back.'"

From that speech Rachel gathered the first intimation that Genesee's absence from the Kootenai country was only a transient one. Was he then to come back and again drop his life into old lines? She did not like to think of it—or to question. But that winter visit to "Ole Man Mac," as Kalitan called him, was the beginning of an avowed friendship between the old hermit of the northern hills and the young girl from the southern ones.

(To be continued.)

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

Take Off Your Hats to Model Major 2d.

WE have often said that there are many good boars "in the woods" if we just knew where they were, but we think we have made another "find" in Model Major 2d. This boar is a short two year old, farrowed April 26, 1914, and with a little feed could be made the largest boar of his age in the state. When we saw this boar at the Janesville Fair he appealed to us the minute we saw him. This boar is thin, not even in good condition, for the owner just decided to show him and some of his get, the day before the fair started, but just as he was at that time he only lacked a few pounds of weighing 800 pounds. He has an ideal back, strong and well arched, it would be impossible to make him better on his feet and few boars have as much bone. We like to "rave" a little about a good boar and while this boar is thin, in our estimation, he is the best two-year-old Poland China boar we have seen in the state. He is owned by Chas. S. Maltby, Janesville, Wis., and was bred by Wm. Smiley & Sons, Albany, Wis. We have heard a great deal about Major Hadley as a sire and we have seen some excellent sows by this boar, but we have only seen a few boars by him and this is his best. His dam is Model Gem 10th by Chief M. by the noted High Mogul. Now, we are not advertising this boar for sale, but if you don't think he is a sire as well as an individual, visit Maltby's farm and see some of the long, good-backed, heavy-boned pigs sired by him. They are out of sows with the following blood lines. A yearling by Peerless Wonder by old A Wonder 107353. A three year old by Boyden Jumbo he a son of Big Jumbo. Daughters of Smiley's Wonder by Boyden's Jumbo, and some sows by A Wonder A. one of the best sons of A Wonder 107353. Other sows in the herd equally well bred. Mr. Maltby raised eighty-three pigs and most of them are by Model Major 2d. We might also mention that practically all of them are of March farrow. If you are looking for good Polands go see this herd and also see whether you agree with us on this boar. Mr. Maltby is advertising spring pigs for sale and they are being priced very reasonable considering what you get for the money. Please mention The Wisconsin Farmer when you write for particulars. See page 31.—Adv.

Madson's Poland Chinas.

AS WE have looked over the various herds of Poland Chinas in the state, we are more firmly convinced than ever that Mr. Madson & Sons, Madison, Wis., are among Wisconsin's best breeders. They are critical judges, careful breeders, and develop the young animals in a manner hard to "beat." Big-type animals of quality is their aim, and that they have achieved it is proven by their entire herd. Their senior herd sire was junior champion at the 1914 Minnesota and Illinois State Fairs. Their junior herd sire is a son of Hidestretcher, grand champion at the Wisconsin State Fair. Too many big-type breeders have aimed at large size only in their effort to outdo their rival breeders. This, however, is proving a detriment to the breeder and to these breeders. The ultimate end of all pork production is the pork barrel and the big, deep-bodied, well-hammed hogs that will make 225 pounds in seven or eight months are the most profitable kind. These are the type that Madsons are breeding. They convert all the feed into flesh—they are good rangers, yet not long legged or coarse. When you see their hogs at the fairs, or visit their herd on the farm you will agree that they are "master" breeders, and have developed their big types along the right lines. See page 31.—Adv.

An Old Established Poland Herd.

MR. FRED LATHROP, the senior member of the firm of Fred Lathrop & Sons, Wauzeka, Wis., has been a breeder for twenty-three years and no doubt many of our readers are acquainted with their herd of big-type Polands better than we are. At this time they are offering for sale, a choice lot of big-type pigs, of either sex, sired by some of the best boars in the state. They have a fine lot to pick from and are good judges of stock and if you could read the many letters they have from satisfied customers you could feel sure that you get your money's worth when buying from this firm. The sires of these spring pigs are mentioned in the advertisement. They are boars of great scale and smoothness and the young stuff by them will have plenty of size at maturity if properly cared for. The pigs have not been pampered, but as Mr. Lathrop says, "I have tried to feed them for future usefulness." We have recently visited this herd and the owner will take pleasure in showing you their herd of big-type Poland Chinas. Write them and please mention The Wisconsin Farmer. See page 31.—Adv.

Seitz Ayrshires to Be Exhibited.

ADAM SEITZ, Waukesha, Wis., one of the leading Ayrshire breeders of the middle West, will again exhibit at the leading fairs and dairy shows this fall. Among the shows he expects to make are the following: Iowa State Fairs, Des Moines, Iowa; Minnesota State Fair, Hamline, Minn.; Wisconsin State Fair, West Allis, Wis; Missouri State Fair, Kansas City, Mo.; Dairy Congress, Waterloo, Iowa, and the National Dairy Show, Chicago.—Adv.

Another Addition to the Duroc Jersey Ranks.

WITH this issue of The Wisconsin Farmer our readers should note the advertisement of Riley Martiny & Son, Baraboo, Wis. Pierce Martiny, the junior member of the firm, has been interested in Durocs for several years. He has been improving the herd from year to year and he has now reached the standard where he feels that his Duroc Jerseys are good enough to ship any place. He is so confident that his hogs will make good that he has offered to ship on approval, so you don't have to pay for your Duroc until you have seen him at your own station. This firm was represented at the Janesville Fair where they had a very creditable showing and won their share of the prizes. One of their good brood sows is by Wisconsin Chief and her dam is of the noted Advancer breeding. She raised a nice litter by Star Wonder he by Model's Wonder, a Hanks & Bishop bred boar. The herd boar, Fisher's Volunteer, is a richly bred boar coming from the noted champion, Volunteer. He has sired some good, uniform pigs for the Martinys. You take no chance in ordering from this firm. They can sell you gilts and a boar not related. Write early so as to get the pick. Guernsey cattle also play their part on this good farm. The herd is made up of some forty head, most of which are pure breds. Heading this herd is a three-year-old son of the well-known sire, George Washington, that has eleven A. R. daughters and was second-prize bull at the National Dairy Show, 1912. The dam of the herd bull is imported Fromes Facination, A. R. 311.99 as a two year old and 446.69 as three year old. She is sired by imported Galaxy's Equal, that has seven A. R. sons and twenty-eight A. R. daughters. Here is a good herd to keep in mind. Investigate their Durocs and Guernseys and in writing for particulars please mention The Wisconsin Farmer. See page 31.—Adv.

See the Mogul and Titan Tractors at the Tractor Shows.

EVERYONE who visits a tractor demonstration this year should be sure and see the Mogul and Titan tractors in operation. These are real kerosene tractors, designed especially for this cheap fuel, and their cost of operating and upkeep is very low. To appreciate their efficiency, one should see them at work and compare them with other sources of farm power. The Mogul 8-16 and Titan 10-20 will be shown at all the tractor demonstrations held this year, and everyone is invited by the International Harvester Co., Chicago, Ill., to give these tractors a close examination. The 100-page book, "Farm Power," issued by this company is a valuable source of information on tractors, horses and the applications of farm power to different kinds of work. This book will be sent free on request to the International Harvester Co., if you mention The Wisconsin Farmer. See page 11.—Adv.

The Vital Part of a Farm Tractor.

THE vital part of a tractor is its motor. This is the part which should have the closest scrutiny when a selection is made, for no matter what the design of the tractor, if it has insufficient power, it will never give satisfaction. It is reported that one out of every three tractor builders in the United States equips his machine with a Waukesha motor. This endorsement of the Waukesha motor by so many tractor manufacturers attests its popularity. When the manufacturers stake their success on this motor, the tractor buyer may wisely demand a Waukesha motor in the tractor he buys. The tractor demonstrations which will soon be held in different parts of this country will give opportunity for studying this motor and comparing it with others. Those who cannot visit the demonstrations should send for the free bulletin, "A Guide to Tractor Buying," which may be secured by writing the Waukesha Motor Co., Waukesha, Wis. See page 32.—Adv.

A 30.90-Pound Bull for Sale.

WHEN calling on Fred Albrecht, Watertown, Wis., last week and looking over his herd of Holsteins he stated that he would sell his senior herd sire. We have been watching this bull for several years, as we were greatly impressed by his type the first time we saw him. This bull is North Star Vera Sir Beets, a big, fine individual of ideal type and conformation. His sire is Moscrip's great show bull, Sir Beets Cornucopia Netherland, that has never been defeated in the show ring from a calf to a mature animal, even winning grand champion honors at the National Dairy Show. Not only is he a show animal himself, but his offspring have been equally successful in the show ring. His first daughters to be tested have made very creditable records, proving that he transmits the high production ability which he has inherited from his great sire, Aaggie Cornucopia Johanna Lad. The dam of North Star Vera Sir Beets is Happy Home Vera Ormsby, that has a record of 30.90 pounds butter in seven days. She is a daughter of Knight Errant whose daughters are making very creditable records. J. A. Henderson owns a large number of the daughters of Knight Errant, having purchased them a year and a half ago from Katzman. Last winter he did his first advance registry testing, but in spite of this the daughters of Knight Errant made fine records one I believe close to twenty-eight pounds. Knight Errant is out of the 27.82-pound cow, Lady Ormsby, that also made 813.30 pounds butter in a year. North Star Vera Sir Beets as an individual cannot be faulted. He has a quiet disposition, is gentle, and is a quick, sure server. Mr. Albrecht thinks so much of him as an individual and so much of his breeding that he has purchased a half brother to breed to his daughters. The only reason for selling is that he already has three crops of heifers by him and his cows bred again. See his advertisement on page 30 and send for his extended pedigree. When writing kindly mention The Wisconsin Farmer.—Adv.

F. E. Purdy, Orfordville, Wisconsin.

SEVERAL Poland China breeders have asked us if we had seen the Purdy Polands, so to satisfy our own curiosity we recently went to Orfordville to see this herd and we are glad to report that we were not at all disappointed with the Polands we found on Mr. Purdy's farm. We saw some very fine pigs on this place by Warrior, a son of Big Bone 2d whose dam was by Big Wonder. There are two yearling sows that have fine litters by Long Big Price 76667. Mr. Purdy bought these sows in Nebraska and they are of Sampson breeding, a well-known Nebraska boar. There are six boar pigs on this farm that are real prospects—strictly the big-type kind. They are of March 1st farrow sired by Black Jumbo, a yearling boar that Mr. Purdy owns and that is for sale. Their dam is Hadley Girl 8th, sired by Wonder B. This is the strain of sows that has done so much for the Smileys, of Albany. There is also an outstanding litter of eight by Warrior, out of a daughter of Smiley's Wonder. This yearling boar that we mentioned above is sired by Major Jumbo by Major Hadley out of a dam by Black Giant by Wisconsin Giant. There are also three fall boars on this place that are being offered worth the money. Mr. Purdy's advertisement appears in this paper. If you are in need of some big-type boars or gilts, you'll not be disappointed with the Purdy Polands. Write and mention this publication. See page 31.—Adv.

Wisconsin State Fair Horse Sale.

THE Wisconsin State Fair will have an innovation this year that will give added interest to the fair for all lovers of good horses. We refer to the sale of horses which will be held Friday, September 15th, the fifth day of the fair. Both draft horses and driving horses will be sold and many fine specimens of both classes have been consigned. Mr. Fred Pabst, the manager of the sale has consigned a number from both his Hackney & Percheron stables. The Edgewater Stock Farms, Ft. Atkinson, Wis., are consigning several head of big, roomy brood mares. E. E. Rosencranz, Oconomowoc, has consigned an excellent Percheron stallion that we had the pleasure of seeing recently and do not hesitate to recommend to our readers. Among the other consignors are Dopp Bros., Ixonia; Welsh, of Ripon, and other well-known Wisconsin breeders. Every farmer and breeder in Wisconsin and surrounding states should attend this sale, for here will be an opportunity to purchase some excellent individuals. Many of the Percheron stallions and mares are broke to work, so that they are desirable draft horses, as well as breeding animals. Every good farmer should have a driving horse, even though he has an automobile, as it costs no more to keep a good one than a poor one. The Hackneys consigned by Mr. Pabst, are second to none in the state, both in breeding individuality and in training. They will in all probability sell so that any farmer who appreciates good driving horses can afford to buy. So we advise you to attend the sale, and not have to say afterward that you would have attended the sale if you had thought they would sell for those prices. Mr. Pabst is also consigning four fine black Percheron stallions. Among these is "King Coco" a blocky two year old of heavy bone, a good, broad chest, good head and eye and a good back and rump. He was by Imp. Journal, that sold for over $2,000. His dam is the imported mare, Heroine. Look this stallion over before the sale. Another stallion sired by Journal is Dan Dandy, a growthy yearling carrying plenty of bone and a good middle. He will make over a ton horse when mature and he has what many Percherons lack, viz., good pasterns. He is an extra good mover and will make a most desirable sire. Another of the Pabst consignment is Baccarrat 2d a black yearling by Journal. He is not an oversized animal, but carries lots of quality. His dam was by Baccarrat, that sold for $5,000 to Kellog, of Green Bay. As was mentioned before E. E. Rosencranz, Oconomowoc, has consigned a most desirable stallion that you do not want to overlook in the barns. Many of the animals consigned will be exhibited in the show ring and several of them are creditable candidates for ribbons. Send for a catalog at once and look over the breeding and description of the horses to be sold. Catalogs may be obtained from Fred Pabst, R. F. D. 30, Oconomowoc, Wis. When writing kindly mention that you saw the advertisement in The Wisconsin Farmer. See page 28.—Adv.

The Importance of the Tractor Plow.

EXPERT plowmen say that good tractor plowing depends as much on the plow as the tractor. Certainly this is true; one is as important as the other. Therefore, the selection of the tractor plow deserves careful consideration. Economical plowing demands a plow that scours under the most trying conditions; that has wide range of adjustment, assuring even depth of plowing; that is easily controlled so that the bottoms may be raised or lowered in a short space of travel; and that buries trash and weeds so that they will be out of the way of the crops. Oliver tractor plows fill these requirements, and they do more—time and labor is saved by their improved construction. For instance, the quick detachable share permits changes without the use of a wrench; the bail construction on the No. 62 tractor plow eliminates hitch adjustments; and the lifting mechanism of the No. 78 power lift plow operates instantly at the pull of a trip rope. Farmers are urged to see the Olivers operate at any of the tractor demonstrations this year. Those who cannot attend are urged to send to the Oliver Chilled Plow Works, South Bend, Ind., for circulars and the name of the nearest Oliver dealer, who can show these plows. See page 10 for advertisement.—Adv.

Dependable Spark Plugs Necessary for Good Engine Service.

FAULTY spark plugs are the source of endless annoyance and trouble; they fail to give the spark; the engine stalls; and all work is delayed. Farm work cannot stand such delays. The chief reason for using tractors and engines in farm work is to save time and labor. Therefore, dependable spark plugs should be used on all farm oil and gas motors. Champion spark plugs have a high record of service. They seldom, if ever, go wrong and, besides, they give added "punch" and "go" to the engine. Long service and countless explosions

Another Breeder Finds The Wisconsin Farmer a Profitable Advertising Medium.

A. M. ANDERSON, of Whitewater, Wisconsin, found it an easy matter to sell all his Holstein-Friesian bulls after he inserted an advertisement in The Wisconsin Farmer. Read what he says about it:

"I wish you would discontinue my advertisement for a short time, as I am entirely sold out of bulls anywhere near ready for service. The Wisconsin Farmer is certainly a good paper to advertise in as I have found by experience. I sold a great many bulls, heifers and cows at very satisfactory prices."

The Wisconsin Farmer has a splendid record as a live stock sales producer.

Give it a chance to help you dispose of your stock.

THE WISCONSIN FARMER, MADISON, WIS.
Guaranteed Circulation, 90,000.

do not crack or weaken them. When replacing your spark plugs, remember Champions, made by the Champion Spark Plug Co., Toledo, Ohio. See page 9.—Adv.

The Drake Herd of Short-horns.

THE Millbrook herd of Short-horns, owned by H. B. Drake & Sons, Beaver Dam, Wis., is one of the oldest in the state. Mr. Drake has been advertising in The Wisconsin Farmer for twenty-five years, which is evidence that the herd is one of long establishment. The writer recently spent several hours inspecting the herd and looking over the pedigrees with an idea of getting a little history of the lines of breeding represented. We were impressed with the care which had been exercised in the selection of the breeding stock, both for the foundation herd and up to the animals now in the herd. The present herd sire is an outstanding individual. He is Prince Broadhooks, a bull weighing 2,500 pounds, very thick and deep with a fine, supple, loose hide. He is exceptionally well-bred, tracing on both sides of his pedigree to the famous cow, Lady in Waiting. His two nearest sires are sons of this great cow, which Frank Harding considers one of the six greatest cows in his herd. Her son, Anoka Sultan, is the sire of Prince Broadhooks, and her other son, Ceremonious Archer, is the sire of his dam, Sinnissippi Broadhooks. Anoka Sultan sold to Hanna for $4,000, while Ceremonious Archer sold for $5,000 to Frank Louden. Mr. Drake is offering yearling heifers and bulls sired by Prince Broadhooks and some sired by Victor Fashion. This bull is a son of the great prize-winning bull, Leader of Fashion, a son of Whitehall Sultan. He is also offering a few sired by Royal Coronet's Best by Royal Coronet. The dams of these animals offered for sale are of Stanford, Crimson Flower, Wimple, Victoria, Village Blossom and the best of the American families. Our readers who are in the market for a few females or a herd sire, cannot go wrong in inspecting this offering. See page 31.—Adv.

A Dependable Light Tractor.

THE "Allwork" light tractor advertised on page 21 is a simple, durable, powerful machine, capable of pulling three plows easily, and selling for a price well within the reach of the average farmer. The four-cylinder vertical engine will furnish twenty-five horse power at the belt and twelve at the drawbar. It is equipped with a two-speed transmission working in oil and all gears are self-oiling and thoroughly protected from dust and grit. The "Allwork" weighs 4,800 pounds. It is a light, practical tractor, built by a concern with an established reputation for manufacturing reliable machines. Those who attend the tractor demonstrations should be sure to see this tractor which is made by the Electric Wheel Co., Quincy, Ill. Any information desired will be promptly furnished by the company.—Adv.

BBROADHOOKS PRINCE, a 2,500-pound grandson of Whitehall Sultan. His sons and daughters are advertised for sale on page 31 by H. B. Drake & Son, Beaver Dam, Wis.

Blizzard Ensilage Cutters for Silo Filling.

SILO filling time will soon be here and if you do not have an ensilage cutter to do this work, you should consider the Blizzard cutter made by the Jos. Dick Mfg. Co., Canton, Ohio. These machines are rapid, reliable and durable. They are sold either mounted or unmounted. The advertisement appears on page 19. Further information will be gladly furnished by the company and the dealer's name in your locality will be sent on request.—Adv.

A Labor-Saving Corn Harvester.

THE time for the corn harvest is fast approaching. What provision have you made for harvseting it? This is an important question especially with farmers who have difficulty in getting reliable help. The Perfect corn harvester is a solution of this problem. With one man and one horse it will cut from four to seven acres of corn a day on any kind of soil. For shock or silo threshing it is an excellent machine. The booklet and circulars of the Love Manufacturing Co., Lincoln, Neb., explain this machine in detail and are well worth reading. See the advertisement on page 24 and send for this literature today.—Adv.

A Tractor at $250 Per Plow-Pulling Capacity.

THE Waterloo Boy kerosene tractor sells for $750. Here is a source of power which will do the work of eight horses; it will pull three fourteen-inch bottom plows and stir the ground to a depth of seven or eight inches, and the price is only $250 per plow pulling capacity. The tractor has the advantage over horses in doing the plowing more rapidly and thoroughly—the Waterloo Boy will plow eight acres a day at a fuel cost of 18 cents per acre. In addition to plowing, this tractor will pull the disk, harrow, mower or binder and will operate the thresher, silo filler and all other kinds of belt machinery used on the farm. Sturdy and stanch construction is a characteristic of the Waterloo Boy tractor, besides its working efficiency, so that a long period of service may be expected. A thorough examination of this tractor may be made at any of the tractor demonstrations which will be held this year, and anyone interested should see the Waterloo Boy in operation. A strong guarantee, made by the Waterloo Gasoline Engine Co., Waterloo, Iowa, goes with each tractor and protects the buyer. The high reputation of the company is another factor which makes the Waterloo Boy tractor a safe investment for the farmer. Those who cannot attend the tractor demonstrations and see this tractor under test may receive complete information concerning it by writing the company at either of the addresses given in the advertisement on page 2.—Adv.

Avery Company Makes Tractors in Six Sizes.

THE Avery Tractor Co., Peoria, Ill., has a tractor for every size of farm, from the smallest on which a tractor is practical to the largest. The Avery line includes six sizes of tractors, every one representative of Avery quality and efficiency. Durability is an important point with these machines and the slow speed motor, with replacable cylinder lining, is especially long lived. The Avery tractors have two speeds and a double transmission; their carburetors are adaptable to either kerosene or gasoline. They will operate at all the tractor shows this year, which will give farmers who attend these shows a good chance to study them. The company will gladly furnish any information regarding these tractors on request. Those who expect to buy a tractor should send for the Avery catalog, using the address given above. See page 13.—Adv.

A Booklet of Interest to Young and Old.

AN interesting booklet, "Game Farming for Profit and Pleasure," has been issued by the Hercules Powder Co., Wilmington, Del., which deals with an industry that may be made a profitable and interesting business on the farm. The booklet will be sent to anyone who fills in the coupon attached to the advertisement on page 10 and mail it to the company. Boys and girls on the farm will enjoy reading this booklet as will the older folks who are interested in making the farm pay better. Send in the coupon today.—Adv.

Illinois Breeder Gets Good Bull From Fred Pabst.

MR. JOY MORTON, proprietor of the Thorn Hill Stock Farm, of Lisle, Ill., called at the Pabst Stock Farm, Oconomowoc, Wis., several days ago, and was very much impressed with the junior sire, Maplecrest King De Kol 91584, sired by Friend Hengerveld De Kol Butter Boy 29303, and out of Maplecrest Pontiac Hartog 141157 by Pontiac Aaggie Korndyke 38291, and his visit terminated in the purchase of this young sire. Nothing could have induced Mr. Pabst to part with him short of the fact that he at the present time has several thirty-pound bull calves on hand of their own breeding, one of which will take the place of Maplecrest. Mr. Pabst has a good many of Maplecrest King De Kol's heifers on the farm, and quite a number due to freshen this fall and winter, and he is positive that they will make good. Mr. Morton has a herd of selected Holstein cows (about fifty in all); we understand they are all choice and high-bred individuals, and with Maplecrest King De Kol as a sire Mr. Morton will undoubtedly add much to the dairying interests of Illinois. See page 29.—Adv.

Jean Du Luth Showing at Janesville.

MR. GEORGE P. GROUT, managing owner of the Jean Du Luth Farms at Duluth, Minn., is more than pleased with the showing which his stock made at the Janesville, Wis., Fair. Mr. Grout speaks very highly of the management of the Janesville Fair in a letter to The Wisconsin Farmer, and says that the exhibit of stock was fine. There were nine herds of Guernseys exhibited and Mr. Grout asks us to say that he was well treated with both his herds. The Jean Du Luth Red Poll bull, Teddy's Best, was first-prize senior and grand champion. This is the fourteenth time that he has won this honor. A two-year-old heifer, Jean Du Luth Purity, was first prize, senior and grand champion cow. This heifer has made in the last ninety days, 158 pounds of butter fat. John L. Tormey was judge in these classes and he has something to work for within the Jean Du Luth herd. Starlight's Excelsior, a Jean Du Luth Guernsey bull, was first prize senior and grand champion at Janesville. He had previously won eight grand championships at the age of two years and ten days.—Adv.

Silo Fillers That Save Labor and Prevent Accidents.

THE silo fillers made by the Meill-Blumberg Co., New Holstein, Wis., are designed to eliminate the work of one man. These machines feed automatically, there is no risk of accident and the safety head prevents all danger of choking. Many other advantages of these fillers may be learned by writing to the company named above. When writing ask for the dealer's name in your locality. See page 19.—Adv.

Send for Free Account Book and Catalog.

ON page 19 of this issue appears the advertisement of Rosenthal silo fillers, which are made by the Rosenthal Corn Husker Co., Milwaukee, Wis. These fillers are made in three sizes, running from six to eighteen horse power and are backed by the company's guarantee. A complete catalog, together with a farmer's account and record

President THE PONY CLUB, 802 2nd St., Des Moines, Iowa

book will be sent free to anyone requesting them. If interested, don't fail to write to the company today.—Adv.

A Furnace for Every Home.

EVERY home can have the advantages of furnace heat with small cost by means of the Caloric pipeless furnace. There is no need of putting in a large number of pipes and of making extensive rearrangements in the house. With the Caloric pipeless only one hole need be cut directly above the furnace where the register is placed. Through this register the heated air passes to all parts of the house and forces the cold air downward through an outer channel to the firepot of the furnace, where it is heated and sent circulating through the house again. This method of heating means convenience, comfort and economy. Users of this furnace say that it is more economical of fuel than the number of stoves needed in the home to give the same amount of heat. Besides there is practically no danger from fire, no carrying of coal or wood through the home is necessary and there is no discomfort from dust and ashes circulating in the rooms or getting ground into the rugs and carpets. The letters printed in the advertisement on page 6 show what owners of Caloric pipeless furnaces think of them. Be sure and read these letters and also write to the Monitor Stove and Range Co., Gest St., Cincinnati, Ohio, for their new book, "Progress," which is a carefully written discussion of heating problems. —Adv.

Watch the Cow's Health.

IF the milk yield begins to show an unaccountable decrease, you can take it for granted that the general health of your cows is not what it should be. Don't wait for "Nature" to correct the difficulty, for Nature's very apt to put it up to you—and delay means continued and increasing losses. Digestive and intestinal troubles, and particularly worms, are at the bottom of nearly every malady that affects your stock and what they need is a medicine that is at once a tonic, laxative and worm destroyer. Among the many remedies on the market, Dr. Hess stock tonic seems to be held in high esteem by farmers and stock raisers throughout the country. The compounder, Dr. Hess, is both a doctor of medicine as well as veterinary science and this stock tonic is made according to his own formula—a scientific remedy for the many ailments peculiar to horses, cattle and hogs. One of the unique features of Dr. Hess stock tonic is the guarantee that goes with it—a guarantee of satisfactory results or your money back. A really reliable stock conditioner is certainly a boon to the farmer.—Adv.

Unique Feature in Tom Thumb Tractor.

THE Tom Thumb tractor has a unique mechanism by which it secures traction. It consists of a steel track adjusted so that it is laid and taken up as the tractor moves along. The illustration in the advertisement on page 21 shows its construction. In ground that is soft or where traction is difficult this machine will travel right along. The Tom Thumb will deliver twelve horsepower at the draw bar and twenty horse power at the belt. Everyone who attends one of the tractor demonstrations should be sure to see this tractor at work. An interesting descriptive catalog will be sent upon request to the Tom Thumb Tractor Co., 12 Thirtieth Ave., S. E., Minneapolis, Minn.—Adv.

Rusted Straw For Feeding.

There has evidently not been much investigation on the effect of rust on straw as to its feeding value. Most of the analysis made show that rust increases the feeding value of the straw. The Dominion Experiment Station in Canada and the experiment stations in North Dakota and Minnesota, have found that the rusted straw has a larger feeding value than rust-free straw. The analysis made at the North Dakota Experiment Station one year, however, showed that the straw had a decreased feeding value. The reason for an increased feeding value is explained by the fact that the plant first produces the nourishment in the stem and leaves and later passes it up into the head to fill out the kernels. The rust interferes with this food passing up into the head. It has a little the same effect as cutting the grain for hay. The value of the rusted straw depends on a good many factors, among which are the time at which rust strikes the crop, how the straw is cured and whether it has any shriveled grain in it. Cases have been reported in which animals have been harmed by being fed rusted straw. One way to determine if it is harmful is to feed it to a few of the less valuable animals for a week or two and observe the effect that it has on them. Some other roughage should be fed with the rusted straw and do not make a sudden change from other feed to rusted straw. Shaking the straw to remove the dust as far as possible is also advisable. Observe the animals that are being fed rusted straw to see what effect it has on them.—[North Dakota Station.

Breeders Wanting 30-lb. Herd Sires

We Invite Your Attention to

Three Young Bulls

No. 151, calved March, 1916. Sire, Korndyke Segis Johanna 127132, a 38-lb. son of the 40-lb. bull, Johanna McKinley Segis by King Segis, and whose dam, Pontiac Lady Korndyke (A. R. O. record 38.03) is the highest record daughter of Pontiac Korndyke. Dam, Pabst Blackberry, a 31.68-lb. three year old by a 29-lb. grandson of Hengerveld De Kol. Second dam, a 23-lb. three-year-old by King Pontiac Champion, a 31-lb. son of King of the Pontiacs. Third dam, a 33.86-lb. daughter of De Kol 2d's Butter Boy 3d.

No. 156, calved April, 1916. Sire, King Pontiac Champion, has 41 A. R. O. daughters. The only one tested as a mature animal made over 1,000 lbs. butter in a year. Dam a 31.51-lb. daughter of Sir Hengerveld Model Johanna, that has twenty A. R. O. daughters, two above 30 pounds. Good A. R. O. breeding for several generations.

No. 152, calved April, 1916. Sire, King Pontiac champion. A 30.38-lb. daughter of Hengerveld Model Johanna, a son of Hengerveld De Kol. Dam's dam, A. & G. De Freule De Kol 2d, a 29.68-lb. cow.

Several young bulls by the above sires, all out of A. R. O. cows, ranging in price from $100 up, depending on breeding and age. Be sure to address

PABST STOCK FARM, R. 30, OCONOMOWOC, WIS.

KING HENGERVELD PONDYKE

THIS bull has 20 A. R. O. daughters, 2 with records over 30 pounds of butter in 7 days." He was sired by King of the Pontiacs, that has 175 A. R. O. daughters, 2 with records over 40 pounds. Bull No. 1, born December 18, 1914, ¾ white, good and straight. Dam, Kinsman Beauty, 19.25 lb. 7-day record, 675 pounds butter and 16,032 pounds milk in a year. She is a granddaughter of Pontiac Aaggie Korndyke. Price of bull $150. Bull No. 2, born September 24, 1915, ¾ white, very straight. Dam, Robert's Fearless Lassie, a show cow, calved on show circuit so not yet tested, but will be this fall. Her dam and grandam both have 7-day and yearly records 757-784 pounds of butter for the year. Price $125. Send for extended pedigrees. Address **DR. DAVID ROBERTS, R. 4, WAUKESHA, WIS.**

A Richly Bred Aaltje Salo Bull

BORN February 28, 1915. Ready for immediate service. His dam, Aaltje Salo Netherland Mechthilde 78488, as a five year old made 23.35 pounds butter in seven days, 38 days after calving. She comes from a long line of heavy-producing ancestors. She not only has inherited this heavy-producing ability, but also transmits it. She has three A. R. O. daughters, one with a record of 28.63 pounds butter as a four year old. Her grandam, Aaltje Salo 5th's Netherland, has eight A. R. O. daughters holding the world's record for five years. The sire of the bull for sale is the 27-pound bull, DAISY JOHANNA 5TH, 1st prize two year old at the Wisconsin State Fair. Address
ARTHUR RUST WEST ALLIS, WISCONSIN

10 Registered Holstein Heifers

14 TO 18 months old, well marked, of good, straight conformation, and ideal dairy type. They are mostly daughters of the richly bred Holstein bull, FOBES WATSON DE KOL 85682, a son of FOBES TRITOMIA MUTUAL DE KOL 2D, and out of untested daughters of ALCARTRA JOHANNA RUE DE KOL 47853, a maternal brother of ALCARTRA POLKADOT. Here is a rare combination of breeding. Will sell in one lot or singly. Prices $125 to $150. Act quickly. Address
MRS. OTTO VOLKMAN JUNEAU, WISCONSIN

HERE IS AN OPPORTUNITY

We are offering a few choice registered Holstein cows and heifers bred to the 29.50 pound bull

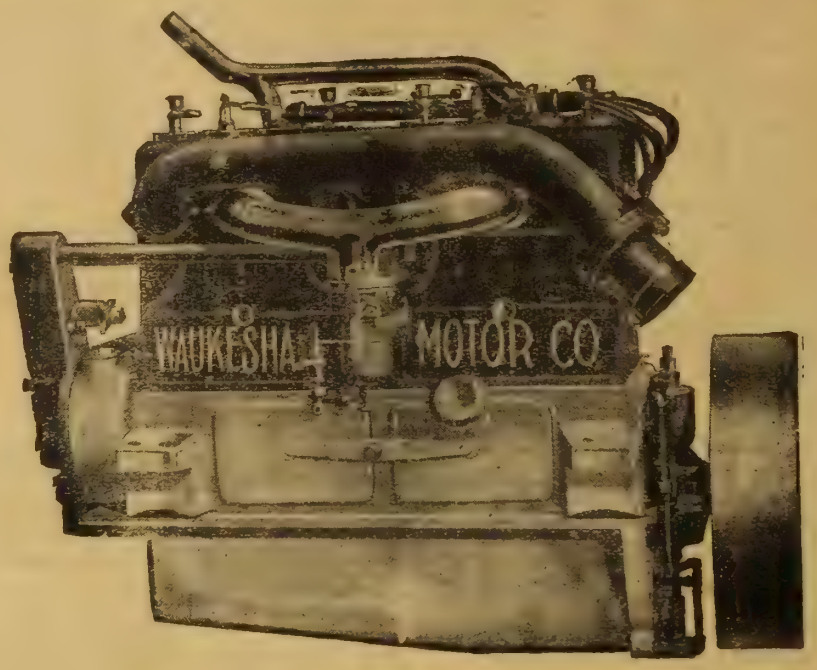
SERVICE boars and open fall gilts for sale. No more spring pigs left. Will hold brood sow sale March 2d. W. A. FREEHOF, Waukesha, Wis.



A Message to Tractor Buyers

Visit the Tractor Demonstration at Madison. You will have an opportunity there to study the world's best tractors. Pay close attention to the question of tractor **power.** Keep in mind that the vital part of a tractor—the feature that determines its real value is the **motor**—the power plant. The tractor operator who **knows** would prefer to have a tractor of questionable design equipped with a **good motor** rather than a tractor of approved design equipped with a poor motor. The reason for this is obvious. In the first case, he **has the power** and with a little ingenuity can use it. In the second case, **not** having sufficient power, his tractor can accomplish little or nothing. Therefore, carefully consider the **motor** before you buy the tractor. More than a score of America's leading makes of tractors are equipped with Waukesha Motors. In fact, one out of every three tractor builders in the United States equips his product with the Waukesha Motor. This wholesale endorsement of the Waukesha Motor by so many successful tractor manufacturers should guide you in your tractor purchase.

A SCENE UP-STATE

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

QUESTIONS AND ANSWERS.

Five-Horse Evener.

Please explain how to make a five-horse evener for a twelve-inch gang plow so that all the horses work abreast.

Answer.—Instructions for making such an evener were published in these columns in the number of July 27th.

Coldness of Natural and Artificial Ice

Which is the colder; natural or artificial ice? Which will melt the quicker in the sun?

Answer.—That all depends upon the ice. Natural ice put up in zero weather will last longer than artificial ice. Natural ice put up in thawing weather will not last as long as good artificial ice. In other words, the colder the ice when made or put up the longer it will last.

Power of Kerosene and Steam.

If a kerosene engine is equipped with a throttle governor, has it more power than a steam engine?

Answer.—We are not sure how you wish to compare the two. For the same size cylinder the steam engine would be the more powerful with the steam at eighty pounds or more. In plants of twenty horse power or less the kerosene would probably be the more economical. For higher horse power the steam engine might be the more economical, unless the Diesel type of oil engine were used.

Motor Loses Power When Hot.

Kindly explain why it is that the Ford motor will not give as much power when it is thoroughly warmed up as when it is cool. The engine turns over freely and has good compression.

Answer.—We doubt that this is a usual trait of the Ford motor. As a rule, a motor develops more power hot than cold, as the gasoline vaporizes better. It may be that your motor has carbon accumulations in the cylinder that cause preignition. You may be using a gas mixture a little too rich. The most common cause of a hot motor losing power is a too tightly adjusted bearing, which becomes tighter as the motor heats. Tight pistons have the same effect. Another possibility is loss of compression due to thinning of the oil as the motor becomes hot. If the push rods are adjusted too high the expansion of the valve stem may prevent the valve from seating when hot. This is not likely to happen with a Ford car, as the push rods are not adjustable.

The Self-Watering Tank.

Can you give me a few pointers on a self-watering tank? The one shown in the sketch (Figure 1) is two feet long and one foot wide. It is connected to

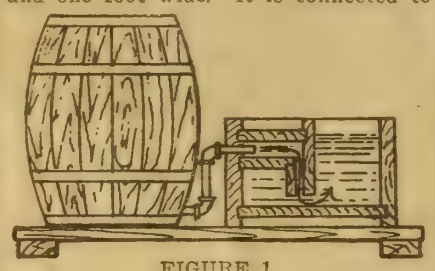

FIGURE 1.

the barrel by a one-half-inch pipe. The pipe empties into an L-shaped box in the tank, as shown in the sketch. The tank overflows. How can I prevent it from overflowing?

Answer.—The supply tank of a self-watering outfit must be air-tight; otherwise the trough will overflow. Lowering the water level in the watering trough must let air into the supply tank. Air will not flow downward through water. These are the fundamental facts to be remembered in making an outfit of this kind. The trough in Fig. 1 will overflow if there

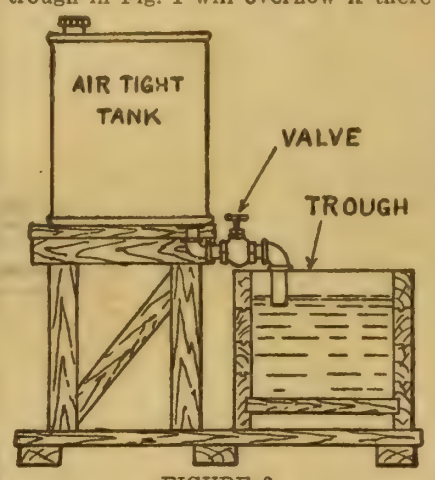

FIGURE 2.

is an air leak into the barrel. If the barrel were air tight the water would not flow out of it at all, as the air would not flow down the half-inch pipe, which would be filled with water.

Figure 2 shows the correct arrangement. Close the valve when filling the tank. Fill the tank full and screw down the air-tight cover. Then open the valve. As soon as the water covers the end of the pipe the water will stop flowing from the supply tank.

Using Motor as Generator.

I have a Crocker-Wheeler motor which consumes four amperes, fifty volts. Would this machine operate as a generator? What would be the output, and what speed should it run? It has sixteen commutator segments and only eight slots. Why has it more segments than slots? Would it have to be rewound if I use it for a generator? Would the same commutator do?

Answer.—Your machine should operate all right as a generator. It should deliver four amperes, fifty volts. It should be run somewhat faster when run as a generator than when run as a motor. The proper speed is usually stamped on the name plate of the machine. Your machine has two coils wound in each slot; therefore, there are twice as many segments as slots. You would not have to rewind it or put a new commutator to use the motor as a generator. You would have to change the position of the brushes in order to prevent sparking. The brushes should be moved about as much ahead of center as they are now back of it.

The first time you use the machine as a generator you may have to magnetize the fields by means of dry cells. The cells must be connected so that the magnetism will flow in the right direction. After the machine has built up once it should start all right without charging the field, provided the direction of rotation is not changed.

Repairing Ford Magneto.

The magneto on my Ford automobile has become very weak. Please explain how it can be recharged without taking the magnets out.

Answer.—It would be better for you to buy new coils for your magneto, as the trouble is probably in the coils. The coils come mounted on a plate, so that they are easy to install. You can also obtain a new set of magnets already charged. As a rule, recharging magnets is not very satisfactory, as the usual garage equipment will not give a Ford magnet much over 70 per cent of a full charge. The magnets seldom lose their magnetism, unless the magneto has been connected to a battery.

Ford Car Troubles.

I have a 1915 Ford car that has been run several thousand miles. It does not seem to take hold quick enough on low. At times, especially if the engine is speeding, the car will exhaust its pulling power when part way up a hill. Then, if I open the throttle, it kills the engine. To go into low, I have to put on the brake and slow the engine down very slow. Then, as the engine speeds up, it will carry the car. Is this the nature of the car, or is something wrong? Is there a way to tell when the magneto is not working without going over the whole engine? Does the magneto ever get short-circuited? How do lights get short-circuited? My car uses too much gasoline. Where should I look for the trouble?

Answer.—The lining on your low speed brake band is worn. Have a new one put on. If the magneto is not working properly the spark will be poor and you will have trouble with the engine missing. Poor connections or incorrect adjustment of the vibrator points would cause the same trouble, so see that these are right before blaming the magneto. Ford magneto trouble is generally due to the insulation becoming rotten, as the insulation is always more or less oil soaked. In this case it is best to buy new coils, mounted on a plate so that they are easy to install. Lights may be short circuited by the wires rubbing on the frame of the car. If the insulation gets rubbed off so that the metal wire comes in contact with the frame a short circuit is the result.

If your car uses too much gasoline remove the exhaust pipe from the engine so that you may see the exhaust. If the fire is blue and regular you have good combustion and the trouble is due to a leaky tank or pipe; or too poor compression; or to running with the spark retarded too much. These latter things cause loss of power and thereby increase the gasoline consumption for the same work. If the flame from the exhaust is red and sooty the needle valve is open too far and should be adjusted for less gasoline.

The Baldwin Creamery stockholders are planning the erection of a $50,000 building there this year.

Learn About These Tractors

EAGLE

The vital part of a tractor is its motor. EAGLE Tractor Motors are the famous two-cylinder Valve-in-Head type, which made such a wonderful record in EAGLE portable engines. One of the reasons for this success is that the gas explosions, coming in a direct line against the piston heads, transmit all their force to the pistons. The result is, that *much more power* is developed than by the usual type of engine. Size and weight can thus be kept down, yet abundant power is secured for both

Traction and Belt Work

EAGLE construction of two-cylinder engines makes possible a better application of the power and a better distribution, or balance, of the total tractor weight. This gives safety under all conditions. The EAGLE responds instantly to the touch and picks up a load quickly and easily, yet with remarkable smoothness.

The EAGLE is *the* tractor for you. It will save money on almost any medium-sized Wisconsin farm, in both plowing and belt work. Ask us to prove this to you. *Write today.*

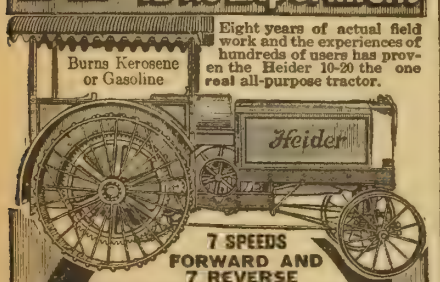
HEIDER TRACTOR Is No Experiment

Burns Kerosene or Gasoline

Eight years of actual field work and the experiences of hundreds of users has proven the Heider 10-20 the one real all-purpose tractor.



7 SPEEDS FORWARD AND 7 REVERSE

Special friction transmission gives this tractor 7 speeds forward and 7 reverse. Also means less gears than other tractors—less trouble, less complications and minimum repairs.

WHAT IT CAN DO

The Heider can pull your plows, discs, harrows, seeders, binders, graders, hay loaders, wagons, etc. It will operate grain separators, shellers, hullers, hay balers, silo fillers or feed grinders. Does light work economically, such as operate cream separator, washer, pump water, saw wood, etc. Pulls three bottoms under normal or four under very favorable conditions.

INVESTIGATE this standard 4-wheel, 4-cylinder, light weight, one man tractor that burns either kerosene or gasoline without carburetor adjustments to make. Find out about its many improvements, simplicity, ease of operation.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

THE FARM A GYMNASIUM.

THE man or boy working in the harvest field, under the burning sun, may not desire to be told that the arduous labor he is performing at so much physical discomfort is the most beneficial work he could possibly do. He may not be thinking of the good this hard work is accomplishing to him physically; he may be thinking only of how many more hours there are until sundown, or until the job is finished. It may, in fact, seem like adding insult to injury to apply such unguent to the harvest wounds. Yet, when the years have passed on and the arduous work is at an end, how many there are who look back and bless the day when it was given to them to perform such body-building, soul-inspiring work!

I was quite interested the other evening in reading an article written by Champ Clark, speaker of the lower house of congress, in which he pays a remarkable tribute to the farm as the "greatest, grandest physique-building gymnasium in all the world," adding that "at least nine-tenths of my health today is due to the farm, where I did something of everything—breaking rock, splitting rails, digging post holes, hoeing corn, following the plow in new-turned earth, swinging the scythe and the cradle—for there were no reapers until I was quite a big lad." According to Mr. Clark's own testimony, he was a scrawny, puny lad, for whom an early death was freely predicted. His father, however, was wiser than his generation and apprenticed the boy to a farmer, who saw to it that there was no mollycoddling. With what result? Let the eminent speaker of the house of representatives answer for himself:

> The farm life worked wonders with my physical development, for let me tell you, the work of the average farm is the greatest, grandest, physique-building gymnasium in all the world. There isn't any form of exercise that compares with it. The farm furnishes every element necessary to build up the growing boy or to restore the health of the man broken down by sedentary work or business stress. There is present every element necessary to physical development and the attainment of health—elements which the best-equipped gymnasium never can provide.
>
> There is fresh air, a whole world full of it, with which the lungs are strengthened and the blood vitalized. There are the sun and the wind and the rain on the face and body to make the skin healthy and firm. There is the healthful, natural, normal exercise that brings that "sweat of the brow," which is far better than any doctor's medicines to eliminate the poisonous wastes of the blood and the body. There is the almost continuous play of the muscles in every part of the body in the performance of the many and varied tasks which develops the whole body and makes it pliable and elastic, yet firm and seasoned. There is the naturally created appetite, with a stomach properly receptive and fitted to digest an abundance of coarse, nourishing food, and there is the fatigue of normal labor to fit the body and brain for nights of sound, uninterrupted sleep in quiet and repose.
>
> Some of the healthiest and most rugged men in congress were reared on a farm. And more than that, most of the prominent men in our history have come from the farm, there being, of course, exceptions to prove this rule, as all others.
>
> The best exercise in the world for physical, and, therefore, mental development is to be found in the routine work on a farm. It means the uplift and the upkeep of the race.

It may not make the work easier, at the time, to have these consoling words from Missouri's eminent statesman, but surely, when the task is over and the heat has subsided and another crop has been harvested, we can all pluck courage from such testimony and remember that health is the greatest blessing, after all. Not every boy who swings the scythe, as Champ Clark did, or plows corn or feeds the stock, is going to turn out as well as did the eminent Missourian, for there are but few such high places and millions of farm boys in the world. But it is worth something—more than can be measured in dollars and cents—to have a constitution which withstands the attacks of approaching age and bears one through to the allotted three-score-years-and-ten without bodily ailments, and with a mind made clear by physical perfection. And the farm is the best of all gymnasiums for bringing this about, there is ample testimony as to that.

FARM CHILDREN AND TOWN SCHOOLS.

MY RECENT editorial telling of the Wisconsin farm mother who wrote to me for advice on whether or not to make all manner of self-denials in order to send her sixteen-year-old daughter away to town school has brought a greater number of letters to me than almost any other subject discussed in these columns in many weeks past. Most of the writers are kind enough to compliment me on my stand (you may recall that I earnestly endorsed the idea of getting the very best education possible, but suggested that the girl stay on the farm for another year or two, to help out with the family finances) but many of them came out flat-footed against the idea of a girl in such moderate circumstances attempting to gratify her ambition for a better education than the rural schools of her neighborhood afford. Among all the letters received, none interested me more than one from a worthy "mother in Israel" in Oklahoma. She started her letter by saying that the communication from the Wisconsin farm mother "appeals to me very strongly," and then went on to tell of her own experience. Her fourteen-year-old girl developed a thirst for knowledge and every effort was made to satisfy this thirst, her parents seeing her forge to the head of her classes with excusable pride. Let the Oklahoma mother tell the story of what happened after the farm girl passed the eighth-grade examination with flying colors:

> About this time a drouth of several years set in and we did not raise enough to live on. We had to make a store account every year and at the end of the year we did not have enough to get us out of debt. This so worried my husband that he hardly ate or slept and became almost a skeleton. Such a condition was a grief to me, for with the burden of the household on my shoulders and my little ones to look after, I felt powerless to help him.
>
> The normal that year was to be held closer to us than it had ever been. A neighbor boy and his sister were going to attend, so the girls could room together, with the young man near at hand to see that they were all right. This seemed to be just the chance she wanted, so she told her papa that if he would attend the school meeting and make the application for the primary grades for her she would teach the school and give him one hundred dollars of the money to help pay his debts. Here seemed a way out of the dilemma and he borrowed fifty dollars to pay her board and buy her clothes. The last of May she left for town. I was just barely able to sit up, having a little baby two weeks old, but I felt it might be her only chance, so through blinding tears I saw her go. Her sister four years younger had to take the burden of the household on her small shoulders, but she did it without a murmur, installing herself mother's nurse, mother's cook, mother's laundry girl, and the care of the smaller children and all the things that fill a woman's life fell to her lot. But she performed her tasks cheerfully, in order that mother might regain her health and strength and sister might have an opportunity to be somebody. We were all so proud of our oldest girl—she had grown so tall and stately. We did without her help during the crop and she came home at the end of eight weeks fully prepared to teach her school. We were almost wild over her success. She started to teaching and was to teach two months, but on account of the weather being so hot, the school board shortened the term to six weeks and, as she only got forty dollars a month, the summer term did not much more than pay back the fifty we had borrowed for her, but she had five months to teach in the winter, so we thought it was still all right, and I never dreamed of anything else but that she would do just what she said she would.
>
> Now try to imagine our grief and surprise, when in November she contracted a marriage with one who was in no respect her equal, and in spite of my tears and her father's entreaties, she went on and married him and he spent her money as fast as she earned it, hardly allowing her enough to buy decent clothes. Instead of giving her papa a penny of what she had made, he had to take what he and the other children had made and buy her wedding clothes.

Do you wonder, when I receive letters such as this, the tears come into my eyes and I regret the futility of my poor, faltering words to really express all I feel? What can I write to this poor, disappointed, well-nigh-discouraged farm mother that will cheer her up? But she is brave and out of the slough of her despondency sends some words of advice to other farm mothers who find themselves in a similar plight. Here is her advice:

> I say, by all means keep your daughter with you just as long as you can. I think the editor's advice is splendid and think, too, that there is nothing that helps or elevates us more than good reading. If it is so you possibly can, let your daughter have a room all her own. Let her have a flock of laying hens all her own and sell the eggs, or if you can't do that, let her have the proceeds from the poultry for a month or two. Give her a pig and let her raise hogs. There is good money in turkeys; let her have some if she likes them. If she loves music, let her have an organ, by all means, even if you have to sell something to get it. By doing this, I believe she will stay on the farm, satisfied. Let her buy curtains and rugs for her room with what she makes. Help her to have some aim in life and she will be all right. If I had a fortune I would give it all if we had done some of these things for our daughter, for she might have stayed with us longer, but it is too late now. It is not too late to keep them while you can, and I wish I could tell all American mothers just what I feel on this subject. To me it is one of vital importance. I wish I could tell all I feel about it, but I hope that this letter may help some parents and keep them from making the mistake we did. Never let your daughter go the first time with any man you wouldn't be willing for her to marry.

Shall we leave the matter here, with the moral so obvious it does not need to be pointed out by me? Every case must be decided on its own individual merits, yet the vastness of the debt which children owe their parents who have made sacrifices for them (such as this Wisconsin farm mother and this Oklahoma farm mother have made) can hardly be overestimated. I can only hope that out of all this discussion some good may result to both parents and children who find themselves confronted by similar crises. There is no bigger problem facing country folks today.

SOME THOUGHTS AT THE TRACTOR SHOW.

THERE is no more convincing proof, in my opinion, of the farmer's eagerness to increase his efficiency and to make every acre yield to its utmost—bringing farming up to a higher plane than it has ever before occupied—than is to be found in the attendance and the interest manifest at the series of tractor demonstrations which comes to an end at Madison next week. It is positively inspiring to watch several thousand farmers following the tractors as they chug across a field, leaving a string of freshly turned furrows in their wake, or pulverizing the ground in wholesale fashion. The eagerness with which they measure the furrow's depth, to see that the tractor is indeed doing everything claimed for it; the good, sound common sense they manifest in comparing the various makes, not only as to the work performed, but as to the cost of fuel and of upkeep; and the manner in which they go about determining what size tractor to buy, how many horses or mules it will displace, and so on; all this convinces me that never before was farming being done on so scientific and businesslike a basis. If the tractor demonstrations had done nothing else but show the farmer that every operation of farming should have at least a mental "cost system" (ascertaining which animals are proving worth their board, whether tractor plowing or horse plowing is the most economical, what crops are productive of the best results in the long run, and so on) they would be worth their immense cost. But tractor demonstrators assure me that the shows are having far more tangible results; the farmers are not "shopping" after the fashion of a woman in town; they are actually buying. I look for such a season of tractor usefulness and popularity within the next five years as has never been witnessed before in any land.

I had the pleasure to watch a battery of tractors start across a field the other day at one of these tractor shows, and a friend who stood by me declared that even after having watched a flock of army aeroplanes maneuvering on French soil, preparatory to ascending and winging their way to the battle front, he found the sounds and the sights on the tractor field fully as inspiring as those on the aeroplane field across the seas. Why should this not be so? Is there not fully as much that is inspiring and pulse-quickening in those things which make us fight for a living as in those things which make us fight to take away the living? Are there not victories of peace, in which the tractor is playing an important part, fully as worth winning as the victories of devastating, life-sacrificing war? Why should not the man who invents and who uses a tractor be a national hero just as much as the man who invents and who uses a siege gun or the 42-centimeter "Jack Johnsons" with which the artillerists of Europe have been tearing up golden wheat fields and slaughtering their victims by the hundreds of thousands?

I hope there is not one among all my thousands of readers who will not visit at least one of these tractor demonstrations next year, if a series is held as was done this summer. Farming is no longer a matter of the individual toiling alone in the field, a mere "man with the hoe;" it is now a scientific pursuit, in which the best energies of men are expended. The tractor is going to play a most important part in increasing our productiveness and our efficiency in the years that are to come. And just to the extent that we make our fields yield more surely and more abundantly, to that extent do we become better men and women, for thereby are we realizing our duty to the limit and doing our full share of the real, necessary work of the world.

James M. Pierce

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-In-Chief

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

1912 Grand Ave. Des Moines, Ia. | 201 Washington Bldg. Madison, Wis.

To either of which communications relating to subscription or advertising may be addressed.

MEMBER AGRICULTURAL PUBLISHERS' ASSOCIATION
MEMBER AUDIT BUREAU OF CIRCULATIONS

SUBSCRIPTION RATES—Single subscriptions, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of fifty or more, 25 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription prices in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing give the same name and initials as you gave before or state both the old and new names, and explain why you make the change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address WISCONSIN FARMER, MADISON, WISCONSIN

Attend the Wisconsin State Fair.

THE WISCONSIN FARMER has been a constant supporter of the Wisconsin State Fair. This support has been given because we believe such an exhibit encourages better farming.

It would be a grand thing if many thousands of our farmers could look over the live stock exhibit at the state fair at Milwaukee, September 11th-16th, this year. While the state fair offers splendid amusement and entertainment, the interest of this publication centers in the live stock, agricultural, horticultural, dairy, poultry and educational exhibits. It is worth while for the farmer and his family to visit the state fair because of the recreation and change which such a visit affords. But we look upon this feature as the smaller part of the benefit which any farmer and his family ought to get out of the fair. We would like to see the readers spending a considerable part of their time in the cattle, hog and sheep barns and in the judging pavilions. We would recommend further that the farmers who visit the fair, take time to talk with the breeders who have fine stock on display. Surely, every farmer and his boys will be interested in the grain and grass exhibits and in making a mental comparison between the products exhibited at the fair and those which he raises on his own farm. There is a great deal of talk nowadays about the county agent and his work and also about Upper Wisconsin. The farmer who visits the state fair and inspects the county exhibits will get a great deal of information on these subjects which will be of value to him.

We are particularly fortunate in Wisconsin in having the best display of dairy products at the fair which are exhibited in any state in the Union. It will certainly pay to look them over. No one can carefully inspect the horticultural exhibit arranged under the direction of the Wisconsin State Horticultural Society and fail to be benefited thereby. The farmer and his family who are interested in poultry cannot afford to miss the poultry exhibit at the fair. If there are farmers who do not take sufficient interest in poultry they ought to get new enthusiasm at Milwaukee. It will pay to study the educational exhibits and the exhibit of the University of Wisconsin, to make a careful inspection of the school exhibits, to have the young folks take special interest in the contests which are provided, to attend the state spelling match, etc.

It is not possible for us to enumerate in a short article all of the good things which may be seen at the fair. We must take into consideration that these exhibits are arranged by the most successful men in their lines in Wisconsin. Those who desire to keep pace with progress in agricultural implements will have this opportunity afforded them at the fair. The automobile show is well worthy of attendance. It is well staged and the exhibitors are as interesting as one could see at the Chicago or New York shows. Those who missed the automobile show last year missed a treat.

Keep in mind the dates of the Wisconsin State Fair at Milwaukee, September 11th-16th. The Wisconsin Farmer will have a booth near the secretary's office. Our readers are invited to call and make themselves at home.

Moving Pictures For Farmers.

SOME effort has been made by the University of Wisconsin to introduce the motion picture into rural communities. Of course, these things all have to start in a small way, but the farmer and his family should have the advantage of the moving picture in a much larger way. We do not suggest that it is the duty of the state to take charge of the matter. Someone, however, is overlooking the majority of rural communities. Except where there are well-organized farmers' clubs, there are not many regular motion picture exhibitions in the country. Small towns supply something along this line, but too frequently the character of the pictures displayed is mediocre. We believe some well-organized plan of weekly motion picture shows in well-populated rural districts could be put on a paying basis. Farmers have supported the Chautauquas until Chautauquas may be found almost in every village and hamlet. But the Chautauqua is only one week in the year. The lyceum affords some additional educational instruction and amusement in the wintertime. The day is not far distant, in our judgment, when the farmer will have just as ready access to good moving pictures as residents of the city. It remains for some force to work out the details.

Getting Full Value From a Wisconsin Farmer Subscription.

WE HAVE often said that a subscriber to The Wisconsin Farmer receives more for his money than simply the weekly visit of his paper. The personal services of the entire editorial staff, comprising many departments, are at his disposal.

The publication of a journal like The Wisconsin Farmer requires a large organization of men who have made a special study along various agricultural lines. These men endeavor to keep in constant touch with the farmer and his problems, and while it may be true that "there is nothing new under the sun," it is also true that there are always new angles from which to view old problems.

The editors of The Wisconsin Farmer do not pretend to "know it all," but such information as they have is offered freely and gladly to our readers. We are pleased to answer inquiries addressed to the editors along special lines, and it is for this very purpose that we maintain such departments as the farm mechanics, live stock, veterinary, home, legal, and other departments. Not all the inquiries received can be answered in print, but we are always glad to reply to communications of this kind by letter, if not in the columns of the paper.

In this connection we are especially glad to receive letters from the wives and daughters of our subscribers on such subjects as club work, cooking, canning, home, school and church decorations, sanitation, home conveniences and the like.

Subscribers and their families are invited to avail themselves of the services of our organization and to send us their inquiries or personal experiences on problems relating to farm mechanics, live stock, marketing, home building, barn construction, and, in fact, on all the varied interests and activities of farm life.

Preventing Spread of Hog Cholera.

WISCONSIN is to be congratulated upon the zeal shown by its stockmen in preventing the spread of contagious diseases. In none of the twenty-two states where foot-and-mouth disease appeared was a better record made than in Wisconsin, and the same determination which was shown at that time will most assuredly be placed behind the movement to free the state from cholera. In such a movement co-operative effort is an absolute essential. Of course, there are duties for each individual to perform on his own premises, by way of cleaning up yards and feed lots and by disinfecting pens, troughs and sleeping quarters. By giving attention to these matters, one may prevent disease from getting a foothold, though, of course, it must be borne in mind that no herd is safe where real hog cholera infection makes its appearance in a locality.

Sensible co-operation in the stamping out of cholera means that every individual who becomes suspicious that the disease is in his herd should at once make the fact known to his neighbors, in order that precautions may be taken against the spread of the disease. Too often in the past preventable losses have been sustained because attempts have been made to keep the presence of the disease a secret. In the meantime there would be traffic back and forth in visiting and in the exchanging of work, thereby making conditions ideal for increasing the infected area.

Every swine breeder should regard it as a solemn duty to notify the proper authorities just as soon as he becomes suspicious of his herd. Where there is a county agricultural representative, his services should be enlisted at once in order that he may put into force proper quarantine regulations. Through his instrumentality well hogs will be immediately given the serum treatment, and in that way infected premises will soon be surrounded by immune herds. Just as prairie fires were stopped in an early day by plowing around the danger areas, so does it hold in fighting cholera that the sensible use of serum will immediately check the spread of infection.

Where there is no county agricultural representative, but a county agricultural school, the authorities in charge should at once be informed of the fact when cholera makes its appearance, in order that the same precautions may be taken as referred to above. Those counties in which there is no agricultural school and no county representative must look for aid to State Vetenarian Dr. E. H. Eliason, at Madison. Information in any event should be sent to headquarters by phone, because a single day's delay may cost thousands of dollars of loss because of spread of the disease. Every individual should be concerned not only in saving his own hogs, but he should have enough interest in the welfare of his community to assist his neighbors, and this can be done most effectively by getting in touch at once with the authorities that we have referred to.

Farmer a Valuable Asset to Village Business.

FREQUENTLY while traveling about the state the writer has noticed great signs in bold letters on billboards, fences and elsewhere, announcing that some particular village is offering free sites, freedom from taxation and other alluring inducements to secure the location of factories. But can any reader recall seeing any sign offering inducements to farmers and breeders to settle in the trade territory of any particular village? We are referring to the small cities, villages and hamlets where farming is the backbone of business, and not to the large cities which depend upon industries.

All of which brings us to wonder why these small cities should pay so much attention to getting factories? True, a factory is an asset, if successfully operated, but can it compare to a good farming country settled by prosperous farmers? We do not believe enough villages and small cities or rather the business men in such places appreciate the importance of farming. There is a disposition to conclude that a city, to grow, must have factories and shops, while the fact remains that some of the fastest-growing and prosperous cities in Wisconsin today are dependent entirely upon the farms thereabout.

Only recently a ruling of the railroad commission brought to light in an application for depot facilities at Bethesda Crossing, in Waukesha county, the real importance of farming and dairying. Within a mile and a half of this crossing there are twenty-five families, twenty of which are breeders of dairy cattle and shippers of milk. These residents have invested something like $400,000 and operate herds ranging from twenty-five to 184 head. Shipping facilities were poor, and upon proper showing the railroad commission has ordered the railroad to provide a station, adequate platforms and team tracks.

Most significant, though, in showing the importance of intensive dairying and the benefit to a small village of encouraging the farmers, are the figures on business produced before the commission. It was shown that at this little crossing, with only a loading station, that the milk shipments averaged 810 gallon cans of milk and 2,545 twelve-quart cans of milk daily, which is equivalent to a carload. In the minds of the commission this little farming community had grown to such importance from a shipping standpoint that the farmers were entitled to better railroad facilities.

The Waukesha county incident we cite merely to illustrate the importance of a broader co-operation between merchants and bankers and farmers. While they are offering free factory sites, they should not lose sight of the fact that the greatest development may come through better farming. The farmer does not ask for free farms or other inducements. He does not seek to avoid his taxes. Co-operation is all he asks, and can anyone suggest a factory employing the heads of twenty-five families that, from a trade and buying-power standpoint, compare with an equal number of farmers living near any village?

Good Advice For the Wisconsin High School Boy.

THE following is from the pen of H. L. Russell, dean of the College of Agriculture, University of Wisconsin:

Many a young man who has finished high school is now considering the question whether he will spend additional time in educational training to fit him better for his life work. Perhaps the boy has not yet fully made up his mind just what line he expects to follow. In fact most of us who are already engrossed with the problems of life did not consciously prepare in the most advantageous way for the particular niche we may now be filling.

While the opportunity to learn is always before us, no matter how old we are or the conditions under which we may labor, yet the years of conscious training and preparation come to the great majority during youth. If we do not take advantage of the opportunity then, the chance slips by and too frequently the regrets of after years are unavailing.

In the field of agriculture the opportunity for useful efforts is unrivaled, for there is no limit to the chance which the well-trained young man has in this field. In the earlier years naturally a large majority of the graduates of our agricultural colleges were needed to fill the professional positions which were then open, but competition is now much keener for these positions, as in all other branches of the teaching field.

In the practical field, however, there is no need for the trained man to fear competition. The business side of agriculture like any other business, is held down and encumbered with the multitude who are unwilling to apply the results of modern science or indifferent to its value. Just so long as they are content to move along in the same rut, to ignore the findings of modern science and the tested experience of others, to let well enough alone and drift rather than to push, just so long will the returns of the average farm be absurdly low.

Why do the cornfields year after year of the members of the Wisconsin Experiment Association run from ten to twenty bushels above the average yield of the state? Why is the average yield of corn in Wisconsin from thirty-six to forty bushels per acre, while that of the entire United States runs about twenty-six? Simply because Wisconsin farmers are more progressive than the average. They have learned the lesson of good seed and good culture and reap the profits thereby. The man who is able to apply these lessons certainly is able to compete advantageously with the average.

No good farmer should keep a herd of milking cows and not know to a certainty whether the

labor and feed he expends on each animal returns an actual profit, or not. The average yield of many a Wisconsin herd is 300 pounds per year, while the average of the state is only 175 pounds of butter, just about enough to pay the cost of keep.

Food products are on the rise in value and will continue to increase so long as consumers multiply more rapidly than production. For this reason the product of the farm, as well as the land itself, is very unlikely to bring less returns than the average values now received. Neither does the farmer have to write off large sums for depreciation on his farm like the manufacturer on his factory or plant.

These facts are worth careful consideration by the boy who stands at the threshold of his opportunity and now has a chance to train his mind to think straight, as well as to learn how to handle effectively and efficiently his time and his talents.

As usual, Dean Russell makes a very clear and logical statement, and we believe it worth while for readers of The Wisconsin Farmer to call the attention of boys and young men in the family to it.

Improving a Wisconsin Herd.

MR. ROY H. MONROE, official tester for the Empire Cow Testing Association, gives the following advice to members relative to improvement of dairy herds:

(a) Use well-bred dairy cows; (b) Keep cows comfortable and contented; (c) Follow the practice of most successful dairymen; (d) Ask your field man to calculate you a ration suitable for the weight of cow and the production of milk and butter fat. This may mean dollars in your pocket; (e) Use a variety of feeds in the ration; (f) Take into consideration the cost of the ration; (g) Eliminate the unprofitable cows.

We quote further from Mr. Monroe, the following:

It is a hard and difficult proposition to feed a herd of dairy cows without some way of knowing the exact production of each individual. In fact it is merely guesswork on the part of the feeder. By testing the herd once each month by an official tester, the farmer obtains the required information, and hence can proceed on the right track to profitable feeding. At the close of each year the owner of the dairy herd will be able to tell exactly which cows are the money-makers and which cows are the star boarders. He will also be able to tell you just what it cost each individual cow, to produce 100 pounds of milk or one pound of butter fat, and how much he made for every dollar invested in feed.

Without the aid of the cow-testing association these facts would be hard to secure, and yet it is very essential that a producer should know the cost of the article before placing it on the market.

There are a large number of advantages which can be appreciated by the members of the association, such as: feeding a balanced ration; saving the heifers from the best cows; selling star boarders; showing the association record of cow to the purchaser. A man who desires to buy a cow would like to know of her production and would pay a larger sum for the same animal if she had a good record down in black and white, such as is furnished by the cow-testing association.

Did you ever stop to think that each and every cow in your herd is a market. You may sell your oats to one and receive 80 cents a bushel in return, while another will pay you 25 cents and it may be that you are getting as low a figure as 5 cents. It's a mighty good idea to know what markets pay the best prices for your feeds.

These pointers are certainly worthy of the careful consideration of Wisconsin farmer-dairymen.

Summer Silage Helps Out in a Dry Season.

IF THERE were ever any arguments for two silos on a farm, they have been presented, and, very forcibly so, by the drying up of the pastures in Wisconsin this summer. In a state where dairying is so largely followed as in this state, good, abundant pastures are necessary to a heavy flow of milk, and when these are gone and there is no good substitute, such as silage, the cows are sure to decrease in production. Where silage has been fed this summer, it has been found that the milk flow has been kept considerably above that in herds which had no silage, and there will undoubtedly be two silos on many farms next season where there is only one silo today.

The hot weather not only seriously cut down the milk production, but it interfered greatly with the semi-official work in Wisconsin herds. Mr. Roy T. Harris, supervisor of dairy tests, advises the Wisconsin Farmer that the seven-day work stopped absolutely and, of course, there was no incentive for a dairyman to start his cows on a long test when the weather was hot, the flies bad, and the pastures short. Poor pastures have also interfered with many cows on long tests, and, where the owners of such animals were without substitutes for pasturage, the records show the effect. However, one notable record was completed during the summer by Yeksa's Tops of Gold's Fannie 22362, owned by Mr. William Jones, of Waukesha county, which places her at the head of Wisconsin Guernseys with a yearly milk production of 19,792.2 pounds of milk and 982 pounds fat at nine years, six months. This record places her third in the list of world's Guernseys, and she has five records exceeding 700 pounds of fat. This record could not have been produced without good care and proper feeding, regardless of her breeding.

Mr. Harris who is in very close touch with dairying conditions in Wisconsin believes that the pasturage has been shorter this year than for several decades. The year opened with an especially heavy flow of milk in May and June and gradually began to drop off in July as the hot weather began. In some instances the decrease in milk production ran as high as 50 per cent, and in the university herd the decrease averaged a pound of fat a week during the hot days of late July. The writer recently visited a farm in Eau Claire county where the same conditions prevailed, the flow falling from thirty-five pounds of milk daily in June to twenty-eight in July, and this dairyman is certain that the use of summer silage is all that kept his herd up as well as it held up. It is certain that conditions have been very unusual in this state this summer, and such drying up of pastures may not come again soon, but the dairyman who wishes to be on the safe side is preparing now to feed silage in summer as well as in winter.

This Week's Cover Page.

THE cover page of this issue is a scene photographed August 17th, in Marinette county, Wisconsin, for The Wisconsin Farmer. It offers a suggestion which will be of special interest to the southern Wisconsin breeders. The cattle shown in the scene comprise a carload shipment from a southern Wisconsin county to Upper Wisconsin. These cattle were shipped in by a Marinette county association of farmers. The directors of the association took the responsibility of ordering the shipment with the understanding that if the cattle could not be sold at the annual county new settlers' picnic the directors would personally take them over. It happens that the cattle were not only all sold, but another carload could easily have been sold at the same time. This is not only suggestive of the future of dairying in Upper Wisconsin, but also suggestive of the possibility of increased sale of good live stock here in our own state. We are developing a country in Upper Wisconsin which is making a heavy demand on our southern Wisconsin herds. This demand will increase as the country is developed. The far-seeing breeder in the older counties will not worry about a market for good stock with so good and rapidly developing a market close at hand.

Lime Should Be Worked Into the Soil.

TEN years of experimental work at the Missouri station in applying lime to soils has led to the conclusion that lime may be applied either in the spring or fall, but in any case it is advisable to apply it before the seed bed is prepared in order that it may be worked in by tillable implements. Although lime is sometimes applied and plowed under, the Missouri station does not recommend this plan, claiming that better results will follow the mixing of the lime with the surface soil.

The results of ten-year experiments on about twenty-five fields scattered through Missouri show an average return of $5.80 from applying about a ton of ground limestone once in a corn, oats, wheat, clover rotation. The largest return was secured on clover, second on corn and lowest of all on wheat. These tests seem to show that about $3 a ton is about the highest price that a man can usually afford to pay for ground limestone for this purpose. Of course, on a sour soil where lime is absolutely necessary and makes the difference between a clover failure and a good stand, the lime has a still higher money value.

About 1,200 pounds of lump lime or 1,500 pounds of water-slaked lime furnish the equivalent of 2,000 pounds of ground limestone for this purpose, but the ground limestone is usually so much more economical to use. It should be applied at the rate of about two tons per acre under average conditions, but, of course, this depends very largely on the sourness of the land.

Tractor Demonstration at Madison.

WISCONSIN'S first tractor demonstration of state-wide importance will be held at Madison, September 4th-8th. Great preparations have been made for this show and it should be largely attended. A statement received this week from F. M. White, manager of the demonstration, shows that a large number of the big companies have signed up for the demonstration, and there is no doubt there will be a fine representation of every size and type of tractor. This is the round-up show of the National Tractor Circuit, and the shows held on this circuit this season have been very successful. As the tractor is a coming force in farm operation in this country, no farmer can keep pace with the progress of the day unless he gives the tractor some study. Certainly no better opportunity could be had to see the tractor, and ascertain what it will do, than will be afforded at the tractor demonstration at Madison. Having visited a number of these demonstrations, the editor feels no hesitancy in saying that the farmers who attend will be well repaid for their time and effort.

Earnings on Farm Greater Than in Industrial Occupations.

AN INTERESTING study has been made by the farm demonstration service of the department of agriculture for the purpose of ascertaining the comparative income of farmers and those engaged in industrial pursuits. This study was made in the case of 4,400 farms, a number sufficiently large to obtain a somewhat accurate average.

It seems that the average farm family makes approximately as much for its labor as the average industrial family, but owing to the lower cost of living on the farm and to the interest earned by the farm investment, the average farm family occupies a much more secure economic position than does the average city family. This statement refers to averages, and it should be remembered that a great many farmers fall far below those averages, while others rise far above them.

The most successful fifth of the farmers made about four times as much as the next to the least successful fifth, while the poorest fifth made considerably less than the interest on their farm investments. While it is doubtless true that the distance separating the richest from the poorest farmer is not as great as that separating the men at the lowest and at the topmost rung of the ladder in the industrial world, nevertheless there is a wide range of variation in prosperity even among farmers.

In order to compare the wages earned by the farmer himself with those earned by the worker in other industries, the value of the unpaid labor of the farmer's family should be subtracted. This item amounts to approximately one-tenth of the net earnings of the whole farm family. The farmer's wages, based on an average for the entire country, are approximately $360 a year, including food, fuel and lodging furnished by the farm, while based on the farms included in farm management surveys they are $852 a year. If the real wages earned by the representative farmer of the United States were midway between these two extremes his earnings would be about $600. This figure is below the average obtained by the study of the 4,400 farms referred to. This average was $387 in cash, to which should be added about $400 in home supplies and rent, bringing the total up to about $800. Thus, $600 is a conservative figure for the farmer's wages and may be compared with $518 earned by the average wage workers on full time in factories. When allowance is made for unemployment the factory workers average only $460 a year, and, while this includes women and children employed in manufactures, as well as the men, wage earners even in such occupations as iron and steel works and rolling mills report average earnings, allowing for time off, of only about $610.

While the farmer's earnings are higher than those of most industrial wage earners, the salaried employes of factories, clerks, etc., who average $1,188 a year, have cash incomes above those earned by farmers. The farmer's earnings may be further compared with the $1,052 earned by the average patrolman on the police force in cities of at least 30,000 inhabitants, with the $948 earned by the average employe of the United States government, and with the $663 earned by the average clergyman.

The limitations of averages and the difficulties of comparison apply with the same force to the farmer's wages as to the earnings of the farm family, but in view of all the available evidence the conclusion seems justified that the farmer's earnings, all things considered, are greater than those of the average wage earner engaged in other occupations.

Neatness Counts Just the Same.

IT IS NOT always an easy matter to keep the surroundings of the farm home and the outbuildings in apple-pie order. During the strenuous days of seeding and harvesting there will be certain evidences of neglect and in a measure this neglect may be excused. It is not excusable, however, if it gets to be a habit to allow everything to have a run-down appearance. It will mean the loss of pride in one's manner of living and where there are growing boys and girls slovenliness in the home or outside of the home may tend to fix habits that will never be uprooted.

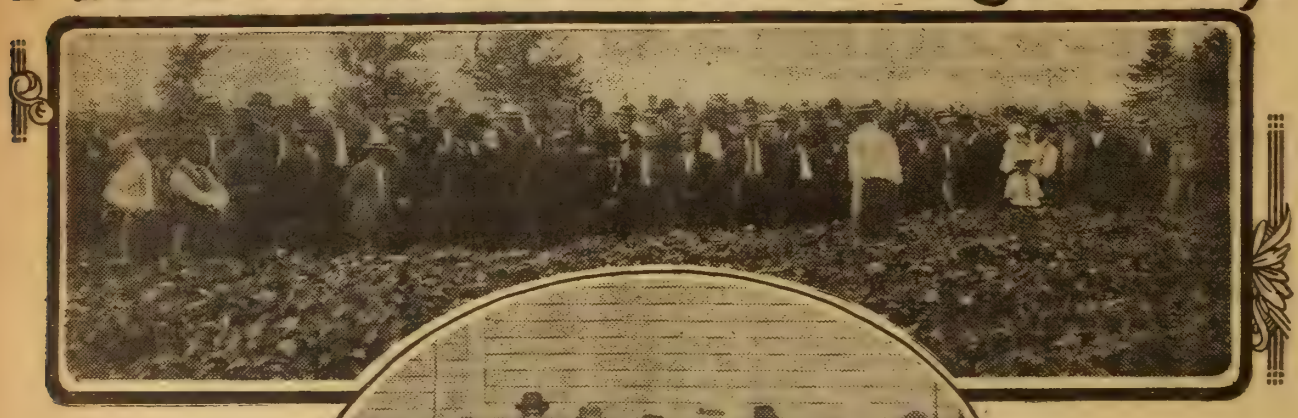
Those who fail to find the time to keep things in order around the front yard, and the back yard, too, for that matter, would do well to study the habits of those who are ahead with the work of every season. Such individuals generally find the time to make the "living" part of the farm harmonize with the fields. Instead of dragging along behind each season and, therefore, being continually in a grind, they put snap into their actions and they are usually finished ahead of schedule. These men literally have time to live and, having time to live, home surroundings are generally in condition to be a source of enjoyment to every member of the family.

The individual who loses pride in his own personal appearance is slipping back toward the blanket stage. He goes, we believe, in the same direction when he loses ambition to keep up to the same standard the appearance of his home.

This is not equivalent to advocating the expenditure of a lot of labor in carrying out the program. A neat little lawn and a few shrubs every home may have and, having them, their care at the proper time should become a pleasing necessity and not an irksome duty. The family that does not enjoy the pleasure of having an attractive front yard in which to while away leisure moments during the spring, summer and fall months misses one of the deep joys of farm life. If weeds must grow, let them be found in the fields and fence sides, but never in the front yard enclosure. We are not criticizing those who labor under difficulties because of an insufficient supply of help, but even of such we would say that more emphasis might be placed on the little everyday joys of living in the future than has been in the past. Some of the keen pleasures of farm life may be obtained practically without money and without price and may be enjoyed entirely apart from consideration of revenues or anything of the kind.

No home surrounded to the very doorstep with cockleburs and rag weed will ever put tender regard for that home into the hearts of growing boys and girls.

Marshfield Farmers' Roundup



Upper Scene—Studying field crops at the experiment farm near Marshfield. This work will be kept up each year and farmers brought in just before fields are ready for harvest. Practical talks on condition of crops are of great interest.

Center Scene—Young men and boys' classes. Lower Scene—Group of the company of farmers and their families gathered at the Marshfield station August 18th. This station is in charge of F. L. Musbach.

MR. F. L. MUSBACH, in charge of the Marshfield Experiment Station, Wood county, writes The Wisconsin Farmer enclosing an account of the Farmers' Round-up held at the farm August 18th. Although farmers were caught in a busy season, they turned out in large numbers to attend the meeting. Meetings of this kind will be held each year before harvest, a program being provided which will appeal to farmers, their wives and daughters and also the boys and young men. Mr. Musbach writes that the introduction of games has created great interest in the annual round-up. Crops are inspected in the field and lectures given to show why the crops are good or poor, as the case may be. Tillage methods are discussed, varieties of grains, drainage and other matters. Questions were brought up, answered and discussed. There were about 400 present, several coming as far as forty miles. Farm drainage was the chief topic emphasized this year.

Throughout a large section of central Wisconsin there is a soil type mapped as the Colby silt loam which is in need of drainage over a large area. The soil is retentive of moisture and in many places the land lies nearly level or only gently rolling, so that surface drainage is always necessary and in many cases tiling will be found profitable.

From the time that the first farm automobile reached the experimental farm southeast of Marshfield, Wood county, to the time that the third break in the tug-of-war rope occurred late in the afternoon the fourth annual Farmers' Round-up, August 18th, contained one successful feature after another. Over 400 farmers and their families were in attendance during the day, listening to the instructive talks of Mr. L. E. Scott on the "Most Important Crop on the Farm" and Mr. Jones on "Farm Drainage," as well as many others.

The program was a complete "balanced ration" of the educational and the entertaining sort. Every event was one of deep interest. While the morning was spent in a union meeting to discuss farm drainage and other topics, the afternoon was divided between a canning demonstration, under the direction of Miss Elizabeth Amery, of the home economics department of the university; stock judging, conducted by Mr. G. R. Ingalls and Mr. W. W. Clark; field crop inspection, under the direction of Supt. F. L. Musbach, of the experimental farm in this district, and Mr. E. J. Delwiche; a pie-eating contest for the boys; a nail-driving contest for the girls, and many games and races of various sorts.

The address by Mr. Scott on the "Greatest Crop on the Farm," directed to the value of farm children, was very interesting. Mr. Scott said:

Northern or what is popularly known as Upper Wisconsin is noted for three things, clover, cows and children. Clover is rightly named first being grown to feed the cows to produce the milk for the babies.

I have traveled a good deal and stood before a great many people and noted the bright appearance of the many farm children in this part of the state. Why shouldn't they be bright? They are brought up under the most favorable conditions, with the purest of air, best of water, and attention. Are they not then the best crop we can grow on the farm? Perhaps you have wondered sometimes when you have toiled early and late day after day what it is all for. Why are we laboring to grow corn and clover and to milk cows? It is for the one object—the perpetuity of our families. We are working solely for our children.

When we raise our crops, feeding them to our cattle and selling our milk, butter and cheese, we perhaps often ask what is the raw material? Why, all of these things are raw material to the farmers, and the finished products are the young men and young women that go from our homes to take up their life work. We have had our farm homes criticized from a great many and there is no doubt a great chance for improvement as there is for improvement of city homes. But the farm homes, I am sure, compare most favorably with any others.

A few years ago, I heard a speaker tell how many professional men and women were raised in farm homes. He found out of 100 leading doctors, seventy-eight were reared in farm homes; 100 lawyers, seventy-four were reared in farm homes; 111 engineers, sixty-eight were reared in farm homes; 112 preachers, all came from farm homes; 100 leading reformers, ninety were reared in farm homes; 100 teachers, eighty-two were reared in farm homes; 80 per cent of Chicago's leading professionals came from country homes.

C. P. Cary, Wisconsin Superintendent of Public Instruction, has stated that from statistics of the state it is in marked evidence that the country-bred boy and girl progress more rapidly in our city schools than those coming up through the grades in the city. It is the influence of the country homes and the tasks these people are required to perform that is responsible.

I believe that a child capable of loving can be ruled and governed by loving. We must make companions of them and for them make our homes pleasant with good conversation and music. While our country schools have been much criticized, personally I have a high regard for them. They are very good as far as they go, but they do not go far enough in the curriculum to help the child on the farm. Surely we ca..not keep them all at home for what would happen to the city, neither do we want to educate all our children for the city. Let us make our schools what they ought to be. After the completion of the eighth grade there is further education and they go to the city. We must try to avoid this by widening our township high school courses. When they come back from the city, if they do that, they would not manifest the interest they once had. After graduation we can feel that we have lost them. They take up their work in the city.

There is a county superintendent in the state who has made the broad statement that the city high school is not a fit place in which to educate our farmer boys and girls. What we can do to counteract this is to make our country schools better and larger. I have always viewed the township high school centrally located where the young people may be educated in the atmosphere of the country, driving to and from school and living at home to help their fathers and mothers in the farm work.

The talk by Mr. E. R. Jones on soil drainage was followed by considerable discussion, participated in by interested farmers. Many practical points of great value were brought out.

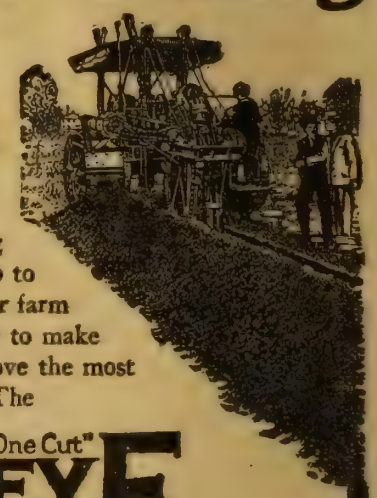
Mr. F. L. Musbach in presenting Mr. Jones said:

The Colby silt loam which embraces a large section in central Wisconsin is similar to the soil on the local experimental station farm. This soil is the result of weathered granite in some sections while in others sand rock contributed to a considerable extent, forming a sandy subsoil. The state soil survey has mapped a large area in central Wisconsin comprising over 6,500 square miles including Wood county on which is indicated all the various types found. This map together with report will be available for distribution within the next year. The drainage conditions are effected to a considerable extent by the subsoil conditions; whether of sandstone origin or granite. The surface soil without reference to the subsoil, however, in both cases is a compact silty loam that contains a large amount of fine earth particles so that water does not escape rapidly, yet not a sufficient amount of fine earth to cause the soil to check and crack when once dried out. As a result, this Colby silt loam does not permit water to pass through it rapidly. In fact, is the most difficult soil to drain of any in the state.

Mr. Jones emphasized the importance of having sufficient surface drainage. This should be the first step in improving drainage conditions. He referred to the open surface flood ditch on the experimental farm which was later inspected by the farmers. This flood ditch is about ten feet wide at the top and a foot deep at the deepest point, sloping gradually from the center to the sides. The slopes are seeded so that no surface erosion occurs. The land should be plowed in

(Concluded on page 11.)

The First Thing To See at Your State Fair



is this ditcher under actual working conditions, proving that it can cut 100 to 150 rods of perfect ditch a day. If your farm needs drainage or you think you'd like to make a little spare-time money this will prove the most profitable exhibit on the lot for you. The

"A Perfect Trench at One Cut"

BUCKEYE Traction Ditcher

Will Be Demonstrated at the Following State Fairs

Ohio, Columbus	Aug. 28 to Sept. 1
Iowa, Des Moines	Aug. 23 to Sept. 1
Indiana, Indianapolis	Sept. 4 to Sept. 8
Michigan, Detroit	Sept. 4 to Sept. 13
Wisconsin, Milwaukee	Sept. 11 to Sept. 15
Kansas, Hutchinson,	Sept. 16 to Sept. 23
Minnesota, Hamline	Sept. 4 to Sept. 9

Also at the Canadian National Exhibition Toronto, Ont., August 26th to Sept. 11th

Competent representatives will be in charge and will freely answer all questions. Learn how you can make $15 to $18 a day. Get our Buckeye Book of Facts E at the fair, or direct from us.

The Buckeye Traction Ditcher Co.

178 Crystal Avenue, Findlay, Ohio

DEATH OF JOHN M. ROBERTS

Pioneer Breeder and Farmer of Racine County, Wis., Passes Away at a Ripe Old Age After Life of Splendid Achievements.

JOHN M. ROBERTS, pioneer farmer and live stock breeder, died at his home in Racine county, Wisconsin, August 20th, after an illness of thirty-six hours. He was eighty-seven years and three months old, a man of high standing and splendid family, and his connection with farming and especially with the live stock industry had won him an enviable reputation.

Mr. Roberts was born in Towyn Meirionethshire, North Wales, May 22, 1829.

He came to America in 1850 and settled with his father in Racine county, where he has lived ever since. He married Mary Davis, of Wales, and settled down on a tract of 250 acres seven miles west of Racine, where later the little town of Franksville was built.

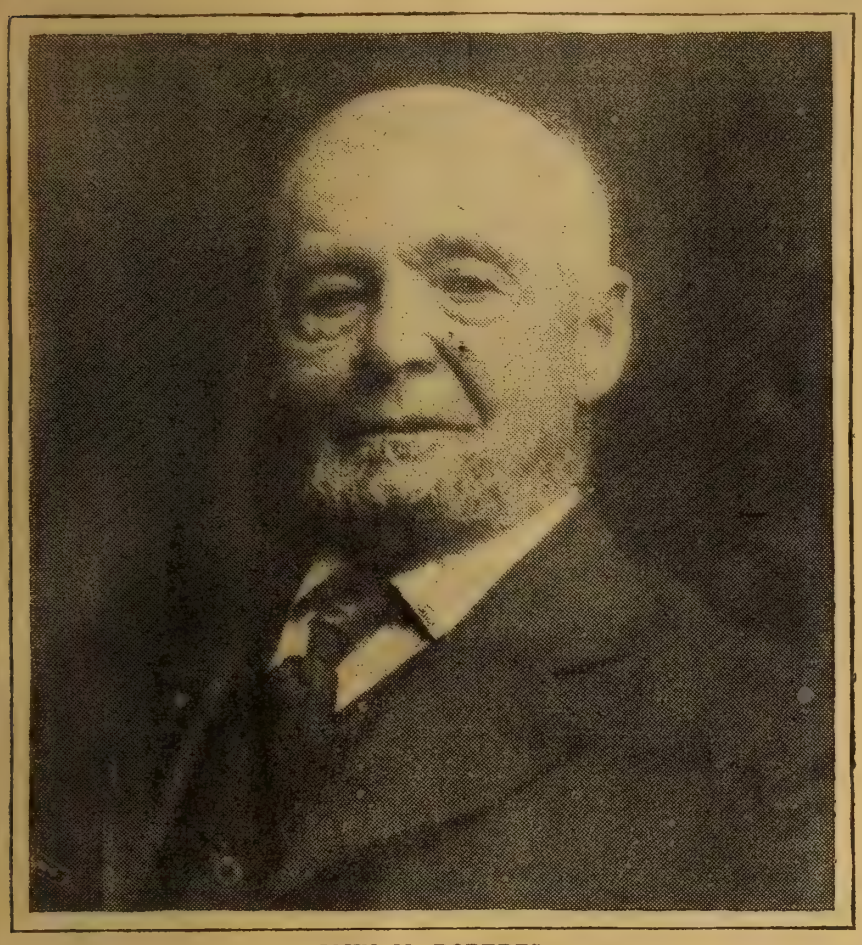
There was born to this union five sons and two daughters, those surviving being Mrs. James Baker, of Edmore, North Dakota; Mrs. Mary Ellis, of Racine, Wisconsin, and Lewis Roberts and Dr. David Roberts, of Waukesha, Wisconsin, all being present at his bedside at the time of his death excepting Mrs. Baker. The late Dr. E. D. Roberts, of Janesville, Wisconsin, formerly state veterinarian of Wisconsin, was one of the sons.

John M. Roberts was a very active live stock breeder and had engaged in many agricultural enterprises such as operating a large dairy and milk supply company in Milwaukee some thirty years ago. He at one time was engaged in the breeding of pure-bred sheep and Percheron horses as well as devoting much of his time and attention to the hop industry.

He retired from his farm some ten years ago and has made his home at Racine, Wisconsin, where he died.

The funeral services were held Wednesday, August 23d, at 2 p. m., from the Racine Welsh Church on Grand avenue, where he attended.

Mrs. John M. Roberts died last November at the age of ninety-two years.



JOHN M. ROBERTS.

Late of Racine county, Wis. A farmer and breeder in this state for fifty years.

Filling the Silo.

No rule can be laid down for filling the silo during a year of short rainfall, says C. H. Eckles, of the Missouri College of Agriculture. When the corn matures normally the time to put it in the silo is when the kernels are dented and glazed, but the kernel still soft enough so it may be broken with the thumb nail. At this time the husks will generally be turning yellow at the end of the ear. Corn may be put in after it is almost dry if enough water is added.

Where corn is injured by the drouth it should be allowed to stand as long as there is any hope at all of its getting rain to complete its growth. If it begins to die it should be put in the silo, as by this means what feed value it contains will be saved. If it cannot be put into the silo just then it may be shocked and put in later, as tests at the Missouri Agricultural Experiment Station have shown that shock corn makes good silage. Of course, it is not as good as that made at the usual time.

When filling the silo remember that silage spoils if too dry or the air is not expelled by thorough tramping. The tendency of late years has been to put corn in the silo too dry. It should be moist enough to wet the feet of the men who tramp it. If too dry add water by running it into the blower. At least two men are needed to tramp the silage at filling.

Special attention should be given to packing well around the edges. If the walls of the silo are not in good condition repairs should be made to keep out the air. If the doors do not fit well a good plan is to place a piece of tarred paper over the door on the inside allowing it to extend about two feet on each side.

Examine Wisconsin Potato Fields.

Dean Wortley, of the Bermuda Experiment Station; Dr. B. M. Barrus, of Cornell University, and other experiment station workers are now making a tour of the potato sections of Wisconsin for the special purpose of examining Wisconsin potato fields in reference to disease conditions.

The southern potato growers have had serious difficulty with certain types of potato diseases. Some of the seed stock secured in the past has come from unknown sources in the east and north.

Through the plan of seed inspection in practice in Wisconsin the Wisconsin Experiment Station was enabled to show Dr. Wortley and his party a large number of fields in excellent condition. The state potato growers' association and the Wisconsin Experiment Station is using every possible means to develop the seed industry of the state among growers who are in position to grow good seed stock. The trip of Dr. Wortley and others represents the recognition which is now given Wisconsin through the attention the state has given to pure seed work.

Federal Farm Credit Board.

A meeting of the federal farm credit board was held last Saturday in Madison to hear the claims of Wisconsin representatives for one of the twelve new farm loan banks to be established. Several prominent Wisconsin people appeared before the board and urged Wisconsin as a location for one of the banks. It was proposed by R. A. Moore that the county organizations in Wisconsin be utilized to assist in the operation of the farm credit law. There are now such organizations in fifty-one counties and the officers could aid the federal bank in securing information concerning those who request loans. Walter L. Houser, of Mondovi, former president of the Wisconsin Live Stock Breeders' Association, urged a portion of monies borrowed under the new act should be directed toward the purchase of live stock. On a $5,000 loan he said $4,000 might be applied on the land and $1,000 on good stock, and before very long the $1,000 invested in stock would pay off the larger part of the loan. It was pointed out to the board that the upper portion of Wisconsin is held back because of lack of funds for development, and that this loss is a loss to the consumer as well, because production is limited when there is plenty of good land which should be made to produce.

Complying With License Law.

To the Editor:—The license law has been the means of placing some 3,000 men under state recognition. It has given to these men a new idea of the position they hold and the responsibility that has been placed upon them as community leaders in an industry of national reputation. One must admit that there are a few men who have not fallen into line, but the number in this class is diminishing.

Only a short time ago the writer unexpectedly visited a factory where a license was granted to both the farmers' company as the operator and to the maker on the first inspection. The maker's license was framed and placed where it could be seen by everyone. His first remark was: "I would not take $1,000.00 for my license if it could not be replaced." One inspector writes: "I have just finished reinspection of ——— county and all but three have complied with the license law rules and regulations since my inspection in May." This is remarkable considering that this county has a large number of factories and makers.

In a large measure the license law has been the means of finding out where the best makers are located, and the time may come when they will be officially so rated. All men obtaining a license this year will be in one class under the law, but the record on file in this office is not the same for all. What is more to a maker's credit than to have an inspector's report attached to his application blank worded: "This is one of the best makers in my territory; I found his factory spotless. I recommend that a license be granted."

These splendid leaders of efficiency and standards of cleanliness may be found in every county of the state, and if it were possible for the men of every county to make a tour of inspection and get acquainted with their neighbors, one could not venture to predict what the result would be. All men have not had an equal chance in the past, but the changes that have been brought about this year in repairing old factories and the building of new ones is going to do away with the cause. "It is not my fault—look at the condition of my factory. Anything that I do is not appreciated."

The question is often asked, Is it worth while to do a little extra when time permits? The answer must be yes. No matter whether the factory is operated by the farmers or by an individual, the maker's efforts are, as a rule, productive of much good.

At a certain creamery meeting the stockholders of the factory voted an increased salary for the maker for the balance of the year covered by the contract, because the buttermaker was given credit for the new appearance of the interior of the building. A short time ago a certain factory with a past record that was not good as to cleanliness was inspected. A new man was found in charge and I venture to say that if the former maker should return to the place for a visit, he would not know the factory. The same farmers were supplying the milk. The officers had not been materially changed. What made the difference? Co-operation between the maker and the farmers. This factory was not a modern structure; it had been built years ago, but the use of paint and a close observance of the license rules and regulations made it a most creditable place.

Begin early to plan for that state fair exhibit. This is your opportunity to show what can be done in getting up a large exhibit of butter and cheese. Men have already written this office for suggestions and for assistance in bringing about best results. Bear in mind that all exhibits should be in the Dairy Building, State Fair Park, West Allis, Wis., Saturday, September 2, 1916.

C. E. LEE,
Asst. Commissioner and Dairy Specialist.

NEWS OF THE SALE RING

Anoka Farms' Sheep Sale.

The Anoka Farms' sale of imported sheep at Waukesha, Wis., on August 19th was a success. The attendance was from a wide territory as will be noted from the list of purchasers. Mail bids were also on hand from three or four states that were not represented personally. One hundred and thirty sheep were sold at an average of $95, total, $12,509. Twenty-nine Cotswolds averaged $92, total $2,680; forty-six Shropshires averaged $94, total $4,261; forty-eight Hampshires averaged $92, total $4,416; nine Lincoln rams averaged $128, total $1,152. About two-thirds of the offering were rams and ram lambs and the balance ewes and ewe lambs. Anoka Farms were congratulated on all sides for the uniform high quality of the importation which was bought by many of the leaders in the business in this country. A. W. Arnold paid top price for Cotswolds at $150 for ram and $100 each for three ewes. J. C. Andrew paid $190 for a Shropshire ram and $225 each for two ewes; W. S. Corsa also paid $190 for ram. Walnut Hall and Frank Brown each paid $250 for Hampshire rams. Harry Allen paid $160 for a Lincoln ram.

Cotswold purchasers were:
A. W. Arnold, Galesville, Wis.
Walnut Hall, Donerail, Ky.
O. W. Taylor & Son, Ames, Iowa.
J. R. Allen & Bros., Draper, Utah.
F. L. Hall, Crawford, Neb.
Harrison White, Marion, Ill.
Geo. Allen & Sons, Lexington, Neb.
C. R. Doty, Charleston, Ill.
Shropshire purchasers were:
H. D. Eddingfield, Mt. Pleasant, Iowa.
E. B. Walker, Memphis, Mo.
W. S. Corsa, White Hall, Ill.
W. R. Leland, Ann Arbor, Mich.
Hereford Farms, Versailles, Ky.
J. T. Kramer, Tulsa, Okla.
D. Bock, David City, Neb.
Frank Brown, Carlton, Ore.
C. D. Nichols Live Stock Co., Cresco, Iowa.
John Clay, Warrens, Wis.
J. C. Andrew, West Point, Ind.
Hawthorne Farms, Leithton, Ill.
Henry Klinger, Lebanon, Ind.
Arthur Broughton, Albany, Wis.
Zelora Green, Oakland, Ill.
W. S. Ellis, Bryn Mawr, Pa.
Geo. Allen & Sons, Lexington, Neb.
E. D. Cook, Plainview, Wis.
Hampshire purchasers were:
Walnut Hall, Donerail, Ky.
F. M. Rothrock, Spokane, Wash.
G. L. Mitchell, Lucas, Ohio.
Wisconsin Agricultural College, Madison, Wis.
Alex W. Arnold, Galesville, Wis.
Frank Brown, Carlton, Ore.
Iowa State College, Ames, Iowa.
Frank Sherwood, Shelbyville, Mo.
J. R. Allen & Bros., Draper, Utah.
Lincoln purchasers were:
John Gibson, Denfield, Ontario
E. Robson, London, Ontario.
Geo. Allen & Bros., Lexington, Neb.
A. W. Arnold, Galesville, Wis.

From the other end of the globe comes striking instance of the Jersey's ability to produce heavily and profitably wherever grass and grain will grow. Lady of Collingwood, a registered Jersey owned by T. E. Hellyer, of Northeast Harbor, Dunedin, New Zealand, has just finished a three years' cumulative test of 29,909.35 pounds of milk and 1,863.4 pounds of fat begun at one year, eleven months.

In and Around Wisconsin

The Sauk County Agricultural Society has begun the erection of a wire sheep barn on the Sauk County Fair grounds at Baraboo, to be completed in time for the fair in September. It will be 24x96 feet with an eight-foot alleyway and will be a very substantial addition to the fair ground buildings.

Farmers of Outagamie county are being urged to assist in making the county exhibit at the state fair one that will be representative of the county. This will be the first time Outagamie county has exhibited and William F. Wolf, county clerk, and P. W. Silverwood, chairman of the exhibit committee, have begun work in getting together the necessary products.

Wisconsin tobacco growers who stuck with tobacco despite the losses of the last two seasons are fortunate this year and there is promise that they will recover some of the previous year's losses. The buying movement in the southern part of the state is in full force now and many fields are being contracted for at 16 cents. Thousands of acres sold last year at 5 and 6 cents, but this year the packers are anxious for the stock and prices have been known to jump 2 cents a pound overnight. It is estimated half of the acreage in the southern counties has already been contracted for, while most of the buying has been completed in the northern sections, some going at 18 cents. Scarcely any of the crop has been harvested, so that the buying by the packers has been largely on prospects.

The annual meeting of the state drainage association will be held at Racine September 4th-5th. On the morning of September 5th delegates will be taken on an automobile ride to Racine and Kenosha counties. The program includes addresses by Senator Everett, of Racine; James L. English, of Waterford; E. J. Meyers, of Racine, and P. J. Hurtgen, of Burlington. The program says, "If it rains, so much the better. We shall see the drains in operation."

Following the drainage association's meeting the delegates will go to Madison to attend the tractor show September 6th, 7th and 8th. At this demonstration plows and ditching machines will be seen in operation on marsh land.

Mr. A. M. TenEyck, agricultural agent of Winnebago county, Illinois, writes that he has been called to visit several farms where pigs were not thriving. He reports that in each instance the trouble was worms, but in a few cases this was aggravated by indigestion, caused by feeding too much oats, either whole or ground. He says oats should be mixed and ground with other ground feed and fed in slop and then it is advisable to sift the hulls out or skim them off the barrel after mixing the slop.

Mr. TenEyck recommends the following remedies for worms in hogs:

1. Turpentine—One teaspoonful to each 100 pounds' weight of pig. Feed with milk or in slop after keeping the pigs without feed for some twelve to eighteen hours.

2. Lewis Lye—About one-half teaspoonful to 100 pounds of weight of pig.

3. Oil of American Wormseed—A drop to the pound, or a tablespoonful to large hogs. When pigs are badly affected each pig should be dosed separately or the medicine may be given in slop or with milk. With each of the above remedies it is advisable to give a purgative with the medicine or at the next feed. Two ounces of Glauber salts to 100 pounds' weight is a dose. Pigs on pasture need less physic. It is advisable to repeat the treatment in ten days.

4. Copperas is usually given in combination with other ingredients which mixture should be kept before the hogs in a box or self-feeder. The regular government formula is given as follows:

Charcoal	1 Bu.
Wood ashes	1 Bu.
Salt	8 Lbs.
Slaked lime	4 Lbs.
Sulphur	4 Lbs.
Pulverized copperas	2 Lbs.

Mix the salt and sulphur thoroughly and then mix with the charcoal and ashes. Dissolve the copperas in a quart of hot water and sprinkle over the whole mass mixing it thoroughly. Hogs will eat this material freely, and the mixture acts as a tonic, appetizer, and bone builder as well as a vermifuge. In place of charcoal, slack or soft coal may be used and if wood ashes are not available, use sifted coal ashes or else put in more lime. It is doubtful whether pigs which are badly infested with worms will be very quickly relieved by this remedy. It is a preventive rather than a cure.

The Waupaca and Portage County Holstein Breeders' Association will have a choice selection of pure-bred cattle on display at the Waupaca County Fair, September 5th, 6th, 7th and 8th, in the new barns erected by the fair association for pure-bred stock. This will be a fine opportunity to see some excellent animals.

The twenty-ninth annual summer meeting of the Wisconsin State Cranberry Growers' Association was held

J. A. ROBERTS, WAUKESHA COUNTY.

Mr. Roberts has exhibited stock at the Wisconsin fairs for many years and has a wide acquaintance among the exhibitors of various states. This year he has been invited to judge stock at the following county fairs: Waupaca, Sauk, Tomah, Sparta, Boscobel, Lincoln, Juneau and Jefferson.

at Cranmoor on the M. O. Potter bog, Tuesday, August 8th. The fine bog at the Potter place as well as the experiment station and other bogs near by were inspected by the visitors. The station was found to be in fine shape with prospect of a good crop. Mr. M. O. Potter has several sections where he has been seeding and which looked like a Cape Cod bog. After the dinner, which was a basket picnic, the meeting was called to order by President Searls, who explained new companies do not hesitate to spend as high as $900 to $1,000 per acre to make a good bog and he said he is sure it will pay them. Assistant Dean Morrison, of the agricultural college, was present to get the ideas from the grower as to the future of the station. It seemed to be the general opinion that the station should be enlarged so as to make it self-supporting and that it should remain at the present location if possible. In case it became necessary to move it several sites were offered at Cranmoor and Mather. Mr. Frederic Cranefield, secretary of the Wisconsin State Horticultural Society, spoke on the great possibility of the state fair as an advertising medium and it was decided to make quite an extensive display, consisting of fruit growing on the vines, samples of different varieties and a practical cooking demonstration with the free service of the cooked fruit. A committee consisting of Mr. C. M. Seeker, C. R. Treat, O. G. Malde, George Orpin and J. W. Fitch was named to have charge of the state fair exhibit. The sales company voted $250 to help pay expenses. The growers all reported better crops than last year.

DEMONSTRATING THE USE OF A 12-25 TRACTOR IN CHEAPENING COST OF LAND CLEARING AND BREAKING A FIELD OF BRUSH.

MODEL BARN AND SILO ON J. A. CRAIG FARM NEAR JANESVILLE, ROCK COUNTY, WISCONSIN.

The statement from G. B. Mortimer, of the Madison station, calls attention to mistakes which Wisconsin farmers have made in handling Sudan grass. Mortimer says that notwithstanding the fact Sudan grass should be planted in Wisconsin from May 15th to June 1st. A number of plantings were made much earlier and in most cases with poor results. Even the plantings which were made this year at the proper time are not the best for the reason that the season has been unfavorable.

MY 1917 MODELS NOW READY!

NO OTHER SPREADER COMPARES WITH IT

COSTS ONLY $87.50

JUST READ THESE 1917 IMPROVEMENTS!

They mean that every Galloway Spreader is **built stronger and better than before.** The beater bolts are 1-16 in. larger with lock nuts. Beater bar bolts increased in size and strength. Beater teeth longer and stronger than ever which means they now tear the toughest manure finer than ever and spread it easier. Heavier bolts hold the beater bars in the beater head. Rear shaft increased in strength—higher carbon steel used. Additional bolts strengthen (beyond actual necessity) the beater bracket. Larger drive sprockets, which mean **lighter draft than ever.** The fifth wheel castings are larger and increased in strength—spreader box **steadier in turning.** Rear conveyor shaft now made of No. 40 carbon steel. All steel tongue. All metal parts thoroughly coated with asphaltum weather-proof paint. Spreader box better finished and painted. Galloway WIDE SPREADING V-RAKE on every machine WORTH $15 on any spreader, COSTS YOU NOTHING EXTRA. INVINCIBLE, IRRESISTIBLE, PATENTED ROLLER FEED—an EXCLUSIVE GALLOWAY FEATURE, makes it SUPERIOR to all other feeds on all other machines—the SECRET OF OUR LIGHT DRAFT. The mechanical principle is the same as MOVING A HOUSE ON ROLLERS. THIS FEATURE ALONE WORTH $25 on any spreader, EXCLUSIVE AGAIN on the Galloway, costs you NOTHING EXTRA. PATENTED AUTOMATIC STOP, uniform clean out push board, WORTH $10 EXTRA on any spreader, EXCLUSIVE on the Galloway, costs you NOTHING EXTRA. These are a few of the features you will find on the Galloway, which are PROTECTED BY GALLOWAY PATENTS. Don't buy a spreader of any make or kind until you have tried a genuine GALLOWAY 1917 MODEL No. 5, No. 1A or No. 8 at our risk, without obligating yourself in any way. Thirty days' field trial and returnable to us within one year if not perfectly satisfactory. Remember, we manufacture this spreader in our own factories and sell it direct from factory to farm. Do not confuse the Galloway spreader with lower priced machines made to sell for a price, which are all cheap, worthless imitations. Over 60,000 Galloway Spreaders in use. These and other features make the Galloway Spreader more invincible than ever in actual field work. No big, cumbersome, four-horse team or three-horse team needed to handle a Galloway. Two average horses can spread with the Galloway anywhere.

Complete particulars and details of this 1917 model spreader now ready.

A Postal Gets These Two Books---Write Today

Which tell the whole story. No. 1 is my 250-page four-color catalog. No. 2 is my 100-page fall supplement to the big spring book. YOUR copies of these books are now ready to mail. **Ask for yours today.** Remember a postal gets them. **They will save you from $100 to $200** on your fall purchases because they are crammed full of standard quality merchandise priced at **one small factory profit. Gasoline engines, farm tractors, farm implements** of all kinds, household goods, clothing, sewing machines, furniture, kitchen utensils, **automobile accessories, sporting goods,** shotguns, ammunition of standard high quality makes and grades, all priced to you at **one small profit** based on **great volume.** Ask for these books **now!**

Bloomington Tractor Show a Big Success.

Large Attendance and Great Interest Manifest—Exhibitors Report Good Sales, as the Crowds Were There For Business.

THAT the tractor is in favor with the Illinois farmer was amply evidenced at the National Tractor Demonstration at Bloomington last week. At no demonstration this year has the attendance been any larger or the interest more keen. Crowds ranging from 15,000 to 30,000 were present each day and every exhibition of plowing was closely followed by large and critical crowds. Every condition worked to the success of the affair. The weather was ideal, barring the heavy clouds of dust that arose, the ground was in excellent condition for plowing and the work was done with expedition and thoroughness that brought surprise to the thousands present who were not familiar with the tractor and its ability to work for the farmer.

It is an inspiring sight to see sixty tractors, large and small, making their way across a field, each one dragging from two to twenty plows and turning over the earth in glistening lines. Putting sixty acres of soil under the plow in a little less than two hours is certainly doing the work in a hurry, but that was the case at Bloomington, and when the job was completed each day it was conceded by the onlookers that it was satisfactorily performed in every particular.

In addition to the plowing demonstrations there were numerous private exhibitions showing the adaptability of the tractor for the hauling of binders, manure spreaders and other farm machinery, the doing of the belt work on the farm, hauling heavily loaded wagons filled with farm products to market, disking and harrowing the freshly plowed ground. In each case the work was thoroughly performed, to the full satisfaction of the onlooking thousands. There was also a demonstration of hedge grubbing by a specially constructed plow for this class of work, and the dynamiting of a low place on one farm in order to alter the course of a small running stream. It was surprising the ease with which these jobs were both completed and furnished another striking evidence as to the advance in farming methods.

In addition to the sixty tractor manufacturers that were exhibiting at Bloomington there were some two score accessory men on the ground with their exhibits, including rotary harrows, harvesting machines, oils, magnetos, motors, etc., as well as a number of labor-saving devices for the farm and the farm home that have no relation to the tractor question.

The crowd was a buying one. Not a manufacturer on the ground but reported a satisfactory number of sales, to say nothing of numerous prospects. The rapid advance that has been made in the past two or three years in the manufacture of medium-sized and medium-priced tractors has given a great impetus to the business and it was machines of this class that were universally in demand at Bloomington. The kerosene burning machines attracted a great deal of attention, owing to the high price of gasoline, and this fact was given great consideration by many of the buyers. In fact, there were as many, if not more, kerosene burning machines sold at Bloomington as the other kind.

Illinois did not furnish the total attendance at the show by any means. Indiana was well represented, and in addition there was present representatives of Uncle Sam who were giving careful consideration to the different machines. A delegation of Louisiana newspaper men and farmers, who are making a tour of the corn belt, spent a few hours at the demonstration, and there was also on hand representatives of business and farming interests in Mexico and the Argentine Republic. These latter men were very much impressed with the demonstration, and were very free in their expressions that their respective countries were bound to become in the very near future great fields for the operation of the tractor.

No one seemed to think that the advent of the tractor sounds the death knell of the horse on the American farm. As one farmer put it, "The tractor will supplement the work of the horse by taking off his shoulders the heavy work that the horse is really not fitted to do without rapidly wearing him out. But the tractor will not supplant him. We are going to do more intensive farming in this country than we have ever done before, and will need twice as much power as we have ever had. The additional power will be furnished by the tractor and the horse will find plenty to do on the farm in the easier tasks."

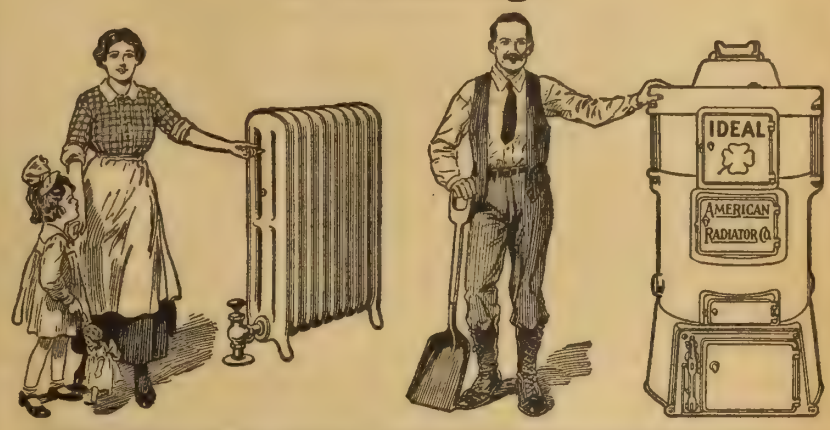
It was the consensus of opinion among the majority of the exhibitors that the tractor demonstrations have pretty well served their purpose, and that it is very doubtful whether another year will see anything of a general nature along the lines carried out this year. That there will be demonstrations next year is a foregone conclusion, but that there will be a national circuit such as this year seems very doubtful. The tractor is now an established fact on the American farm. A campaign of education on the part of the farm papers, backed up by the demonstrations that have been given for the past few years have furnished to the American farmer ample proof of what the machine will do. The expense connected with these demonstrations is very heavy, this series of shows costing some of the larger manufacturers over $20,000 and the smaller firms in like proportion. The tractors are now at work on farms in nearly every section of the country and the farmer who wants an actual demonstration can see one by going to some neighbor's farm.

There was a large attendance of county agents from all over Illinois at the Bloomington demonstration, and they were all enthusiastic tractor advocates. One of the most active men on the grounds was David Thompson, county agent for McLean county, affectionately called "Big Dave" by his many friends and admirers. Thompson characterizes the tractor as the "new plow horse for the farmer." "It is," he says, "many times more powerful than the horse and takes up scarcely any more room. You feed the new plow horse with a gasoline can and groom it with a handful of waste, a monkey wrench and a hammer. If you take good care of it you can have it work for you twenty-four hours a day if needed."

The Bloomington show was a decided success in every way, and no small part of this fact was due to the hearty support given it by the Bloomington Commercial Club, the most up-to-date bunch of live wires in central Illinois. No detail was overlooked by this organization and Secretary Hudson was on the job every minute. The city was filled to overflowing. Hotels were crowded to the limit, but there was plenty of accommodations for visitors in private homes and all were taken care of in a satisfactory way.

The Bloomington show was not a one-day affair. From the opening on Monday morning until the close Friday night the grounds were filled with farmers and their families, all intent upon watching the work of the iron plow horse. All the demonstrations were carefully watched by thousands of interested men and many women, who followed the machines from one end of the field to the other, all evidently determined that no single thing should escape their notice. The even depth of plowing, the straightness of the furrows, the ease and rapidity with which the task was accomplished, all were matters of deep interest to the onlookers, and it was apparent on all hands that the tractor has become a permanent fixture and a big factor in farming operations in the corn belt. The attendance at this year's demonstration was easily as large again as that at the Bloomington demonstration last year, and the manufacturers all stated there was a greatly increased interest and much more liberal buying.

Prepare! For old man winter is coming!



IDEAL Boilers are easier to run than a stove and the heat can be regulated to suit the weather—mild for chilly days or warmer to defeat the blizzard

Make up your mind to have this greatest of farm comforts and equipment right away. Don't put it off another day before finding out all about it and making arrangements for putting it in your house. Not necessary to have running water or a basement. The IDEAL Boiler can be placed in a side room or in a "lean-to;" even a well boarded up summer kitchen will answer the purpose.

AMERICAN RADIATORS & IDEAL BOILERS

But above all things, *have IDEAL - AMERICAN heat this winter.* A properly heated home is more important than automobiles or farm machinery.

Keep dampness and chill—(those half brothers of sickness) out of your house entirely. Give your family and yourself genuine comfort, pleasant health-giving warmth. IDEAL heating is the most successful and most profitable investment you can make—[illegible]ing big returns in comfortable living, health and happiness for the whole family.

Hot water supply for home and stock

Our little Hot Water Supply Boilers are fine for the home that has running water—domestic hot water always on tap for the use of the family or can be piped out to the water trough for tepid drinking water for the stock in winter.
Fuel: IDEAL Boilers will burn most anything—hard or soft coal, lignite, screenings, wood, and they produce the full heat to distribute to the AMERICAN Radiators placed to warm all parts of the house.

A No. 4-19-W IDEAL Boiler and 270 ft. of 38-in. AMERICAN Radiators, costing the owner $200, were used to heat this farm house. At this price the goods can be bought of any reputable, competent Fitter. This did not include cost of labor, pipe, valves, freight, etc., which vary according to climatic and other conditions.

Ideal heating best for farm house

Turn old Winter out and keep him out! Money spent in IDEAL-AMERICAN heating comes back in good living, health, happiness, savings in fuel and the big increased value that your property gets by this, the most important equipment of the farm home. Bankers and real estate men will almost invariably lend money for installing IDEAL-AMERICAN heating for they know that the security is sound and never less in value.

Write today for "Ideal Heating" and get this big book of information free. Investigate now before the winter rush and while prices are so attractive!

Sold by all dealers. No exclusive agents.

AMERICAN RADIATOR COMPANY

Prominent Seedman Killed

Mr. Henry A. Salzer, of La Crosse, Wisconsin, well-known in the grain-belt states through his connection with the John A. Salzer Seed Company, was instantly killed on Tuesday, August 22d, when an automobile in which he was riding plunged over a seventy-five-foot embankment in La Crosse county, near the village of Dresbach. Mr. Salzer was caught under the machine which turned over three times before it struck the bottom. News of his death will be received with deep regret by his many farmer friends in this state. Mrs. Salzer, Prof. and Mrs. Edward Kremers, of Madison, and Emil Bixson, the chauffeur, who were also in the machine, escaped injury. Prof. Kremers is Mrs. Salzer's brother. The driver, in turning out for a buggy, apparently lost control of the car.

Mr. Salzer was the second son of John A. Salzer, the founder of the big seed business at La Crosse which bears his name. He was born January 23, 1855, at Dutch Creek, Iowa, and went to La Crosse county with his father when sixteen years of age. At that time his father was a German Methodist preacher who, on retiring from the ministry in 1869, went into the floral and seed business, taking his sons into the business with him. After the death of John A. Salzer in 1892, Henry A. Salzer became president of the seed company and continued as its head until his death. Mr. Salzer also had other large business interests, including lumber, land and bank holdings. He was prominent in church work, being a trustee of the Methodist College at Charles City, Iowa. The widow and two children, Kenneth, twenty-two years old, and Gertrude, eleven years old, survive. Burial was from the La Crosse residence on Thursday, August 24th.

Invitation to Waukesha Motor Company Exhibit.

In our issue of August 24th appeared a page announcement of the Waukesha Motor Company, of Waukesha, Wisconsin. An invitation was extended to Wisconsin farmers to visit the tractor demonstration and especially the Waukesha Motor Company booth at Madison, September 4th to 8th. Unfortunately in a part of the edition the invitation read "St. Louis," instead of Madison. We make this correction and trust those readers who attend the Madison demonstration will visit the Waukesha Motor Company exhibit, which will be in a prominent place on the demonstration grounds. A great many tractors are equipped with Waukesha motors. Those who have had tractor experience understand the value of a powerful, smooth-running motor.

Remember the dates for the Wisconsin State Fair, September 11th-16th.

Ready For the 1916 State Fair.

Visitors at the West Allis Fair Ground, Milwaukee, This Year Will See Many Important Changes and a Splendid Exposition.

WISCONSIN's sixty-sixth state fair will open on Monday, September 11th, at Milwaukee, continuing through the week, and present indications are that it will be the greatest fair in the history of the state. Details for the fair have all been worked out; the improvements on the grounds are all under way and will be completed in good time; the entries in all departments have been very heavy and apparently all that is now needed to assure a successful exposition is good weather.

The visitor to the fair this year will see many things changed, many improvements for the better, and among these are the new sheep and swine pavilions and the addition to the grand stand. The new sheep and swine barns are drawing a large number of breeders who never exhibited at Wisconsin before and the capacity of 2,600 head in the new barns is expected to be taxed. The streets are being widened; a new fence has been erected on the east side, taking in the ten additional acres donated to the fair by Milwaukee county; paint is being used freely to freshen up the older buildings and with these improvements and good exhibits the fair is expected to establish new records for itself.

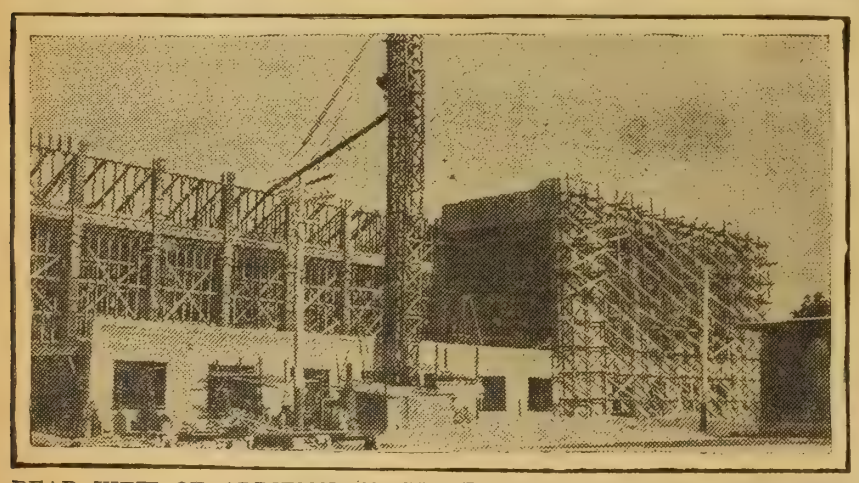
ENTRANCE TO THE SHEEP PAVILION WITH ACCOMMODATIONS FOR 1,300 HEAD.

The swine and sheep pavilion is modeled after those on other fair grounds, the good points of all being embodied in the plans. It will be a great pleasure for these breeders to show their stuff in these new barns this year after putting up with the old, crowded quarters for so many years. The barn is almost 1,000 feet long; of the open type with great judging pavilions in the center and cost in the neighborhood of $50,000. The swine are in the north half and the sheep in the south half and the barn located in the northwest corner of the grounds with the other stock buildings. Visitors will also have better facilities for looking over the prize winners and these facts, which are appreciated by the swine and sheep breeders, have brought forth a large entry.

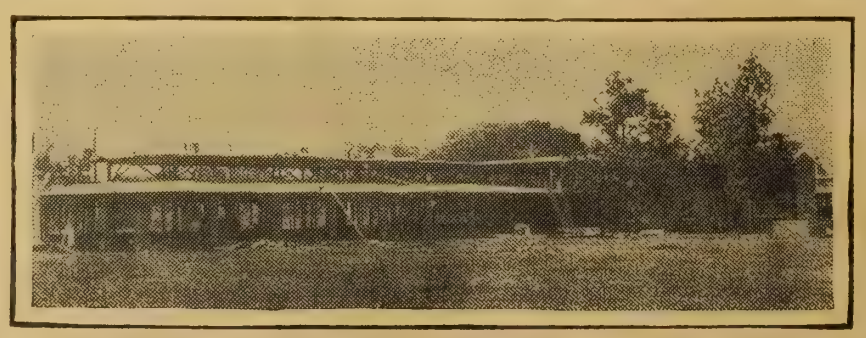
The addition to the grand stand gives the fair a seating capacity in the stands of 5,000, which will be increased to 12,000 by the erection of temporary bleachers. This improvement cost in the neighborhood of $50,000 and in addition to increasing the seating capacity has also added 40,000 square feet of exhibit space. This year the women's work, the Indian exhibit and the bees and honey exhibit will be found on the first floor under the grand stand, while the University of Wisconsin and the boys' and girls' club work exhibits will occupy the second floor. The third floor lecture room will be used also for the boys' and girls' club work and the spelling contest. These improvements are in line with the general policy of the fair board to gradually improve the grounds and are made possible by the appropriations of the last legislature. Next year a new poultry building, to cost $25,000, will be erected and will greatly stimulate this important department of the fair which is now hindered by insufficient quarters.

The fair this year will be more agricultural, in a sense, than ever before and the total amount in premiums and purses to be awarded will total about $65,000.

Most important, though, will be the live stock show, which undoubtedly will surpass anything of its kind ever held in Wisconsin. The competition is open to the world, while last year, owing to the prevalence of foot-and-mouth disease at that time, it was closed to all except Wisconsin breeders. To date this year there are herds entered from many other states, one herd coming from the state of Washington, and the fight for the prize money promises to be very strong. More money has been added for classes in all live stock and some minor changes have been made in classifications which are now known to the exhibitors, the entries having closed. There is an increase in Jersey and Guernsey money; a Wisconsin class has been added for Herefords; a Duroc Jersey futurity has been added, for which The Wisconsin Farmer is donating a cup on the same conditions as the Poland China futurity; and in the horse division there are new premiums for mare with foal at side. These additions have been made with the idea of strengthening the live stock part of the fair and indications at this time are that the quarters will be taxed to care for the stock to be shown. The dairy cattle entry list is especially large, Wisconsin being represented by some of its finest herds in competition with those of other states.



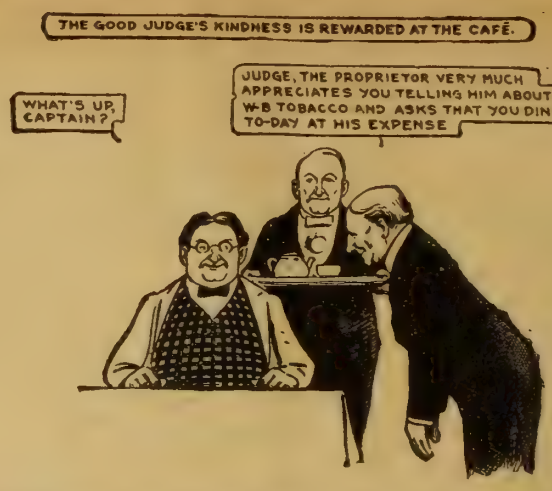
REAR VIEW OF ADDITION TO GRAND STAND, SHOWING INCREASED SPACE FOR EXHIBITS. WILL BE COMPLETED THIS WEEK.



THE SWINE PAVILION, ALMOST COMPLETED. IT WILL ACCOMMODATE 1,300 HEAD.

The cow-testing demonstration will be of intense interest to dairymen who are interested in this work and who are anxious to weed the boarders from their herds. There are fifty-one local associations in the state at the present time and this demonstration will show the profitable and the unprofitable cows, they having been brought from herds in local testing associations. Prizes have also been offered to the associations which show the greatest mileage of attendance, that is, according to the distance traveled by the residents served by any local association. This is a part of the live stock show and will work in with the display of baby beef, pigs, etc., in the boys' and girls' club work and the baby beef feeding contest of the Wisconsin Live Stock Breeders' Association.

New records are also expected to be established in the dairy exhibits, the entries of cheese and butter being very heavy. The cheese exhibit last year was pronounced by Fred Marty, superintendent, to be the finest and largest ever brought together in this country and it is expected to make a better showing this year. More stress has also been placed on the butter ex-



ONE good turn deserves another—one good chew of W-B CUT Chewing gives a man the tobacco satisfaction he's been seeking for years.

A good chew of W-B CUT, *long shred*, means a *small chew*. The *salt* seasoning brings out the rich tobacco flavor without grinding and spitting—that's what makes it a gentleman's chew.

Get a 10c pouch at any business-like dealer's. Give W-B CUT the quality test—and learn the biggest surprise of your tobacco experience.

BAIN'S PEERLESS SEED CORN DRYER

PREPARE for NEXT YEAR'S CORN CROP

The thirty thousand farmers who used our mouse-proof Dryers and selected their seed corn carefully last fall had 100% good seed corn last spring.

Circular Dryer 3½ feet in diameter but has 300 feet drying space. Corn put on with double galvanized hooks. Each ear has complete circulation of air around it; thus curing every kernel. No moulding, heating or souring. Corn cured on the Dryer will increase the average farmer's corn crop from 10 to 25%.

The price of Dryers has not advanced, although built of steel. Dryers made in two styles and four sizes, ranging from 600 to 1500 ears.

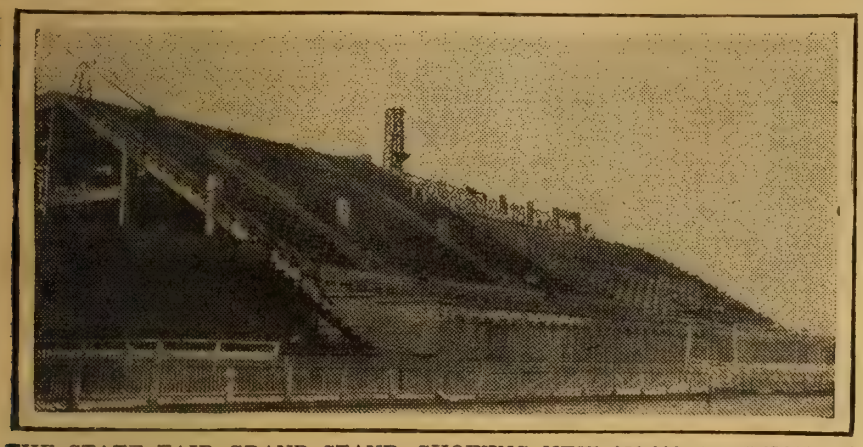
hibits and it is hoped to make this the best ever held.

The machinery show, which is always of interest to farmers, promises to break all records. The demand for space by the implement and machinery manufacturers has been very heavy and almost every kind of a machine from a farm tractor to a road building machine will be shown. In addition to tractors there will be farm implements, traction tile ditchers, farm engines, barn equipment, pulverizing machines, gates and fencing, ensilage cutters, silo fillers, silos and building materials, potato machinery, vehicles, road machinery, corn binders, separators and numerous other farm conveniences. The automobile show also promises to be of great interest, as it will be the first display of the 1917 cars and all of the 47,000 feet of floor space has been reserved for the show which will be under the direction of the Milwaukee Automobile Dealers' Association. Pleasure cars will be shown with commercial motor vehicles and accessories.

The county building will be taxed to take care of the county exhibits. There promises to be a very keen fight for honors this year and the older sections of the state will be well represented, in contrast to previous years when the newer counties were in the majority. To date Ashland, Clark, Dane, Forest, Iowa, Kenosha, Langlade, Marathon, Milwaukee, Oneida, Ozaukee, Polk, St. Croix, Sauk, Sawyer, Taylor, Washburn, Waupaca, Wood, Walworth, La Crosse, Chippewa, Dodge, Columbia, Outagamie and Lincoln counties have entered and several other counties are expected to follow suit. The agricultural products will also be shown in the county building. In potatoes some changes have been made in classifications, eliminating non-standard varieties, which will improve the potato showing. The state association will have its large, comprehensive exhibit as usual.

The boys' and girls' club work department has grown to be very important and is under the direction of Mr. T. L. Bewick. He expects about 1,200 boys and girls to show and the regular and special premiums offered total $7,722. All exhibits must be the results of the labor of the person exhibiting so that they will show definitely the work being carried out among the farm boys and girls of the state. For the convenience of these contestants a camp under the direction of the Y. M. C. A. will be conducted on the grounds. The school exhibits, women's work, etc., promises to be up to their former standard.

These are only a few of the features of direct interest to the farmers. They concern the educative value of the fair, while plenty of amusement will be provided. Ruth Law will thrill the crowds with her diving airship, there will be an abundance of free circus acts scattered about the ground and a wild west show will take the place of the old "pike." The racing program is said to be very fine and on two afternoons there will be automobile racing. Milwaukee has raised $20,000 for holding a night festival down town so that visitors may enjoy this entertainment after spending the day at the fair. There will also be two night shows at the fair this year and a Sunday afternoon program with Ruth Law as the headliner. Every effort, The Wisconsin Farmer believes, has been made to insure Wisconsin of a great fair September 11th-19th and the patronage of the people is all that is needed to make it a success.



THE STATE FAIR GRAND STAND, SHOWING NEW $50,000 ADDITION ON THE RIGHT WHICH WILL BE COMPLETED THIS WEEK.

AUTOMOBILE HALL WHERE THE 1917 MODELS WILL BE ON DISPLAY.

Marshfield Farmers' Roundup.

(Continued from page 6.)

the direction of the fall, and in narrow lands the dead furrows are to be connected up with a good outlet leading to an open flood ditch as previously described.

Tile have been laid at Stanley and also on the local experimental station four or five years ago. The results in both cases show that the tile worked effectively, but not to the same extent as they do in other soils of the state. Usually tile are laid about four rods apart and even on the heavy red clays of the state this is sufficient. On the Colby silt loam, however, it will be necessary to place them much closer together, since water does not escape rapidly enough to prevent damage during the early part of the growing season.

Four inches was considered the smallest sized tile that could be used effectively. The cost of these at the Vesper Company's plant is $18 a thousand wholesale. The cost of laying four-inch tile was estimated at about 80 cents a rod. This includes digging the trench and laying the tile and "blinding" them.

The discussion was led by Mr. John Gault, who spoke of his experiences on his farm north of Vesper. Mr. Gault has laid in the neighborhood of ten or twelve miles of tile. In his section of the county the subsoil is of a sandy nature and Mr. Gault is of the opinion that the tile need not be laid so closely together. Practically all of his laterals are laid twelve rods apart. Mr. Gault spoke of connecting up his tile with the sandy subsoil by means of setting on edge a five-inch tile, thus permitting the water to enter the tile from the underlying sand. This is being tried out on a large scale and the experiment will be watched closely by farmers in this section of the state. If successful it will reduce the cost of tiling very largely.

Mr. Vaughn, an attorney from Grand Rapids, followed Mr. Gault, speaking briefly on the township drainage law.

The program in the afternoon was divided into three sections. Miss Amery conducted a demonstration in canning for the women folks, while the boys were given instruction in judging stock and the naming of seeds under the directions of Mr. Ingalls, county representative of Eau Claire county, and Mr. W. W. Clark, director of the agricultural school at Grand Rapids. The farmers were conducted over the farm under the direction of Mr. F. L. Musbach and Mr. E. J. Delwiche.

Miss Amery emphasized the importance of planting in the spring sufficient amount of vegetables and fruits so that a sufficient amount may be preserved in the fall. It requires but little more time to can a large amount than a small amount. "Vegetables and fruits contain minerals which are needed for the body. Sickness known as spring fever in the spring is due to the fact that there is not enough mineral matter in the body. If more vegetables and fruits were included in the bill of fare we ought to feel just as good in the spring as in the fall."

Mr. Ingalls and Mr. Clark had a live bunch of boys in the station barn, pointing out to them the good and the poor points of the Holstein herd maintained on the farm. Vernon Hocker won first in the placing of the animals judged. The boys were then taken in hand to the tool house where trays containing large numbers of seeds were laid out, which they were to identify. Thorwald Johnson took first in this contest.

Women's canning institutes are announced by the superintendent of farmers' institutes in Wisconsin as follows: Tomah, August 31st; Phillips, September 5th; Prentice, September 6th; Bayfield, September 6th; Washburn, September 7th; Ogema, September 7th; Mellen, September 8th, Stetsonville, September 8th.

Ask your neighbor to subscribe for The Wisconsin Farmer.

Correction

IN The Wisconsin Farmer issue of August 24th appeared the full page advertisement of the Waukesha Motor Company, a Wisconsin institution. Our readers were invited by this company to inspect the exhibit of motors at the Madison Tractor Demonstration, September 4th-8th. Through an unfortunate error the invitation in some copies of the paper read "St. Louis," instead of "Madison." As soon as the error was detected it was corrected. The Waukesha Motor Company has a very interesting exhibit already made up for the Madison demonstration and they are anxious to have every farmer interested in motors call at their booth. They will be pleased to show their engine and explain its good points. The Waukesha Motor is used in many of the tractors to be exhibited at Madison. This correction is made by The Wisconsin Farmer for the benefit of our readers who may have secured the copy last week which was incorrectly printed.

UPPER WISCONSIN

Marinette County New Settlers' Picnic and Cattle Show.

Three special trains, 500 autos and hundreds of farmers' rigs brought 5,000 people to the fifth annual Marinette County New Settlers' Picnic, which was held at Wausaukee on Thursday, August 17th. With the settlers' picnic was combined the first annual dairy cattle show and sale. The great picnic now takes precedence as the largest new settlers' picnic ever held anywhere in America. Visitors were present from several states, besides the general outpouring from all parts of Marinette county. The special train from Marinette, which also picked up large numbers of people at all stations on the way to Wausaukee, carried eleven coaches. A special train running from Pembine south brought in 150 people and another special from Girard Junction, Athelstane and points on the Milwaukee road branch brought in 100 people.

PRIZE-WINNING STOCK AT MARINETTE COUNTY SUMMER CATTLE SHOW.

One of the new features of this year's picnic was a merchants' and manufacturers' exhibit, which was very well patronized, and there were also attractive exhibits by the Marinette County Training and Agricultural School, and by the rural schools of the county, Mrs. Gertrude Schwittay, county superintendent, being in charge of the latter exhibit. All school exhibits were based on agricultural work being carried on by the pupils.

Two tractors, a 10-20 and a 12-25, gave demonstrations throughout the day, and their work was followed with great interest by a large number of farmers. The smaller tractor gave demonstrations of plowing with three bottoms, while the 12-25 was used in clearing a field adjacent to the picnic grounds. A tractor, of course, cannot pull the larger stumps, but its use in pulling green trees and stumps of a diameter of six inches and under was well shown.

One of the greatest drawing cards from the farmers' standpoint was the carload of twenty-one heifers brought in by the Marinette County Co-operative Cattle Buyers' Association for exhibit and sale at the cattle show. No orders had been received from farmers for this shipment, but one of the trustees of the association offered to purchase any cattle not taken by farmers at the picnic, and on the strength of that order J. K. Kern, buyer for the association, made a hurry-up trip to southern Wisconsin and came back with one of the finest carloads of cattle which he has ever purchased for Marinette county farmers. The trustee who offered to buy all cattle left over from the carload after the picnic did not have much chance of getting any cattle from that carload. Two days before the picnic farmers from Wausaukee and near-by territory had put in applications for over half of the carload. Before the picnic was over not only had the entire carload been purchased but applications had been received for another carload, and about fifty settlers and farmers had made preliminary arrangements for several more carloads.

ARRIVING ON SPECIAL TRAIN.

All of the cattle brought in for the picnic by the association were heifers, with the exception of one grade Holstein cow, seven years of age. This animal showed such a huge udder, milk veins and other indications of a great milker that seven applications had been made for her at a price of $125 two days before the picnic. She was awarded to the first farmer who applied for her, a Mr. E. Fields, who is building up a dairy herd on his place east of Wausaukee. While the cattle show did not bring out as large a represetnation of the best dairy stock of Marinette county as might have been desired, it was nevertheless a very good start and it is believed the annual county show and sale will continue until it becomes one of the most valuable features of the picnic. Awards of $400 were made on the classes exhibited, all of which were Holsteins or native cattle. The classes and winners were:

Pure-Bred Holstein—Cows three years old or over—H. J. Christ, 1st; Augustine Brothers, 2d; M. Mortenson 3d.

Pure-Bred Holsteins—Two animals of either sex, the produce of one dam—Augustine Bros. won on two heifers.

Pure-Bred Holsteins—Heifers one year and under two, not in milk—Augustine Bros., 1st.

Pure-Bred Holsteins—Bulls under one year—Augustine Bros., 1st; H. J. Christ, 2d; Augustine Bros., 3d.

Pure-Bred Holsteins—Cows two years and under three, in milk—Augustine Bros., 1st.

Pure-Bred Holsteins—Bulls one year and under two—M. Mortenson, 1st; Frank Wood, 2d and 3d.

Pure-Bred Holsteins—Champion bull any age—H. J. Christ, 1st.

Pure-Bred Holsteins—Two-year-old heifer, not in milk—H. P. Christ, 1st.

Pure-Bred Holsteins—Bulls three years old or over—H. J. Christ, 1st.

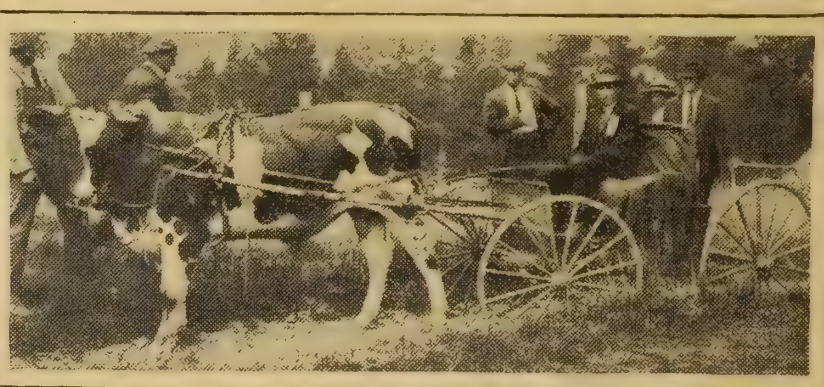
Grade Holsteins—Champion grade cow in milk—Grade cow, Fred Wartick, 1st; grade; calf, Fred Wartick, 1st.

Pure-Bred Holsteins—Bulls two years and under three—Frank Wittock, 1st; Augustine Bros., 2d.

Grade Holsteins—Cows three years old or over—Fred Wartick, 1st; J. N. Frankforth, 3d.

Pure-Bred Holsteins — Champion cow in milk—H. J. Christ, 1st.

Pure-Bred Holsteins — Champion heifer not in milk—Augustine Bros., 1st.



PURE-BRED HOLSTEIN BULL OWNED BY AUGUSTINE BROS., AT HEAD OF STOCK PARADE.

At 2 o'clock in the afternoon a stock parade took place. It was led by the pure-bred Holstein sire of the Augustine Bros.' herd, of Grover township, driven in harness in a single buggy. The animal was driven by Robert Augustine. This three-year-old sire has been broken to harness since he was a year old, and until recently was used to drive the children to and from school. During the past spring and summer he has been used part of each day plowing, cultivating, mowing and for all other uses for which the

MARINETTE COUNTY FARMERS CAME TO ANNUAL COUNTY PICNIC IN THEIR AUTOMOBILES.

Fills The Silo on Time

You Can Depend On
SILVER'S "OHIO"
The Logical Silo Filler

and *dependability* is a big point at silo filling time. This is one of the reasons for the "Ohio" *unbeatable leadership*. It's *always* ready—built for *big capacity—fast work*—with least chances for breakage and delays. Backed by *62 years'* manufacturing experience—by the silo filler pioneers. Used by experiment stations and leading farmers everywhere. Big features: Automatic beater feed, power-saving direct drive, friction reverse, single lever control, "Bull-dog-grip" rollers, non-explosive blower. *Better cut silage—packs air tight—ferments better—better food for stock. Write for catalog, also book on Silverized Silage.*

horses on the farm are kept. He minds the bit perfectly, and when driven through the picnic grove created no end of interest.

Prof. G. C. Humphrey, of the animal husbandry department of the college of agriculture, University of Wisconsin, presided as judge at the stock show. The judging was done in front of the main dairy barn and Professor Humphrey talked on the judging of dairy cattle while he did the official judging. This practical method of teaching farmers the points to seek in purchasing and breeding up cattle held the interest of at least 400 farmers through most of the forenoon.

Prof. A. M. Olson, superintendent of the Marinette County Training and Agricultural School, acted as chairman of the day and presided over the two main programs, which were held during the forenoon and afternoon in the main picnic grove. At the morning program S. E. Bennett, chairman of the new settlers' picnic committee since the picnic began five years ago with an attendance of eighteen people, announced that he would no longer be able to head the picnic organization, and that he was not a candidate for reelection. The two candidates for the office were H. E. Parsons, manager of the state experiment farm in Marinette county, and F. Hammes, a business man of Coleman. Mr. Hammes won the election, and in a short time will name the members of his committee to take charge of next year's picnic. The members of this year's picnic committee, all of whom are new settlers in Marinette county, were: A. W. Bennett, Amberg; T. W. Cherry, Porterfield; Thomas Edwards, Athelstane; L. N. Ferguson, Cedarville; Glenn E. Hart, Marek; Bert Hoffman, Crivitz; E. G. Holley, Beaver; A. F. Hose, Intervale; C. M. Jones, Dunbar; W. B. Sanderson, Loomis; J. L. Shanebrook, Middle Inlet; H. F. Steinbrecher, Wausaukee; F. J. Stevens, Pembine; M. C. Yeazel, Peshtigo.

F. G. Kraege, of Ft. Atkinson, Wisconsin, a dairy specialist, was the principal speaker at the morning program. Mr. Kraege's address was intensely practical and unanswerable from the standpoint of logic. He emphasized the importance of dairying, asserting that it was far ahead of grain or stock raising to maintain the soil fertility. For that reason in Marinette county, which he said could not be surpassed for grasses, water and climate, it was the ideal way of farming and would advance this county to high rank in Wisconsin, which is one of the leading dairy states of the Union. He predicted a great increase in the consumption of dairy products in the next few years and said that the National Dairy Association would spend in the next year or two, $750,000, to promote the popularity of milk, butter and cheese. Here was another reason, he said, why the Marinette county farmer should go in for dairying.

He next spoke on the vital necessity of the right kind of stock. Poor milk-producing cows were only boarders and netted a loss instead of a gain. One good producing bovine was worth forty poor ones. Then there should be care used in the rations, for the feed was important. Sanitary conditions were just as important as anything else in promoting milk production. Fresh air was just as necessary for the cow as human beings and means a stimulation of her product. It is important also that the farmer keep individual records of his cows so that he may be in better touch with the value of his herd and lastly there must be enthusiasm. Without enthusiasm no one could succeed at any business and it was surely needed in dairying. Without it he advised farmers to keep out of the business. The address was well illustrated by charts and was really a remarkable exposition of the virtues of dairying.

In the afternoon State Senator C. H. Everett, of Racine, spoke on agriculture in a general way.

A contest which called forth a great deal of interest was the milking competition between Marinette county farmers' daughters. Fifteen girls had been entered in this contest, but it was possible to get only seven cows of sufficiently quiet disposition to stand and be milked in the midst of a howling crowd of several thousand people. The girls were given five minutes in which to milk, the awards being made on the weight of the milk drawn by each.

A large number of Illinois, Iowa, Indiana and southern Wisconsin people who have purchased land in Marinette county, but have not settled on it as yet, were present at the picnic.

The intention of the picnic committee this year was to feature dairy farming as the plan to be followed by Marinette county farmers and there is no doubt but what dairying was given another great forward step by the picnic and cattle show.

A chicken and roast pork dinner was served in the main picnic grove in cafeteria style between the hours of 11 a. m. and 1:30 p. m., the arrangements having been made by the picnic committee. Several thousand people partook of the meal on the grounds.

Not only was the picnic a big success from an agricultural and social standpoint but it was a success financially. Not 1 cent was collected from business interests by the picnic committee, and yet it was possible to report a balance of about $100 after all expenses had been met. The money was raised by funds paid for the exhibition of farm machinery and merchandise and the refreshment stand concessions.

OUR DAIRY DEPARTMENT

ALL communications relating to dairy matters should be addressed to this office. Inquiries of general interest regarding dairy management and production will be promptly answered.

Winnebago Association.

The following table gives the names and records of cows in the Winnebago County Cow-Testing Association which have produced forty-five pounds of butter fat or over during the period of thirty days ending July 31, 1916:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat
Tenant Bros.					
Leona, G. J....	6	3-7-16	777	5.8	45.1
Sall, P. B. J....	6	2-9-16	801	6.8	54.5

Archibald R. House, Official Tester.

Alban and New Hope Association.

The following is a report of the Alban and New Hope Cow-Testing Association for the period of thirty days ending August 10, 1916. Among the leaders this month are the following men: C. E. Ericksen had the largest producing cow. This is a grade Guernsey eight years old. She gave 1,269 pounds of milk, testing 4.3, making 54.6 pounds of butter fat. Anton Brekke had the best average herd for this period, his eight grade and registered Holstein cows giving an average of 1,201 pounds of milk per cow and 41.4 pounds of butter fat.

There were twenty-six cows giving over forty pounds of butter fat per cow this month, which is not as many as we had last month, but this was caused by the continued hot, dry weather during July which caused the pasturage to be of a very poor quality.

The following list shows the cows that gave over forty-five pounds of butter fat:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat
C. E. Ericksen					
Whiteface, G.G.	8	3-26-16	1269	4.3	54.6
Lady, N.....	10	2-28-16	1087	4.2	45.7
Anton Brekke					
Whiteban, G.H.	6	3-3-16	1360	3.5	47.6
Blacky, G. H..	7	6-14-16	1331	3.4	45.3
Gr. Hols.	7	6-20-16	1376	3.5	48.2
Selina, R. H..	6	5-23-16	1504	3.6	54.1
Gunder Dobie					
Gr. Hols.....	6	5-17-16	1348	3.4	45.8
Otto Halvorson					
Beauty, N....	7	5-19-16	1318	3.6	47.4
A. Weinmann, Jr.					
Wis. Lass Aggie, R. H.	8	6-8-16	1420	3.3	46.9
Josie, G. H....	9	4-11-16	1374	3.6	49.5
M. J. Wrolstad					
Gr. Guern.....	9	11-25-15	859	5.5	47.2

M. E. Smith, Official Tester.
M. J. Wrolstad, Secretary.

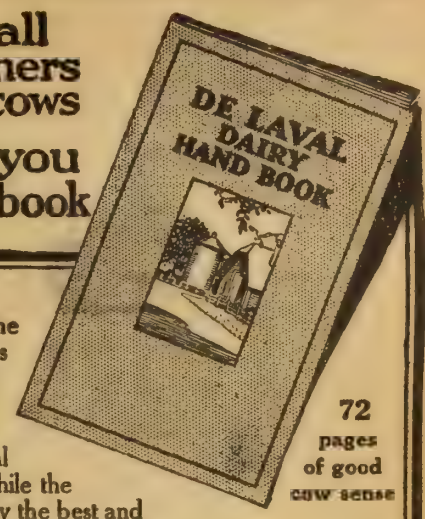
A scarcity of milk and cream is reported by dealers in dairy products near Antigo. The milk production has been gradually falling off since the pastures began to dry up.

The total value of all domestic animals in Wisconsin January 1, 1916, was $246,839,000.

More than 2,000,000 European women have been forced to take up men's work since the war started.

FREE to all owners of cows

If you keep cows you ought to write for this book



72 pages of good cow sense

THIS book was written for the man with only two cows just as much as for the man with twenty. In it has been gathered together a great fund of valuable information on subjects which are of vital interest to every cow owner. And while the various phases of dairying are treated by the best and highest authorities, it is not a technical treatise but is written in plain every-day language so that even the children can understand it.

Here are just a few topics that will give you an idea of the practical nature of its contents:

"How a Dairyman Made Good"—a real story of a real farmer, who starting with almost nothing, built up a fine dairy herd and made a big success.

"Year Around Feeding of Dairy Cows"—by an authority whose advice is well worth heeding. The importance of proper feeding deserves more attention from every cow owner.

"How to Judge a Dairy Cow."—shows by illustrations what points to look for in a dairy producer—explains the essential qualifications of a good dairy cow.

"Building Up a Dairy Herd"—a practical breeder gives some sound advice on this important subject.

"The Farm that Won't Wear Out"—shows that the farm where cows are kept, and the fertility returned to the soil, improves instead of deteriorates.

"The Care of Cream on the Farm"—quality is as important as quantity. It costs little and brings big returns.

"Silos and Silage"—one of the best chapters in the book. Full of silage facts that every farmer ought to know.

Then there are splendid articles on "Alfalfa," "Ventilation of Dairy Barns," "Breeds of Dairy Cattle," "Improving the Herd with a Good Bull," "Care of Freshening Cows," "How to Test Cows," etc. Numerous dairy rations, suitable for various sections of the country, are given, and various milk and dairy tables as well as tables of weights and measures, silo capacities, etc. that every farmer has occasion, at some time or other, to refer to.

Thousands of dollars have been spent in the preparation of this book, and if you keep cows you certainly ought to write for a copy and read it from cover to cover. The book is absolutely free. Just fill out the coupon or send the information requested on a post card, mentioning this paper.

The "Man-Saver" Ensilage Cutter

The Holstein Ensilage Cutter is a man saver and a power saver. No man is needed to feed fodder into the knives. Just throw the stuff, dry or green, onto the conveyor—the machine does the rest. The "Safety Head" adjusts itself to the amount of material fed. Save the expense of a man. Also risk of accident. Three men working at top speed cannot choke the machine.

Foreign Substances Do No Damage

By means of safety devices, the fly wheel and pulley run free when cutting head suddenly stops.

These are only a few of the many points of superiority of the Holstein. Write for full particulars and the name of our dealer in your locality.

The Meili-Blumberg Co., 200 Main Street NEW HOLSTEIN, WIS.

AGENTS WANTED IMMEDIATELY.

Recent Rains Start Fall Pastures.

Feed Sufficient For Live Stock—Corn Prospects Are Good —Threshing Well Advanced and Returns Generally Good.

WISCONSIN.

Baraboo County.—Threshing is in full swing; oats and barley are light, rye is an average. Potatoes are late in setting and some have been damaged by the recent drouth. Early potatoes are very scarce. Pastures are somewhat improved. The corn looks exceptionally well.—A. H. Buehler.

Bayfield County.—Most of the harvesting is finished, except a few fields of late oats. Late oats are rusty and have not filled as well as the early sowing. Corn is making a fine growth, as it has plenty of moisture and heat. Late potatoes have been benefited by the recent showers. The second crop of clover is fine and will make a crop nearly as heavy as the first cutting. Many farmers will put this clover in silos. Young stock on cut-over lands are getting fat.—E. C. Stevens.

Burnett County.—Grain is in the stack and threshing has commenced. The yield is less than half that of last year. Oats are averaging thirty-five bushels per acre, wheat fifteen bushels. Hot weather continues so a good crop of corn is looked for. Potatoes are poor, they are not forming well in the ground. Rain is plentiful. Pastures are getting old, but cattle still have plenty to eat. A good hay crop was harvested under excellent condition.—Fred Larson.

Chippewa County.—The grain crop is fair, but not equal to last year's mark. Oats are averaging about thirty-five or forty bushels an acre. Corn is good, but a little more rain would help it along considerably. The season has been too dry for potatoes this year. Although late, fruit is coming on well. Some stock in the wild pastures have died from eating poison grass or drinking impure water.—G. E. Rheingans.

Douglas County.—Oats and rye are harvested and wheat is nearly ready for cutting. The small grain crop is above the average. Potatoes will be light on account of lack of rain. Hay is nearly all cut and most of it has been put up in fine shape. Pastures are fine and cattle are doing well. A good deal of road work will be done in the next two months.—J. N. Ottun.

Grant County.—Corn is suffering badly from drouth and Grant county will not have more than one-half a crop. Oats are averaging about fifty-five bushels per acre, barley thirty-five bushels, fall wheat twenty bushels. Pastures are suffering from lack of rain and the cream checks are being cut down. Potatoes will be a failure. The usual number of cattle are on hand. The pig crop is about 10 per cent greater than usual.—P. R. Stoffel.

Iowa County.—Small grains are being threshed; they lack the yield and quality of last year. If there is plenty of rain soon there will be some corn, but the crop will not be heavy. Pastures are nearly all dried up, except along the creek bottoms, and cattle are being fed green corn and hay. Several carloads of live stock have been shipped from the community. The potato crop is almost a complete failure, only a few early ones being worth digging. This failure is due to dry weather.—Will Dowling.

Iron County.—Pastures and meadows are good. Vegetables are good and potatoes normal. The grain is good, but not much is grown here. Live stock are up to average.—Henry Peterson.

La Crosse County.—Early potatoes are not very good because of the hot weather in July. Threshing has begun and returns show that the oat crop is light. Barley will be fair. Pastures are being revived by the rains and live stock are doing well. The fruit crop is uneven—some orchards will have a good crop of apples.—R. R. French.

LaFayette County.—Weather continues warm and dry, with not rain since July 19th except a light shower August 10th. Pastures are getting short and some farmers are feeding green corn. The milk flow has fallen off about 60 per cent. Most of the shock threshing is finished and oats are running from forty to seventy-five bushels, with an average of about fifty-five bushels. Some fields of corn look well, but others show the lack of rain. Early fields are beginning to dent and appear normal. Late potatoes must have rain soon in order to make a crop.—Lloyd Scott.

Marinette County.—Pastures and new seedings are very much in need of rain. Temperatures for the last week have been between 96 and 100 degrees. Threshing has just commenced; much grain is being stacked. The second crop of clover will be short, but well filled with seed. The potato crop will be short on account of dry, hot weather. Late potatoes will suffer if rain does not come soon. Potato bugs are bad this year. Corn is weedy, but making good growth. Much interest is being taken in dairying. Hogs are not very plentiful.—W. B. Sanderson.

Oconto County.—Small grain is cut and threshing has started. Oats are generally light. Corn looks fine, but needs rain. Potatoes are doing well. Pastures in general are good. Cattle are in good condition. The shipments of cattle and hogs from this locality average about two cars a week.—W. J. Hinker.

Oneida County.—About 65 per cent of the harvesting is done. All small grain crops are lighter than last year and have considerable smut. The corn crop is looking fine; it will ripen by September 15th if frost does not strike it. Potatoes will be a short crop because of dry weather when they were setting. They are running from two to nine in a hill. The second crop of clover is ready to cut; it will be lighter than the first cutting. Rains during the last two weeks have helped potatoes.—Art Blumenstein.

Outagamie County.—Harvest is nearly finished and threshing has commenced. Oats are making about one-half the yield they did last year because of the very wet weather during seeding time and the excessive hot weather in July. Barley and wheat also show the effects of hot weather. Although planted late, corn has grown rapidly and with a favorable fall will yield a fair crop. Early potatoes are almost entirely a failure and home consumption will be supplied from other regions. Potatoes are selling at from $1.60 to $2 a bushel. The late planting of potatoes has had occasional showers and will, therefore, do fairly well. Fruit is not abundant; the Duchess apples promise a fair yield. Pastures are very good, especially the second growth of clover, and the milk flow has increased with better pastures and cooler weather. Some cases of abortion in cows have been reported. Hogs are on short rations.—Peter Tubbs.

Ozaukee County.—Threshing has begun and returns show oats are running from fifty to seventy bushels per acre; barley is good and farmers are hauling from the machines to the elevators, where they get from 95 cents to $1 for it. Corn is good and potatoes are fair. Although most farmers have good clover pasture, the milk yield is low on account of flies and hot weather. The number of cows kept in this county is increasing.—C. E. Dineen.

Racine County.—Good rains during the last few days, followed by cooler weather, is bringing the corn along in fine shape. Ears are forming now and prospects are for an unusually good crop. Cabbage is backward, but making a good growth at present. Threshing is in progress. Barley is yielding about thirty-five bushels per acre and oats fifty-five. Pastures are getting in fair condition again. Potatoes are poor. Apples are scarce and poor in quality. —Charles Jeffery.

Richland County.—The hay crop, which has been put up in fine shape, is good. Threshing is nearly all done and oats turned out from forty to fifty bushels per acre. Other grains yielded well also. The recent rains are helping to boost the corn crop. Late potatoes are growing slowly and the yield is not heavy. Fruit is scarce with the exception of blackberries. Cows are giving more milk since the rains revived the pastures. Farmers in this county have no cause to complain.—E. B. S.

Taylor County.—Haying is finished. The crop was late, but very good and conditions were favorable for harvesting. Oats threshing has begun. This crop is good only on high and rolling lands. Potatoes look well, but will be late with a light yield. Rye and peas have done well. The second cutting of clover is short. Clover seed seems good. Corn is coming along fine. Pastures are good and all live stock are doing fine. Garden truck, except cabbage, looks well. All roads are in fine shape.—E. H Dehne.

Walworth County.—Weather conditions are very favorable to crops. Threshing is well under way. The yield and quality of grain are good. Corn looks fine. Early potatoes are rather poor. Pastures have been much improved by recent rains.—Arthur Ewing.

Washburn County.—This month has been almost ideal for corn, which is beginning to dent. A light frost occurred on the 13th. Small grain is nearly all cut and stacked. Wheat and rye are fair and oats are good. Potatoes will be rather light. The second crop of clover for seed is unusually promising. Cattle buyers are very active; the top price for two-year-old grass steers is 6 cents. The local creamery is paying 29 cents for butter fat. A co-operative creamery, covering the eastern part of Burnett and the western part of Washburn counties, has been organized and building will begin soon on a location seven miles from Shell Lake.—John W McCulloch.

MINNESOTA.

Mower County.—Harvest is finished and threshing is in full blast. Oats are light because of the dry weather when they were filling. Corn is remarkably good. Early potatoes are good, but late potatoes are light. A large amount of first-class hay was put up this year. Pastures are getting dry and short, which causes a light flow of milk. The alfalfa crop is a failure. Live stock are healthy, but several horses were overcome by heat recently.—Walter H. Martin.

Beekeepers' Meeting.

To the Editor:—A representative number of Langlade county's most interested beekeepers turned out to the beekeepers' meet at Jas. Cherf's farm August 17th.

Beekeepers' wives provided a bountiful dinner at noon and as advertised a lunch of hot biscuits and honey at the conclusion of the day's program.

Mr. N. E. France, of Platteville, Wisconsin, was practically the whole program, but the oftener one hears him the more thoroughly they become convinced that he is a regular university on the subject of bees. Langlade county bee men who failed to hear him on either of his visits to Antigo missed a golden opportunity. During the meeting he explained a simple device for rendering beeswax, which if followed would save pounds of wax to every beekeeper annually. Mr. Chase, a beekeeper from Oneida county, explained how he had been successful in buying bees by the pound and having them shipped up from Louisiana for re-enforcing his weak colonies. He also explained a successful method of introducing queen bees into hives by the use of tobacco smoke in the smoker. The object of this method is to save time, always a valuable factor in beekeeping.

One of the outgrowths of the meeting is an organization of bee men to be known as the Northern Wisconsin Beekeepers' Association. Fourteen members joined to start. A second meeting will be held at Antigo on August 26th to elect officers and transact other business. Beekeepers from all the northern counties will be asked to attend. F. G. S.

LISTEN! OLD WISCONSIN IS CALLING YOU TO STATE FAIR!

Take a Week of Rest and Recreation Seeing the Good Old Badger State on Parade, and at the Same Time Be Entertained and Inspired at a Cost Next to Nothing. Don't Hesitate! Come!

By OLIVER E. REMEY, Secretary State Fair.

Milwaukee, Aug. 31.—You have been working mighty hard all summer.

Nothing would suit you better right now or do you more good than about one week of real relaxation.

Be fine, wouldn't it, if you could take a week off, rest up and at the same time be informed, entertained and inspired at a cost you would hardly notice?

Appeals to you, doesn't it?

You like this grand old Badger State, because it's your state, and a rattling good old state. Some states may be a little stronger on a resource or two, but, taken all in all, it requires SOME state to beat old Wisconsin, as a general proposition.

Now, wouldn't you like to see just what this good old Badger State can do in the way of raising things—horses, cattle, sheep, swine, agricultural, horticultural, dairy products—what the women of this state can make with their own hands; what the farmer boys and girls can raise?

And wouldn't you like to listen to the best Italian band in the world, see a wild west and frontier show worth seeing, enjoy over twenty circus acts second to none anywhere, see a woman perform more and greater stunts with a flying machine than the famous Beachey performed, see four days of high-class harness racing and two days of automobile racing, see the greatest display of 1917 automobiles shown this year, enjoy a $20,000 free pageant in a big city—in fact, see a thousand and one other interesting and entertaining things and at the same time be one of immense crowds out for days of profitable enjoyment, with music and laughter everywhere and the good old state of Wisconsin showing you every way you turn just what she can do?

Sounds like a dream, doesn't it?

But it can be done.

Just come down to the State Fair Sept. 11th-16th.

You'll go back home rested, better informed and full to the brim of enthusiasm for your grand old state.

It isn't going to cost much—not one-half what it would cost to take a week's trip out of the state.

Make up your mind right now and you'll never regret it.

Come on; the old Badger State is daring you to take a look at her on parade!

Send No Money

7 Months to Pay

We will send this big, upholstered Rocker to any responsible person without a cent of money in advance—just write us a letter or PostCard saying: "Send me Rocker 90174. I will pay freight charges and if I find it satisfactory—after ten days free trial in my home—I will send you $1 each month until I have paid the Bargain Introductory price of $7.95." If you don't want to keep it, don't pay a cent, send it back at our expense—you take no risk—send for this Rocker today.

$7.95

No. 90174 Solid oak frame; spring seat 21x20 ins. high back with roll headrest; luxuriously upholstered.

CROFTS & REED CO., Dept. C310, CHICAGO, ILL.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Cull Your Flocks Early.

It is amusing, the advice handed out in regard to the ways and means of culling one's flock. Now, just take notice of some of the lore that is going the rounds. In almost every case, the writer describes the kind of individual to be kept, as the one that answers his idea of what a chicken should look like, regardless of breed, color, environment or purpose.

In one instance a bird must have a combination of deep chest, long body, broad head, bright eye, curved beak, etc. Now, wholly unconsciously this man is describing his own flock which would not apply to any other breed, neither to another strain of his own breed. There is too much of self in much of the advice handed out.

And again, "The hen that bags down behind should be sold, because she is usually a poor producer." That she should be sold is certain, but what an excuse! She may have been the best of breeders, and should be sold because she is one of the heavier breeds and after the second season becomes too fat to be kept at a profit, but the very fact that she lays on fat after her laying period is practically over is in her favor. Such hens are today bringing very nearly a dollar each after two busy seasons.

After the older hens are disposed of, then what? It pays to dispose of them before the molt begins, because at that time they will shrink at least a pound with a combination of hot weather and depleted systems incident to the molt. When dressing a hen to cook lately, we were almost discouraged, when the sac was found to contain an egg, that so many like her had been culled out and sold. However, only four embryos showed any sign of developing soon, and that would be about the size of the egg package until after the molt, and possibly until next spring, depending on the keeper. After viewing the problem from every angle, we find it does not pay to hold the surplus too late.

With us, vigor is next in line. Unless beginning to get ragged, a hen has no business to be listless all day even though the weather is warm. Unless she hustles some time through the day, preferably in early morning or evening, her chances are slim. It is the red blooded people and hens, that are desired, and if there is a mingling of the blue, why so much the better.

A fine bone, for one of the American breeds, is not desirable. When we raise all-purpose chickens, we raise for meat as well as eggs, and to carry a goodly carcass, a hen must have the frame to do it. Any hotel keeper with an eye to business would tell you that there is almost as much waste in dressing a small chicken as a large one, and relatively much more meat in the latter. So if it is an all-purpose fowl we raise, each and every branch must be considered; all too often of late is the laying qualities alone being considered. If one wishes to produce eggs alone, why eggs it is, but do try to "stick to your bush," and keep laying varieties, instead of dwarfing the good, all-purpose breeds. Who ever heard of a successful cattle breeder stunting his splendid, big Short-horns for the sake of producing a greater flow of milk?

Examine the ear lobe, and if there should be no white in it for your own particular variety, do not under any consideration tolerate a trac of white. This defect brands a bird as being mixed with something alien to its kind. Try to keep birds of a single general type, and that type to be as nearly what, in your estimation, a chicken should look like as possible. Single out one bright, aggressive, hustling bird, and so far as possible require the others to measure up to her yard stick.

Other things being equal, the hen that molts late is the most productive. She will lay late, molt in a hurry and be on hands for business before the really cold weather of next winter.

AILING ANIMALS.

Inflammation of the Bag.

I have a couple of cows with caked bags and I would like to have you tell me what to do for them.

Bathe the udder or bag twice daily with either hot or cold water and then apply camphorated oil over the entire udder. Also give two teaspoonfuls of fluid extract phytolacca in a pint of water every four hours for two or three days.

Infected Milk.

I have a cow that gives a matter-like substance in her milk. She is to come fresh some time in September. Would like to know cause of this.

This trouble is probably the result of infection of the udder with some organism. These cases are sometimes not very responsive to treatment. The internal administration of two drams of bisulphite of soda once daily may be of some benefit.

Warts.

I have a mare about five years old that is bothered with warts around the mouth, lips and nose. You can find a hundred or more on a very small place. My neighbors tell me that they will go away, but she has had them a year or longer. Can you tell what makes this, or give me a remedy?

If you will take this animal to your local veterinarian and have him cut these off with the scissors and touch each one with caustic you will have little trouble with them returning.

Sterility in Cow.

I have a ten-year-old pure-bred Hereford cow that has not had a calf for two years and has not come in heat since last September. What can I do to make her come in heat?

We would not advise treatment in this case without first knowing the cause of the trouble. It might be from disease of generative organs, from overexercise, not enough exercise, lack of condition, or overfat. Your best course would be to have her examined by a veterinarian and he can then prescribe treatment if treatment is found advisable.

DEATH TO HEAVES

NEWTON'S Heave, Cough, Distemper and Indigestion Cure.

Some cases cured by 1st or 2nd $1 can. Three cans are guaranteed to cure heaves or money refunded.

The original and the up-to-date Standard Veterinary Remedy for Heaves; free booklet explains fully. 36 years sale and veterinary use.

CURES HEAVES BY CORRECTING CAUSE—INDIGESTION. IT'S A GRAND CONDITIONER AND WORM EXPELLER

Safe. Most economical. Excellent for Cattle and Hogs. $1.00 per can at dealers, at same price by parcel post.

THE NEWTON REMEDY CO., Toledo, Ohio

BIG 4

POULTRY JOURNAL

Practical, Snappy, Instructive—YOUR PAPER. For the breeders of Mich., Ind., Ill., Wis., only. You should read it. 50c a year, 3 mo. 10c. Agents wanted. Big 4 Poultry Journal, Desk 28, Chicago, Illinois.

POULTRY.

S. C. R. I. REDS

FOR SALE—Hatching eggs from prize pens, half price for balance of season. Won 9 ribbons on 15 birds at Wisconsin State Fair, 1915; 4th pullet and 3d young pen at Chicago Coliseum, 1915. Winnebago Poultry Yards, R. 23, Omro, Wis.

HATCHING EGGS; prize-winning S.C. Reds, White Wyandottes, Buff Orpingtons, S. C. White and Brown Leghorns, $1.50 per 15. Ledge View Poultry Farms, Box W.F., Fond du Lac, Wis.

HATCHING EGGS; S. C. Reds, prize-winners all leading shows. Eggs $1.50, 15; $8, 100. Order from this ad. Address C. L. Pre-Fontaine, Box 600, Fond du Lac, Wisconsin.

EGGS for hatching from Barred Rocks, E. B. Thompson's Ringlets, $1.25 per 15, prepaid. D. S. Thorosen, Shell Lake, Wisconsin.

The Golden Prairie District of Wyoming is the Only Sure Crop Country of the West

We are now placing on the market in farm tracts our celebrated Hillsdale Ranch

This is the driest season since the settlement of the country, but we can show you, within three miles of Hillsdale in the neighborhood of this ranch and on no better land, fields of grain (some on sod breaking, too), that would more than pay for the land at our selling price.

DID YOU READ our full page announcement in The Wisconsin Farmer of August 10th? If not, please look up your file. It is on page 9, and invites you to come to the Golden Prairie right now where you can purchase at about what two years' rent will amount to in the Central states as choice a farm as the sun shines on and have included, free, the assignment of a five years' lease on an equal acreage of adjoining state land.

Field of winter wheat in shock and binder at work on farm of Richard Spatz, adjoining the Hillsdale ranch. Photo taken July 20, 1916. This same field produced 50 bushels of oats per acre in 1915, the wheat shown being drilled into the oats stubble in September.

And while you have the issue of August 10th in your hand you can easily turn to page 12, where you will see some pictures of farm scenes adjoining our Hillsdale ranch and read what the Editor thinks of the Golden Prairie District after his second annual visit.

Fill out and mail us at once the coupon found below. It will bring you, without cost, valuable information regarding a district where within a few years farm land values will be as high as they are in the most favored sections of the Central states.

FEDERAL LAND COMPANY

Burns, Wyoming

FEDERAL LAND COMPANY, BURNS, WYO.

Gentlemen: Please mail me at once full descriptive literature of your Hillsdale ranch and the Golden Prairie District of Wyoming.

Name.....

Address.....

Remember this: That we are protected from hot winds and extreme heat by the snowcapped Rockies, always on clear days in plain view to the southwest. This is fully explained on page 3 of the booklet entitled "Wheat Growing and General Farming Without Irrigation in the Golden Prairie District" which will be sent to all who fill out and mail us the above coupon.

PROSPERITY IN CANADA

$900,000,000 in new wealth added in 1915. Enormous crops and low taxation make farmers rich. Wheat average, 36.16 bushels per acre in Alberta, 28.75 bushels per acre in Saskatchewan, 28.50 bushels per acre in Manitoba. Taxes average $24 and will not exceed $35 per quarter section, includes all taxes; no taxes on improvements. Free schools and full religious liberty, good climate. Get your farm home from the Canadian Pacific Railway. 20 years to pay. Good land from $11 to $30 per acre; irrigated lands from $35, and the government guarantees your land and water titles. Balance, after first payment, extended over nineteen years, with interest at 6%; privilege of paying in full any time. Before final payment becomes due your farm should have paid for itself. We will lend you up to $2,000 in improvements in certain districts, with no security other than the land itself. Particulars on request. Ready made farms for sale. Special easy terms. Loans for live stock. In defined districts, after one year's occupation, under certain conditions, we advance cattle, sheep and hogs to farmers up to a value of $1,000. We want you; we can afford to help you. We own the land; we want the land cultivated. Our interests are mutual. Buy direct and get your farm home from the CANADIAN PACIFIC RAILWAY. Send for free book. J. S. Dennis, Assistant to the President, Canadian Pacific Railway, 82 Ninth Ave., Calgary, Alberta, Canada.

IF YOU WANT 40 acres or more rich, clay loam clover lands in our co-operative settlements near Crandon, county seat of Forest county, Wisconsin, write us and state **what terms you must have.** We will send you booklet written under supervision State Authorities. Agents wanted. Per-Ola Land Co., 21 Main, Crandon, Wis.

WRITE to Bauer & Eiche, Marshfield, Wisconsin, for information and price list of farms in Wood, Marathon, Clark and Taylor counties, which counties are in the heart of the great dairy belt in central Wisconsin.

FOR Minnesota improved farms and land bargains, write or call on H. A. Hanson, 242 Temple Court, Minneapolis, Minnesota.

LET US TAN YOUR HIDE: COW, HORSE, or calf skins for coat or robe. Catalogue on request. The Crosby Frisian Fur Co., Rochester, N. Y.

ARE YOU GOING TO BUY LAND?

IF so, get a copy of our journal first. It has lands, city property and stocks of goods advertised in its columns from nearly every state, so that you can find just what you're looking for in its columns. Established 19 years and reaches 76,200 readers. Send 25c for one year's subscription or $1.00 for five years. Department F, Farm and Real Estate Journal, Traer, Iowa.

125 ACRES Fine buildings, splendid soil, near town and school, $11,000. $3,000 cash, balance 5%. 80 acres, 30 under cultivation, no buildings, sandy loam, clay subsoil on good road, near school and two towns. $20 per acre. Other snaps. W. E. Webster, Hudson, Wis.

FOR sale—200 acre farm in Richland Co. Wis., 7 miles south of Viola, one of the best grain and dairy sections in the state. For particulars and prices call on or write to R. Gochenaur, Route 1, Viola, Wisconsin.

BARGAIN. Oneida county lands. 146 acres hardwood. Some timber. Thos. Leith, Monico, Wis.

UPPER WISCONSIN FARM LANDS.

ONEIDA County Lands: I have four hundred acres in solid body on a main road, 4 miles from city with groves of timber and several small lakes, very desirable property, can divide if necessary into four pieces. Ask for map and prices. Also have an improved farm, 160 acres, good house and barn, full of clover and timothy hay, big field of fine oats, 70 acres of clover growing, pasture, running water, timber, only half mile from school and cheese factory. Ideal dairy farm. Want $3,000 cash, balance on time. Address C. P. Crosby, Rhinelander, Wisconsin.

WE ARE selling a part of our 10,000 acre tract, located in Oneida County on beautiful lakes with the best known soil in upper Wisconsin, in the heart of the choicest dairy spot on earth. To see these lands is to buy them. Write or inquire Oneida Farms Co., E. M. McVicker, Prop., 1202 First National Bank Bldg., Milwaukee, Wis.

THE HOME

Letters intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Editor Home Dept., Wisconsin Farmer, Madison, Wis.

What You Can Do to Help the Rural Teacher.

Rural schools everywhere are opening their doors for the new term and teachers and pupils alike are looking forward to the first day of school. Did it ever occur to you how important it is that that first day of school should be a success, and how much parents have to do with its success or failure? The teacher may be a new one and the day, at best, will be trying. Imagine, then, her feelings should she step into a schoolroom which has not known the feel of a broom or soap and water since its last going-over last spring, where the stove has stood to collect dust and rust all through the summer, and where she feels more like going in for a thorough housecleaning than making the acquaintance of the children and arranging classes. Not long ago a rural school-teacher, in speaking of the work in her school, touched upon this very subject, and what she had to say may give some of us a hint as to what we might be doing these days just before school opens. This is the way she described her first day in a new school:

The first morning I shall never forget, when I opened the schoolhouse door and went in. In the middle of the room and a little to the back stood an old, rusty stove. Passing around the stove, because I could not possibly have seen the rest of the room without, I saw in front a small platform, occupying the small open space in the front of the room, and the teacher each time she used the desk and chair must expend energy stepping up that platform to the chair and desk. To one side stood an old organ and on the other side stood a cupboard with glass doors, very dusty, and used for a library. But I must not forget to mention the teacher's chair. That was the only really nice piece of furniture in the room. It was a nice revolving chair. And as I looked about that morning, that dirty schoolhouse, nothing at all to appeal to the teacher, I thought, the temptation came to me, I will just sit down here, draw my wages and hear the classes for eight months and get up and leave.

How much do you think the children would learn in those eight months? But could you blame her? She was hired to teach the children of the community, yet the children's own parents had not thought enough about her coming to in any way prepare for it. No doubt many of them had put new machinery on their farms and new equipment in their homes with the sole object in view of being able thereby to do their work more easily and efficiently, and yet no time or thought had been given to the teacher's workshop where she was supposed to spend her time and give the best that she had to give in exchange for her wages.

Far be it from us to censure her for the temptation to "sit down, draw her wages and get up and leave." But that isn't what she did. Instead of yielding to the temptation, she says:

I am thankful today that a greater determination came to me at that same moment, and I decided to take things as they were in that community and in that schoolroom, and as far as it was within my power, if I had to go at the end of eight months, I would leave them as nearly as possible as they should be.

The walls had once been white. It was ceiled. But they were now very, very black from dirt—possibly had not been painted for years and years. On the walls were a few dirty pictures cut from the backs of magazines and calendars. There were six windows in the room, as usual, three on one side of the room and three on the other, and three or four blinds, none of which would roll, but we did have a good set of maps, a globe and a dictionary. That was about the only apparatus or equipment in the schoolroom. There were a number of books in the library, but none that would help us to carry out the course of study.

That first week of school, with the help of my children, we put on the wall some new pictures I had brought, we cleaned the windows, cleaned out the bookcase and rearranged our books, cleaned off the window blinds and adjusted them as much as we could. This added much to the appearance of our room. Along later in the fall I asked permission to give a box social. I didn't receive very much encouragement because those that had been given before hadn't been very successful, but there was no serious objection, so we had a box social and cleared something over $20. That night, I believe, was the turning point in the history of the community.

The patrons all gathered out of curiosity or something—it certainly wasn't with interest, I think. I had been there three or four months and I met many of my patrons for the first time that night. It was also the first time any of them had been inside the schoolhouse since I had been there.

Well, after we had counted the proceeds, the president of that board asked me what I intended to do with it. I said:

"Give the walls a fresh coat of paint, put in some new blackboards (we only had blackened walls) and also have some new window shades."

Of course he knew $30 wouldn't do this and he said at once:

"Let us help you by painting the walls for you."

Another member said: "Let us buy more blackboards."

And a kind mother standing near

A $2,800 hollow-tile schoolhouse which is furnished with a raised stage to be used for special programs. Beneath the windows on the stage is a ledge for flowers and plants, making a most attractive setting for school plays and the like.

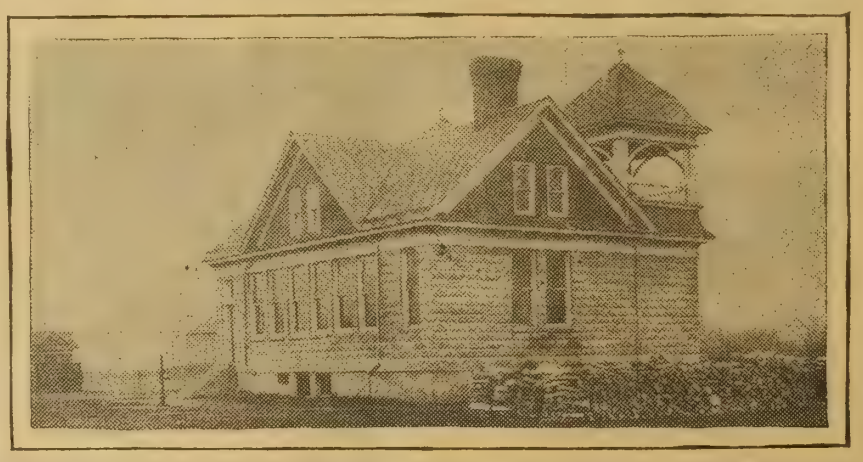
said: "You take the money and get you a new teacher's desk."

I made one of the pupil's desks into one for myself by removing the seat attachment. So right then and there began the good work. Never since that time have I ever asked for a thing that was within their possible reach that I havn't gotten it, just from that one little movement there that night

The next day I went to work and purchased new window shades and had them at the windows. By Christmas week the walls were painted as promised. At the beginning of the new year we had clean walls, new window shades, a new teacher's desk, new blackboards up, and you would not have known it was the same old schoolhouse. The board did not stop there. I said I needed some new library books. We had a set of over twenty new volumes in our library to help me carry out the course of study.

How different might have been the result had the teacher been as thoughtless as were the patrons, and how much easier it would have been had all these things been done beforehand. It is not so much that school patrons do not want to spend the time and money necessary, but rather because they have not been in the habit of interesting themselves in such matters and it is only when their attention is called to it in some such way as outlined above that they see that it is really their duty as members of the community and patrons of the school.

We wish every rural schoolhouse could be thoroughly gone over before school begins, swept, scrubbed, painted if necessary, aired and made ready for the housing of teacher and children during the greater part of the day. A dirty schoolroom is bad for the health of the children. Many communities have built splendid new rural school buildings like the accompanying illustrations and such are to be congratulated, but even the most old-fashioned building need not be unattractive. If everything is kept in repair, a fresh coat of paint applied when needed, everything made clean and in order, perhaps some inexpensive white curtains put at the windows, prints of the best pictures on the walls and blooming plants in a sunny window, the old-fashioned schoolhouse will be as dear to the hearts of the children and the teacher as the most modern, up-to-date building. And having once established the feeling of pride among patrons and children, the up-to-date building is sure to follow.



THERE IS NO LACK OF LIGHT OR AIR IN THIS SCHOOL BUILDING, AND AS FOR WINTER COMFORT—NOTE THE WOOD PILE.

Secret of Good Jelly Making.

Many housewives insist that the making of a good jelly depends upon luck, but any housewife may always have a perfect jelly if she knows the principles of jelly making and follows a few general rules.

The essential part of fruit juice that makes jelly set is a chemical substance called pectin. It is found in abundance in apples, currants, grapes, quince and the white rinds of oranges and lemons. Small quantities are found in cherries, raspberries, blackberries and pears. Since pectin is essential, the housewife should determine whether the fruit juice she expects to use contains any before she starts the jelly making process. To determine whether pectin is present, add two tablespoonfuls of grain alcohol to two tablespoonfuls of hot fruit juice. Cool, and if pectin is present, a lump of jelly will have formed. The size of the lump will indicate the amount of pectin present.

Fruit juice should also contain acid. By tasting it one can easily determine whether or not acid is present. If lacking, enough lemon juice or tartaric acid may be added to give the fruit a tart taste.

Points of a Good Cake.

A good butter cake is smooth on top and evenly browned. Bursting and cracking indicate too much flour or too rapid baking.

Inside of loaf should be slightly moist, but not sticky.

Cake should be fine grained and of uniform lightness.

Coarse-grained cakes indicate a lack of beating, too low an oven temperature or too much baking powder.

DIRECTIONS FOR BAKING CAKE.

Cake	Time	Temperature
Sponge	40-50 min.	212 F
Butter	40-50 min.	220 F
Small cakes and layer cakes	25-30 min.	220 F
Molasses drop cakes	25-30 min.	215 F

DIVISION OF TIME.

First quarter	Rise not brown.
Second quarter	Rise and begin to brown.
Third quarter	Brown not rise.
Fourth quarter	Neither rise nor brown, grow firm and shrink away from pan.

Save Time Now—Money Next Winter.

In canning time why not can a mixture of vegetables for use in vegetable soups? This will not only prove a saving of time but an economy as well, and a great convenience through the winter when we want vegetable soups frequently. The vegetables will be ready cooked and can be added to the meat stock whole or after they have been passed through the soup strainer.

Some New Vegetables.

To the Editor:—I have been a reader of this paper off and on for some time and after moving to the farm over a year ago I have felt that it was the only farm paper, so have been a subscriber ever since the first of the year. I have found the Home page especially helpful.

So many readers have come with their questions and received so many ready and helpful answers that I naturally turn to you for assistance.

This year I planted some vegetables that are new to me and I have been wondering if any of the readers could tell me how to prepare them for the table. They are kale, akra, egg plant and citron. I would like to know how to preserve the citron and also how to candy it. I will appreciate any information. Mrs. B. J. B.

Canning Kinks.

To the Editor:—We all read your paper with faith and have always got just about what we wanted out of it. The different departments are always helpful to beginners, and others, too. My two little girls enjoy every letter and poem that appears and I do also.

I have gotten so much help from the Home page that I want to help someone else now with my experience in canning, as this is the season to know all the "kinks" there are to learn.

I have canned corn, both sweet and young field corn last year and this. Last year I had thirty quarts. This year I have ten quarts of sweet corn and tomatoes canned together and expect to can more after a while. I have never lost a quart or had any mold. Last year was the first I ever canned corn and tomatoes together and we were all so fond of it that I wondered why I had not done the same years ago. I prepared the corn in the usual way for cooking, by cutting the grains

half off and scraping, using two parts corn and one part tomatoes. I do not use any water, as there is tomato juice enough to start the mass to boiling. Put it in granite kettles and cover tightly. Season with one-half teaspoonful of salt to one quart. Cook twenty or thirty minutes, stirring occasionally. Have jars ready and pack the hot mass in them to running over. Use new rubbers and seal at once.

Mrs. E. H. R.

Household Hints.

Washing walls and floors with powdered borax is hard on the roaches.

A delicious and economical dessert is stewed figs and boiled rice served together.

When baking lemon pies do not have your oven too hot, as the lemon will curdle and boil over your crust.

When preparing pickles a wooden spoon or fork should be used, never a metal one.

Old sheets and other pieces of linen should never be thrown away, but kept in a convenient place for use in case of cuts or burns or other accidents.

To clean cut glass satisfactorily use a stiff bristle nail brush and hot water to which a few drops of ammonia have been added.

Paste labels on the inside of glass jars used to hold food supplies, such as rice, tapioca, spices, etc. Thus labeled, the jar can be washed without soiling the label or pulling it off.

When making angel cake be sure to beat the whites of the eggs stiff, until you can turn the dish upside down and the whites of the eggs will not move. You will find your cake almost always will come out right and will be much lighter.

Recipes.

Corn Soup.—Cut enough corn from the cob to make one pint of the milky part of the kernels without the hulls; add one pint of hot water or plain white stock; let it cook for ten minutes; meanwhile have ready one quart of milk brought to the boiling point and season with a teaspoonful of onion juice; add this to the corn and thicken with a tablespoonful of flour mixed with a tablespoonful of butter; simmer gently for fifteen minutes, press through a puree sieve, add a little butter, and serve.

Orange Omelet.—Beat the yolks and whites of five eggs separately, combine and season; add five tablespoonfuls of cream, in which has been dissolved two tablespoonfuls of cornstarch. Pour into a buttered omelet pan and cook slowly on top of the stove until the egg is set, then place pan inside the oven to finish cooking. Spread one-half of the omelet with orange preserves and serve on a hot platter.

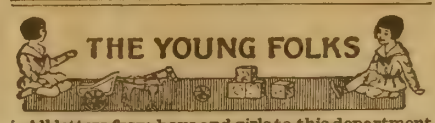
Fried Egg Plant.—Pare an egg plant and cut in slices one-fourth inch thick; sprinkle with salt; pile one slice on top of another, weight down with a plate and let stand for a couple of hours to press out the acid juice. Sprinkle with salt and pepper, dredge with flour and fry slowly in fat till crisp and brown.

Salmon Loaf.—Two cupfuls salmon, three eggs, one cupful stale bread crumbs, salt, one teaspoonful chopped parsley, pepper, one teaspoonful onion juice. Chop the salmon until fine, mix with crumbs, season and moisten with beaten egg. Put in buttered mold, steam for two hours or bake one hour. Serve hot.

Creamed Turnips.—Pare but do not cube young white turnips. Boil until tender and drain. Arrange in baking dish and pour over it a white sauce. Cover with buttered crumbs and brown in a quick oven.

Green Tomato Butter.—Two quarts of green tomatoes, two cupfuls of seeded raisins, one and one-half cupfuls of granulated sugar, one teaspoonful of salt, one large juicy lemon. Wash, dry and cut the stem ends and all spots from the tomatoes. Cut into halves; remove as many seeds as possible. Cut into small pieces; mix the sugar with the tomatoes, and put over a very slow fire. Boil slowly for two hours; add the raisins, which have been washed, dried and put through a food chopper. Add the salt, lemon juice, and boil for thirty minutes.

Creole Dish.—Take two cupfuls of cooked rice, a cupful of minced ham browned in butter, salt, cayenne and a tablespoonful of sugar; put into a buttered pan and cover with cracker crumbs; brown in the oven.



All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

Not too Big For Us.

Dear Young Folks:—I am sixteen years old, but thought maybe I am not too big to write a letter to the Young Folks' page.

My sister and I are going to drive to high school this year. I will graduate next June. I live on a farm and like it ever so much better than living in town.

We have lots of pretty flowers in the garden and in the house. I think I like the old-fashioned marigolds best.

I think the answer to Elizabeth's riddle is a well. It is round as an apple, deep as a cup, and all the king's horses can't pull it up. —Florence.

A Trip to Colorado.

Dear Young Folks:—I have been reading your letters for some time and I enjoy them very much. I am nine years old. I live on a farm of 160 acres. We live just about 200 yards from our school.

We have a Ford car and last summer we made a trip out west in it. We went to Colorado Springs and camped in the park at Manitou. Papa went up Pike's Peak and I went up to what they call Half-way House. It is a station half way up the mountain. We went through the Garden of the Gods, too, while we were there. Then we went to Denver and camped. There we saw all the animals in the zoo. We sure saw some beautiful sights and I had a fine time. I want to go again some time. —Chlorus.

Loves Her Pets.

Dear Young Folks:—I want to join your circle because I enjoy your letters so much. I do not live in the country. I live in town and papa runs a restaurant.

I have four brothers and four sisters. I am twelve years old and in the sixth grade. We have to go a little over half a mile to school and we come home every noon for dinner.

My papa is a preacher and I like to go to Sunday school and church. I hardly ever miss a Sunday.

My pets are one old cat and four little kittens. They are sure fine, too. Papa has a lot of little pigs and mamma has almost a hundred chickens. I like to tame them and have them fly on my shoulders and in my lap. Every time my kittens see me coming they run to meet me and when I go away they follow me as far as the path goes. The other night when I woke up one of them that I call White Face was in bed with me. She had her head on my shoulder and she was asleep. I just love them because they are so cute. —Lola.

Makes Apple Sauce Cake.

Dear Young Folks:—I have been reading your letters and I have enjoyed them very much. I will be fifteen in December, but I hope you will let me be one of you on this page. I have two sisters and one brother.

I love to go to school and will be in my tenth year of school this fall. All four of us drive to school. We live in the country and have three miles to drive. I would rather live in the country than in town, for I like horses, cows, pigs and chickens. We live on a 120-acre farm. We have just built a new house and barn.

I like to cook and here is a cake I like. Apple Sauce Cake: One cupful of sugar creamed with one-half cupful of butter, add one cupful of apple sauce mixed with one teaspoonful of soda, one and three-fourths cupfuls of flour and one teaspoonful of cloves and nutmeg. Bake in a slow oven.

—Dorothy.

For Rainy Days.

Children love to engage in the game of "playing school." They will cut out boys and girls for pupils and a few men and women for teachers. With crayons and paints they will color these nicely and fasten them to empty spools with flat sticks so that they will stand upright. The picture is first pasted to the stick and the stick is wedged into the hole in the center of the spool. In this way the figures will stand or sit on the spool. Then the teacher figures are supposed to march the children around and to teach them. A single game of this kind will occupy all the children's spare time for a week.

Our Fashion Department.

All Patterns, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want, and inclose 10c for each number. We agree to fill all orders promptly and guarantee safe delivery.

Catalog of Fall and Winter Fashions

Send 10c in silver or stamps for our up-to-date 1916 large fall and winter catalog, containing over 400 designs of ladies', misses', and children's patterns, as well as the latest embroidery designs, also a concise and comprehensive article on dressmaking, giving valuable hints to the home dressmaker. Address all orders for patterns and catalogs to WISCONSIN FARMER, Madison, Wis.

1838—Ladies' combination corset cover and underskirt. Cut in 7 sizes: 32, 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 3⅞ yards of 36-inch material for a 36-inch size.

1556 Blouse-1558 Skirt—A jaunty trim middy suit. The patterns are cut in 4 sizes: 14, 16, 18 and 20 years. It requires 3½ yards of 36-inch material without the cuff. The cuff requires 1¼ yards for a 16-year size. The blouse requires 2⅝ yards of 44-inch material. Two separate patterns, 10 cents for each pattern.

1715—Ladies' apron with or without sleeve in either of two lengths and with collar, or with neck edge in square outline. The pattern is cut in 3 sizes: Small, medium and large. It requires 3½ yards of 36-inch material for a medium size with sleeves; without sleeves, 6 yards.

1821—Ladies' kimono. The pattern is cut in 3 sizes: Small, medium and large. It requires 7⅝ yards of 36-inch material for a medium size.

1520—Girls' dress with or without belt, and with sleeve in either of two lengths. The pattern is cut in 4 sizes: 4, 6, 8 and 10 years. It requires 3¼ yards of 36-inch material for a 6-year size.

1660—Ladies' house or home dress. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 7 yards of 36-inch material for a 36-inch size.

1846—Girls' dress with or without bolero. Cut in 4 sizes: 4, 6, 8 and 10 years. It requires 3½ yards of 36-inch or wider material, for an 8-year size.

1824—A stylish dress. The pattern for this model is cut in 6 sizes: 32, 34, 36, 38, 40 and 42 inches bust measure. It requires 7¾ yards of 44-inch material for a 36-inch size.

1725—A simple stylish skirt. The pattern is cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. It requires 3⅞ yards of 44-inch material for a 24-inch size.

1840—A new jacket suit for mother's boy. Cut in 4 sizes: 4, 5, 6 and 8 years, and requires 3 yards of 44-inch material for a 5-year size.

1848—Girls' coat with raglan sleeve. Cut in 7 sizes: 2, 4, 6, 8, 10, 12 and 14 years. It requires 2⅝ yards of 44-inch material for a 6 year size.

1692—Ladies' shirt waist with sleeve in either of two lengths. The pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 3½ yards of 27-inch-material for a 36-inch size.

International Sunday School Lesson.

Lesson for September 3, 1916.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Paul, the Hero.

LESSON TEXT—II Cor. 11:21-12:10.

GOLDEN TEXT—My grace is sufficient for thee; for my power is made perfect in weakness.—II Cor. 12:9.

This letter raises interesting questions for research and discussion, such as:

1. What is the difference between Paul's heroism and that of a soldier? 2. Is war essential to the development of heroism? 3. Which courage is higher, moral or physical?

I. Paul, the Hero (11:21-22). To a man of a sensitive nature, craving perfection, sarcasm stirs up the deepest bitterness of the soul. We do not believe Paul primarily desired to refuse these false charges—they were unworthy of him—but the knowledge of his sufferings for the cause of Christ and the truth of the gospel would augment his power to serve the church. For the sake of those whom he had reclaimed from heathenism he was willing to seem to be boasting. Literally he says: "I speak by way of disparagement (of myself) as though we had been weak," yet he adds: "Whereinsoever any is bold, I am bold also." Paul had as much to boast of as any one of his Jewish opponents (v. 21). "Are they Hebrews? (Of the purest blood, of one nation and language?) So am I." Are they Israelites, worshiping only one God? Are they of the seed of Abraham, inheritors of the ministry of the promise and Messianic hope and the kingdom of God? Are they ministers of the Messiah, seeking to bring all men into his kingdom? "I speak as a fool. I speak as one beside himself. I am more." In labors he was more abundant; he had occupied a larger field with greater results. In stripes above measure—those inflicted by the heathen were not limited to forty blows—besides other beatings referred to in this list. In prisons oft (Acts 16:23). Frequently exposed to death and to the perils of robbers by land and see (v. 24). "Five times I received forty stripes, save one, from the Jews" (v. 25). "Thrice was I beaten with rods: once was I stoned" (Acts. 14:19). "Thrice I suffered shipwreck," evidently not recorded in Acts, for his shipwreck on the way to Rome was later. "A night and a day in the deep," this not otherwise recorded. "In journeyings often," suffering from the perils of hard travel, often on foot in uncivilized regions. "In perils of water," literally "in rivers." Bridges were rare and floods sudden and frequent. "In perils of robbers." Every road in Asia Minor then as now was infested with robbers. "In perils of his own countrymen;" "In perils by the Gentiles;" "In perils in the city;" "In perils in the wilderness;" "In perils in the sea" from storms, rocks, pirates; "In perils among false brethren"—Judaising teachers who were self-seeking instead of making the gospel first (Gal. 2:4; II Cor., 11:13). "In weariness and painfulness," literally in labor and travail; "In watchings often;" repeated night of sleeplessness due to anxiety or pain. "In hunger and thirst, in fastings often," hunger unsatisfied for a long time. "In cold and nakedness;" in the mountain passes badly shod and badly clothed. Besides these things which were without, innumerable other trials such as the care of or anxiety over the churches (vv. 32, 33).

II. God's Sustaining Grace (12:1-10). To Paul God gave one of the greatest tasks ever committed to man, viz., the planting of the gospel in heathen lands; founding churches; teaching them the gospel truths of the Lord Jesus. He wrote to these churches two-fifths of the New Testament, thirteen of its twenty-seven books, and this work was accomplished under the greatest difficulty, trials and suffering. To sustain and guide, the Lord gave him "visions and revelations" (v. 1). These revelations came to him from the very beginning of his Christian life and continued in every great crisis. The first was given at his conversion, twenty years before this letter was written, when he saw Jesus in His glory and received his marching orders. (Again (vv. 2-4), fourteen years before, or about A. D. 43, when he was in Antioch and first entered upon his foreign missionary work. He obtained his gospel directly from the Lord. Subsequently he had other visions to sustain and guide him.

Teachers ought to study this entire section, beginning at chapter 10. Paul says that as an apostle he did not labor in the fields of others (10:14-15).

He was not much concerned by what his enemies might say.

As to his opinion of them, read chapter 10. Ashamed to boast, yet for their sakes he meets their foolish charges by giving us this record.

Because of these sufferings (v. 10) he takes pleasure in infirmities, reproaches and persecutions; "For when I am weak" (in my own strength) then I am strong through Christ who strengthens me."

He may be a fool in glorying, compelled to as he had been, yet his work had been accompanied by the signs of an apostle, and he was not to be behind the very chiefest, although himself he was nothing.

TOLD IN THE HILLS

By Marah Ellis Ryan

Author of "That Girl Montana," "The Bondwoman," "My Quaker Maid," Etc., Etc.

(Copyright Rand McNally & Co.)

PART III. "Prince Charlie"

CHAPTER I—Continued.

Her independent, curious spirit and youthful vitality were a sort of tonic to him, and as he grew better he accepted her invitation to visit the ranch, and from that time on the grizzled head and still athletic frame of the old fellow were not strange to the Hardy household. He was there as often as was consistent with the weather in the hills and almost seventy years of braving their hardships; for of late years MacDougall did not range widely. His traps could find too many nooks near home for mink, lynx and the black bear, and from the Kootenai tribes on the north he bought pelts, acting the trader as well as the trapper; and twice a year making a trip to a settlement to dispose of his wares, with horses from his Indian neighbors to transport them with.

Rachel learned that for forty years he had followed that isolated life—moving steadily farther west or farther north as the grip of civilization made itself felt behind him; and he felt himself crowded if a settler's prairie schooner was sighted within twenty-five miles of him. The girl wondered, often, the cause of that self-exile, but no word or sign gave her any clew. He had come from the eastern highlands of Scotland when less than thirty years old, and had struck out at once for the extreme borders of civilization in America; and there he had remained—always on the borders—never quite overtaken.

"It will be but a few more stands I can make," he would say to her sometimes. "Time is little content to be a laggard, and he is running me close in a race he has na a doubt of winning."

With advancing years, the barrier, whatever the foundation, that he had raised between himself and the world was evidently weakening somewhat; and first through Genesee, and now through this girl, had come a growing desire for intercourse with his own race once more. And much teasing did the girl get in consequence of the visits that by the family in general were conceded to belong to Rachel in particular, teasing, however, which she bore with indifference, openly claiming that the stronger interest was on her side, and if he forgot his visits, she would certainly go herself to Scot's Mountain to learn the why and wherefore. This she did more than once, through the season, when indoor life grew at all monotonous; sometimes with Jim as a companion, and sometimes with Kalitan trotting at her mare's head, and guiding very carefully Betty's feet over the dangerous places—Aunty Luce always watching such a departure with prophecies of "Miss Rache's sca'p a-hangin' round the neck o' that red nigger some o' these days, I'm a-tellin' yeh!"

Despite prophecies, Kalitan proved a most eager and careful guardian, seeming to feel rather proud when he was allowed to be her sole compan ion.

Sometimes he would say· "S'pose you hear where Genesee is—may be?" and at her negative he, like a philosopher of unlimited patience, would content himself with: "Sometime he sure come; s'pose waum illihie"—waum illihie meaning the summer time; and Rachel, noting his faithfulness to that one idea, wondered how many seasons his patience would endure.

At last, about the middle of April, he stalked into the ranch door one morning early, scaring Aunty Luce out of her seven senses, or as many extra ones as she laid claim to.

"Rashell Hardy?" was all he deigned to address to that personage, so inborn in the Indian is the scorn of a slave or those of slavish origin. And Kalitan, who lived almost entirely with his tribe, had many of the aristocratic ideas of race that so soon degenerate in the Indian of the settlements or haunts of the white man. Once Aunty Luce, not understanding his ideas of caste, thought to propitiate him with some kindly social inquiry as to the state of his health and well-being, and had beat an ignominious retreat to the floor above at the black look of indignation on his face at being questioned by a slave. When Rachel took him to task for such a ferocious manner he answered, with a sullen sort of pride: "I, Kalitan, am of a race of chiefs—not a dog to be ridden by black blood;" and she had noticed then, and at other times, that any strong emotion, especially anger, gave an elevated tone and manner of speech to him and his race, lifting it out of the slurred commonplaces of the mongrel jargon—a direct contradiction of their white brother, on whom anger generally has an effect exactly contrary. After that one venture of Aunty's at timorous friendliness, she might have been a dumb woman so far as Kalitan ever had further knowledge; for her conversations in his presence were from that date carried on entirely in pantomime, often to the annoyance, though always to the amusement, of the family.

Kalitan's abrupt entrance and query that April morning was answered by a comprehensive nod and wave of pudgy black hands toward the sitting room, into which he walked without knocking—that, also perhaps, being deemed a prerogative of his lordly race.

"Why, Kalitan, so early!" said Rachel in surprise. "Are you trying to outrun the sun? What is it?" For her eyes, accustomed to the usual calm of his countenance, recognized at once that some new current of emotion was struggling for supremacy in him that morning. He did not answer at once, but seated himself in impressive silence on the edge of one of the settees, and after a dramatic pause that he considered a fitting prelude to the importance of his communication, he addressed himself to Rachel—the only woman, by the way, whom he was ever known to meet or converse with on terms of equality, as Indian chivalry does not extend to their exaltation of the gentler sex.

"Rashell Hardy," he said, in a mingling of English and Chinook, "I, Kalitan, the Arrow, shoot to the south. Genesee has sent in the talking-paper to Ole Man Mac that the Reservation Indians south have dug up the hatchet. Genesee is taking the trail from the fort with rifle and many men, and he wants an arrow that can shoot out of sight of any other; so he wants Kalitan."

And having delivered himself of this modest encomium of his own worth, there was a stage-wait of about a minute, that might have been relieved by some words conceding his superiority, but wasn't. Rachel was looking out of the window as if in momentary forgetfulness of the honor done her in this statement of facts. Kalitan rose to his feet.

"Ole Man Mac come down valley, may be, in two days. I stop to tell you, and say like white man, klahowya."

And with the Indian word of farewell he turned to the door, when Rachel stopped him.

"Wait, Kalitan," she said, holding out her hand to stop him. "You are going south into the hostile country. Will the Arrow carry a message as it flies?"

"Let Rashell Hardy speak. Kalitan is swift. A message is not heavy from a friend."

"That is it, Kalitan; it is to your friend—Genesee."

"Rachel!" ejaculated Tillie, who had been a silent auditor to this queer little scene, with its ceremony and its ludicrous features—ludicrous to any not knowing the red man's weakness for forms and a certain pomposity that seems a childish love of display and praise. But Rachel never ridiculed it; instead, she simply let herself drop into his tone and thus enhanced very much his opinion of her. And at Tillie's voice she turned impatiently.

"Well, why not?" she asked; and her combative air at once reduced Tillie to withdrawing as easily as she could from the discussion.

"But, dear, the man's reputation! and really you know he is nothing we thought he was. He is scarcely fit for any lady to speak to. It is better to leave such characters alone. One never can tell how far they may presume on even recognition."

"Yes? After all, Tillie, I believe you are very much of the world worldly. Did he stop to ask if I was entirely a proper sort of person before he started to hunt for me that time in the Kootenai hills?"

"Nonsense! Of course not. But the cases are totally unlike."

"Naturally. He is a man; I am a woman. But if the cases were reversed, though I might preserve a better reputation, I doubt much if, in some respects, I should equal the stubborn strength of character I have seen that man show at times."

"Oh, I might have known better than to advise you, Rachel, if I wanted to influence you," remarked Tillie helplessly. "You are like an Irishman, always spoiling for a fight, and hunt up the most ridiculous, impossible theories to substantiate your views; but I am so disappointed in that man—he seemed such a fine fellow. But when we are assured of our mistake it is time, especially, Rachel, for a girl, to drop all acquaintance with him."

"I wish I was not a girl. Then I would not have to be hedged in forever. You would not think it so terrible if Hen or Ivans, or any of the men, were to meet him as usual or send word to him if they chose."

"But that is different."

"And I am sick of the differences. The more I see the narrowness of social views the less I wonder at old MacDougall and Genesee taking to the mountains, where at least the life, even the life's immoralities, are primitive."

"Primitive! Oh, good Lord!" ejaculated Tillie in serio-comic despair. "What would you suggest as an improvement on their simplicity?"

And then, both being rather good-natured women, the absurdity of their vehemence seemed to strike them, and looking at each other for a second, they both burst out laughing.

All this time Kalitan stood, showing his silent disdain of this squaw "wauwau" with the impassive gaze that went straight over their heads at the opposite wall, not seeing the debaters, as if it were beneath his dignity to open his ears to their words. In fact, his dignity had been enhanced several degrees since his visit to the ranch, some ten days before—all because of that "talking-paper," no doubt, that had come from the Fort, and his full Indian dress—for he would scorn to wear the garb of his father—was decked with several additional trinkets, borrowed or stolen from the tribe, that were likely to render his appearance more impressive.

And Rachel, glancing at him, was reminded by that manner of dignified toleration that she had kept him waiting no doubt five minutes—and five minutes in the flight of an arrow is a lifetime.

"Tell Jack Genesee," she said, turning to him in complete negligence of arguments just used, "that Rachel Hardy sends to him greetings—you understand? That she is glad to hear where he is; a soldier's life is a good one for him, and she will always have faith in his fighting well, and trying to fight on the right side. Is that message much to remember?"

Kalitan poetically answered in Chinook to the effect that his heart was in his ears when she spoke, and would be in his tongue when he met Genesee, and with that startling statement he made his exit, watched by Aunty Luce from the stairs on which she had taken refuge.

"You are a queer girl, Rache," said Tillie as Rachel stood watching the gaily-decked, sinewy form as it broke into a sort of steady trot, once outside the gate, and was so quickly out of sight down the valley.

"Am I? Try and say something more original," she suggested.

"I believe you would make a good missionary," continued Tillie debatably. "Your theory of civilizing people seems to be all right; but while it may work capitally with the savages born in heathendom, I fear its results when applied to enlightened mortals who have prefered dropping into degraded lives. Your laudable energy is likely to be wasted on that sort of material."

"What a learned diagnosis for you to make, my child," said Miss Hardy approvingly. "Aunty Luce confided to me she was going to make a 'batch' of sugar cookies this morning, and you shall have the very first one as a reward for delivering your little speech so nicely."

(To be continued.)

YOU Are Paying $2 to $4 Too Much For Your Coal!

We Will Show You How to Cut Coal Bills Almost In Half

THE place for you to buy your coal is at our mines. Direct from the big Tecumseh mines, located in Knox County, Indiana. Buy direct from the mine owners themselves and pay only the mine wholesale price. Get Tecumseh Coal the same as hundreds of Indiana farmers are doing and have done for years. They know from actual experience that Tecumseh gives them better coal value, more heat and less waste at a lower price per ton. And besides the big saving in money we offer, consider this:

Tecumseh Coal

is mined from the famous number five vein in Knox County, Indiana. Reputed by the State Geologist to produce the *very best* coal mined in the state consequently the Middle West. Tecumseh will give you extra coal quality at a lower price. We absolutely guarantee Tecumseh Coal to prove out 13,400 B.T.U.'s (heat units) to the coal pound with only 9% ash and 9% moisture. Our guarantee spells pure coal quality; coal that is clean, minus slate and dirt. It means added heat with less actual waste at a lower cost per ton.

Tecumseh Users Save $50 to $100 on Season's Supply

You can do the same. Find out how much we really can save you. A postal card will bring you complete information. Don't pass this up. You can see it means money to you. Write us today—let us prove this story of coal economy. We want you to know more about our monstrous big mines—our latest model mining equipment and our wonderful money-saving "direct-from-mines-to-you" coal plan. Heavy Losses From Infectious Abortion.

Prompt Measures Must Be Adopted to Stamp Out This Dread Disease---Owners May Treat Their Own Stock---By R. C. Mills.

UNDER the term "infectious abortion" are included those cases which occur in otherwise healthy mothers, as a result of external infection producing inflammatory lesions of the uterine mucous membrane and of the fetal membrane. It usually occurs in an enzootic form.

Infectious abortion occurs most frequently in cattle breeding establishments, more seldom in studs and in the breeding of sheep and swine. The stable-fed, finer-bred animals are especially affected, but the infection may become widely spread in range animals. The introduction of the disease into large cattle herds causes heavy losses, because of the fact that a number of valuable calves perish and because of the decrease of the milk production; moreover, the cows conceive only with difficulty after abortion or not at all.

Natural infection may take place from the external genitals. Most frequently it is transmitted during copulation by males, who have previously covered infected females. On the other hand, the straw and floor of stables become contaminated with the vaginal discharge during and after abortion by the amniotic fluid and the fetal membranes, which contain enormous numbers of bacilli, whence the contagion may likewise penetrate the genital organs; at the same time, the infection may be introduced by various objects, such as sponges and other utensils and also by attendants.

The possibility of an intestinal infection in cows, goats and sheep by the indigestion of food and drinking water contaminated with amniotic fluid and afterbirth, was proven beyond a doubt by the successful experiments of certain scientific men and this mode of infection should be considered as the natural infection more often than has heretofore been the case. Especially does it play an important part where the malady spreads rapidly on a farm.

In cattle establishments free from the infection the virus is usually introduced by an already infected female, who during abortion infects the stable, and during copulation infects the male. The infection then spreads on this particular farm with every favorable opportunity, since the first cases of abortion or premature birth are given little attention, as they are followed by new cases only after a considerable period and consequently the necessary measures to eradicate the disease are omitted. The introduction of the disease can also be accomplished by means of animals that suffer from a chronic uterine catarrh subsequent to abortion, and also rarely by animals that in spite of their being infected carry the fetus the full term. More seldom is the disease introduced by males that have recently been covering animals on infected premises, and likewise also by new-born animals from such farms. The infection spreads, as a rule, only among animals of the same species. At times, however, animals of other species are attacked.

Cows are more likely to abort in the fifth or sixth month of pregnancy, mares in the fourth to eighth month, sheep in the fourth month and swine in the eighth to twelfth week. At times abortion takes place in an earlier or later period of pregnancy.

The abortion is usually preceded by a catarrh of the genital passages. With the moderate swelling of the lips of the vulva the vaginal mucous membrane becomes reddened and reddish nodules, like millet seed in size, appear on its surface. At the same time there appears from the vagina a mucous or muco-purulent, exceptionally bloody and always odorless discharge which in cows is reddish-gray or yellowish, in mares, and sows whitish-gray in color. The milk production becomes simultaneously diminished, the milk having a colostrumlike appearance and coagulating on boiling.

Two to three days after the appearance of the first catarrhal symptoms the abortion usually takes place with moderate pains and with mild general manifestations. Should the abortion occur in an early period of gestation the fetal membranes are expelled together with the fetus. On the other hand, in abortions taking place at a later stage of gestation the afterbirth is passed off subsequently to the fetus, and it is not a rare occurrence to have it retained for some time. Following the abortion a continuous vaginal discharge is always observed for one or two weeks. The secretion, which is then dirty brown or reddish-brown, odorless, or somewhat fetid, may accumulate in the uterus and from time to time be discharged under straining. Gradually the discharge becomes diminished and finally it disappears entirely. Still in spite of their otherwise healthy appearance the animals either do not conceive, or if they abort at an earlier or later stage of gestation, and in rare cases this may be repeated more than once. Abortion reappears, as a rule, in cases when copulation occurs shortly after the first abortion or when the vaginal discharge was still present, whereas in cases where copulation occurs several months after the abortion normal births are more likely to follow.

Fetuses aborted at early periods of gestation are usually dead. Those, however, that are expelled at a later period are not seldom born alive. Poorly developed fetuses mostly die within one or two days, with manifestations of intestinal catarrh.

Infectious abortion often persists for years in infected premises when proper means for its suppression are not taken. After the first case of abortion new cases appear, as a rule, only after several weeks, then, however, they follow each other in more rapid succession and finally normal births occur only exceptionally. After a time, however, the cases of abortion become more rare, as animals which have already aborted once or twice again give birth at the normal termination of pregnancy, and only the newly introduced young cows or newly purchased animals from healthy herds abort, until finally the disease dies out of its own accord.

For suppressing the disease after it has appeared in a herd, first of all change all the remaining apparently healthy female animals which have never aborted to a place away from the infected district. If this cannot be accomplished under existing conditions it is at least advisable to keep the already infected and suspected animals in another stable, or at least in an isolated part of the same stable and to supply special attendants for them. Subsequently it is necessary after removing the remnants of food and straw in these parts to disinfect the entire infected stable thoroughly and repeatedly, the floor and walls as well as the stable utensils, in addition to which the external sexual organs of the pregnant animals should be washed daily with a non-irritating antiseptic solution and their vaginas should also be irrigated. In the meantime these animals should be subjected to careful observation and those in which prodromal symptoms of abortion are noticed should be isolated immediately and their stalls disinfected. At the same time it must be taken into consideration that the vaginal discharge has possibly already contaminated the litter and food.

The expelled fetus, together with the fetal membranes and afterbirth, should be burned, or at least scalded and buried deeply. If remains of the fetal membranes were retained in the uterus it should be attempted to remove them soon, if possible in the course of two or three days.

Males which have covered affected females, or in which there is a suspicion in this direction, should be subjected to treatment by cutting the hair short at the opening of the sheath, the prepuce sack should be washed with a ½ to 1 per cent solution of lysol or 1 per cent soda solution, and following each covering the washing should be repeated with pure lukewarm water or with one of the fluids mentioned. In sheep and swine herds where this is accompanied with difficulties it is advisable to suspend breeding for a certain time.

The treatment of animals which have aborted consists in irrigation of the vagina and uterus with lukewarm antiseptic fluids, by means of an irragator, the soft rubber tube of which should be introduced deeply into the uterine cavity. For disinfecting fluids, which are also satisfactory for washing the surrounding parts of the vulva, freshly prepared corrosive sublimate in rain water, 1:8,000—10,000 (should not use stronger) 1-2 per cent creolin or lysol solution, 1-2,000 permanganate of potassium solution, may be used, of which large animals receive three-fourths of a quart, small animals one-half quart each.

This treatment should be continued at first one to two times daily, later every two or three days, until the discharge has ceased for several days. After the conclusion of the procedure it is advisable to keep the animals separated for several weeks and to breed them again, not earlier than two months after the abortion.

In order to prevent the introduction of the disease from outside, newly purchased pregnant animals should be observed carefully and should be kept isolated until calving; further, animals with symptoms of a uterine or vaginal catarrh should not be bred at least until completely recovered. The association with persons who are employed in infectious premises should also be limited as far as possible. In male animals which have served on these premises it is advisable to disinfect the prepuce and the penis before the act of covering. Furthermore, each case of abortion should be treated as if it were an infectious form of the disease and particularly does this appear to be necessary in those cases where the abortion occurs under the above described manifestations even in a herd which has been known to be free of the affection.

Females which have aborted one or more times should be disposed of only if they fail to conceive after a subsequent covering, provided that they have received suitable treatment. By keeping pregnant animals the disease will be brought to a standstill more quickly than if new susceptible material is continually added in their place.

This method carried out accurately invariably succeeds. It is doubtful if abortion in infected animals can be prevented, but infection of healthy animals can be prevented.

The use of an anti-abortion vaccine is claimed by some to get results, while others claim little, if any, good comes from its use. It might be worthy of a trial, however.

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

Wisconsin State Fair Horse Sale.

THE offering of Percheron and Hackney horses to be sold at the Wisconsin State Fair horse sale on Friday, September 15th is attracting the attention of horse breeders and farmers in all parts of the state. Wherever the writer goes he is asked about the horses to be sold, and is pleased to be able to say that he has seen many of them. It is impossible to go into detail in regard to all of the horses, but in general we are able to state that it is a high-class offering. Fred Pabst, Oconomowoc, Wis., is consigning four Percheron stallions and fourteen Hackney stallions and mares. The Percheron stallions are all yearlings except one two year old and all black in color. The two year old named King Coco, is a blocky, heavy-boned horse with a close coupled back, good hips and good head and chest. He is by the imported stallion, Journal, that sold for $2,000, and his dam is the imported mare, Heroine. The yearling stallion, Dan Dandy, another son of Imported Journal, is a toppy individual. He has plenty of middle, heavy bone and has what many Percherons lack, a very good set of pasterns. He is an extra good mover. The other two yearlings are by Imported Journal and Royal. The Journal colt is out of a dam of Baccarrat breeding that sold for $5,000 to Kellog, of Green Bay. The Edgewater Stock Farms are consigning nine head, two Percheron stallions, eight Percheron mares and one trotting stallion. This is a really high-class lot of animals and seven of them are entered for the show ring at the state fair. Several other breeders are consigning some exceptionally good stallions and mares that our readers are advised to inspect. Among these are several head from the Welch Farm, Ripon Wis.; E. E. Rosencranz, Oconomowoc, Wis., is consigning an extra good imported stallion that you do not want to miss. Dopp Bros., Ixonia, are consigning a toppy stallion and several others are consigning a few. The Hackneys being consigned by Mr. Fred Pabst are high-class animals and no farmer or lover of a good driving horse should fail to be at the ring side when these horses are sold. Do not leave your check book home either, for you will have an opportunity to buy a fine driving horse at a price any lover of a good horse can afford to pay. No farmer should be without a good driving team, regardless of whether he has an automobile or not, as it costs no more to keep a good team than a poor one. Send for a catalog of the sale, which will give pedigrees, pictures and descriptions of the animals. Catalogs may be obtained by writing to Fred Pabst, Route 30, Oconomowoc, Wis., manager of the sale. See page 22.—Adv.

King Defender the Grand Champion.

THERE was a great showing of Duroc Jerseys at the Janesville big fair and King Defender, the 940-pound Duroc boar was an easy winner in the aged class and was made grand champion of the breed. This boar was recently sold to John L. Fisher, who showed him at this fair. This boar is a wonderful sire and it was for no fault of the boar that caused B. W. Little, Janesville, Wis., to sell him, but in view of the fact that he had so much of his get he thought it advisable to sell him when he was offered a good price. Mr. Little has some great Durocs on his farm, in fact he has some spring pigs as good as the writer has seen and as far as the breeding goes you need not be afraid of that. Many of the pigs are by King Defender he by Ohio King and his dam was by that great breeding son of Defender, Defiance. You'll like the pigs by this boar and it is worth something to have a boar at the head of your herd that is by a grand champion. If you can't use this breeding Mr. Little has some outstanding spring pigs by Critic Top Notcher. This boar comes from a line of breeding that is most popular in Nebraska. Sired by Dusty Critic 2d, that was the sire of Critic B., the Nebraska grand champion of 1914 that in turn was the sire of Critic D., the 1915 grand champion of the same state. This makes Mr. Little's boar a half brother to Critic B. This is new breeding for Wisconsin and is a good strain. Write this good breeder for his prices on gilts and boars. Don't fail to mention this publication. See page 24.—Adv.

Some Good Chester White Pigs.

AT Art G. Hoskins' (Dodgeville, Wis.) we found a few litters of as good Chester Whites as it has been our pleasure to see. This breeder has one litter of March 24th farrow that are "killers." They have great length, good bone and with proper care they will have plenty of scale at maturity, for they are larger now than many March 1st pigs we have seen. The second choice litter are equally as good, though not quite so large at this time, but Mr. Hoskins says that they will be just as large in six months, for he knows what the pigs from this certain sow have done for him before. He has other litters that came about the first of April that are coming fine and he will certainly have a grand lot of boars and gilts to offer the trade. Here is a good chance to get a herd boar, they look good to us and we think you will like them if you order one. Don't be afraid to order by mail from this breeder, he will handle it in an honorable manner. Mr. Hoskins also has a herd of milking Short-horns and at a later date he will have something of this breed to sell. Your mail will be promptly answered. Please mention The Wisconsin Farmer when writing for breeding and prices. See page 24.—Adv.

Excellent Short-horn Trade.

WE have just received the list of recent sales made by J. E. Kennedy, owner of the beautiful Oak Lawn Farm, Janesville, Wis., and the home of some of the best Short-horns in the country. He reports the following sales: One bull to Dan McCollouch, Winnebago, Ill.; one bull and two heifers to Russell Clark, Clinton, Wis.; six heifers to C. P. Coolridge, Winnebago, Ill.; one bull to B. W. Little, Janesville, Wis.; eight bulls to Gerauld D. Arnold, Galesville, Wis.; one heifer and one cow to James Guernsey, Elkhorn, Wis.; three bulls to E. D. Drake, Alexander, N. D.; one bull to Theo. N. Mathias, Greenland, Ark.; one cow and calf to Ernest Damann, Farmington, Minn.; one cow and calf to F. J. Damann, Farmington, Minn.; one bull to E. J. Parker & Son, Janesville, Wis.; six cows and ten yearling heifers to F. J. Derby, Ward, Ala.; eight cows to D. B. Smith, Mission Hill, S. D. If you want Short-horns you can find them on Oak Lawn Farm. He has a large assortment and the prices quoted are attractive. If interested, write for further information.—Adv.

Borchardt & Son, Duroc Jersey Breeders.

WE recently looked over the Duroc herd owned by John Borchardt & Son, Richland Center, Wis. This herd is not large, but they have a few extra good spring pigs both boars and gilts. The pigs have great length and we believe they will be large at maturity. They are sired by Richland Defender, a very well-bred yearling boar and a good individual. He is sired by Defiance and his dam was by that sire of big ones, Marion's Wonder. One couldn't ask for a better pedigree. Some of the dams trace to Cook's Defender and they are good brood sows. Boars and gilts of spring farrow are being offered and the prices asked are not high. Write the above mentioned firm for particulars and mention The Wisconsin Farmer. See page 24.—Adv.

Metzler's Jerseys.

WHEN we dropped in to see the Jersey herd of Lorenz Metzler, New Franken, Wis., last week we were very much pleased to see such a fine herd. He has been breeding for a number of years and has some forty head. The cows and heifers are of the large, roomy American type, with big, evenly-balanced udders and good teats. They are largely of the Scribner breeding, of the St. Lambert family. He is now offering a few heifers and yearling bulls for sale sired by Hutzeland King, a grandson of King of St. Lambert's King. The bulls are especially good individuals having good spring of rib and good depth. Mr. Metzler is also a breeder of Poland China swine and is offering spring pigs of both sexes for sale at reasonable prices. You will not be disappointed if you buy of this breeder. See page 22.—Adv.

Reports Activity in Holstein Sales.

E. E. ROSENCRANZ, Oconomowoc, Wis., whose advertisement appears on page 23, reports the following sales during the last few weeks: The young bull, Sir Nonesuch Ormsby, to Edward Kummrow, Oconomowoc, Wis.; Sir Ormsby De Kol to Davy & Son, Oconomowoc, Wis.; Champion Ormsby to Nordean Groth, Ixonia, Wis.; three cows, Colantha Nonesuch, Canary Pride De Kol and Oakside Johanna Fayne, to Frank J. Lehman, Watertown, Wis. Mr. Rosencranz has only two young bulls left which he is able to spare from his herd.—Adv.

Fond du Lac County Jersey Breeders' Sale.

THE first annual consignment sale of the Fond du Lac County Jersey Breeders' Association will he held Tuesday, September 26th, at Brandon, Wis. Fond du Lac county has long been known as the home of many of the best Jersey herds in the West, in fact among th best in the United States. Not only have these herds been known for their high production ability, but their winnings in the big Jersey show rings have proven that they rank second to none in type and conformation. The Jersey Breeders' Association has now become so strong and so large, that they are able to make a very creditable showing in this their first public consignment sale. Among the consignors are the following: Ed Bruins, Fairwater, whose show herd the past year, won very heavily at all the leading state fairs and dairy shows in the middle West. His herd is largely of imported and the best American strains. Register of merit work has been and now is being carried on and very creditable records made, combining in his animals high production ability and the best obtainable type and conformation. J. H. Dixon, Brandon, Wis., who is recognized all over the United States as a master breeder and judge of Jersey cattle. His herd represents the best in breeding, no expense or labor being spared in getting the best obtainable. The winnings of his herd during the past ten years are proof positive that his animals are of ideal Jersey type. C. A. Peterson, Rosendale, the well-known Duroc and Jersey breeder is consigning a few. There will also be a number from the Smith herd at Princetor, Wis., and several others of the smaller breeders of the county are consigning a few. Catalogs giving pedigrees, pictures and description are being issue and will be sent on application to the secretary of the association, C. A. Peterson, Rosendale, Wis. We advise our Jersey readers to send for a catalog and to plan to attend this sale, as it is an offering going a long way to see. When writing for catalogs kindly mention that you saw their advertisement and this write-up in The Wisconsin Farmer. See page 21.—Adv.

Berkshires in Demand.

THERE is an increasing demand for Berkshire swine, and breeders are reporting very favorable sales. W. A. Freehoff, Waukesha, Wis., reports a sale made recently through his advertisement in The Wisconsin Farmer of a fine young boar to Henry Stuttgen, Stanley, Wis. Mr. Stuttgen we understand is also a breeder of registered Berkshires, and we congratulate him on securing so good a herd header.—Adv.

Fisher Buys Giant Boar, King Defender.

JOHN L. FISHER, of Janesville, breeds big Durocs, and he simply cannot live without a big boar. Recently he sold his great boar, Gold Bond, to D. B. Smith, of Mission Hill, S. D., and immediately started on a hunt for another big boar to take his place. After looking around the country he came back home and purchased King Defender from his neighbor and fellow breeder, B. W. Little, of Janesville. King Defender is some big boar. He weighs 940 pounds and is going to be at the Wisconsin State Fair. If you want to see a real big Duroc, Fisher invites you to call around and see this boar when you are at the fair. He also will have some fine fall boars and spring boars on exhibit at the fair. If you want anything in the line of Durocs don't fail to see his exhibit or write him. See page 24.—Adv.

Big Col. a Wonderful Individual and Sire.

WHEN the writer saw Big Col., the great boar owned by Geo. H. Willsie, Prosper, Minn., in the spring, he was very thin, but at that time we considered him one of the best aged boars in the Northwest. We had occasion to be at Prosper again in August and now that the boar is in good condition we even like him better than ever. He is the best King the Col. boar in Wisconsin or Minnesota and the writer has only seen one boar of this breeding that can be considered his equal and he is owned in Nebraska. We tried to prevail on Mr. Willsie to show this boar at the state fairs, but at this late date he did not feel that he could get him in show condition by fair time. He will be shown at LaCrosse and unless we are mistaken he will cause trouble. Big Col. is big—he can be classed as a 1,000-pound boar, and he has the quality and other good points to go with it. Not only is he a good individual, but he is also siring a uniform lot of big, stretchy Durocs. The boars that Mr. Willsie will sell in his October 19th sale will please the most critical. There will also be some by Chief Defender, a litter brother to Disturber, being sired by old Defender, and out of the great brood sow, Lucy Wonder 112th. We still say that no breeder has two better boars than can be found in this herd. Don't forget that this will be a good place to buy boars in October. Send him your name and address so that when the time comes you will be sure to get one of the sale catalogs. It will contain some great pedigrees. Mention The Wisconsin Farmer when writing. See page 24.—Adv.

High-Production Holstein Blood.

THAT the ability to produce a large flow of milk and large butter records is transmitted from one generation to another has been demonstrated in the pedigree of a young bull advertised for sale on page 23 by Earl A. Paddock, Elkhorn, Wis. The dam of this bull is Flora Hesseltje. At seven years of age she made 25.73 pounds of butter in seven days. Her dam, Aaggie Hesseltje De Kol, made 25.23 pounds. Her sister from the same dam made 23.73. Her dam's sire, Prince Hesseltje De Kol, has seven tested daughters and all of them are heavy producers. Three of them have records of 26.93, 26.20 and 25.23 pounds and the other four all have records over twenty pounds. The sire of the bull for sale is Canary Paul Fobes Homestead whose dam made 34.96 pounds butter in seven days and recently topped the great sale in Detroit, Mich., selling for $4,600. The dam of Canary Homestead is a daughter of Homestead Jr. De Kol, that has seventy-one A. R. O. daughters, six with records from thirty to 35.55 pounds butter in seven days and thirty-one others from twenty to 29.55 pounds. It will be seen from this that the high-production has been consistently transmitted from generation to generation, and there is every indication that this bull will transmit it to his daughters, as it has been bred into him on both sides. For further information in regard to this bull write to the above address.—Adv.

Jumbo's Equal 2d Grand Champion at Janesville.

THE attraction in the Poland China division of the Janesville Big Fair was the Poland China boar, Jumbo's Equal 2d, owned and exhibited by C. S. Flesch, Mt. Ida, Wis. When it comes to a big-type boar, Jumbo's Equal 2d, is the real thing. If any of the "small type" men say they can show more quality than this boar possesses they will have to go some. We consider this boar one of the best in the state and we know that the owner has been offered a good price for him, but he thinks he is worth as much to him as any other Poland China breeder. This boar may be shown at the state fair, but as yet Mr. Flesch has not decided. Not only is he a show boar, but he is a sire as well and the pigs by him compare favorably with any we have seen in the state. Get in on the ground floor and get a son of Jumbo's Equal 2d. Mr. Flesch's post office is Mt. Ida and shipping point, Fennimore, Grant county, Wis. Don't fail to mention The Wisconsin Farmer. See page 24.—Adv.

Lawson Sells Many Guernseys.

GUERNSEY cattle have been selling very well during the last two months. In a letter dated July 16th, W. A. Lawson, Rosendale, Wis., reports the following sales: Elmway's Prince to Lawson Farm Company, Rosendale, Wis.; Elmway's Buoy to Levi Randall, Rosendale, Wis.; Elmway's Baron to F. Arenz, Fond du Lac, Wis.; Avis of Elmway to William Kurtz,

WILL ADVERTISE ALL YEAR.

IT DIDN'T take long to convince George Wenham & Sons, Fort Atkinson, Wisconsin, breeders of Short-horn cattle, that advertising space in The Wisconsin Farmer is a paying investment. They are now among the year-round advertisers in The Wisconsin Farmer. Read their letter:

We have decided to run an advertisement for the entire year in The Wisconsin Farmer, as we feel from the results obtained during the time our advertisement has been running that it will pay us very materially to have our name before the public at all times.

We are convinced that it pays to let people know what we have for sale and that The Wisconsin Farmer is the proper medium for us to use. We recently sold a carload of cows and heifers and a great many bulls at satisfactory prices through our advertisement in The Wisconsin Farmer.

The Wisconsin Farmer will carry Messrs. Wenham's message into more than 90,000 farm homes every week. Let it carry your message, too. Wisconsin Farmer advertisements are result getters.

THE WISCONSIN FARMER, Madison, Wis.
Guaranteed Circulation, 90,000.

Kewaskum, Wis.; Maud of Elmway's Pride to Clover Lawn Farm, Lewistown, Minn.; Belle of Elmway to Clover Lawn Farm, Lewistown, Minn. See Mr. Lawson's advertisement on page 23 for the animals he is now offering for sale.—Adv.

Lice and Disease Prevention.

EVERY farmer should see to it that his hogs are kept free of lice and that the hog buildings are clean and sanitary. Lice are blood-sucking parasites. They drain the vitality of hogs not only by sucking the blood, but by continual irritation which permits no rest. In their weakened condition, hogs are always susceptible to attacks of disease. To rid them of lice, hogs should be dipped two or three times, at intervals of about ten days. The hog buildings should be cleaned regularly and sprayed with a reliable dip and disinfectant to kill the parasites and disease germs. There are many reliable coal-tar dips and disinfectants which will give equally good results at a considerable saving in cost when compared with Cresol Compound. One of the most widely known and used product of this kind, and one which is manufactured by a firm of the highest scientific and commercial reputation, is Kreso Dip No. I. It is a standardized product. This means that every lot conforms to a uniform and dependable strength. Kreso Dip No. 1 has a carbolic acid coefficient of five. This coefficient denotes its relative value as a disinfectant when compared with pure carbolic acid by the method of testing advised by the United States Hygienic Laboratory. For dipping hogs, Kreso Dip No. 1 may be used in a dilution of one part dip to seventy-two parts water and will give as good results as a one to fifty dilution of Cresol Compound, and it costs about one-fourth as much. Used according to directions, it is not caustic, irritating or unpleasant to handle. It will kill lice, mites, fleas and sheep ticks and improve the appearance of the animal's skin. As far as is known, it is the only product of this kind which has been tested on live hogs to determine its value for killing virulent hog cholera virus. Experiments prove that its use in a 2½ per cent dilution will kill virulent hog cholera virus in five minutes by contact. The manufacturers, Parke, Davis & Co., Detroit, Mich., will mail (free) interesting booklets on hog cholera prevention and the care of hogs and other live stock to anyone writing for them. Kreso Dip No. 1, in original packages, may be procured from any drug store.—Adv.

Dobson & Eastman.

WHEN you visit the Wisconsin State Fair this year be sure and visit the Poland China section and see the Dobson & Eastman exhibit from Lancaster, Wis. We recently spent the day with Burlie Dobson and if this firm don't get a few of the blues we will be badly mistaken. They will have out some of the best "under six months" stuff that we have seen and those that know Burlie will, of course, expect to see them fitted to the minute. In a previous write-up we mentioned their junior yearling boar as being the best one of the age we had seen. Two weeks ago this boar became cast in a fence and was not able to get up for two days. Naturally that put him back considerable and injured his hind quarters some. He is improving each day and they are in hopes he will be all right by fair time. We will not take time to mention all the show animals. The writer didn't see their exhibit last year, but we have been told that they have the best show herd they ever exhibited, if that is true some of you Poland China men will have something to shoot at. They will also have a few boars that will be for sale and they are certainly good ones. Mr. Dobson is very anxious to have you visit the pens and get one of the boar sale catalogs. The Grant county Poland China breeders will hold a combination sale at Lancaster, October 10th. The catalogs will be ready at the time of the state fair and if you are interested in Polands you will be interested in this catalog. Watch out for the Dobson & Eastman Poland Chinas. This herd will also be shown at La Crosse. See page 24.—Adv.

Trapshooting.

ONE of the many delightful phases of trapshooting affiliation and one, by the way, which is comparatively new is the Farmers' Community Gun Club. For many years, with the exception of a few individuals in farm sections who would attend an occasional trapshooting tournament, the young men were content to do a little hunting in the fall and winter, feeling that time and distance precluded the possibility of their indulgence in this fascinating sport. Today, however, we see marked changes taking place in this respect. Regularly organized community trapshooting clubs are beginning to dot our farming sections and it is indeed a fine example of American independence; it was not convenient for the farmer to go to those distant traps, so he is bringing the traps to the farm. And what a get-together sport it is! Though they live miles apart they know one another intimately, the general store having been their meeting place for years and during those years each has studied the ability of the other as a rabbit, quail or duck shot, either through hearsay, observation or personal boasting. The gun club, however, leaves no room for argument for the scores stand out in mute judgment and in place of the one-time boasting, arguments and doubt, a wholesome friendly rivalry holds sway. An important part of a gun club is proper equipment. New clubs when selecting their equipment, should specify Winchester guns and ammunition as advertised on page19.—Adv.

Grand Model 21st.

THE only son of the many times grand champion, Grand Model, that we know of in Wisconsin. No family of Duroc Jersey swine has won as many premiums in the West as the Golden Models and practically every good breeder has some Golden Model blood in his herd. Geo. D. Sprain & Sons, West Salem, Wis., have only been breeding registered Durocs for a couple of years, but in that length of time they have made great improvement, and now have some outstanding hogs of this breed. Inasmuch as they bought Grand Model 21st late last fall, they haven't many pigs sired by him for sale, but they have some very choice pigs by other noted boars. They bought several Lee's Defender sows that raised them nice litters sired by Lincoln Model. They have some herd boars by Corrector 2d a son of Corrector, the boar that Atwater used successfully. We believe that you would be pleased with the boar that you would get from this firm. They expect to build up one of the best herds in the state and to enjoy a reputation as breeders of good Durocs, they realize that they must send out only the good ones. They have culled closely and if you place your order with them, you will get a good pig or none at all. They are reserving the best gilts for a bred sow sale to be held the first week in February. Get their prices and when writing please mention this publication. See page 24.—Adv.

Cook's Defender a Good Breeder.

WE recently spent the day at Richland Center, Wis., and while there looked over the Emmett Cook & Son herd of Durocs. When we were there the first time it was early in the spring and the pigs were very young at that time, and one could not tell very much about them. We will now say that we have seen no pigs that have come faster or done better than those sired by their good boar, Cook's Defender. Here is a good boar and in going over the good breeding boars of the state, Cook's Defender must be classed among the best. They have one litter of March pigs that are as good as any breeder has and there are some boars in this litter that should go to the head of some good, pure-bred herd. They have good backs, the best of bone and feet and are well bred. Many breeders that have more of a reputation would ask about $60 for boars of like quality, but these can be bought cheaper. Cook's Defender is sired by Defiance, he by old Defender. He weighs now right at 900 pounds. You'll not be disappointed with the Cook Durocs, if you are, when you get your boar or gilt home, send them back, that is the way they do business. They guarantee their Durocs to please. They also have a fall boar that might please you. He is being priced at $50 and has a world of quality. Get into communication at once. Order a boar or a gilt or two, they will please you. Mention The Wisconsin Farmer. See page 24.—Adv.

PABST PONTIAC DE FREULE 185994, the registered Holstein bull that has been given by Mr. Fred Pabst, Oconomowoc, Wis., as a special prize at The Wisconsin State Fair.

Col.'s Choice-Wonder Chief.

PROBABLY no boar of the breed has the distinction of being the sire of as many herd boars as King the Col., and the important part is that his get have great size. One of the best King the Col. boars in Wisconsin is owned by Dennis Shea, Melvina, Wis. Several good boars are represented in this herd, but the best pigs are by Col.'s Choice or out of sows by him. He has made good as a sire. Sows in the western sales sired by King the Col., sold for more money last winter than the get of any other boar. This shows that King the Col. breeding is in demand and hardly any breeder would think his Duroc herd complete without some of this blood. We know of no better place to get this blood than from Mr. Shea. He also has some good spring boars by Wonder Chief. He is sired by Cherry Chief the boar that put Hanks & Bishop on the map. The pigs by him are very uniform and those out of the Col.'s Choice sows are dandies. By buying a boar of this cross you would get away on the right foot, for you would have the breeding of two of the great boars of the breed. Mr. Shea is a mighty fine fellow with whom to do business. You can depend on what he tells you and can rest assured you will get just what you order. Try him with a boar order, he won't sell any gilts, they go in the sow sale this coming winter. Will you please mention The Wisconsin Farmer when writing? See page 24.—Adv.

Four Oaks Stock Farm Sale.

WHEN it comes to prolific Durocs I guess we will have to give the honors to the herd on the Four Oaks Stock Farm, Ft. Atkinson, Wis., owned by W. W. Goodrich. When visiting the farm a short time ago and looking over the herd of registered Holstein cattle and Duroc swine, we asked what the litters had averaged the past year. We were happilly surprised to learn that six sows farrowed ninety-six pigs an average of sixteen pigs to the litter. However, Mr. Goodrich like all other good breeders, weeded out the poorer ones, as he knew that the sows could not properly raise so many, so raised but fifty-six of these, however, this makes an average of over nine raised per litter. If anyone can beat this let us hear from them. These pigs were sired by Defender Major 2d 70335A a right good boar of choice breeding and type. These pigs are now being advertised for sale on page 24.—Adv.

Wulff's Red Polls Selling Well.

WILLIAM WULFF, Grafton, Wis., has recently sold three of his fine Red Polled bulls. He sold Bob 29542 V-11 to Otto Miller, West Bend, Wis.; New Year 28621 A-29 to Frank A. Miller, Markesan, Wis.; and Nelson 29391 A-29 to George H. Sollman and John H. Haselbrink, Fort Branch, Ind. See Mr. Wulff's advertisement on page 22.—Adv.

UNDER date of July 22d the Carnation Stock Farms, Oconomowoc, Wis., write as follows: "During the past few weeks we have made the following sale of young stock: To Mr. Robinson, of Berlin, Wis., we sold a son of Beauty Pietertje Prince, from a 24.58-pound daughter of Sir Ormsby Hengerveld De Kol. His dam is a great producer, and we believe when conditioned for test at next freshening will greatly increase her present record. To Chas. Reed, Oregon, Ill., we sold a son of King Ormsby, from a twenty-two-pound daughter of Colanthan 4th Lad. We also sold him three heifers with good A. R. O. records. With this stock as a foundation, Mr. Reed should soon have a herd of good producing pure breds. To Calvin Fulton, of Oregon, Ill., we sold a son of Korndyke Segis Johanna, from a daughter of Pontiac Korndyke. This is a very well-bred bull, having as his sire a bull from a thirty-eight-pound daughter of Pontiac Korndyke, and sired by our forty-pound bull, Johanna McKinley Segis. We still have a few sons of Johanna McKinley Segis and Beauty Pietertje Prince from well-bred A. R. O. cows. They are priced right, and we are not going to keep them long." Their advertisement appeared during the past six months with the Oconomowoc Holstein Breeders' advertisement in The Wisconsin Farmer.—Adv.

THE offering for the Short-horn sale at the American Royal at Kansas City the first week in October under the auspices of the American Short-horn Breeders' Association, has been selected with a view to securing a collection of show and breeding cattle of a high order. The most prominent herds of the corn belt are contributing, and, as a considerable number of the entries are members of show herds, the outstanding merit of the offering is assured. Considered both from the standpoint of individuality and blood lines, the Royal sale will be one of the most important sales of the year. It will afford the best opportunity to obtain herd bulls, as more than half of those consigned are heading show herds on the season's circuit. See page 22.—Adv.

Many of these horses will be exhibited in the show ring. Several of them are candidates for ribbons. The consignors are among Wisconsin's best breeders. Send for catalog giving breeding and description to

FRED PABST, SALES MANAGER, OCONOMOWOC, WIS.

A Good Duroc Breeder.

THE writer recently called on B. M. Arries, Augusta, Wis., and saw some good Duroc Jerseys and Holstein cattle. Mr. Arries hasn't as many Durocs as some, but what he has are good, and we would rather see a breeder with a few good ones than have a big herd with all kinds. He started in the game a couple of years ago, buying one of his first sows from the Atwater herd, she being a Corrector-Marion's Wonder cross. She proved to be a good buy, and some of the best pigs on the farm trace to this sow. He also has some pigs out of a Lee's Defender sow, and they have great scale, as well as quality. He has a good yearling boar at the head of the herd, being by Great Wonder, out of a Lee's Defender dam. This is one of the good yearlings that we have seen, and Mr. Arries has some likely looking pigs by him. At the present time he is offering about a dozen boars and gilts. These are the tops of the spring crop, and if any of our readers should order from this breeder they will be pleased with the pig he receives. Mr. Arries is also getting nicely started with Holsteins and we will have more to say about them at a later date. Don't overlook this herd of Durocs. The owner is a good care-taker and he is going to make good with the "red hog." Mention this publication when writing for particulars. See advertisement on this page. —Adv.

Of Interest to Swine Men.

THOSE that show hogs at the Wisconsin State Fair will be pleased to learn that the new swine pavilion will be ready by fair time. The building will hold about 1,500 hogs, and each exhibitor will have ample room to show his hogs to advantage. Each breed will have its own division which will be a great improvement over the old arrangement. We hope that the swine show this year will be the "best ever," so that there will be an appropriate "opening" for the new swine building. —Adv.

THE MARKETS.

Union Stockyards, Chicago, August 26th:—A terrific break in the market for all classes of cattle save a few prime specialties, has been shown in the trade here the past few days, occasioned chiefly by the scarcity of labor, but to a considerable extent by liberal receipts at all markets. Labor is not to be had. Manufacturers all over the country are bidding frantically for it. Packers have not been able to kill live stock bought early in the week. At every packing point on the map similar congestion exists. The situation here has been aggravated by forwarding cattle from other receiving points for slaughter. Congestion is on the stockyard side of the killing floors. Whole pens of cattle are today awaiting an opportunity to get to the shambles and all the cattle available cannot be killed this week. Every plant is short of labor of all kinds. One big local house needs at least a thousand men, while others are not able to kill half their capacity. Light receipts early next week will help. The labor situation is serious and cannot be ignored. It is the sequence of stoppage of European emigration owing to the war and unprecedented activity in all spheres of production.

Plenty of medium to strictly good steers, which had to go at $7.85@9.00 the latter part of the week showed flat $1.00@1.25 decline from Wednesday of the week previous, and were 75c@$1.00 lower than Monday. A like decline was quotable for the right choice steers, such as went last week around $10.50. Only the right prime kinds were quotable at lesser decline, and had such kinds been here at the week end, it is probable they would have had to sell at least 25@50c lower than Monday. A drove of choice steers made $10.00, which would have commanded at least $10.75@10.85 a week ago, and cattle had bids around $9.50@9.75 which were also that much lower. Declines from last week's high spot measure from 75c@$1.25 per cwt., conservatively quoted, on the general run of decent to strictly good, fat beef cattle, both steers and she stock. Cannery and stockery stuff has lost less, not to exceed 25 to 50c.

While the cattle market has suffered such severe reverses, the hog trade has been doing a pyrotechnical stunt, though it, too, has been involved in vicissitude since midweek. On Tuesday and Wednesday, high days of the week, prime butcher and Canadian singeing hogs sold up to $11.30 per cwt., the highest price paid in the history of the Chicago Union Stockyards, which were opened late in December, 1865. Earlier in that year hogs sold as high as $13.25. With the bulk of the trading at high time this week at $10.50@11.20, the general average price was right at $4 per cwt. higher than the corresponding time a year ago. Since early Wednesday the top has been reduced 20c and the bulk of sales 25c, but the market still shows 25@35c advances over a week ago.

HOLSTEIN-FRIESIAN CATTLE.

Breeders Wanting 30-lb. Herd Sires

We Invite Your Attention to

Three Young Bulls

No. 151, calved March, 1916. Sire, Korndyke Segis Johanna 127132, a 38-lb. son of the 40-lb. bull, Johanna McKinley Segis by King Segis, and whose dam, Pontiac Lady Korndyke (A. R. O. record 38.03) is the highest record daughter of Pontiac Korndyke. Dam, Pabst Blackberry, a 31.68-lb. three year old by a 29-lb. grandson of Hengerveld De Kol. Second dam, a 23-lb. three-year-old by King Pontiac Champion, a 31-lb. son of King of the Pontiacs. Third dam, a 33.86-lb. daughter of De Kol 2d's Butter Boy 3d.

No. 156, calved April, 1916. Sire, King Pontiac Champion, has 41 A. R. O. daughters. The only one tested as a mature animal made over 1,000 lbs. butter in a year. Dam a 31.51-lb. daughter of Sir Hengerveld Model Johanna, that has twenty A. R. O. daughters, two above 30 pounds. Good A. R. O. breeding for several generations.

No. 152, calved April, 1916. Sire, King Pontiac champion. A 30.38-lb. daughter of Hengerveld Model Johanna, a son of Hengerveld De Kol. Dam's dam, A. & G. De Freule De Kol 2d, a 29.68-lb. cow.

Several young bulls by the above sires, all out of A. R. O. cows, ranging in price from $100 up, depending on breeding and age. Be sure to address

PABST STOCK FARM, R. 30, OCONOMOWOC, WIS.

THE 30.90-LB. SHOW BULL NORTH STAR VERA SIR BEETS 97406

AS we now have four crops of calves by this sire, we are compelled to offer him for sale. He is a show bull as his picture shows him. He is perfectly gentle and quiet, even with strangers, is a quick, sure server, and we guarantee him to be absolutely right in every way. He was born December 24, 1911. Sire, SIR BEETS CORNUCOPIA NETHERLAND, that was never defeated in the show ring. Dam, HAPPY HOME VERA ORMSBY, A. R. O. record 30.90. First check for $500 gets him.

FRED ALBRECHT WATERTOWN, WISCONSIN

2 Yearling Sons of the Richly-Bred Holstein Bull KING HENGERVELD PONDYKE

THIS bull has 20 A. R. O. daughters, 2 with records over 30 pounds of butter in 7 days. He was sired by King of the Pontiacs, that has 175 A. R. O. daughters, 2 with records over 40 pounds. Bull No. 1, born December 18, 1914, ¾ white, good and straight. Dam, Kinsman Beauty, 19.25 lb. 7-day record, 675 pounds butter and 16,032 pounds milk in a year. She is a granddaughter of Pontiac Aaggie Korndyke. Price of bull $150. Bull No. 2, born September 24, 1915, ¾ white, very straight. Dam, Robert's Fearless Lassie, a show cow, calved on show circuit so not yet tested, but will be this fall. Her dam and grandam both have 7-day and yearly records 757-784 pounds of butter for the year. Price $125. Send for extended pedigrees. Address **DR. DAVID ROBERTS, R. 4, WAUKESHA, WIS.**

A Richly Bred Aaltje Salo Bull

BORN February 28, 1915. Ready for immediate service. His dam, Aaltje Salo Netherland Mechthilde 78488, as a five year old made 23.35 pounds butter in seven days, 38 days after calving. She comes from a long line of heavy-producing ancestors. She not only has inherited this heavy-producing ability, but also transmits it. She has three A. R. O. daughters, one with a record of 28.63 pounds butter as a four year old. Her grandam, Aaltje Salo 5th's Netherland, has eight A. R. O. daughters holding the world's record for five years. The sire of the bull for sale is the 27-pound bull, DAISY JOHANNA 5TH, 1st prize two year old at the Wisconsin State Fair. Address

ARTHUR RUST WEST ALLIS, WISCONSIN

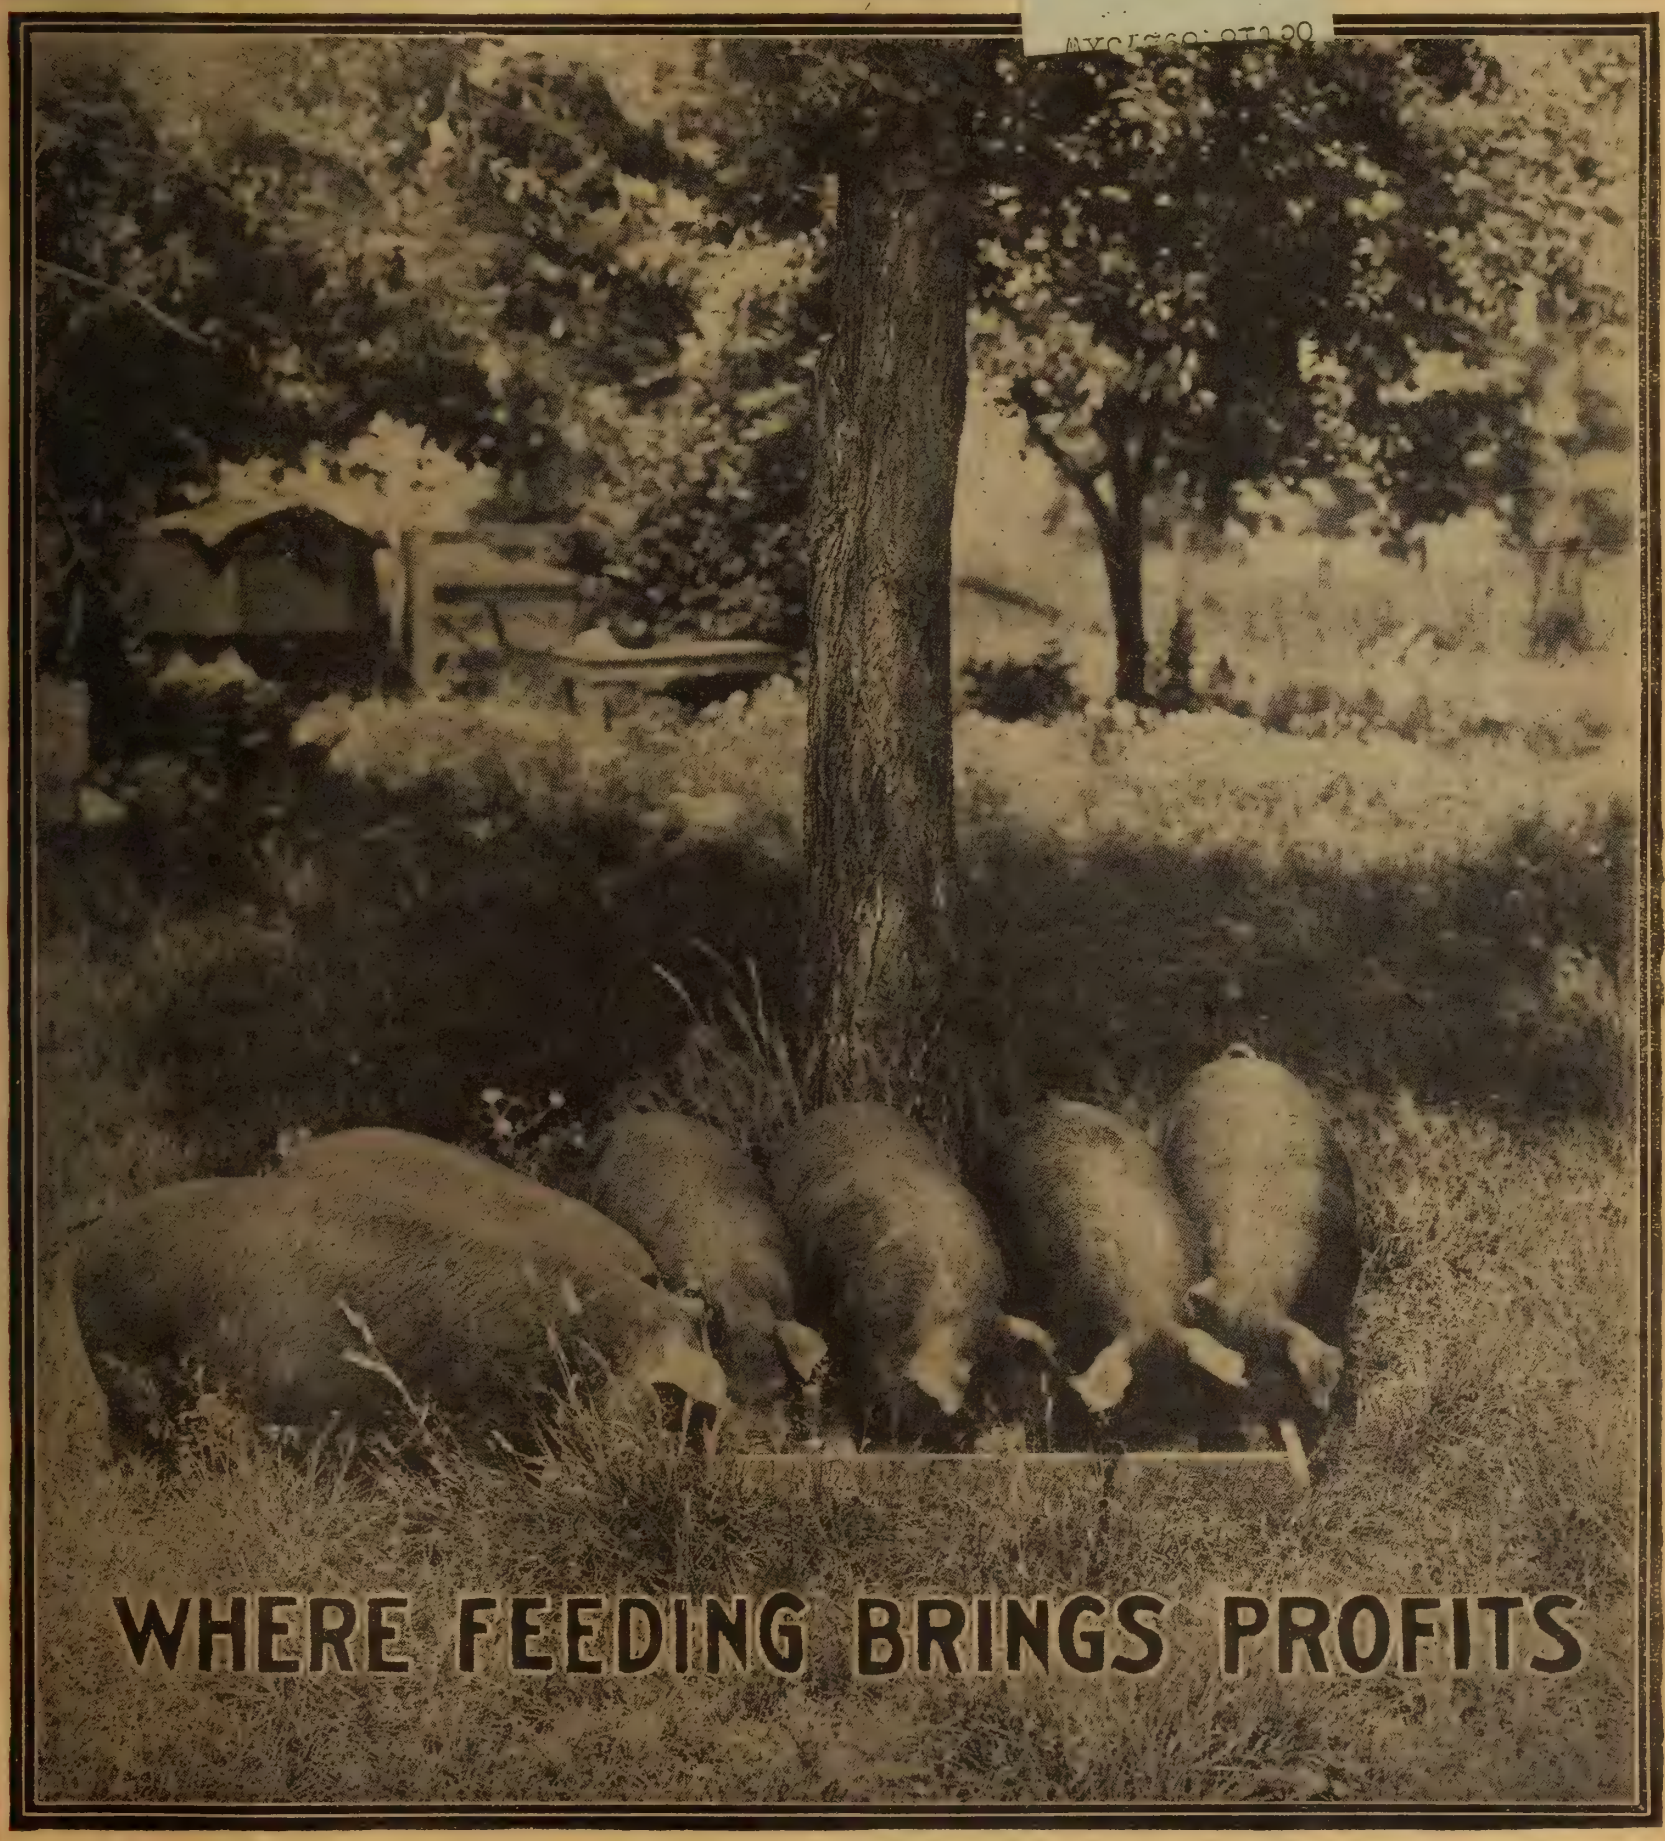
THE WISCONSIN FARMER

VOL. XLV. NO. 36. THURSDAY, SEPTEMBER 7, WHOLE NO. 1806



WHERE FEEDING BRINGS PROFITS

These hogs were treated properly with refined, sterile serum, with most excellent results

100% Potent Serum in Every Dose

Potency is always the first requirement of Mulford Refined Hog Cholera Serum

STERILITY and freedom from all solid particles are additional features.

Each and every lot of Mulford Refined Hog Cholera Serum must prove of the highest potency, must actually protect hogs against cholera, according to the prescribed Government test, before it is released from the laboratory.

The Mulford (original) process refines the blood from hyper-immune hogs until nothing remains except **potent,** sterile (germ-free) serum. All solid matter is removed.

This fact makes Mulford Refined Hog Cholera Serum **the most economical** for you to use because every c.c. you pay for is sterile serum, and every drop injected into your hogs helps to protect them against cholera, because it is promptly and completely absorbed. In this potent, sterile serum there is no waste and nothing to cause disease, abscesses or cysts.

Mulford Refined Hog Cholera Serum

Potent—Sterile—Filtered—Unlike Other Serums

Supplied in 100 c.c. and 500 c.c. bottles at two (2) cents per c.c.

The reputation of the Mulford Laboratories is your protection in using this Mulford Refined Serum. That reputation is the same on which physicians rely when using Mulford Serums and Vaccines in human practice.

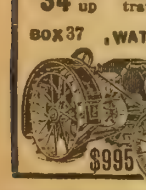
ENGINES---SEPARATORS
SPREADERS---TRACTORS

As well as many lines of general merchandise which are sold direct from factory to you at one small profit. These books tell truth about **Galloway Sanitary Cream Separators.** They give **Gasoline Engine Secrets and Facts.** They tell how and why the **Galloway Manure Spreaders** are built better and sold for less money. Separators $34.50 up Fully describe my **new 12-20 h. p. tractor.** A copy of each book should be in your hands even if you are not now in the market for a single thing. Printed in four colors and handsomely illustrated. **Ask for your free copies today.**

WM. GALLOWAY, Pres., THE WM. GALLOWAY COMPANY
BOX 37 **WATERLOO, IOWA, FARM IMPLEMENT MANUFACTURING SPECIALISTS**



Engines of all sizes from 1 3-4 to 16 h. p. heavy duty moguls. Prices way down. Big engines lower than ever.

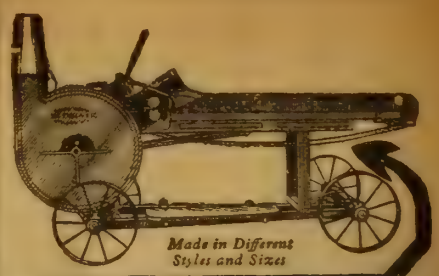
These two books fully describe the 1917 models of Galloway's famous spreaders. Don't buy a spreader of any kind until you have seen these books.

CURRENT EVENTS

CONFRONTED by a strike called by the four principal railroad unions to commence Monday morning of this week, President Wilson went before congress last week to plead for legislation designed, in his opinion, to prevent the walkout of 400,000 railroad men, or at least to postpone the crisis until the country would have time to see if an amicable settlement of the difficulty could not be had. The president proposed to congress that it establish an eight-hour day as the legal basis alike of work and of wages for all railroad men engaged in interstate commerce; that it enlarge the membership of the Interstate Commerce Commission so as to make it possible for the commission to divide its membership into investigating boards and look into the pressing problems now before it; that it sanction an increase in freight rates to offset the immense amount of money which the railroads will need to pay the increase in wages as soon as the eight-hour law goes into effect; and that it give to the president the power to take over and to operate the railroads of the country "in case of military necessity," which might be invoked now on the plea of moving supplies for the soldiers along the Mexican border. The president's plan met with the full support of neither the employes nor the employers, but congress set to work to make what progress it could in the emergency. In the meantime, practically all the railroads issued orders refusing to accept live stock or perishable freight which would not reach its destination by Sunday night. The situation remained critical throughout the entire week; business stagnation being inevitable if the strike succeeds in tieing up the railroads for any length of time.

RUMANIA finally entered the European war last week, on the side of the allies opposed to Germany and Austria, and lost no time in marching an army across the Hungarian boundary line, sweeping everything before it in the first stages of the march. Rumania was frank enough to admit that it entered the war with the allies because she believes they "can assist her most efficaciously in realizing her national aims," the latter being to grab more territory, particularly the southern part of Bukowina, Austrian crownland, and Bessarabia, the extreme southwestern province of Russia. She is willing to sacrifice her citizenry in order to obtain these long-coveted territories. Rumania brings to the allies an army of about 500,000 men, said to be exceedingly well officered, well drilled and well equipped. Even more important than the size of its army, however, is its geographical location, inasmuch as it gives Russia a clear field to march upon Hungary and to pour a horde of troops upon Bulgaria. Rumania, territorially, is the most important of all the Balkan states and her accession to their ranks is a great victory for the anti-Teutonic allies. With more men now under arms than the Teutonic powers have, at least an equal supply of munition and Rumania allied with them, the advantages are now almost all with Germany's enemies. Greece undoubtedly wants to engage in the war, against Germany, but the queen is a sister of the kaiser and German influence has thus far succeeded in keeping Greece out of the struggle.

PICKING of California fruits for eastern shipment was practically discontinued because of the threatened railroad strike. Shipping companies have decided to quit picking and to forward what now is in the packing houses. Upwards of 5,000 carloads of table grapes valued at about $6,000,000 remain on the vines and would be lost if the strike should continue for any length of time, according to dealers. Inability to move the small-grain crop and to get the usual amount of live stock to market here in the grain belt would be the most important immediate effects of such a widespread strike as is threatened.



The Old Standby

Every farmer who has used an EAGLE Ensilage Cutter knows its **absolute reliability.** When your corn or other silage feed is ready for the silo, you want quick service with a safe, reliable, large capacity silo filler. Experience shows that the EAGLE is a **compact, safe, well built, clean-cutting machine of extra large cutting capacity and reliable service.**

EAGLE Ensilage Cutters

are simple, durable, light running machines. The deep-grooved and non-winding spike rolls give far greater feeding possibilities than any other cutter. **Reverse lever permits instant stopping and reversing.** They are machines with easy running, durable, positive-drive blowers that will not clog. *Get catalog at once showing other special features.* 26

FAMILY CIRCLE TALKS
BY THE PUBLISHER

THE THREATENED STRIKE.

A RAILROAD strike, such as is now threatened, would cause far-reaching injury to the farmer, and I sincerely hope it may be averted. It could hardly come at a more inopportune time. With the labor unions threatening to call out 400,000 workmen, the railroads issued embargoes against all live stock shipments and perishable freight, in which is included poultry products, vegetables and fruits. The effect was immediately evident on market quotations, but being unable to get their produce through to market, the rise in price does the farmers no appreciable good.

With bumper small-grain crops awaiting shipment and with the demand for live stock continuing steady, at good prices, the farmer will be the heaviest sufferer if the strike is brought about, as seems almost inevitable at this writing (Friday afternoon). Stockmen already find themselves inconvenienced by the possibility of their fancy stock being held up in transit from one state fair to another and made to suffer incalculable loss. Thanks to the directors of the Iowa State Fair, the stock was released at Des Moines twenty-four hours sooner than usual and fast trains are even now rushing the fine animals there displayed to Lincoln and Minneapolis, for the Nebraska and Minnesota state fairs and back to the various homes of the exhibitors, many of whom do not care to take the risk of getting their stock from one fair to another under the circumstances.

It may be that congress will be able to avert the strike, by rushing through the legislation which the unions demand, and that the immediate danger will be over by the time these words of mine are read. The deadlock has been serious now for several days, with commercial activities along practically all lines at a standstill, awaiting developments. Just when we were being reassured that owing to the new export rules, and to more systematic planning than usual, there would be no freight-car shortage and that our grain crop would be promptly moved to market, this new situation arose, to make matters even worse than usual.

I am not going to enter into the merits of the controversy here, but this much I can and will say: It is a crying shame, and altogether wrong, that the welfare of an entire nation should be imperiled, and the shipment of food products with which to feed, not only our own people, but the people of much of the world, should be delayed and perhaps completely prevented, simply because of differences arising between two comparatively small groups of men. The interests of the nation are too big to be made thus subservient to the welfare of any one group and the only outcome that can result, no matter whether the strike occurs or not, is to increase the sentiment for government ownership of such public utilities as the people are completely dependent upon for their very existence.

THE FARM LOAN HEARINGS.

I AM CERTAIN that a better understanding of both the financial needs of the grain-belt farmer and the workings of the new federal farm loan law will result from the meetings held during the past week in Madison, Des Moines, Sioux City and elsewhere. While the actual, practical farmer who will want to take advantage of the new law was conspicuous by his absence at most of the hearings (the facts being given the federal farm loan board, for the most part, by commercial club boosters and town and city men, rather than farmers) a great deal of information was brought to light which can hardly fail to be of material assistance to the board in its first duty—the selection of the twelve cities in which the new federal land banks shall be established. I, for one, obtained a great deal of valuable information by listening to the board's sessions, information which I shall pass on to my readers, from time to time, in a discussion of the various phases of the new law and its probable workings.

I think the board was impressed by one thing, at least, as a result of its visit to Madison and Des Moines. That one fact is this: A mortgage indebtedness is a sign of prosperity, rather than of adversity; of progress, rather than of retrogression. If any of us were called upon to name the five principal agricultural states of the Union, we would unquestionably answer: Iowa, Wisconsin, Illinois, Missouri, and Kansas. Yet, these five states are likewise the largest farm-mortgage borrowers, ranking in the order I have given them here. Thus, Iowa now has over $200,000,000 borrowed on its farms, yet the value of its annual field-crop production is larger than that of any other state. This immense farm-mortgage debt of Iowa's is $60,000,000 more than the farm-mortgage debt of the second state in the list, Wisconsin, which in turn owes $30,000,000 more than the third state in the list, Illinois. I find, on examination, that the next state in the list is Missouri, with a farm-mortgage debt but $3,000,000 less than that of Illinois, while a few states further down the list comes Kansas, with a farm-mortgage debt of more than $70,000,000. Now, these are the richest agricultural states in the Union, yet they are the heaviest farm-mortgage borrowers. Is this not conclusive proof that the farmer who borrows money is not borrowing it because he cannot make both ends meet—because his annual production is not enough to offset his living expenses—but because he finds farming profitable and wants to enlarge the field of his activities so as to make still more money? If there are any states where agriculture is languishing today, it is in such southern states as Alabama and Mississippi, where the total farm-mortgage debt is only one-twentieth what it is in Iowa or one-fourteenth what it is in Wisconsin. Farmers are borrowing money in order to make money; to add to their land and live stock holdings, to install time-saving and labor-saving machinery, to improve farm-home conditions, and so on. I can remember when a mortgage was considered a sort of disgrace, a veritable "skeleton in the closet" of which the whole family stood in awe. Nowadays it is a legitimate, business-like transaction, which shows that the borrower is not content with the progress he is making, but seeks to enlarge his field and do still more work. It convinces me that the late J. Pierpont Morgan was right when he said that a millionaire is not the man who has a million dollars so much as it is the man who can raise a million dollars.

I think this thing is now firmly implanted in the minds of the members of the federal farm-loan board. Certainly the Wisconsin and Iowa boosters presented their facts clearly and convincingly. This being the case, anything which will enable the farmers of these and other states to borrow more money, on better terms, will add to our already flattering prosperity, for the law specifically provides that the money obtained is to be used for certain purposes, the main ones being to buy land, equipment, fertilizers and live stock, to erect buildings and to pay off existing indebtedness. All these things tend toward better farming, and money thus used can hardly fail to increase our agricultural production and to make our annual crop wealth still greater.

I believe there are certain phases of this new farm-loan law which the rank and file of the farmers do not understand. I know they were not clear in my mind before talking with the members of the federal farm-loan board on their visit to our part of the country. I propose to discuss these phases of the subject from week to week in these columns, in the belief that farmers generally are intensely interested and that this knowledge should be widely disseminated. Already dozens of farmers have come in to my office to ask various questions, as to when they could borrow under this new plan, the amount they could borrow, and so on. Scores have written to me. If you will follow this page of mine for the next few weeks, I believe you will get a clear understanding of the new law, its possibilities and even its limitations and defects. If I do not make myself perfectly clear, write to me; I will be only too glad to take the matter up in a personal letter, for it is of the utmost importance that we give the law a thorough trial and realize its every possibility.

SOME MORE ABOUT HOMINY.

IT IS VERY apparent to me (thus soon after the publication of my little article telling of the eastern man who was conducting a nation-wide search for the old-fashioned, genuine, yellow corn hominy) that this palatable and toothsome edible has not completely disappeared from our land. I am fairly deluged with recipes, offers to send recipes and interesting information on hominy in general and the kind that was such an important article in the daily diet of our farmer pioneers fifty or sixty years ago in particular. If my correspondents will have just a little patience, I am going to print a number of their letters and recipes in a week or two, when I can get around to picking out the best. In the meantime I cannot refrain from giving one of the letters almost in full. It is from a reader who remembers, as though it were but yesterday, when he was a boy back on the old York State farm, when hominy was a treat such as nothing of today can possibly equal, and when getting out the corn for the "samp and corn meal" took on many of the qualities of a solemn rite, so important and awesome was the occasion. Let me pass this letter along to you, that you may all enjoy it with me. It is written by Mr. S. E. Chandler, of Minneapolis:

I read with interest what you had to say about "hominy" and "samp." Those words take me back to 1854, or about that time, when, as a boy, I lived in Wayne county, New York. A couple of weeks or so after the corn was cut and "stooked" mother would say, "Boys, you go and husk a basket of corn, pick out the best ears, shell it and take it to the mill and have it ground half samp and the other half corn meal." When we would get it home mother would spread a sheet upstairs near where the stovepipe came through the floor and spread the samp and meal out to allow the air to come in contact with it so it would not get "het." We boys could hardly wait for mother to "hatch up" a Johnny cake made out of that yellow corn meal. My! but it was good. Then the next day she would cook a kettle of samp which we would eat in milk, not milkman's milk, but cow's milk.

The corn was ground in an old-fashioned "grist mill" which run two burr of stone (I guess that is the proper way of describing it). As a rule we would find "Uncle West," the miller, (a veteran of the War of 1812) sprawled out on two or three half-filled sacks "pecking" the working side of a burr.

Those old-fashioned custom grist mills of "befoh de wah" days took a grist of wheat, corn and oats, buckwheat or anything. It would be put in the hopper, then the miller would take a measure that held a tenth of a bushel and take his "toll," a measure for each bushel, and the customer take home the rest. Then mother used to make hulled corn. She knew just how much good beech and maple ashes to use to make a lye to remove the hulls. I tell you those yellow-corn products used to lie up alongside of a fellow's ribs in great shape. During those early days, owing to the war between the allied powers and Russia, wheat went up to $2.50 a bushel and the ordinary people had to live on corn meal. I acquired a fondness for corn bread at that time that has always stayed with me and when in the army if I could get hold of a little corn meal, hard-tack lost all its charms for me.

A letter like this turns time backward for me forty, even fifty, years to my own pioneering days, to my own war experiences. It seems to me that in these days of high living, when the young folks want their olives and their grape fruit and their fancy cheese and all manner of such things, unknown to the days when I was young, we could not hope for anything better than a return to the good old days of the simple life, when samp and corn meal were more common articles on our household menus than they are today. They were nourishing, they were palatable; as one of my correspondents aptly says: "They sure did stick to the ribs in those days." Is there such a thing as prosperity weaning us away from a simplicity of life which was better for us, physically as well as mentally? I fear so.

I started out with the intention of quoting only one letter, but while I was writing this another letter was laid on my desk, so interesting I am going to print it, too. It comes from Mr. S. L Johnson, cashier of the German-American Savings Bank, of Muscatine, Iowa, and is as follows:

In your paper of the 24th inst. you have an article headed "A Quest for Hominy," and this awakens memories of forty years ago when a boy on the farm in Cedar county, this state. Mother would take some wood ashes and make a leach to take the outer hull off the sound yellow corn that father brought in for her and, after hulling, she would commence boiling the corn to take the lye water out of it and also to make the corn soft. It usually took a whole day to prepare a kettle of hominy, as it required frequent changing of the water and when I came home from school in the evening I would slip up to the kettle, raise the lid and purloin a few kernels, blow them a little while and eat them. We have a man here at Muscatine that makes this same old-fashioned hominy and we invariably buy some of him when he calls. Fried hominy with good sausage gravy was a dish that would satisfy the hunger of most any boy.

Where is there a boy in all this broad, prosperous land today who is being brought up on anything which more nearly fills the bill or more surely makes the mouth water to think of than "fried hominy with good sausage gravy?" I may be a bit old-fashioned; in my elderly years I may find my mind turning back a little unduly, perhaps, to the good things of youth, but I, for one, crave some of those good, almost-forgotten things of my boyhood in preference to the highly-seasoned, French-named things of today, which we have to be taught how to eat and never can be made to enjoy as much as the simple foods of yesteryears.

Farm Labor Situation in Wisconsin.

THE labor situation, which has been more troublesome this summer with Wisconsin farmers than ever before, still proves a source of considerable worriment. From complaints received by The Wisconsin Farmer, it is apparent that farm laborers have demanded higher pay this year than ever before. In certain communities in Jefferson county, we are informed, ordinary labor about the farm has been raised to $3 per day as against the former rate of $1.90 to $2.25. The situation also became so critical in Polk and St. Croix counties that the farmers held a mass meeting at one time in an effort to form an agreement not to pay more than twenty cents per hour, when the men were demanding as high as $2.50 to $3 per day.

Just how much farm labor has advanced, it is impossible to say, but the situation appears to be one of supply and demand just as it is in other lines of business. When unskilled labor in the cities is receiving as high as thirty cents per hour, as has been the case in Milwaukee the past summer, and it is hard to obtain even at that price, it can be readily seen that prices of farm labor are sure to increase accordingly. Mr. A. J. Beckerle, superintendent of the Milwaukee office of the Milwaukee State Free Employment Bureau, advises us that his office has never had so great a demand for farm labor as this summer and that the prices paid by the farmer are on a higher level than ever before. The demand has been so heavy that it has been impossible to supply everyone with men, with the result that many farmers, especially during the harvest, were offering as high as $40 per month, including board and room and expenses to and from the farm, and were unable to secure labor at this price.

Mr. J. D. Black, of the agricultural economics department of the college of agriculture at Madison, has begun the gathering of statistics relative to the farm labor situation in Wisconsin, which will be used in issuing a bulletin on this subject some time during the coming winter. Mr. Black is endeavoring, with the assistance of farmers over the state, to gather reliable information along this line, and it should prove very interesting to the farmers who see the cost of their farm labor rising by leaps and bounds. There are no authentic statistics available just at this time to answer the inquiries of our many readers as to what this increase has amounted to in recent years, but it apparently is a matter to be decided entirely by the law of supply and demand and farm labor is bound to increase as the cost of unskilled labor increases in other lines.

Exhibiting at the Fairs.

WE BELIEVE that Superintendent E. L. Luther, in charge of county exhibits at the state fair has hit the nail on the head when he says that "farmers who exhibit at fairs, as a rule, grow good crops and are helped in marketing by exhibiting them."

Exhibits of grain and live stock have proved profitable to the buisness in the state because they have helped the farmer and stockman to advertise a higher quality of products than some of his buyers had known about. A first-class exhibit at a state or county fair is bound to arouse the interest and enthusiasm of someone, and to implant a desire for better things. This desire has a commercial value to every farmer in this state who is progressive enough to take advantage of it.

There may be some instances of poor farmers who exhibit at the county and state fairs, but they are scarce. As a general rule, the farmer who takes the pains to arrange an exhibit will exercise the same good judgment in other farm operations and make the same effort to excel in the products which he offers to sell. The difference between success and failure, between loss and profit is to "try" and try hard, and those who try intelligently must have some set aim or object or ambition. Those who exhibit at the fairs see their crops or their stock in competition with others, and in this manner learn their own weaknesses. To realize our mistakes is half the battle toward correcting them. The Wisconsin Farmer is always glad to see the young man starting out with ambition to succeed, exhibiting his stock and grain. It is an almost certain sign that this young man is going to make a success.

Guard Against Late Cutting of Alfalfa in Wisconsin

WISCONSIN farmers who are growing alfalfa should bear in mind that cutting alfalfa later than the first week in September has resulted in serious winterkilling where good stands have been maintained. The second cutting this year was light on account of the hot, dry weather and there will no doubt be a tendency with many farmers to cut late in the fall. Experiments conducted by the Wisconsin Alfalfa Association show that if cut late, sufficient growth is not made in the fall before freezing to withstand the winter weather and that if the first or second crop has not been cut at the proper stage, the third crop will not be ready for harvest the first week in September. Two or three weeks later, however, the alfalfa will begin to blossom and the farmer often cuts his tempting crop, late as it may be. This frequently results in a total or partial killing of the field as well as weakening of the plants which may survive. It is very important that these facts be borne in mind at this season, as Mr. L. F. Graber, secretary of the state order, advises against cutting later than September 5th.

The experiences of many farmers last winter who had fields which winterkilled will no doubt prompt them to take the necessary precautions this year. Our attention has just been called to the experience of Mr. H. R. Hatch, of Walworth county, who holds to the opinion that cutting for the third time, late in the fall of 1915, killed more alfalfa than all of the snow and ice received during the winter. Mr. Hatch has a field of alfalfa this year, part of which was cut late last fall. The entire field was covered with ice during the winter, but the alfalfa killed out only on the part from which a third crop was taken late in September. On the other part of this plat he left a third crop last fall that was fifteen inches or more in length, and that survived the winter successfully. Mr. Graver contends that, although the farmer is sometimes tempted to take his third cutting late in the fall, it is more profitable in the long run to let it stand, as the first cutting the following spring will be far heavier. This tends to keep the alfalfa thick and blue grass will not develop as rapidly as it would in a thin field with weakened plants the following spring.

Higher Priced Farm Machinery.

THE cost of producing farm products is bound to increase in the future, due, in the first place, to the higher wages of workmen and, secondly, to an increase in the investment in farm machinery. We are told that 55 per cent of the production of steel of the world comes from countries that are at war, and steel is the basic product used in farm machinery construction. Three-fourths of the world's production of steel during the last two years has been destroyed by the devastation of war, brought about by the wrecking of railroads, bridges, cities, rolling stock, to say nothing of the waste of steel in the projectiles used by the armies of Europe. In addition, incalculable losses have been sustained through the sinking of rich cargoes by battleships and subsea craft. These losses combined have depleted the available supply of steel to such an extent that it will require ten years to place production where it can keep pace with the demand in the same ratio as it did before the opening of hostilities.

Then there is the cost of labor in the production of farm machinery. This has continually advanced along with other trades and the effect on retail prices would have been felt long ago had it not been for the labor-saving devices put into use which enabled the manufacturer to increase the effectiveness of every man employed. It seems now, however, that the time has arrived when advances in the prices of everything entering into the manufacture of machinery has resulted in an advance in price of the finished product. This advance does not begin to be in proportion to the percentage of advances in the price of raw materials, because, as before stated, economies that have been attained in construction methods have largely offset the increased cost of raw materials.

Foreign countries that are at war already have agents in the larger cities of the United States contracting for materials and placing it in storage, waiting to be shipped the moment peace is declared. The effect of this is to reduce the supply of materials used in the construction of implements, thus tending to create a scarcity, with a corresponding effect in raising prices. The law of supply and demand operating freely, as it does in these products, can have no other effect than to increase values.

This increase comes at a time when we are placing greater reliance upon the use of improved machinery than ever before. Where formerly one man plowed with two horses and a fourteen-inch plow, we are now using gangs with four and even six horses, while in thousands of instances the tractor is being put into use, pulling anywhere from two to eight plows, and the same principle holds true all along the line. Five-foot binders are too slow in these days, their place being rapidly taken by the seven and eight-foot type. If prices of farm machinery are, therefore, to increase, as they inevitably must, the situation can only be met by putting into service on the farm such types of machinery as will increase the efficacy of man's labor. If one man can plow six acres a day, where formerly he plowed three, he is forthwith placed in a position to make his more costly machinery factors of real economy in production.

Possibly the new situation can be partially met by giving more attention to the care of farm machinery. There has been a tremendous waste in the past as the result of carelessness, and more machines have been rusted out in the corn belt than have been worn out from use. All in all, we have confidence enough in the producer to believe that he will meet the situation with fortitude so that production will be maintained at its present high point. Somewhere along the line economics may be practiced just as they are in the manufacturing industry by labor-saving devices, so that in the end the cost of living will not be materially increased. Improvement in crop-marketing facilities would help immensely in cutting out large wastes between producer and consumer, and it is urgently needed that industrial agencies combine with farmers and bring about this desired end.

Wisconsin Looks Good to Visitors.

BECAUSE of the high standing of the dairy herds of this state, Wisconsin is the mecca of many farmers who come here to learn how to better their own conditions. We have had visitors from the Dakotas and other states farther west, and delegations from South America and from a number of eastern states. Recently a company of fifty farmers from Louisiana visited this state to study dairying methods, and the gentlemen in this party were more than pleased with the reception they received and the knowledge they were able to pick up in their short stay here.

When a company of farmers starts out to see what is being accomplished in other states, and how other farmers have worked in order to succeed, it is a good omen. We have no doubt there is a good future for farming and for dairy farming in particular in Louisiana. It is a matter of special pride that Wisconsin looks so good to these parties of visitors who come here to learn from our successes.

This Week's Cover Page.

OUR cover page on this week's issue of The Wisconsin Farmer is from a picture taken on "Parkhurst Farm," owned by E. H. Parker & Son, Janesville, Wisconsin. The Messrs. Parker are well known throughout the Northwest as breeders of Duroc Jerseys, they having one of the best herds in Wisconsin. This picture shows six spring Durocs, farrowed in May and photographed in August, and though of late farrow they have size equal to many pigs of March farrow due to the fact that Mr. Parker believes in balanced rations and is an excellent caretaker.

Wisconsin Live Stock Breeders Exhibit.

SOME interesting comparisons for the live stock farmer are made at the exhibit which is being shown at a number of Wisconsin fairs by the Wisconsin Live Stock Breeders' Association.

One choice steer exhibited, aged sixteen months, weight 1,040 pounds, value $109.20 at $10.50 per hundredweight, is a fine sample of baby beef. Another steer alongside, a common rough, aged three years, weighs 920 pounds, and is valued at $59.80, being worth only about $6.50 per hundredweight.

Other exhibits are described as follows:

Dairy exhibit: one "dairy" cow with a yearly record of 461.8 pounds of butter fat, value of butter fat in one year, $150.75; total feed cost in one year, $60.92; total net profit, $89.83.

Another cow, "boarder" class, with an annual record 136.5 pounds of butter fat, value of butter fat in one year $49.14; total feed cost in one year, $45.24; total profit in cash, $3.90.

Sheep exhibit: three choice native lambs, average weight sixty-four pounds, value $6.40 at $10 a hundredweight.

Three common or cull lambs, average weight sixty-four pounds, value $5.44 at $8.50 a hundredweight.

Swine exhibit: two prime butcher hogs, average weight 250 pounds, average value $25.13 at $10.05 a hundredweight.

Two inferior "skips" average weight 125 pounds, worth $10 each at $8 a hundredweight.

Horse exhibit: two two-year-old Percheron fillies, bred and raised at the college of agriculture, weight, 1,650 and 1,550 pounds respectively, a type of animal within the reach of any careful and progressive farmer. The cost of feed and service fees to date on both these animals amounts to $247.08. No horses of inferior type are carried in the exhibit.

These figures are very significant and those of our readers who have seen the exhibits and who know anything about live stock will understand why they are possible. The Wisconsin Live Stock Breeders' Association is making a determined effort to raise the standard of live stock in this state, and this effort is a laudable one.

The exhibit referred to will be seen at the Wisconsin State Fair, September 11th-16th; Langlade County Fair, (a free gate by the way) Antigo, Sep-

tember 19th-22d; Dodge County Fair, Beaver Dam, September 26th-29th; Buffalo County Fair, Mondovi, October 3d-6th.

A Foothold in South America

BRITISH live stock breeders have made the admission that an important point has been scored by American breeders in furnishing stock judges to act at the Buenos Aires show this year. There is even discord in the ranks abroad regarding the failure of the Royal Agricultural Society of England to furnish the judges. It is claimed on the one hand that America's opportunity to perform this service to Argentine breeders came only after the society declined to nominate. The foreign breed associations were not consulted apparently and gloom hangs like a pall over the future prospects of the live stock interests of the entire British Isles.

British purses have been fattened during the last two decades by the splendid trade in pure-bred live stock carried on with the Argentine country and during this time American herds have been receiving some of the best blood of England and Scotland until the point has been reached where we can enter the South American market with full assurance that we can deliver the goods. British judges who have been acting at our great International show early have always been astounded at the high standard of excellence of the breeding classes at that show and visitors from the southland have ever been present to witness the splendid progress that is being made by American breeders. It is, therefore, fitting that there should be an interchange of judges between the two countries and unquestionably this will mean that the United States will in the future share in an important part of the pure-bred live stock trade with the great South American country.

Already some of our best herds have been drawn upon and with characteristic zeal our live stock associations are pushing the cause of the American stockman to the front. If Johnny Bull feels the effect of competition in the future he must remember that for half a century he has had a most excellent export trade in improved live stock with this country and the American breeder is not the man to weaken when he goes into the open to seek an outlet for his product. We have confidence enough in the hustling secretaries of our various pure-bred live stock breeders' associations to believe that in this contest for trade American breeders will hold their own against all comers.

Taking Better Care of the Cows.

MUCH is heard nowadays about high-producing dairy cows, and many farmers wonder how it is possible for cows to make such high records. Their own cows yielding around 150 pounds of butter fat a year, it is next to impossible to understand how a cow can be made to produce 700, 600, or even 400 pounds of fat a year. Much, of course, depends upon the individual cow and the way she has been bred, but more depends upon the kind and amount of feed she is given and the care and attention bestowed upon her than most farmers realize. The average farmer's milk cow is underfed and not given the right combination of feeding stuffs.

The more methods of feeding are studied the clearer it becomes that brains, applied to the management of the dairy cow, pay exceedingly well. We have just been studying the results obtained in feeding two cows by the Ohio Experiment Station, and comparing the yields obtained under high feeding with those previously secured under good feeding and ordinary care. Thus, one cow that for four years had averaged 8,194 pounds of milk and 239 pounds of fat, under heavy feeding and milking three times a day produced 14,722 pounds of milk and 400 pounds of fat. In other words, her milk yield was increased nearly 80 per cent and her fat yield a little over 67 per cent.

Another cow that for five years had averaged 8,195 pounds of milk and 280 pounds of fat, under high feeding and special care produced 15,318 pounds of milk and 505 pounds of fat in a year. Her milk yield was, therefore, increased 87 per cent and her fat yield 80 per cent.

Taking into consideration the cost of the extra feed and care given these cows, it was found that cow No. 1 produced milk at $1.23 per hundredweight on the heavy ration as compared with $1.57 for the ordinary feeding, and cow No. 2 produced milk at a cost of $1.28 per hundredweight under heavy feeding as compared with $1.55 under ordinary feeding. The heavier feeding, therefore, paid well, because the total profits per 100 pounds of milk were very much larger for the heavy than for the ordinary feeding.

Naturally, another profit would be selling the increase. A calf or a matured animal from a cow yielding 400 to 500 pounds of butter fat a year commands a much higher price on the market than one from a cow producing only 200 to 250 pounds a year.

It is time for the average farmer to realize that he must feed his cows more liberally and on a better balanced ration, so that the feed consumed may be more economically utilized. Silage is one of the best feeds to help out along this line. A cow that is fed liberally on silage, say thirty-five to forty pounds a day, has a much better appetite than one that is given dry feed throughout the winter months, and is, therefore, able to consume more grain and other roughage, and it is always the amount of feed consumed over and above that required for maintenance that produces the profit.

Grand championship honors will be much sought by the large breeders of dairy cattle of a dozen different states at the Southwest Dairy Show in Convention Hall, in Kansas City, September 18th to 23d. The Brown Swiss aged cow, Arlene, owned by J. Allyn, Delavan, Wis., was grand champion at the National Dairy Show, the Minnesota, Wisconsin, Illinois and Iowa State Fairs and the Iowa Dairy Congress in 1914 and 1915. She will contest for the same honor at the Southwest Dairy Show in Kansas City. She is the cow around which the breeders of Brown Swiss dairy cattle build their greatest hope.

THE CAR AHEAD
A Hudson Super-Six

When you buy a car in the Hudson class you buy that car to keep. So the question is a big one. What that car is or isn't matters much for years and years. Let us look facts in the face.

Always the Master

The Hudson Super-Six, under every condition, will or can be "The Car Ahead."

No other stock car ever went so fast. None ever went so far in one day. None ever climbed such hills on high gear. And none ever picked up so quickly.

Those are facts based on official tests. And no car built can successfully dispute them.

So the Super-Six owner, in traffic or on highways, on hills or on levels, feels himself the master of the road.

Why You Should Care

We hear men say, "Well, I don't care. I don't want speed. I don't need that power."

But you do want—don't you?—the best car in your class, when you pay about the price that gets it.

Let the extra capacity remain latent capacity. Keep the speed and the power in reserve.

You can out-distance your rivals without going faster, because of the quick pick-up. In traffic and in hill-climbing you have less change of gears. Everywhere you get effortless performance. And you rarely tax the motor to half its capacity. That means long life and economy.

80% More Efficiency

The Super-Six invention—patented by Hudson—has added 80 per cent to this motor's efficiency. It does this by reducing vibration, the cause of motor friction. So it adds just as much to motor smoothness. And it adds just as much to endurance.

Our radical tests—like those cited below—seem to prove that the Super-Six doubles endurance.

The motor is the heart of your car, and the life of it. The leaders of motordom have always led on motors. Why should any man buy a fine car now without demanding that motor supremacy?

14,000 Now Running

More than 14,000 Hudson Super-Sixes are now in the hands of owners. You can anywhere learn how men like them. Parts are ordered or on hand for 31,000 more. So there will be no change in the Super-Six so far as we can see ahead.

By quadrupling our output we are now, for the first time, keeping close to the demand. So fine car buyers can now get the car they want.

No Feats Like These Ever Before Performed

All made under A. A. A. supervision by a certified stock car or stock chassis, and excelling all former stock cars in these tests.

100 miles in 80 min., 21.4 sec., averaging 74.67 miles per hour for a 7-passenger touring car with driver and passenger.

75.69 miles in one hour with driver and passenger in a 7-passenger touring car.

Standing start to 50 miles an hour in 16.2 sec.

One mile at the rate of 102.53 miles per hour.

1819 miles in 24 hours at average speed of 75.8 miles per hour.

Also fastest time up world's highest highway to summit of Pike's Peak—**against 20 contestants**—with Hudson Super-Six Special.

Phaeton, 7-passenger	$1475	Touring Sedan	$2000	Town Car	$2750

DETROIT, MICHIGAN

WISCONSIN WINNERS AT IOWA

Dairy and Beef Herds From This State Show Up Well at State Fair atDe s Moines Last Week, Two Breeders Being Premier Exhibitors—Competition Strong in all Divisions.

FIRST-PRIZE GUERNSEY YOUNG HERD SHOWN AT THE IOWA FAIR BY THE JEAN DULUTH FARM, DULUTH, MINN.

WISCONSIN was well represented with stock at the Iowa State Fair at Des Moines last week and breeders from this state succeeded in bringing home their share of the ribbons. The Iowa stock show was one of the largest ever held there and the herds from this state came into competition with some of the best from Iowa, Minnesota, Illinois, Nebraska, Kansas, Missouri and the Northwest.

The largest showing from Wisconsin was in Short-horns, the herds of Frank Harding, of Anoka Farms, at Waukesha; Herr Bros. & Reynolds, at Lodi; Ebon E. Jones, of Rockland; MacMillan & MacMillan, of Lodi, and Carpenter & Carpenter, of Baraboo, being represented. The next largest showing was of Ayrshires from the herds of Adam Seitz, of Waukesha; Dr. David Roberts, of Waukesha, and Frank Stare's, of Ferndell Farm, at Ladysmith. H. W. Ayres, of Honey Creek, with his Brown Swiss, carried away a majority of the ribbons, while in Holsteins Wisconsin was represented by the herds of Baird Bros., of Waukesha; Charles Van Der Schaff, of Sparta, and a young bull from Dr. David Roberts' herd at Waukesha. The Wisconsin Guernsey showing was confined to the Wilcox & Stubbs and the Jean Duluth Farm herds. Frederick Underwood, of Wauwatosa, carried away many ribbons on his Jerseys. There were three sheep exhibitors, Alex W. Arnold, of Galesville; George McKerrow & Sons, of Pewaukee, and Geo. A. Frazer, of Lake Beulah. No Wisconsin swine breeders exhibited. In the horses E. A. Jones, of Bangor, was the only exhibitor, with Clydesdales.

Competition in Ayrshires was largely confined to Wisconsin breeders, three of four herds being from this state. They were the Ferndell Farms, of Frank Stare, of Ladysmith; Dr. David Roberts, of Waukesha, and Adam Seitz, of Waukesha.

The Wisconsin winners were as follows:

Bull 3 Years or Over (4 shown)—1st Seitz on Bargenrock Rising Star; 3d Roberts on Roberts' Cavalier; 4th Ferndell Farms on Victor of Ladysmith.

Bull 2 Years and Under 3 (4 shown)—1st Seitz on Cavalier's Kilnford Ringmaster; 2d Roberts on Roberts' Fairy Duke; 3d Ferndell Farms on Ferndell Victor.

Bull 1 Year and Under 2 (7 shown)—1st Seitz on Cavalier's Lord Rosberg; 3d Roberts on Roberts of Hamline; 4th Ferndell Farms on Ferndell's Lessnessock Gem; 5th Roberts on Roberts of Waukesha.

Senior Bull Calf (5 shown)—1st Roberts on Roberts' Pride Cavalier; 2d Seitz on Cavalier's Lord Stuart; 3d Ferndell Farms on Ferndell's Credit; 5th Ferndell Farms on Ferndell's Trust.

Junior Bull Calf (5 shown)—1st Seitz on Cavalier's Kilnford Gloster; 2d Ferndell Farms on Ferndell's Loyalty; 3d Ferndell Farms on Ferndell's Arrogance; 4th Roberts on Roberts of Dousman; 5th Seitz on Cavalier's Kilnford Marquis.

Cow 4 Years or Over (7 shown)—1st Seitz on Imp. Kilnford Bell 4th; 2d Ferndell Farms on May of Hillcroft; 3d Roberts on Value's Pride of Oak Valley; 4th Ferndell Farms on Silver Beauty of Bulrush Farm; 5th Seitz on Imp. Hillhouse Maud.

Cow 3 Years and Under 4 (8 shown)—1st Seitz on Bargenrock Carnation; 2d Roberts on Belle Roberta; 3d Seitz on Lady Margaret; 5th Seitz on Cavalier's Wild Rose.

Heifer 2 Years and Under 3 (7 shown)—1st Ferndell Farm on Silver Pet of Ferndell; 2d Roberts on Roberta Dehlia; 3d Roberts on Roberta of Scotland; 4th Seitz on Cavalier's Pet; 5th Galloway on Lessnessock Carlton.

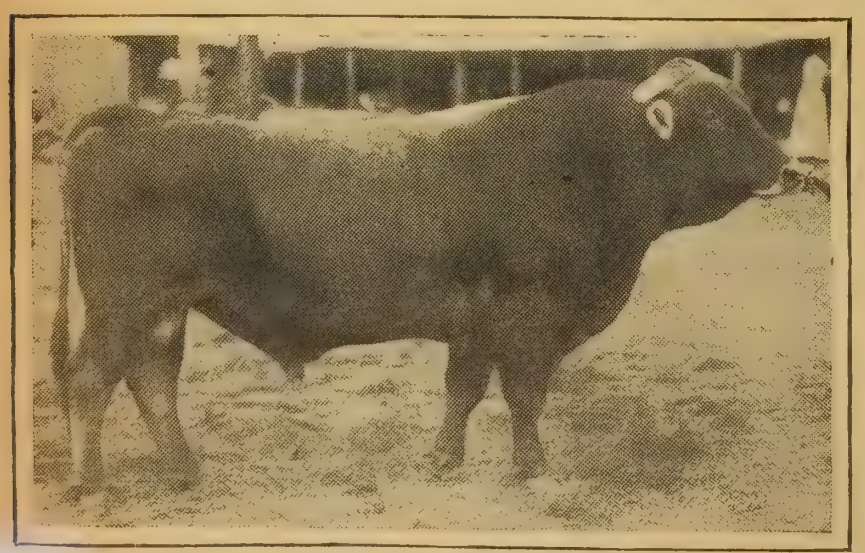
Senior Yearling Heifer (7 shown)—2d Roberts on Roberta Value's Pride Cavalier; 3d Seitz on Cavalier's Lark Spur; 4th Ferndell Farms on Snow Flake of Ferndell; 5th Seitz on Cavalier's Rose Wood.

Junior Yearling Heifer (5 shown)—1st Ferndell Farm on Ferndell's Felicity; 3d Seitz on Cavalier's Rose Leaf; 4th Roberts on Roberta Cavalier Belle; 5th Ferndell Farms on Ferndell's Innocence.

Senior Heifer Calf (11 shown)—1st

LADY BASHUA, JUNIOR CHAMPION JERSEY COW AT IOWA FAIR. OWNED BY FREDERICK D. UNDERWOOD, WAUWATOSA, WIS.

ROBERTS' ABBEKIRK PONTIAC, JUNIOR CHAMPION HOLSTEIN BULL AT IOWA FAIR. OWNED BY DR. DAVID ROBERTS, WAUKESHA, WIS.



URNEY'S 2D SON, GRAND CHAMPION BROWN SWISS BULL AT IOWA FAIR. OWNED BY H. W. AYRES, HONEY CREEK, WIS.

BARGENROCK RISING STAR, GRAND CHAMPION AYRSHIRE BULL, ANY AGE AT IOWA FAIR. OWNED BY ADAM SEITZ, WAUKESHA, WIS.

Seitz on Cavalier's Lavender; 2d Seitz on Cavalier's Kilnford Twinkle.

Senior Heifer Calf (11 shown)—1st Seitz on Cavalier's Lavender; 2d Seitz on Cavalier's Kilnford Twinkle; 5th Roberts on Roberta Southwick Cavalier.

Junior Heifer Calf (5 shown)—1st Seitz on Cavalier's Lady Bountiful; 2d Ferndell Farms on Ferndell's Mode; 3d Seitz; 4th Ferndell Farms on Ferndell's Fidelity.

Senior Champion Bull—Seitz on Bargenrock Rising Star.

Junior Champion Bull—Seitz on Cavalier's Lord Rosberg.

Senior Champion Cow—Seitz on Imp. Kilnford Bell 4th.

Grand Champion Bull—Seitz on Bargenrock Rising Star.

Grand Champion Cow—Seitz on Imp. Kilnford Bell 4th.

Graded Herd (6 shown)—1st Seitz on herd headed by Bargenrock Rising Star; 2d Ferndell Farms on herd headed by Ferndell Victor; 3d Roberts on herd headed by Roberts' Duke; 5th Seitz on herd headed by Cavalier's Kilnford Ringmaster.

Young Herd (5 shown)—2d Seitz; 3d Ferndell Farms; 4th Roberts; 5th Ferndell Farms.

Calf Herd (4 shown)—1st Seitz; 2d Roberts; 4th Ferndell Farms.

Get of Sire (6 shown)—1st Seitz on get of Imp. Bargenrock Gay Cavalier; 3d Seitz on get of Imp. Bargenrock Gay Cavalier; 4th Ferndell Farms on get of Lessnessock Gem's Good Gift; 5th Roberts on get of Roberts' Cavalier.

Produce of Cok (7 shown)—2d Seitz on produce of Imp. Chapel Hill; 3d Roberts on produce of W. Bell; 4th Seitz on Produce of Dewdrop; 5th Roberts on produce of Southwick Heath Flower 6th.

Premier Exhibitor—Seitz.

In the Holstein class there were approximately 150 head in which Wisconsin was represented by the herds of Baird Bros., of Waukesha; Chas. Van Der Schaff, of Sparta, and Dr. David Roberts, of Waukesha. The junior bull was Robert Abbekirk Pontiac, owned by Dr. Roberts. He is an excellent type of Holstein, possessing plenty of size and bone, yet not lacking in quality. The Wisconsin awards were:

Bull 3 Years or Over (4 shown)—4th Baird Bros. on Bairdland Segis Sir Prize.

Senior Bull Calf (22 shown)—1st Roberts on Roberts Abbekirk Pontiac; 5th Baird Bros. on Tarsee Sir Segis Hengervild.

Junior Bull Calf—3d Baird Bros. on Knockdair Segis Fobes Boy; 4th Baird Bros. on Knockdair Segis George.

Cow 3 Years and Under 4 (4 shown)—4th Baird Bros. on Knockdair Segis Prairie Flower.

Heifer 2 Years and Under 3 (11 shown)—3d Baird Bros. on Knockdair Segis Netherland Prize; 4th VanDer-Shaff on Queen of Enterprise Stock Farm.

Junior Yearling Heifer (5 shown)—4th Baird Bros. on Knockdair Segis Valentine; 5th Baird Bros. on Knockdair Segis Corndyke Lottie.

Senior Heifer Calf (23 shown)—3d Baird Bros. on Knockdair Segis Longfield Jim; 5th Baird Bros. on Knockdair Segis Goldbron.

Junior Heifer Calf—5th Baird Bros. on Knockdair Segis Gelsche.

Junior Champion Bull—Roberts on Roberts Abbekirk Pontiac.

Graded Herd (7 shown)—5th Van Der Shaff on herd headed by North Star Cornucopia Sir Beet.

Four exhibitors furnished the showing of fifty-two Jerseys. The only Wisconsin herd was that from Fewacres, of Frederick D. Underwood, at Wauwatosa, whose heifer, Lady Bashua, won the junior champion honors. Mr. Underwood's winnings were:

Bull 3 Years or Over (2 shown)—2d on Noble's Fawn Prince.

Bull 1 Year and Under 2 (4 shown)—3d on Frederick's Knight.

Senior Bull Calf (5 shown)—2d on Frederick's Jim Conners.

Junior Bull Calf (4 shown)—4th on Frederick's Lord of Fewacres.

Cow 4 Years or Over (7 shown)—5th on Distinction's Oxford Belle.

Cow 3 Years and Under (2 shown)—2d on Belvidere's Fairy.

Heifer 2 Years and Under 3 (5 shown)—3d on Iceland's Lady Eleanor; 4th on Noble's Lady Helene.

Senior Yearling Heifer—1st on Lady Bashua; 4th on Lady Dunlap.

Senior Heifer Calf (7 shown)—2d on Frederick's Lady Margaret.

Junior Heifer Calf (6 shown)—1st on Frederick's Lady Marjorie.

Junior Champion Heifer—On Lady Bashua.

Grade Herd (3 shown)—2d on herd headed by Noble's Fawn Prince.

Get of Sire (5 shown)—1st on get of Noble's Fawn Prince.

Produce of Cow (4 shown)—4th.

H. W. Ayers, of Honey Creek, won all but two blues and one purple and the diploma as premier exhibitor in the Brown Swiss class. His winnings follow:

Bull 3 Years or Over (2 shown)—1st on Merney's 2d Son.

Bull 1 Year and Under 2 (3 shown)—1st on Merney's Nephew.

Senior Bull Calf (3 shown)—1st on Toney; 2d on Columbus A.

Junior Bull Calf (2 shown)—1st on Bobbie.

Cow 4 Years or Over (3 shown)—1st on Brownie B.

Cow 3 Years and Under 4 (3 shown)—3d on Zelia.

Heifer 2 Years and Under 3 (4 shown)—1st on Linda Long; 4th on Zell's Merney.

Senior Yearling Heifer (2 shown)—1st on Masters' Alpha.

Junior Yearling Heifer (2 shown)—2d on Chris Rubel.

Senior Heifer Calf (3 shown)—1st on Jane C.; 2d on Columbus Bowney.

Junior Heifer Calf (3 shown)—1st on Queen of the Campus; 2d on Columbus Merney.

Senior Champion Bull—Ayers on Merney's 2d Son.

Junior Champion Bull—Ayers on Merney's Nephew.

Senior Champion Cow—Ayers on Browney B.

Grand Champion Bull—Ayers on Merney's 2d Son.

Grand Champion Cow—Ayers on Browney B.

Graded Herd (2 shown)—1st Ayers.

Young Herd (2 shown)—1st Ayers.

Calf Herd (1 shown)—Ayers.

Get of Sire (2 shown)—1st Ayers.

Produce of Cow (2 shown)—1st Ayers.

Premier Exhibitor—Ayers.

The herds of Jean Duluth Farm at Duluth and that of Wilcox & Stubbs, of Des Moines, who own a Guernsey farm at West Salem, were the only Guernsey herds from this section. The awards were:

Bull 3 Years or Over (4 shown)—3d Wilcox & Stubbs on Imp. Patritia's Son; 4th Wilcox & Stubbs on Penyn of Rosendal.

Bull 2 Years and Under 3 (2 shown)—2d Jean Duluth Farm on Starlight Excelsior J. D.

Bull 1 Year and Under 2 (3 shown)—1st Jean Duluth Farm on May Rose Yeksa Starlight; 2d Wilcox & Stubbs on Francis Holden of Fairview.

Senior Bull Calf (7 shown)—2d Jean Duluth Farm on Marathon Rose King; 3d Wilcox & Stubbs; 4th Wilcox & Stubbs.

Junior Bull Calf (3 shown)—1st Wilcox & Stubbs; 2d Jean Duluth Farm on May Rose Noble.

Cow 4 Years or Over (7 shown)—4th Wilcox & Stubbs on Francis Rose of Fairview.

Cow 3 Years and Under 4 (3 shown)—3d Jean Duluth Farm on J. D. Phyllis.

Heifer 2 Years and Under 3 (4 shown)—1st Jean Duluth Farm on J. D. Coronet; 3d Wilcox & Stubbs on Pride of Village View Farm; 4th Wilcox & Stubbs on Bob Rilma's Daisy Bell.

Senior Yearling Heifer (4 shown)—1st Jean Duluth Farm on Williams May Rose.

Junior Yearling Heifer (5 shown)—3d Jean Duluth Farm on Lyzette's May Rose; 4th Wilcox & Stubbs on Belle Black Sport.

Senior Heifer Calf (9 shown)—1st Jean Duluth Farm on Grees' May Rose 5th Wilcox & Stubbs on Holden's Hazel.

Junior Heifer Calf (9 shown)—3d Wilcox & Stubbs on Margaret Rilma; 5th Jean Duluth Farm on J. D. Roselight.

Junior Champion Heifer—Jean Duluth Farm on Grees' May Rose.

Graded Herd (4 shown)—2d Jean Duluth Farm on herd headed by Starlight Excelsion of J. D.; 3d Wilcox & Stubbs on herd headed by Imp. Patritia's Son; 4th Wilcox & Stubbs on herd headed by Penyn of Rosendale.

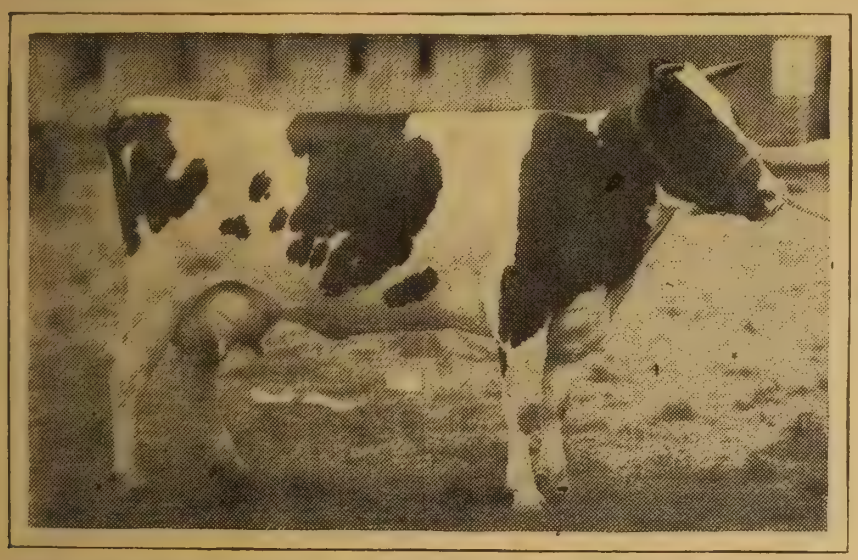
Young Herd (4 shown)—1st Jean Duluth Farm; 3d Wilcox & Stubbs.

Calf Herd (3 shown)—Wilcox & Stubbs.

Get of Sire (5 shown)—2d Jean Duluth Farm on get of May King of Lindavista; 3d Jean Duluth Farm; 5th Wilcox & Stubbs on get of Holden 4th.

Produce of Cow (6 shown)—2d Wilcox & Stubbs on produce of Hazel Tucker; 3d Jean Duluth Farm on prod-

(Concluded on page 9.)



JEWEL WALKER GERBEN OF CEDARSIDE, GRAND CHAMPION HOLSTEIN COW AT IOWA FAIR. OWNED BY WM. GALLOWAY, WATERLOO, IA.

CHOICE CUMBERLAND, FIRST PRIZE TWO-YEAR-OLD SHORT-HORN BULL AT THE IOWA FAIR. OWNED BY MILLER & SONS, GRANGER, MO.

It's Dependability That Counts

The most wonderful Spark Plug Record ever made under the supervision of the American Automobile Association has just been chalked up to the credit of Champions.

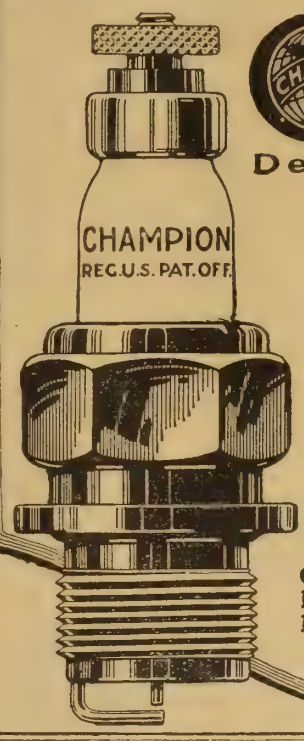
A stock seven-passenger eight cylinder King car traveled 10850 miles at an average speed of 33 miles per hour.

The long grind continued for 14 days and nights—*without stopping the motor an instant.*

At no time was it necessary to change *a single one of the eight Champions* that were supplying the vital sparks—regularly and efficiently.

As the King Motor Company states in a telegram at the end of the run—

"It is the most wonderful official Spark Plug record of a stock car under triple A supervision, and speaks volumes for your product."



Champion
"TOLEDO MADE FOR THE WHOLE WORLD'S TRADE"
Dependable Spark Plugs

It is such dependability—such superendurance—such all 'round efficient service, that has made the Champion standard equipment, not only on the King but on four out of every five of the new cars being built this season.

When you replace a plug, insist on the Champion. Your dealer knows which model is best suited to your particular motor.

And be sure the word "Champion" is on the porcelain—not merely on the box.

Champion Spark Plug Co.
512 Avondale Avenue
Toledo, Ohio

Champion Heavy Duty Price $1.00

FREE GAS TO HELP BUILD WITTE ENGINES

MY own natural gas well right in the factory gives me free fuel for power. Without this free gas, my fuel bill would run thousands of dollars a year. My customers get the benefit of this saving. I claim that I can save you half your engine money and you can depend upon what I say.

NOW Priced as Low as $15.00 Per H-P.

"Built by Experts"

I have been building engines right here in Kansas City for 30 years, and am given the highest credit by Dun's and Bradstreet's. I do not tell you this boastingly, but just to let you know that I must be dependable or I could not have been so constantly successful in a business extending over so many years. This record also enables me to buy the very highest quality materials at lowest cash, big-quantity prices.

I have always built the very best engine I could, regardless of price and profit. I sell direct from factory to user—the one small factory profit is all you pay. Formerly the retail prices of my engines were double. I can sell at a very, very close margin, because of my big business—if I only make one dollar clear profit on every engine I can buy a good farm every year!

30-Day Trial; 5-Year Guarantee; Cash or Easy Terms of Payment.

Built in 2, 3, 4, 6, 8, 12, 16 and 22 H-P. sizes, in different styles for Kerosene, Gasoline, Naphtha, Distillate or Gas, stationary, portable or saw-rig types. Write for new book, "How to Judge Engines," prices, etc.—ED. H. WITTE.

WITTE ENGINE WORKS,
2715 Oakland Avenue, Kansas City, Mo.
2715 Empire Building, Pittsburgh, Pa.

In and Around Wisconsin

The field meeting of the Wisconsin Drainage Association, which was to have been held on September 4th and 5th, at Racine, has been postponed until October 10th and 11th, and the original program will be carried out. This includes a one-day session and the second day will be devoted to a tour of the drainage districts of Racine county.

Reports of heavy yields of grain are now being received, and Frank Bohinger, of Bloomington, Grant county, reports that his oats threshed eighty bushels to the acre of measure and ninety bushels by weight from a twenty-acre field. Other farmers in that county report heavy yields, among them 6,000 bushels from ninety-five acres, 5,100 bushels from ninety acres, 4,000 from sixty acres and 5,220 from eighty acres. John Bierman secured seventy-eight bushels of barley per acre and thirty-four bushels of wheat.

Walworth county farmers report that one of the best barley crops that the county has ever produced is now being marketed at the elevators. The quality of the grain is far above the average and the price at Elkhorn has reached $1 per bushel. Barley yielded all the way from thirty to fifty bushels per acre and, owing to the dry season, unusually large acreage was harvested and threshed without being rain-soaked which preserved the excellent color and helps bring a good price. Samples of the grain being received at the elevators test from forty-one to forty-nine pounds to the measured bushel with an average of forty-six to forty-seven.

Indications point to a heavy tobacco crop in Dane county this year. Unless there is a very heavy frost or hail many growers predict it will be the largest crop in the history of the county. The farmers are receiving from 12 to 16 cents a pound for their crop and it is estimated that about 80 per cent has already been contracted for. The yield in this county is estimated for this year at 22,000,000 pounds.

The Wisconsin State Fair has issued a special premium bulletin of the young people's department, which every child in Wisconsin ought to receive. In this bulletin is given a list of prizes to be given to the various clubs, agricultural schools and individuals to boys and girls not over nineteen years of age. Among the premiums to be given is a registered Holstein bull calf to the champion agricultural school. This bull calf will be given by the Pabst Stock Farm, Oconomowoc, Wisconsin, Fred Pabst, proprietor. This young bull is a son of King Pontiac Champion, that was sired by the noted bull, King of the Pontiacs, the only bull of the breed to have two daughters making over forty pounds of butter in seven days. The dam of the young bull to be given is Pabst's Cherry, that with her first calf made 12.80 pounds of butter in seven days and is out of the cow, Pabst Aaggie Model, that made 25.63 pounds of butter in seven days. The bull calf himself is an excellent individual, well marked, and the agricultural school that wins him will indeed be fortunate.

Owing to the continued dry weather during the late ripening period and to the satisfactory harvesting season, the condition of Wisconsin winter grain seed crop is excellent, according to Mr. R. A. Moore, of the Wisconsin Experiment Station. Mr. Moore says that many farmers have observed that the improved grains have been able to resist freezing much better than the common varieties and that yields of pedigreed grains have been very good this year, considering the extremely trying winter. This means much to the seed grain growers of pedigreed fall rye and wheat, which are in great demand for seed purposes by other states.

Winter rye can be seeded up to September 15th in Wisconsin and will make excellent fall pasture if sown at this time, according to the Wisconsin Experiment Station. Not only does rye furnish fall and winter pasture but its growth preserves the fertility of the soil by preventing the leaching and washing which occurs to soils left bare during the fall and early spring. If it is desired to leave the rye crop ripen for seed it can be turned under for corn and thus issue a good seed bed for this crop. Many Wisconsin farmers are using pedigreed ryes for this purpose, as it makes a quick, heavy growth in the fall and withstands winterkilling better than the common varieties.

WORTH TAKING TO THE FAIR.
Team of farm horses exhibited at a number of county fairs by the Wisconsin Live Stock Breeders' Association.

The Wisconsin Live Stock Breeders' Association have taken hold of the proposition to organize the Hampshire breeders into a state organization, and letters will be sent out to swine breeders to sound the sentiment in favor of such an organization. Mr. A. L. Damon, proprietor of Delbrook Farm, at Richland Center, is the father of the idea and believes it will be to the advantage of the Hampshire breeders to so organize. In speaking of the Hampshire breed, he says Wisconsin is particularly well adapted for this breed and that the Hampshire hog can be placed upon the live stock map of the state through a state organization similar to that of the Poland China, Duroc Jersey, Chester White and the Berkshire Associations.

SCENE ON THE E. H. PARKER & SON FARM, ROCK COUNTY, WISCONSIN.

YOU can't hide the truth—that's why men who use W-B CUT Chewing know what quality tobacco is. A *small* chew of the real tobacco tucked away in the cheek gives men the tobacco satisfaction they want.

A gentleman's chew—it cuts down grinding and spitting and there's no unwieldy wad to roll around in your mouth or to plug out the cheek.

Give W-B CUT Chewing the quality test and learn what tobacco satisfaction is.

Wisconsin Winners at Iowa.

(Continued from page 7.)

uce of Coquette of Haddon; 6th Wilcox & Stubbs on produce of Peratitia of Sarina.

The showing of Wisconsin Shorthorns was especially good with five herds represented as follows:

Anoka Farms, Waukesha; Carpenter & Carpenter, Baraboo; Herr Brothers & Reynolds, Lodi; Ebon E. Jones, Rockland; McMillan & McMillan, Lodi.

Over 350 of this breed were shown and in the aged cow class Carpenter & Carpenter presented Maxwalton Queen, a stylish deep roan cow which carried off first prize. The classes were all especially strong and winnings of the Wisconsin exhibitors were:

Senior Yearling Bull (8 shown)—4th Carpenter & Carpenter on Sultan Mine 2d.

Senior Bull Calf (51 shown)—6th Anoka Farms on Lavender Stamp; 8th Anoka Farms on Good Stamp; 14th McMillan & McMillan on Dale's Star.

Junior Bull Calf (24 shown)—3d Anoka Farms on Augusta's Sultan 2d; 5th McMillan & McMillan on Meadow View Knight.

Cow 3 Years or Over (8 shown)—1st Carpenter & Carpenter on Maxwalton Queen.

Senior Yearling Heifer (21 shown)—4th McMillan & McMillan on Imperial Heiress; 7th Carpenter & Carpenter on Collynie's Best.

Senior Heifer Calf (45 shown)—1st Anoka Farms on Anoka Blossom 2d; 2d Anoka Farms on Anoka Clipper 3d; 11th Anoka Farms on Anoka Broadhooks; 18th Jones on Victoria Cumberland; 19th Carpenter & Carpenter on Collynie Sultan 2d.

Junior Heifer Calf (28 shown)—4th Anoka Farms on Augusta Anoka 3d; 6th Carpenter & Carpenter on Collynie Mint Drop 2d.

Junior Yearling Heifer (27 shown)—7th Carpenter & Carpenter on Collynie Mysie.

Young Herd (12 shown)—4th Carpenter & Carpenter.

Calf Herd (14 shown)—1st Anoka Farms.

Get of Sire (18 shown)—4th Anoka Farms on get of Imported Villager.

Produce of Cow (12 shown)—3d Carpenter & Carpenter on produce of Barmpton Leaflet.

GRAND NATIONAL SHORT-HORN BREEDERS' FUTURITY.

Senior Bull Calf—6th Anoka Farms on Lavender Stamp; 8th Anoka Farms on Good Stamp; 20th Carpenter & Carpenter on Collynie Cullen; 21st Herr Bros. & Reynolds on Confirmation.

Junior Bull Calf—3d Anoka Farms on Royal Stamp; 5th McMillan & McMillan on Meadowview Knight.

There were two Wisconsin exhibitors of Red Polled cattle: J. B. Ahlers, of West Bend, and the Jean Duluth Farms, at Duluth, Minn. The aged class brought out ten good cows and quite a few of the following favored the Jean Duluth cow, J. D. Brunhilde, but too much indication of dairy tendencies lost favor for her, which gave the blue to Constant, owned by W. S. Hill, Alexandria, S. D. The winnings of Mr. Ahlers and the Jean Duluth Farms in this division follow:

Bull 3 Years or Over (4 shown)—2d Jean Duluth Farm on Teddy's Best.

Bull 2 Years and Under 3 (4 shown)—3d Jean Duluth Farms on Imperial.

Senior Yearling Bull (4 shown)—2d Jean Duluth Farms on Proctor Knott II; 4th Ahlers on Norland.

Junior Yearling Bull (7 shown)—4th Jean Duluth Farms on Proctor Knott IV.

Senior Bull Calf (8 shown)—4th Jean Duluth Farms on Teddy Panama.

Junior Bull Calf (6 shown)—4th Ahlers on Unnamed Bull.

Cow 3 Years or Over (10 shown)—2d Jean Duluth Farm on J. D. Lady Watts; 5th Ahlers on Cora.

Heifer 2 Years and Under 3 (10 shown)—2d Jean Duluth Farm on J. D. Purity; 3d Jean Duluth Farm on Ringlet.

Senior Yearling Heifer (8 shown)—4th Ahlers on Maggie.

Junior Yearling Heifer (8 shown)—2d Jean Duluth Farm on J. D. Winona.

Senior Heifer Calf (10 shown)—3d Jean Duluth Farm on Teddy Dorothy.

Junior Heifer Calf (7 shown)—3d Jean Duluth Farm on J. D. Bomby; 5th Ahlers on unnamed calf.

Graded Herd (5 shown)—3d Jean Duluth on herd headed by Teddy's Best.

Young Herd (5 shown)—3d Jean Duluth Farms.

Calf Herd (6 shown)—4th Jean Duluth Farm; 5th Ahlers.

There were twenty-seven sheep exhibitors at Des Moines, three of which were Wisconsin breeders. Alex W. Arnold, of Galesville; George A. Fraser, of Lake Beulah, and George McKerrow & Sons' Co., of Kewaukee.

With Hampshire Downs the Arnold showing took 1st on get of sire, 1st on flock, champion ewe of any age, 1st and 2d on ewe under 1 year, 1st and 2d on ewe two years or over, 2d and 4th on ram under one year and 1st on ram one year old and under two. In Southdowns Mr. Arnold took 2d on flock, 2d on get of sire, 1st on ewe one year old and under two, 2d on ewe two years old and over, 2d on ram one year and under two and 3d on ram two years old and over. With Cheviots Mr. Arnold took 2d on flock, 2d on get of sire, 3d on ewe under one year, 2d on ewe one year old and under two, 2d on ewe two years old or over and 2d on ram two years old or over. With Shropshires Mr. Arnold took 2d on ewe under one year.

George McKerrow & Sons' Co., with Oxford Downs took champion ram of any age, 1st on ram two years old and over, 3d on ram one year old and under two, 1st on ewe one year old and under two, 4th on ewe under one year and 3d on flock.

E. A. Jones, of Bangor, appeared in the following winnings in Clydesdales:

Reserve Champion Mare on Sweet Marie.

Get of Sire (4 shown)—4th on get of Young Criterion.

Produce of Mare (7 shown)—2d on produce of Maud Trooper.

Yeld Mare 4 Years Old or Over (3 shown)—3d on Grove Girl.

Filly 3 Years and Under 4 (5 shown)—3d on Lady May.

Mare Foal (4 shown)—1st on Molly Darling.

On page 8 will be found a picture of the individual pens for sows and litters on the E. H. Parker & Son farm, known as Parkhurst Farm, and situated near Janesville, Wisconsin. Mr. Parker and son are among the state's most popular Duroc Jersey breeders and a great part of their success is due to the care they have taken of their pigs. Each sow and her pigs have a pen to themselves and if you could visit this farm in the spring or fall after the pigs are farrowed you would be convinced that this is the finest way to raise pigs. The Parkers raise a uniform lot of pigs with very few runts and this is due entirely to their methods of handling.

The New Way To Light Your Home

NOW, you can have and enjoy modern conveniences for lighting your home at a very small expense.

Good light adds to the comfort, beauty and cheerfulness of your home. Father can read his favorite papers in comfort, mother can sew or read in restful ease, and the children can play or study without eye-strain.

Solves the Lighting Problem for Farm Homes

Good light makes the evening hours the best time of the day. Makes everything bright, cheerful and attractive—a genuine satisfaction when company comes.

The American Lighting System gives you 400 candle power light in every room—a pure, white light, softened by beautiful Alba shades.

Ideal Lighting System

You get better and brighter light than electricity or acetylene gas. You get convenient light—nearly as easy to use as gas. You get economical light—costs less than kerosene lamps. And the price of installing an American Lighting System is less than one-tenth that of an electric light plant.

The American Lighting System is a time-tried, owner-proved system. It is the result of twenty years' experience in manufacturing lighting systems,

It is simple, easy to operate, and absolutely safe. Just light a common match—hold it to the burner for 5 seconds—turn a valve—and you get 400 candle power light. It does away with drudgery of filling and cleaning the kerosene lamps every day.

Cost of Operation

The American Lighting System costs very little to run. It is the most economical method of home lighting. Records kept by owners show that the average cost of operating a three light American System is 42 cents per month or $5.04 per year. The average cost of lighting the same homes with three round wick kerosene lamps, two hours per day, would be $10.50 per year. The American Lighting System pays for itself as well as gives you ten times more light than kerosene lamps.

If you want to make your home the best lighted home in the neighborhood—if you want good light with less work and with less expense, write today for complete information regarding the American Lighting System. Every wide-awake hardware dealer has the American Lighting System on hand or will get it for you.

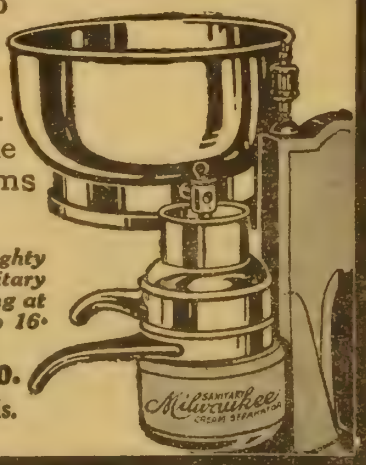
Aluminum Smooth As Glass-and Only 1/3 As Many To Wash

THAT'S the story in a nutshell about Sanitary Milwaukee discs—the reason why so many housewives prefer the

SANITARY Milwaukee CREAM SEPARATOR

The discs are as easy to wash as a coffee cup. No holes or raised bosses—simply a smooth surface that grease doesn't stick to. And besides there are only one-third as many discs—so few that it's quick work to wash them all thoroughly.



The discs are all interchangeable and with fewer discs the Sanitary Milwaukee skims quicker and cleaner.

Write today for the catalog—it's mighty interesting. And be sure to see the Sanitary Milwaukee exhibit in the Dairy Building at the Wisconsin State Fair, Sept. 11 to 16.

DAIRY

Leasing the Bull.

One breeder of high-class dairy cattle has found it profitable to lease bulls from his herd. It happened that there had been a slight depression in the condition of his business. He found his farm too oversupplied with young bulls of very good quality. There was no sale for them at their actual value as breeders. He at first considered sending them to the butcher. Instead he offered to lease them free to a number of farmers who owned grade herds. The agreement was such that the bulls should be returned to the owner whenever the farmers should be through with them.

The results of this experiment were very satisfactory. The bulls were returned after one or two years very much larger and consequently worth more at the butcher's. The farmers had enjoyed the privilege of breeding their cows to a very high-class bull with no expense attached thereto except feeding and keeping the bull. The farmers appreciated this and most of them resolved to never again use anything except a pure bred. In some localities those bulls were the first pure breds to have been used. The whole neighborhoods were attracted and interested in pure-bred sires and pure-bred stock.

The owner of the bulls obtained a reputation for fair dealing when he took the bulls back without asking any payment, as many maintained until the last that he would. His sales of bulls and even of pure-bred heifers to those districts where he lent those bulls have increased markedly.

Doubtless there are men who individually or in co-operation with neighbors could lease some splendid bull for a season or two. In foreign countries leasing of sires is very commonly practiced and is said to be a strong factor in keeping the standard of excellence of all stock very high. The owner of a high-class bull will have his reputation enhanced by renting him out for a season. Some of the greatest improvers of live stock have followed a plan of leasing out all their promising males until they should prove their value as sires. Later the ones that had proven worthy would be recalled to the farm and used there for a series of years. To some extent the leasing of bulls is coming into practice in this country. It is a practice worthy of consideration and commendation.

The Dairy Picnic.

The dairy picnic is a day of profit and enjoyment to all who participate. The dairy picnic is not a summer institute where the main topic is the dairy and dairy interests. It has all the enjoyable and relaxing features of the old-fashioned picnic with a good bunch of dairy sense thrown in. This modern picnic is just as enjoyable, if not more enjoyable than the aimless kind of years past. The dairy picnic is to the dairyman what camp meeting is to religious workers in some localities. The main topic may be "shop talk" yet it is wholesome and refreshing. No one tires of it. The interest grows and an interest in better dairying is stimulated.

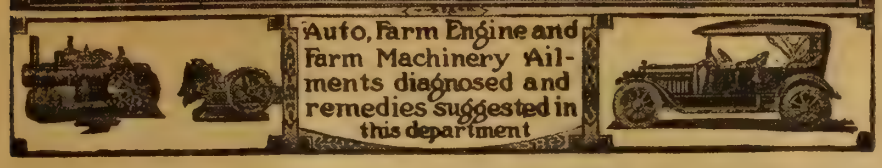
The informal talk with the neighbor and with the fellow dairyman who may have not been seen for months is of itself sufficient justification for the day. Each man learns the experience of others. He will be made to feel enthusiastic over his own work by being encouraged to tell of his success. New ideas will be discussed and accepted or discarded. Records and feeding problems ever present and ever important are live topics for informal discussion. Any dairyman will gather enough ideas at a picnic to well repay him for the time and effort required. It is to be doubted if ever a man left a live dairyman's picnic without feeling better toward his family, toward himself, and with more respect for his fellow men and a genuine appreciation of his cows.

Usually it is an easy matter to arrange a program. State extension workers are ever hungering for unsolicited invitations to visit localities and to speak at picnics or public meetings. The federal department of agriculture through the dairy division is often able to furnish speakers. The state dairy commission or the state food inspectors are usually very willing to partake of a picnic dinner and in return to assist in the formal and informal program. Successful men of the locality or from a distance may be called. This class of men is always listened to with more than usual interest. Programs, of course, may vary almost without limit. In localities where there is a tester's association there is nothing so absorbing as a comparison of cows and records. At one picnic three splendid cows were exhibited in the forenoon. They were criticized and compared critically by a very capable judge. Finally he summed his remarks by saying, "All are very good cows. I will give my opinion as to their value in the dairy as I can best determine by careful judgment. However, their records may show them to be quite different." In the afternoon the records of those cows were exhibited on charts. It was shown that the cow that the judge had placed first had produced the least butter fat during the year. A stronger lesson regarding the necessity of keeping records and testing could not have been produced.

The topic of greatest interest may be the silo or it may be cheesemaking versus buttermaking or the choosing of one breed as a community project. In many localities the matter of starting in the business is the one principal topic of interest. A series of subjects may be arranged. The interest in picnics grows from meeting to meeting. Any community that has a few dairymen can well start a plan to hold a picnic. Any community that does not have a few dairymen and an organization among them will find it advisable to get together and talk over the prospects of the business.

Although dairying predominates in Wisconsin, it is also the home of some splendid beef herds as indicated by the showing of Wisconsin Short-horns at the Iowa fair last week.

FARM MECHANICS



Questions and Answers.

Lighting From Telephone Magneto.

I have a Swedish-American 5-bar, 1,600-ohm telephone generator. Could I use it to charge an automobile storage battery, or light a miniature light?

Answer.—It could not be used to charge a battery. It might be used to light a miniature light of the correct voltage, which depends upon the construction of the machine.

Power to Operate Shredder.

I have a six-roller shredder and I would like to know what horse power is required to pull it on the belt. Would an 8-16 tractor pull it?

Answer.—The 8-16 tractor should pull it easily. As the horse power required to drive these machines varies considerably, it would be well for you to write to the manufacturer for his estimate on the required horse power.

Repair Magneto.

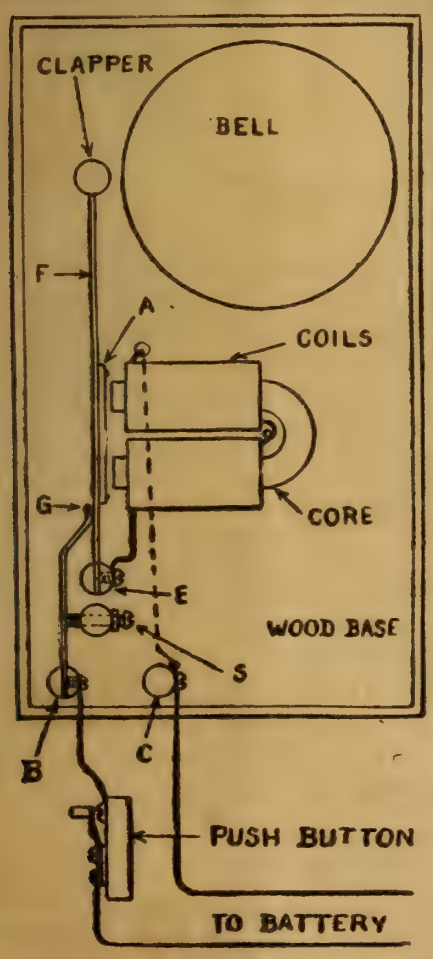
I have a single-cylinder Arrow motorcycle in good order except the magneto. Could I connect dry cells to the timer of the magneto so as to get a good spark?

Answer.—We are not sure what magneto you have on your machine. You probably could not attach a battery to the magneto successfully. Anyway, it would be better for you to have your magneto repaired, as a magneto in good order is better than a battery.

An Electric Bell.

Please show me how to make an electric bell; also how to make the connections. How many batteries will it take? How can I make electricity run a wheel? How can I reverse it? How can I make a storage battery?

Answer.—Space will not permit us to answer all these questions in the near future. Since you are so much interested in electricity, it would be well for you to get a book on elementary electricity and magnetism. There are several such books on the market that would give you the information you wish. Fans, wheels and such machines are run by a motor, the construction of which you can find in al-



most any book on electricity. A motor is reversed by means of a reversing switch, a sketch of which we recently published.

We illustrate an electric bell that a farmer boy should be able to make, and that should be serviceable as a door bell. A small bell is mounted at the upper corner of a wood base about four inches wide and six inches long. Below the bell is mounted a small electric horse shoe magnet. The core of the magnet is made of a wrought iron rod three-eighths of an inch diameter. The coils are made of very fine single cotton-covered copper wire. The coils must be wound so that the electricity flows in opposite directions in the two coils. Clapper spring F and contact spring G should be made of spring brass. A is a piece of iron riveted to F. F and G are fastened in wood posts glued in the wood base. The two terminal posts may also be wood. The binding screws in the posts must make contact with the springs. The screw S must be correctly adjusted so that the springs will vibrate just right. The push button or switch may be made from a wood block, three small screws and a strip of brass as shown. One or two dry cells will ring the bell, and when used as a door bell only, should last a year or more. The bell operates as follows: When the button is pressed, the current flows from the battery through the switch to spring G; from G to F; from F through screw E to the coils, and back to the battery through C. The current flowing through the coils magnetizes the core, which pulls F over so that the clapper strikes the bell. As soon as F is pulled over, the circuit is broken at G. The coils then lose their magnetism, and the clapper springs back. This again closes the circuit, and the process is repeated as long as the push button is held in contact.

Dim Lights on a Ford.

I own a 1915 Ford car that has electric lights run from the magneto. When I first bought the car, the lights were good; but now it is almost impossible to see any light in the road unless going fast. Can you suggest a remedy.

Answer.—See that all the connections are tight, and that the wiring is in good condition. If the trouble is not in the wiring, try new lights. If the trouble is not remedied by new lights of the same voltage you are now using, obtain lights of somewhat lower voltage. If the magneto does not work satisfactorily with the lights of lower voltage, you require a new magneto.

Building a Side-Car.

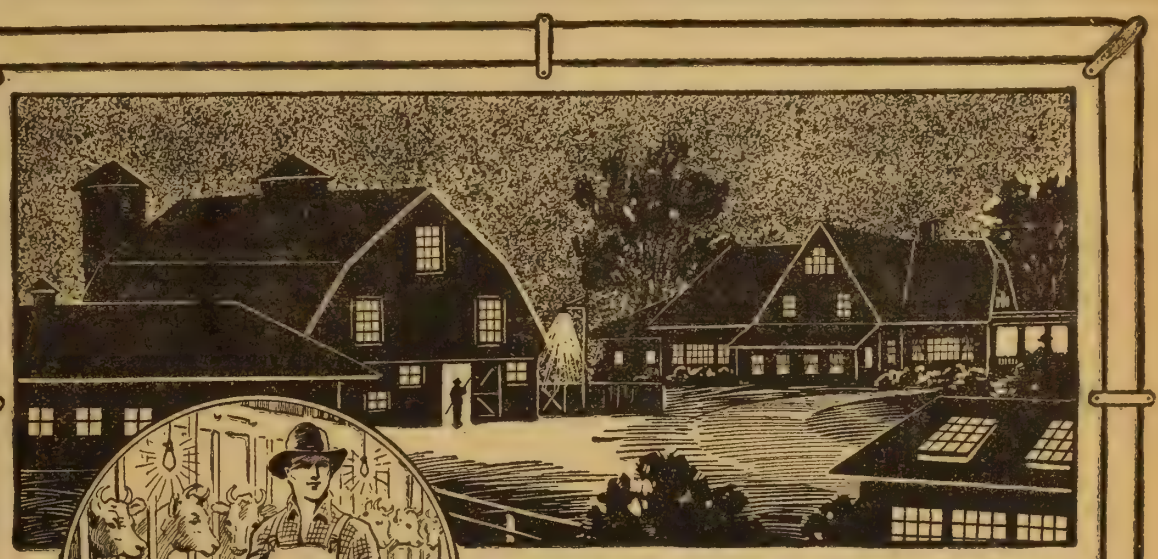
I have a 1914 Excelsior motorcycle. I would like to build a third wheel, or, if possible, a side car for carrying small packages. I want this third wheel mainly to keep the machine from skidding when riding through sand and dust. How can I go about it to build such an attachment? How can I attach it to the motorcycle?

Answer.—Obtain an old bicycle wheel, or motorcycle wheel. Mount the wheel on an axle made from a bar that may be clamped to the rear fork of the motorcycle on the right hand side. Make a rectangular frame the size you want for your side car. Mount the rear end of this frame on a semi-elliptical spring over the rear axle. Attach the forward end of the frame to the diagonal tube of the motorcycle. Steel tubing, flattened at the ends makes the best connection. Also run a brace from the center of the side car axle to the seat post of the motorcycle and another brace from the outer front end of the side car frame to a point well up on the diagonal tube of the motorcycle. The connections must be the right length, so that the two rear wheels line up parallel; otherwise the machine will be hard to steer.

Life And Cost of Storage Battery.

Please tell me which is the better battery, the rubber cell type or the enclosed glass jar type? What is the life of either of them? I would also like to know if we are paying a patent royalty on these batteries, as the price seems to be pretty high. Do you think they will be cheaper in a year or two? Why don't, or can't the manufacturers give a guarantee with the same?

Answer.—The rubber cell is somewhat less liable to breakage than the glass cell. The glass cell permits the plates to be examined without removing them from the battery. There is little choice between the two. Very little of the cost of a battery is due to patent royalty. Not only the materials, but also the labor is quite expensive at present, and the price is more likely to increase than decrease until the end of the European war. The materials for making the paste cost three times as much as formerly. For house lighting, a battery should last from three to five years. The life of a battery depends so much on the care it receives that it is impossible to say how long it will last, and on this account manufacturers hesitate to guarantee them. A high-grade battery may be ruined in a few weeks by improper care.



DELCO-LIGHT

ELECTRICITY FOR EVERY FARM

DELCO-LIGHT furnishes electricity for lighting the house and barn—

It also furnishes power to operate small machinery.

It pumps the water.

It does the washing.

It operates the cream separator.

It churns the butter.

It drives the sewing machine and the vacuum cleaner.

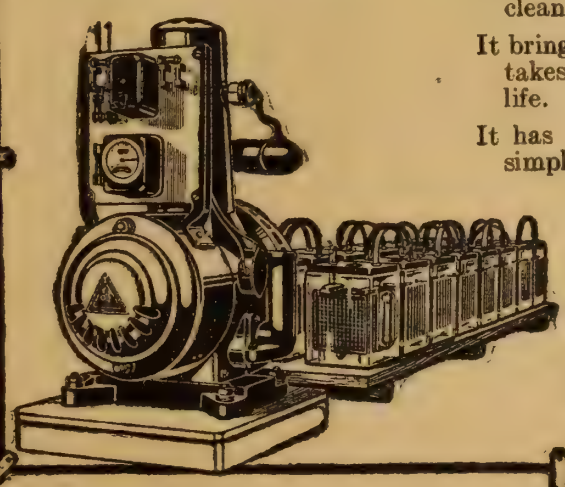
It brings city conveniences to the farm and takes much of the drudgery out of farm life.

It has a capacity 40 to 50 lights, and is so simple a child can operate it.

Price of Delco-Light, complete with batteries ready to run

$275

F. O. B. Dayton, Ohio



A thousand Delco-Light representatives and service men are in the field—there is one in your locality. Look for the Delco-Light Exhibit at the State Fair.

Threshing Returns Satisfactory.

Grain Crops Made Good Yields in Most Sections—Outlook For Mature Corn Favorable—Pastures Need More Rain.

WISCONSIN.

Adams County.—Corn is maturing but does not look thrifty. Potatoes are late in setting. Pastures on land which is not too high are satisfactory, although their growth is rather slow. Marshes are wet, but hay is being cut on them. Threshing has just begun; oats were lodged and difficult to cut, and threshing returns show them to be light. Clover seed is poor on high land, but good on low land.—C. T. Leonard.

Buffalo County.—Harvesting of small grain is finished and threshing has begun. Oats are turning out from twenty to forty bushels per acre. Barley is averaging about thirty bushels. The grain crops this year are making about 75 per cent of last year's yield. Corn is good on heavy soil, but on light, sandy soil it has been damaged by the long period of dry weather. Early potatoes are good, but late ones are not doing well. Several good steel and concrete bridges and culverts have been put in in this county and the roads are in fine shape.—James G. Bates.

Clark County.—Part of the threshing is done. The grain crops are light, having ripened too soon on account of the hot weather. Oats are running from twenty to thirty bushels per acre. Rain is badly needed for the hard grain crops.—Fred Ackermann.

Crawford County.—Threshing is under way and reports state that the grain is good. Oats are making from forty to sixty bushels per acre, rye twenty to twenty-five bushels, wheat thirty bushels and barley forty bushels. The corn and potato crops are poor because of the drouth. Corn will make about half a crop if the frost does not come too soon and potatoes will make almost nothing. Pastures are short, except on low lands. Fruit of all kinds have been damaged by the drouth, but not as badly as was expected. Rain is needed.—H. H. Stuckey.

Douglas County.—Late rains have saved the potato crop, but an average crop is not expected. Pastures are improving and live stock are doing well. The yield of small grain will be light, as compared with that of last year. Hay is about an average crop. There is little corn this year, and what there is stands a poor show of maturing.—B. N. Stone.

Iowa County.—When the small grain was threshed it proved a pleasant surprise to all, as the yield was very good and the quality just a little below that of last year. Corn looks better in the northern part of the county than in the southern, but it is suffering from drouth in both sections. Fall pastures will be very short unless rain comes soon. Potatoes are considered a failure, and the price has advanced to $2 a bushel. The fruit yield is below normal and there are no late gardens this year.—Art Hoskins.

Juneau County.—Crops are suffering from dry weather. Potatoes look like a failure and corn needs rain and hot weather in order to mature. Shock threshing is all done. Barley is normal and oats are about 75 per cent normal. The rye crop is an average. The new seedings of meadows are very spotted on account of the hot, dry weather.—C. W. Hale.

Kewaunee County.—Harvesting is half finished. Barley is an average crop and oats are fair, but somewhat lighter than last year. Pastures are poor on account of drouth and hot weather. Live stock are in fair condition, but the milk flow has decreased. Potatoes are in good shape, but need rain badly. Corn looks fine in most sections and is a week ahead of last year's crop.—W. C. Katel.

Langlade County.—Threshing has begun and small grains are fair. The weather is too dry for crops. Corn on heavy soil is doing well, and some flint varieties have started to ripen. Apples are making half a crop. Potatoes will average half a crop, but in some places they are not worth digging. There will be no second crop of clover for hay, but some will be cut for seed. Cattle are in fair condition in spite of dry pastures.—Chas. Parsons.

Marinette County.—The hot, dry weather has hurt pastures and made the second growth of grass much lighter than was expected. Clover and potatoes are better in the northern half of the county than in the southern, because the rains were more frequent there. Corn is in good shape and a good yield is promised; most fields are past the roasting-ear stage. Without good rains soon, potatoes in the southern half of the country will not make much of a crop. Vegetables are plentiful, and excellent in quality. The tenth carload of dairy cattle brought into the county by the Co-operative Cattle Buying Branch of the County Advancement Association, was delivered to farmers around Waukesha on August 18th, and another load will follow soon.—W. E. Morton.

Marquette County.—All small grain has been stacked and some has been threshed. Corn is doing fine and will make a good crop if frosts do not injure it. Beans will not make more than 25 per cent of a crop. Pastures are short on account of dry weather. Cucumbers are making about one-half a crop. Live stock are healthy. Hogs are bringing 10 cents a pound.—John M. Williams.

Monroe County.—Recent showers have helped the corn very much and it is now growing rapidly. Some fields are denting. A good rain is needed at present for corn and late potatoes, which will be a light crop at best. Two more weeks will be sufficient in which to finish threshing. The yields so far have been better than was expected; oats are making from forty to sixty bushels per acre, and rye from ten to twenty bushels. Pastures are still quite dry and short. We can soon turn the stock into the fields where they will do better.—D. F. J.

Pierce County.—We have had no good rain since the first of July. Pastures are dry and crisp and gardens are drying up. Potatoes are a failure. The new seeding of timothy is dead, but the clover seeding is alive. Apples are plentiful, but smaller than usual. Corn will yield about half a crop. It was injured by heat and drouth. Fields which will make fair corn are maturing rapidly, and farmers believe the seed supply will be ample for next year. Shock threshing is nearly completed. The yield of rye runs from fifteen to twenty-five bushels per acre, oats thirty-five to forty-five bushels, and barley twenty to thirty bushels.—G. K. Moore.

Price County.—Threshing has begun. Oats are averaging thirty bushels per acre of good grain. Potatoes promise a fair crop. Pastures are getting short. Live stock are in fair condition and no diseases are prevalent. Weather continues dry and warm.—C. F. Glissendorf.

Polk County.—In general the month of August has been hot and dry, but the weather is cooler now. The potato crop will be almost a failure. The corn crop is not good, but many fields will make about 75 per cent of a crop and it will be ready to harvest in about ten days. Some clover seed will be harvested this year. Threshing is in progress and the grain is light. Oats are running from twenty to thirty bushels per acre, barley is averaging about thirty bushels, wheat from ten to twenty bushels and rye from twenty to thirty bushels. Pastures are dry and the milk production has fallen off nearly one-half.—P. F. Amery.

Portage County.—The continued drouth has been very destructive to crops. Corn is drying up and potatoes will be a total failure unless it rains soon. The potato bugs are doing considerable damage. Pastures are poor and the milk supply has been reduced. The new seedings of grass and clover seem to stand the drouth quite well. The number of dairy cattle in the country is about 10 per cent greater than in any previous year.—Arthur H. Peterson.

Taylor County.—A big crop of hay has been put up without any rain. Harvesting is done and threshing is under way. Small grains are yielding fairly well, but are light in weight. Potatoes are very small on account of the drouth. Garden truck is good, except cabbage. Pastures are getting short, but live stock are doing well on them. Corn looks well; some of it is glazed already and promises a ripe crop. The second crop of clover is short on account of the dry weather. Peas are poor this year.—J. C. Hoffmann.

Sawyer County.—Rains during the last two weeks have been heavy. The grain crops will be light, especially oats and rye. Pastures are in fine condition. The second crop of clover is in full bloom and ready for cutting. Wild blackberries will be plentiful this fall and picking has already begun. The crop of cranberries will also be good. Cucumbers are yielding well and are keeping the pickling station very busy. Live stock are in fine condition. Several loads of beef cattle have been shipped to the St. Paul market.—F. O. Setter.

St. Croix County.—Most of the shock threshing is done and the grain crops, except wheat, are running about two-thirds normal. With about two more weeks of good weather, corn will yield well. Potatoes are almost a failure. Pastures are very dry and the ground is too hard and dry for fall plowing.—J. D.

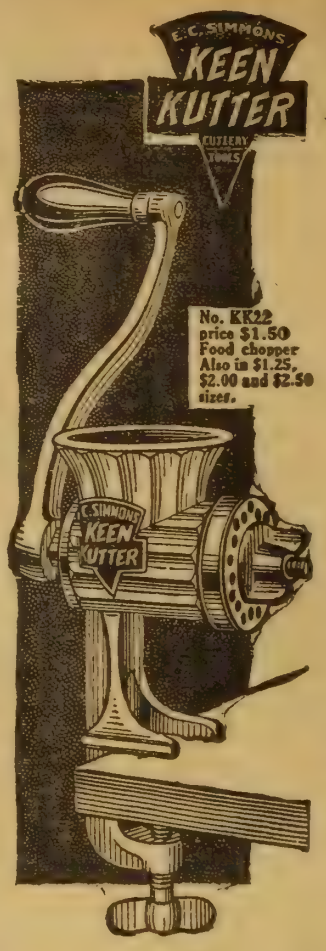
Rusk County.—Threshing is nearly one-half done. Small grain is not yielding as well as last year; oats are averaging from forty to sixty bushels per acre. Corn is developing rapidly and most of it is past the roasting ear stage. Potatoes will make an average crop. Frequent showers have kept the pastures green and cattle are in good condition.—T. M. Thomas.

Washburn County.—Weather has been warm and dry through August, which was ideal for corn, and many fields will mature by September 10th. Pastures are getting short. Some of the second crop of clover is being cut for hay, but a great deal of it will be hulled for seed since the seed is developing well and promises a good yield. The alsike clover which has been hulled, averaged about two and one-half bushels per acre. Little threshing has been done. Oats are not equal to the 1915 crop. Rye and barley are about normal.—L. D. Garnhart.

Washington County.—Harvesting has been completed and threshing is well under way. The average yields of grain will be less this year than last. Barley is making from eighteen to thirty bushels per acre. Oats are better than was expected earlier in the season. Corn has been doing fine for the last two months. Fodder will be plentiful and corn will ripen in about three weeks if weather is favorable. Early potatoes were poor and late ones have not set well so far, but may do so if the weather remains favorable. Red clover seed is yielding better than it has done for several years. Apples are small and the yield is poor. Vegetables are normal in production and very fine in quality. Frequent rains have kept pastures good and the number of stock on them is normal.—M. P. Salter.

Waukesha County.—Corn is doing fine and will make a good crop. It is ahead of last year's crop and is almost ripe. Potatoes are poor; bugs have been bothering them. The second crop of clover will be better for hay than for seed.—W. J. Mann.

Wood County.—Threshing is about two-thirds done. Results show that the rye crop is about normal, and oats are one-half normal and light in weight. Corn is coming on well, but will take two or three weeks more in which to mature. The second crop of timothy has started up well, but there will be no second crop of clover. Pastures are poor. Early potatoes were a failure and it has been too dry for late ones. A light frost on August 26th nipped the cucumbers and corn slightly. Cattle that are on feed look well, and all live stock are in good condition.—Fred E. Weber.



Foods are More Tasty and Tempting when Prepared with this Chopper

KEEN KUTTER FOOD CHOPPER

It actually CHOPS — that's why. Instead of a squeezing, crushing, mangling action, there's a clean-cut *chopping*; all tasty juices are saved and the food served in far more appetizing form.

Any dealer will gladly show you the *KEEN KUTTER* Chopper — all of them are authorized to refund the money of any dissatisfied purchaser.

"The Recollection of Quality Remains Long After the Price is Forgotten."

Louisiana Farmers See Wisconsin

Large Party of Farmers From Southern State Show Special Interest in Wisconsin Dairy Herds and in Dairy Methods.

A PARTY of fifty Louisiana farmers, chiefly interested in the study of dairying, visited Wisconsin last week. They spent a day in Waukesha county and another day at Madison. Those who came in contact with the members of this party were given a new idea of the farmer from the south. The party traveled under the direction of Dr. W. R. Dodson, dean of the state college of agriculture, and Hon. H. D. Wilson, Louisiana commissioner of agriculture.

The purpose of the trip was not to boost Louisiana land, but to study agricultural and dairying methods. Mr. Dodson said that dairying in Louisiana has been hampered and discouraged for many years by federal quarantine against cattle on account of the cow tick. This tick is a very destructive pest and every effort is now being bent toward eliminating it. When this is accomplished it will be possible to build up many dairy herds in the South and there is no doubt that Wisconsin breeders will be called upon to supply good dairy stock for the demand which will be created. Already a very large number of counties in Louisiana have been entirely rid of the tick and this has been due to the dipping process. Recently the legislature of the state passed an act of compulsory dipping and it is believed that this will result in the elimination of the cow tick in a short time. When this occurs, dairying will be put on an extensive and paying basis. Louisiana is an ideal state for dairying and would have forged to the front in this line long ago but for the quarantine relations above referred to.

Many compliments were heard from many members of the party on dairy farms in Wisconsin. Although this party had traveled over other states, Mr. Dodson did not hesitate to say that they had seen no such dairy farms as the twenty-three farms which were visited in Waukesha county. He said that Wisconsin farms not only look prosperous but that they seem to be run on a more scientific basis. The farmers from Louisiana were entertained at the college of agriculture, being escorted about at Madison by Professor Humphrey, of the animal husbandry department. A special session was held for the party in Agricultural Hall and this was addressed by Dean H. L. Russell. Special talks for the benefit of the visitors were given by R. H. Roberts, R. A. Moore, Miss Elizabeth Kelley, Frank Kleinheinz, F. B. Morrison, G. C. Humphrey, D. C. Bullock and J. A. James.

The idea of the tour originated with Dr. Dodson and Mr Wilson. In the party are C. C. Gaspard, of Marksville, La., and W. E. Lawson, of Crowley, La., members of the agricultural committee of the Louisiana State Bankers' Association, and George Villere, manager of the Cloverland Dairy Company, of New Orleans, the largest milk dealers in the South. The others are all owners of large tracts of land and are actively interested in the development of the cattle and dairy interests in their own particular sections. Many members of the party are accompanied by their wives and children.

"We represent the farmers of Louisiana, who are vitally interested in live stock and diversified agriculture—with a dominant interest in dairying," said Doctor Dodson. "While it is our intention to make a thorough study of dairying while on this tour, we also are greatly interested in the beef type of cattle. We realize that in no place in the world may be found more thoroughly developed dairy farms than in northern Illinois and southern Wisconsin. The same is true concerning the beef cattle industry of Iowa. The Wisconsin Agricultural College, Madison, Wis., and Iowa Agricultural College, Ames, Iowa, two of the greatest educational institutions of the world and which have contributed many noteworthy scientific discoveries of inestimable value to the farmer, will be visited, and it is our intention also to make a complete study of agriculture before we return to our respective homes."

Doctor Dodson said that by personal observation the members of the party feel that they will be able to get the full educational value of these industries as pertaining to various branches of farming and the production of beef, milk and all dairy products.

Doctor Dodson added that the farmers of Louisiana are just beginning to take an active interest in live stock. "We are just beginning to realize," he said, "that our state is rich in undeveloped opportunities along this line, particularly in the development of our beef cattle, dairying industries, hog raising and of the construction of silos and barns. We are in search of knowledge and enlightenment."

In the party are six county advisers, who will make it their business upon their return home to arrange for a series of lectures, so that all may receive the benefits of the knowledge obtained.

The trip is of more than passing interest and importance because of the large number of northern farmers who are turning their attention to Louisiana for practically the first time, as a state wherein exceptional farming opportunities exist. Hundreds of grain-belt farmers have moved to Louisiana within the past two or three years, inaugurating a new farming era in that old southern state, which is already beginning to be evidenced in increased production, in intensive farming activities and in improved farm life conditions generally.

The northern farmer's preconceived ideas of Louisiana suffer a wonderful change once he enters this remarkably rich state. No state in the Union has a better school system than Louisiana. Few states are attacking their road problem with more vigor, the result being that the rural sections are traversed with good highways, bringing town and country into ready communication. The influx of the northerners is quickening the slow southern pulse, and conditions generally are improving at a wonderful rate. Louisiana is turning away from its old-style, one-crop manner of farming and is devoting former cotton fields to corn and oats, which yield well and return a good profit. Still more important, however, it is turning to live stock farming and bringing in herds of good, high-grade animals, to replace the scrubs which have held back the live stock industry throughout most of the South all too long. It is in live stock farming in particular that the greatest opportunities seem to exist in Louisiana today; hence, the visit of the Louisiana farmers to the fine stock farms of the grain belt, in order to obtain valuable pointers which will help in sending Louisiana ahead with leaps and bounds. Incidentally, the party visited the tractor show at Bloomington, studying the tractor with an eye to its usefulness in breaking the cutover lands and pulling the stumps, so that thousands upon thousands more acres may be made to yield crops to add to the wealth of the state.

The personnel of the Louisiana party, now in the North, the great ma-

Investigate the Caloric

Don't be like the fellow who saw the giraffe and said "There ain't no such animal". There is a successful one register pipeless furnace and Caloric is its name. No matter how old your house may be or how difficult to heat, the Caloric can do the work. It is right now giving satisfaction in thousands of homes. Even if you've already decided on some other kind of furnace, investigate the Caloric anyhow. It costs nothing and you may get information of great value.

Ask Your Dealers

If there is a Caloric dealer in your town ask him to show you this furnace. A demonstration will quickly show you the principle on which this furnace operates. You will see why the Caloric heats your entire house comfortably with just one register and saves you 35% of your fuel while doing it. See the double ribbed firepot which is guaranteed for five years. You will see for yourself why it is a universal furnace and why it is the none-such furnace in thousands of homes.

tor Stove & Range Co.

Cincinnati, Ohio

We have had a long cold winter and spring but have burned only five tons of soft coal in your Caloric furnace. The rooms have been well warmed and the coil furnishes an abundance of hot water all over the house. The cellar temperature stayed about 10 degrees above and none of the vegetables were spoiled or sprouted by an overheated celllar. The cellar being free from pipes afforded free movement and storage room. Our walls, paper, carpets, etc., are bright as new on account of furnace being dustless. I consider it the cheapest, most economical and easiest operated furnace on the market.—Claud Baker, Union City, Ind.

I bought a Caloric furnace in December, 1915, and am very well satisfied. I used about $12 worth of coal and kept my house comfortable even at 7 degrees below zero. I have seen lots of furnaces but none to equal the Caloric. — William Hanft, New Athens, Ill.

Have had the Caloric furnace since November, 1915. It produces more heat from less fuel and costs two-thirds less than any other kind. I have a large three story 11-room house and on different mornings before 7 o'clock showed 72 degrees in our third story rooms. This was true on March 17th when the temperature outside was 6 below.--Mahlon Fretz, Sellersville, Pa.

We consider the Caloric the coal nan's enemy as we have used approxmately three tons of hard coal per eason for house of seven rooms and ath. One of my neighbors has lready taken out his pipe furnace and nstalled a pipeless furnace, while two thers will take out their pipe furaces and install a Caloric this sumner. The Caloric does not heat the asement and takes very little room. —John Neumann, Sauk City, Wis.

I always heated with hard coal at $45 and $15 for cooking and laundry. I installed a Caloric Pipeless Furnace and heated 6 rooms and bath for $32, including cooking and laundry. I had no trouble keeping 70 degrees upstairs and downstairs, even on several days when the thermometer registered 10 and 20 degrees below. The Caloric makes good moist air and pleasant heat.—W. C. Kindig, Centerville, Ia.

bit at Your State Fair.

UPPER WISCONSIN

Getting Money to Buy Cattle.

The illustration shown herewith is of a part of a group of cattle bought in southern Wisconsin and shipped into an Upper Wisconsin county. The purchase of these cattle was made with the aid of the bank and business men in the town to which the cattle were shipped.

In the current Wisconsin Bankers' Farm Bulletin for September Mr. Raymond Baker, assistant secretary of the Wisconsin Live Stock Breeders' Association, discusses the matter of borrowing money to buy cattle. The Wisconsin Farmer has repeatedly called attention to the "Ashland plan," which Mr. Baker speaks of in particular in the bankers' bulletin. Inasmuch as there should be a good many more Upper Wisconsin communities interested in this plan of buying cattle, we publish Mr. Baker's statement of the Ashland plan as follows:

The Ashland Commercial Club made a survey of the country tributary to Ashland which showed the number of farmers who would buy cows if credit could be arranged. Each farmer was asked to sign an application showing the number of cows he then had, the number he wanted to buy, the breed preferred, whether pure-bred or grade animals were desired and the number of acres cleared. He agreed to raise all heifer calves, to accept the cows purchased and to pay actual cost at Ashland, paying within three years for the cows bought from his monthly cream check and at the rate of not less than $3.00 a month a cow. Payment was secured by chattel mortgage on the cows and their progeny and, if necessary, other personal property.

Two banks agreed to furnish the money to buy the cattle, with interest at 6 per cent, if the business men would guarantee them against loss—in other words, if the business men would lend their credit to the farmers. This was done. The bankers then appointed a committee to pass upon the applications. A competent committee was selected to buy the cows.

In 1913 five carloads of grade cows, representing an investment of $9,475, were purchased. By January 1, 1914, $2,613.74 was repaid. No guarantor was called upon to make good. Worthy farmers got their cows on three-year notes, interest at 6 per cent, secured by chattel mortgages and not by mortgages on their farms. There was a better understanding between farmer and business man, better conditions in the country, improved homes, more silos, better barns, intelligent feeding, and a general educational campaign. Live stock raising has become the leading industry in this community. Creameries and cheese factories have been built. Community breeding has been made effective and testing associations are flourishing.

Mr. Baker also calls attention to other neighborhoods where an effort is made to give special interest to live stock by helping out the farmer with money. The Bayfield County Bank loans to farmers or settlers actually living on a piece of land, money with which to buy cows. The banker insists that land shall be purchased, not rented, and that the farmer be a man of good habits, industrious and prepared to care for and feed the cows he buys and to deliver cream to a centrally located creamery. The bank takes the farmer's note and takes a mortgage on the cows and their increase. Arrangement is made for the creamery to deliver one-half of the cream check to the bank. As soon as the bank receives enough money to pay the note and interest the mortgage is discharged. The note is delivered to the farmer and the cows with their increase are his. The Lumbermen's Bank, of Shell Lake, prefers to pay for the cows from the increase rather than from the cream check. This bank, according to Mr. Baker, has placed $100,000 in live stock paper, taking a mortgage on the stock purchased and also a mortgage, sometimes even a second mortgage on the farm. In two or three years the increase will either pay back the loan entirely or make the security first class. Mr. Baker speaks of the Finnish Farmers' Credit Exchange in Vilas county. A group of farmers pool their credit and borrow money on the joint credit of their organization. From this fund they purchase cattle which they pay for by monthly installments taken from the cream checks. The membership in the association is limited. The association borrows its own capital, makes its own loans, buys its own cattle, provides insurance and furnishes sires. In Marinette county, Wisconsin, the Ashland plan, with some modification, has been operating successfully. Under this plan nine carloads of dairy cattle have been purchased. The business men who have guaranteed the loan have never been called upon to put up a dollar. Mr. Baker calls attention to a banker in Macoupin county, Illinois, who was interested in encouraging the young people. This banker visits Wisconsin once a year, buys pure-bred heifers and sells them to farmers' boys and girls, taking their notes signed by their parents for security. These notes run ten months and draw 6 per cent interest. At the end of a year the banker holds a public sale at which each boy may sell his heifer if he desires. The bank takes out what it has coming in loan and interest and gives the balance to the boy or girl for taking care of the heifer. If the animal is developing well and shows good value under the care of the boy or girl it may be purchased at any time for the money invested in it by the bank.

These plans reviewed by Mr. Baker should be adopted by many more Wisconsin neighborhoods. Mr. Baker makes the following suggestions to those who are buying cattle:

A few suggestions about buying:

1. In buying a bull get as good a one as you can afford. The sire, if a good pure bred, is more than half the herd.
2. If possible, buy from a breeder whom you know.
3. Be sure you get stock from disease-free herds.
4. Do not expect to buy good cows cheap. The poorest cows are those that are for sale in most herds.
5. Your best investment is to get heifers which have not freshened but which have been bred to a registered sire of the same breed.
6. Buy as near home as possible. You save expenses, and if animals are not satisfactory your chances for redress are much better.

BUSINESS MEN AND BANKERS HELPED PROVIDE MONEY TO BUY THESE CATTLE.

Potato Club Exhibits.

The Wisconsin Potato Growers' Association has secured Mr. T. L. Bewick as superintendent of school contest exhibits and potato club exhibits at the state convention. Mr. Bewick has full charge of boys' and girls' club work in Wisconsin and the boys and girls in the potato-growing counties will be pleased to know that Mr. Bewick will have charge of this work at the state convention.

Seed potatoes were distributed to several thousand boys and girls in Wisconsin this season. Special contests have been arranged under the direction of county agricultural representatives, county superintendents and others. The state association has provided that the entry list shall be open to all boys and girls who have grown potatoes individually or in potato club contests.

Mr. Bewick will have charge of this work on the program. A special effort will be made to bring delegations of boys' and girls' potato clubs to Eau Claire and special arrangement will be made for conferences with these delegations by Mr. Bewick.

The home economic department of the state university will have charge of potato cooking demonstrations and will co-operate with organized agencies at Eau Claire.

This work will also be represented on the program and during the forenoon session of the convention special lectures and demonstrations on cooking potatoes will be given.

This work gave unusual success at the last convention and special plans are under way to extend this phase of convention work.

Get this Valuable Reference BOOK on MODERN BARN BUILDING

Write for this Book Today.

We want to show you how complete and convenient, roomy and labor saving, warm and yet well ventilated, a moderate priced Louden planned barn can be.

Louden Barn Plans

is a 112-page book of practical barn plans and building information—not a catalog. Its mission is to help you build the best possible barn at a minimum cost. It contains the best of the building ideas gathered by The Louden Machinery Co. in fifty years of barn building and barn equipping experience.

If you expect to build or remodel a barn you need this book. It is full of information we have paid thousands of dollars to obtain. It is free to you if you'll pay the postage (10 cts. in stamps or coin). Don't wait till you are ready to build; get it now! A few cents invested today will save you many dollars later.

Our Large Well-Equipped Architectural Department

is prepared to render complete barn plan service, from the drawing of preliminary sketches, which costs you nothing, to the preparation of complete working drawings and contractors' specifications, for which a small fee is charged. We will gladly furnish further information about this valuable service.

Remember also, that a barn is no better than its equipment. Get a good start in the right direction by sending for our big illustrated 224-page catalog on Louden Modern Barn Equipment. It's free, postpaid.

Law Questions.

Injury by Overflow—No Damages.

A Wisconsin Subscriber.—A and B own adjoining farms. A creek runs across both farms, first crossing B's farm. A allows the creek on his land to fill up with sand, gravel and earth, and this causes the water in the creek on B's land to overflow and injure his crops. Can B compel A by law to clear out the creek on his land, and pay B damages for the injury caused by such overflow?

Answer.—Under the circumstances stated B cannot compel A by law to clear out the creek on his land, nor can he recover damages from A on account of the overflow of the creek.

The Farmers' Co-operative Packing Company, at Madison, has increased its capital stock from $500,000 to $750,000. This action was taken at a recent meeting of 700 stockholders in Madison and the raise in the capital stock of the company comes as a result of the desire for entrance for membership in the association by many farmers who are not now stockholders. This will increase the territory represented by the packing association. The stockholders also looked over the new plant which is now under construction and which will be completed during the fall months.

Belda's Chester Whites.

NO matter what part of the state you go into we are continually being asked if we have seen the Chester White herd of Wm. F. Belda, De Forest, Wis. We, therefore, went out to see this herd a few weeks ago and are pleased to report a fine crop of March and April pigs that are in thrifty condition. These were sired by Mr. Belda's two good boars, W. B.'s Wonder and Modeler's Best. The boars are doing especially well and they are the kind that will go on and prove profitable in every way. If you are in the market for a herd header write to Mr. Belda at once. See page 28.—Adv.

Percheron Stallion for Sale.

SCHWERT BROS, Wauzeka, Wis., are offering for sale their black Percheron stallion, Creston Victor 80716, foaled 1905. This horse weighs 1,900 pounds, is sound and is an excellent sire and the colts by him will show. Inasmuch as he has been used in his territory so long the owners think it advisable to make a change, consequently they are offering to sell this horse very cheap if taken at once. Anyone interested should go and see this horse. They would also like to hear from someone that has a black purebred Percheron from five to eight years old for sale. Write the above gentlemen and mention The Wisconsin Farmer. See advertisement on page 25.—Adv.

Another Chester White Herd.

WITH this issue of The Wisconsin Farmer L. J. McBain, Bloom City, Wis., starts his advertisement offering Chester White boars for sale. This offering consists of fall and spring boars, well grown, well bred and good individuals. Two good boars stand at the head of this herd, namely, Iowa Boy and Ideal Combination. The first mentioned boar is a good individual and sire and is right and inasmuch as Mr. McBain has a good deal of stuff in the herd sired by him he is offering him for sale and here is a good buy for someone wanting a tried sire. He is by Iowa First out of a daughter of Col. Reese, is of 1913 farrow and if you could see the pigs by him you would be pleased with him as a sire. The other boar, Ideal Combination, is by the widely-known Combination 2d, out of Sophia by Inspector O. K. another well-known sire. He comes from a litter from which eight boars sold in the Evans sale at an average of $71. Mr. McBain has some good spring boars by this fellow and they have a world of quality. This herd will bear inspection and we suggest that our readers write the owner if interested in Chesters. Investigate this three-year-old boar, he'll do. Don't forget to mention this publication.—Adv.

Lau's Brown Swiss.

CHARLES F. LAU, Thiensville, Wis., has a yearling Brown Swiss bull ready for immediate service. This young bull was sired by Casper L., a bull of prize-winning breeding. His dam is a heavy-producing show-type cow and the young bull is of Allyn's breeding on both sides. Mr. Lau has a fine herd which it will pay any Brown Swiss breeder to visit.—Adv.

Have You Engaged an Auctioneer?

READERS of The Wisconsin Farmer, who contemplate holding a farm sale or a sale of pure-bred live stock will do well to secure the services of R. B. Hellen, Jefferson, Wisconsin. Mr. Hellen has had twenty years of experience in the auctioneering field and is a live, vigorous worker and keeps up interest from start to finish. He has a clear, distinct voice and a pleasing appearance on the block.—Adv.

Schultz's Chester Whites.

WITH hogs selling at $$11.40 a hundred in Chicago we advise our readers to buy the five Chester White sows advertised for sale on page 28 by L. A. Schultz, Poynette, Wis. He is also offering sixty March pigs at reasonable prices. These are the stretchy, heavy boned kind that will put on flesh rapidly and with the frame to carry it. For further information in regard to breeding write to the above address.—Adv.

Keeping Hogs Healthy.

EVERY farmer recognizes the importance of keeping his hogs in a healthy condition. The hog oiler is a big factor in this. The Wausau Foundry & Machine Company, 917 Plummer St., Wausau, Wis., is so sure that its Marathon hog oiler will satisfy the farmer and breeder, that they offer to ship it for thirty days' trial, the customer to pay if pleased, and return the oiler if not suited. A catalog explaining the value and use of the hog oiler will be sent you for the asking. See advertisement on page 19. Mention this paper when writing for catalog.—Adv.

HOG HOUSE EQUIPPED WITH CHIEF SUNSHINE WINDOWS. SEE FIELD NOTE ON THIS PAGE.

A Fence That Will Last.

THE progressive farmer sees to it that his fence is in good condition, firm and tight the year round. The Square Deal fence, manufactured by the Keystone Steel and Wire Company, Peoria, Ill., fills this need. It does not sag, but stays trim and neat. A catalog telling about Square Deal fence, and a Ropp's New Calculator, which will save the busy farmer much time by giving the answers to his business problems which may be settled by the arithmetic, may be had for the asking. See the advertisement on page 19 and when writing for these books, mention this paper.—Adv.

Building of Hemlock.

FARMERS who are thinking of building a house, barn, garage or other building, will find pictures, plans, and building suggestions in the "Old Faithful" hemlock book published by the Hemlock Manufacturers, Oshkosh, Wis. The booklet explains why hemlock lumber is the great stand-by of the American farmer. The book also contains coupon calling for any two sets of plans and specifications when presented to your local lumber dealer. See the advertisement on page 22. When you write for your copy of this free book mention that you saw it advertised in The Wisconsin Farmer.—Adv.

Sound Investments.

THE Iowa State Savings Bank, of Sioux City, Iowa, was organized February 28, 1906, since which time it has contributed its share toward the business prosperity of Sioux City. It is officered by men of experience and training and of financial authority in Sioux City and its territory. The funds of this bank are invested in bonds, first real estate mortgages, first mortgage cattle loans, and approved commercial paper. The president of this institution, Mr. W. L. Montgomery, has been engaged in the banking business and the handling of farm loans and cattle paper for the past twenty years, which has qualified him to pass on this class of securities. To those desiring safe investments, at liberal rates of interest, this bank offers an excellent opportunity and we suggest writing for more complete particulars in regard to these securities. We believe that any business transacted with the Iowa State Savings Bank, Sioux City, Iowa, will prove to be highly satisfactory. Their advertisement appears on page 8.—Adv.

Buy Prince Albert everywhere tobacco is sold in toppy red bags, 5c; tidy red tins, 10c; handsome pound and half-pound tin humidors, and that classy pound crystal-glass humidor with sponge-moistener top that keeps the tobacco in such fine condition.

You get quality when you buy P. A.

PRINCE ALBERT has a value that coupons or premiums can't produce—*quality!* Premiums or coupons have never been offered with P. A. State or national restrictions on their use make no difference to P. A. Men get what they pay for when they buy the national joy smoke—*quality!*

It is certain-sure you'll not know the joy and contentment of a friendly old jimmy pipe or a home made cigarette unless you get on talking-terms with Prince Albert! P. A. comes to you with a *real reason* for all the goodness and satisfaction it offers. It is made by a patented process that cuts out bite and parch! It affords the keenest tobacco enjoyment!

Introduction to Prince Albert is no harder than to walk into the nearest place that sells tobacco and ask for a "supply of P. A." You pay out a little change, to be sure, but it's the cheerfullest investment you ever made!

PRINCE ALBERT

the national joy smoke

R. J. REYNOLDS TOBACCO COMPANY, Winston-Salem, N. C. Copyright 1916 by R. J. Reynolds Tobacco Company

This Separator Saves Labor.

CARING for the milk is one of the busy farm wife's important tasks. It is necessary to keep the separator and other equipment spotlessly clean and sanitary. When the Sanitary Milwaukee cream separator is used this task is made much easier, because the separator is made of aluminum, smooth as glass and there are only one-third as many of the disks to wash. The illustrated catalog explained all about it in an interesting way. Read the advertisement on page 10 and then write for the catalog, mentioning that you saw the advertisement in this paper.—Adv.

Mulford Serum of Highest Potency.

PROTECTION against cholera is of utmost importance to the breeder of fine hogs. He dares not risk losing any of his high-priced animals if it can be avoided. That's where the value of Mulford serum comes in. Mulford serum is subjected to government test before it is released from the laboratory. Potency is the first requirement placed upon Mulford serum. Sterility and freedom from all solid particles are additional features. Free Booklet No. 9, which any breeder may have for the asking, tells much about the use of Mulford refined hog cholera serum. See the advertisement on page 2 and mention this paper when writing.—Adv.

An Electrical Plant For the Farm.

ELECTRICITY, both for lighting and power, is now within reach of the farmer. The Delco lighting plant, completely equipped ready for operation, can be purchased for $275. What this plant will do, besides lighting the farm house and barn and pumping water into the house so as to provide running water, is listed in the Delco advertisement on page 11. A letter or post card will bring an illustrated book telling of the possibilities of these little electric plants for the farm. They are simple, too. A child can operate them without danger. The farmer and his wife no longer need envy the conveniences of city residences. When writing please mention this paper.—Adv.

Buying a Car to Keep.

THERE are a lot of things to be considered in selecting an automobile, especially one of the high-grade cars that are bought not for a season's use, but to last for years. How the Hudson Super Six meets these requirements is explained in the Hudson motor car advertisement on page 5. Some of the tests which the Hudson Super Six has successfully met are listed. It is the car ahead, with the reserve power and speed which makes it master of the road. When you write the company for more information about this splendid car, please mention that you saw the advertisement in this paper.—Adv.

Hog House Windows That Pay for Themselves.

THE owner of this hog house, Mr. Allen Huntington, of Cuba City, Wis., states that the three rows of Chief Sunshine windows paid for themselves the first season in saving the early pigs. These windows—manufactured by Shrauger & Johnson, Atlantic, Iowa—insure direct sunlight for the early pigs. They admit sunshine right on the floor of the pens during the winter months—just when it's needed. Meet all the requirements and are recommended by the most progressive hog raisers. Made of galvanized steel—practically indestructible. Frames hold two glasses with heavy wire mesh shield. Glass held in place by copper clips—no putty. Windows are absolutely leak proof—special center piece and four-inch grooved flashing carry off water. They cannot rot or warp, will not rust, need no paint or repairs. Nothing about them to wear out or get out of order. Chief windows are permanent, efficient, neat looking and easy to install in new hog houses or old. They solve the problem of sunshine for the pigs and their use means healthier, faster-growing hogs. See illustration on this page.—Adv.

Fruits and Garden

Picking and Packing Apples

One of the most interesting addresses at the last annual meeting of the Wisconsin State Horticultural Society was that of H. M. Dunlap, of Savoy, Illinois, on picking and packing apples. Mr. Dunlap brought forcibly to the attention of the members of the state society that it is easily possible to produce good fruit without profit unless the producer understands packing and marketing. We usually see the careful apple pickers using a basket lined with cloth, but Mr. Dunlap says he saw apples handled very roughly. It is a bad custom to hang the basket on the tree or on the rung of the ladder or set it on the ground and then proceed to shoot the apples at or toward it. Mr. Dunlap referred to the bottomless picking sack with broad straps across the shoulders. He thinks that either the basket or sack is a good method for picking, if rightly handled, although, personally, he prefers the use of the sack. The use of the sack leaves both hands free for picking. Mr. Dunlap says the sack should not be shifted about and the pickers should not be allowed to lean against the rungs of the ladder with the filled sack between. The sack should be lowered into the picking crate so that the apples have no drop in emptying the sack. We quote further from Mr. Dunlap as follows:

A packing house is essential if best results are to be obtained, but many growers use the canvas covered table in the orchard, picking and packing the product from sixteen to thirty-six trees at a sitting and then moving the table to the next center and in this way over the entire orchard. In good weather this is not so bad as might seem but at times the sun is very hot, or sudden showers saturate everything and in the late fall the weather is too cold and frosty for comfort. On the whole, therefore, a good sized packing house or shed built at a convenient place in or near the orchard is the more desirable method of handling the crop. This building must be large enough to give room for a sorting table three feet wide by sixteen or more feet in length, or better still, room for an apple grading machine of best pattern, which will occupy about three feet by twenty feet. There should be a space on one side or end of the building for unloading the bushel crates with which all well regulated orchards should be equipped, when they come from the orchard. These crates can be stacked up four or five feet deep and there should be adequate room for these based on necessities. There should be room for at least a day's supply of apple barrels and a place to cooper them up by driving the hoops and nailing same. There should be enough room to face and fill barrels and head them up, and to stack up enough for half a day's hauling ahead. The size of this building will depend upon whether you are barreling 100 barrels per day or 1,000 barrels. For the former a building 28x40 will answer very well. For the latter 60x100 feet would be none too large. The building should have skylights in the roof. I build these of ordinary greenhouse sash about 3x6 feet, usually putting two of these sash in each building on the north or east side of the roof according to the slope and directly over the sorting end of the table. This will give you light an average of thirty minutes later each day and prolong the day's work that much or at least make it possible to do better work on cloudy days and in the evenings. The building should be approachable on all four sides with the wagon, and doors, either sliding or hinged, should open at least ten feet wide for taking apples in and out. For example, I have my sheds arranged to take the fruit as it comes from the orchard into the house on one side of the building. The number one apples go out another door and in case I use a grader the number twos go out another side. The cider apples take their own route. The fourth side is used for supplying empty barrels as needed. Thus you see the necessity for getting to all four sides. On the side where the filled barrels are loaded onto the wagon there should be a raised platform so that the loading can be carefully and easily done. A bin for the cider or vinegar apples should be built with a roof over same. Low wheeled, platform wagons are needed to haul fruit from the orchard to the packing house.

The standard barrel of three bushels' capacity is used generally by the commercial orchardist in preference to the box. Good elm hoops are growing scarcer every year and some, including myself, are using two or four of the six hoops required of the twisted splice wire variety as being both safer and more economical. In transit or in storage they hold better and do not break and scatter the contents of the barrel over the car floor or storage warehouse.

The best floor for the apple house is concrete. The next best is to cover the ground with coal cinders and lay 2x4 flat on the cinders, filling between them with cinders to a level and nailing the floor boards to these 2x4. This gives a good solid floor at little expense.

The walls are of 4x4 uprights about eight feet apart, resting on 8x8x12 concrete blocks with a half-inch iron rod imbedded in the concrete and countersunk in lower end of upright 4x4 to keep the latter in place. Nail ties of 2x4 are used and to these are nailed common lumber surfaced. The roof consists of 2x4 or 2x6 rafters, usually three feet apart with 1x6 boards spaced about three feet apart as sheeting. The covering in this case is of galvanized, corrugated iron, suitable length of No. 26 gauge. The doors of this building should be on rollers and with two or more double doors on each of the four sides to give plenty of light and easy access to and from the building. The roof and dry floor are the important parts of such a building and you only need the walls as a support and occasionally to break off the wind when weather becomes chilly. What you should avoid in a packing house is narrow doors, dark interior and access from only one or two sides.

I have found it most satisfactory to pick by the bushel, keeping a foreman in the orchard to see that the crates are filled full, ladders and apples carefully handled. Each picker is provided with tickets of a certain number which corresponds to the one opposite his name on the sheet tacked to a small board or clip carried by the foreman. Each picker is assigned a tree and his empty boxes are distributed to him from the wagon. When filled the number is tabulated by the foreman and loaded onto the wagon and hauled to the packing shed. Here they are stacked up and afterwards emptied onto the sorting tables or machine grader and from thence into the barrels.

The Golden Prairie District of Wyoming is the Only Sure Crop Country of the West

We are now placing on the market in farm tracts our celebrated Hillsdale Ranch

This is the driest season since the settlement of the country, but we can show you, within three miles of Hillsdale in the neighborhood of this ranch and on no better land, fields of grain (some on sod breaking, too), that would more than pay for the land at our selling price.

DID YOU READ our full page announcement in The Wisconsin Farmer of August 10th? If not, please look up your file. It is on page 9, and invites you to come to the Golden Prairie right now where you can purchase at about what two years' rent will amount to in the Central states as choice a farm as the sun shines on and have included, free, the assignment of a five years' lease on an equal acreage of adjoining state land.

Field of winter wheat in shock and binder at work on farm of Richard Spatz, adjoining the Hillsdale ranch. Photo taken July 20, 1916. This same field produced 50 bushels of oats per acre in 1915, the wheat shown being drilled into the oats stubble in September.

And while you have the issue of August 10th in your hand you can easily turn to page 12, where you will see some pictures of farm scenes adjoining our Hillsdale ranch and read what the Editor thinks of the Golden Prairie District after his second annual visit.

Fill out and mail us at once the coupon found below. It will bring you, without cost, valuable information regarding a district where within a few years farm land values will be as high as they are in the most favored sections of the Central states.

FEDERAL LAND COMPANY

Burns, Wyoming

FEDERAL LAND COMPANY, BURNS, WYO.

Gentlemen: Please mail me at once full descriptive literature of your Hillsdale ranch and the Golden Prairie District of Wyoming.

Name.....

Address.....

Remember this: That we are protected from hot winds and extreme heat by the snowcapped Rockies, always on clear days in plain view to the southwest. This is fully explained on page 3 of the booklet entitled "Wheat Growing and General Farming Without Irrigation in the Golden Prairie District" which will be sent to all who fill out and mail us the above coupon.

WANTED TO HEAR FROM OWNER OF good farm for sale. State cash price and description. D. F. Bush, Minneapolis, Minnesota.

FOR Minnesota improved farms and land bargains, write or call on H. A. Hanson, 242 Temple Court, Minneapolis, Minnesota.

A Book on Barn Planning.

THE worry of planning the new barn may be saved if the farmer who is thinking of building one will send for the 112-page book "Louden Barn Plans," published by the Louden Machinery Co., Fairfield, Iowa. The book is free. It is prepared by the architectural department of the Louden Machinery Company and contains many valuable building ideas for the farmer who wants a complete and convenient, roomy, warm and yet well-ventilated barn at a moderate cost. See the advertisement on page 16 and then write for the book, mentioning that you saw the advertisement in this paper.—Adv.

Lighting the Farm Home.

FARMERS who have looked forward to the time when they could install a complete lighting plant in their homes will be interested in investigating the American Lighting System, manufactured by the American Gas Machine Company, Albert Lea, Minn. This system can be installed at low cost and is easy to operate. It lights with a match, and is absolutely safe. Read about it in the advertisement on page 9. When you write for information tell the company that you saw the advertisement in The Wisconsin Farmer.—Adv.

ARE YOU GOING TO BUY LAND?

IF so, get a copy of our journal first. It has lands, city property and stocks of goods advertised in its columns from nearly every state, so that you can find just what you're looking for in its columns. Established 19 years and reaches 76,200 readers. Send 25c for one year's subscription or $1.00 for five years. Department F, Farm and Real Estate Journal, Traer, Iowa.

FOR sale—200 acre farm in Richland Co. Wis., 7 miles south of Viola, one of the best grain and dairy sections in the state. For particulars and prices call on or write to R. Gochenaur, Route 1, Viola, Wisconsin.

BARGAIN. Oneida county lands. 146 acres hardwood. Some timber. Thos. Leith, Monico, Wis.

UPPER WISCONSIN FARM LANDS.

ONEIDA County Lands: I have four hundred acres in solid body on a main road, 4 miles from city with groves of timber and several small lakes, very desirable property, can divide if necessary into four pieces. Ask for map and prices. Also have an improved farm, 160 acres, good house and barn, full of clover and timothy hay, big field of fine oats, 70 acres of clover growing, pasture, running water, timber, only half mile from school and cheese factory. Ideal dairy farm. Want $3,000 cash, balance on time. Address C. P. Crosby, Rhinelander, Wisconsin.

WE ARE selling a part of our 10,000 acre tract, located in Oneida County on beautiful lakes with the best known soil in upper Wisconsin, in the heart of the choicest dairy spot on earth. To see these lands is to buy them. Write or inquire Oneida Farms Co., E. M. McVicker, Prop., 1202 First National Bank Bldg., Milwaukee, Wis.

A SHELTERED DAIRY COUNTRY. Low-priced cut-over lands. Fast developing section. 25,000 acres to select from. Come and see. Flambeau River Lumber Company, Station D, Ladysmith, Wisconsin.

It is natural for a hog to wallow. Provide a wallow close to the feeding grounds, to which add Dr. Hess Dip and Disinfectant occasionally. The hogs will constantly pass back and forth from the wallow to the feed trough; while the DIP will kill the lice and cleanse the skin, the DRIP will destroy the germs of disease and the worms that pollute the ground.

Dr. Hess Dip and Disinfectant

One gallon makes 70 to 100 gallons solution

is excellent for sheep dipping; it is a guaranteed remedy for sheep scab and ticks; it destroys germs and foul odors—in short, its use as a disinfectant around your farm will keep away disease. Invaluable for disinfecting sinks, drains, troughs, garbage cans, outhouses, etc. Good alike for home and stable. Sold in pint bottles, quart, half-gallon, gallon cans and barrels.

1 gallon can $1.00

Smaller pkgs. as low as 25c

Except in far West and Canada

Dr. Hess Fly Chaser

Does not gum, color or blister. Makes stock comfortable.

POULTRY.

S. C. R. I. REDS

FOR SALE—Hatching eggs from prize pens, half price for balance of season. Won 9 ribbons on 15 birds at Wisconsin State Fair, 1915; 4th pullet and 3d young pen at Chicago Coliseum, 1915. Winnebago Poultry Yards, R. 23, Omro, Wis.

HATCHING EGGS; prize-winning S.C. Reds, White Wyandottes, Buff Orpingtons, S. C. White and Brown Leghorns, $1.50 per 15. Ledge View Poultry Farms, Box W.F., Fond du Lac, Wis.

HATCHING EGGS; S. C. Reds, prize-winners all leading shows. Eggs $1.50, 15; $8, 100. Order from this ad. Address C. L. Pre-Fontaine, Box 600, Fond du Lac, Wisconsin.

EGGS for hatching from Barred Rocks, E. B. Thompson's Ringlets, $1.25 per 15, prepaid. D. S. Thorsen, Shell Lake, Wisconsin.

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning disease, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Back-Yard Scoring Not Desirable.

This applies to the farm poultryman who keeps big, pure-bred stock to sell to other farm poultrymen, and not to the ones who are making a business of following the shows. The former desire stock, whose parents would score a fair showing, that have no disqualifications, and that are long on size, bone and vigor. The farmer who is awake to his business, shuns the high-scoring chicken that can be purchased for a minimum price. More and more understanding people pass by an egg advertisement that offers eggs from "prize winners" on both sides of the poultry house, for something like $1 a sitting. First, "prize winners" cannot be sold at the price of just ordinary stock, and secondly for the parti-colored birds there is a wholly different standard between what a bird scores, and what is required to produce either cockerels or pullets.

A cockerel that is expected to produce choice cockerels, should conform as nearly to the standard as possible, while the hens must be several shades darker, causing them to be away off on score. Then, to produce standard pullets, the cockerel should be very light—so light in fact, that he wouldn't score worth a cent. The pullets would need to be the color of the ones you would hope to raise. So, it is very plausible that "winners mated to winners" would produce fries. The point, we hope, is clear, as to the advisability of not trying to purchase silk at the price of good, dependable gingham; if so, you get a cheap quality of the former, and there is no good place for it, on the farm or elsewhere.

Then comes the question, "Are these advertisers not sincere?" They are for the most sincere in their offers. The trouble comes of not knowing the principles of breeding. They have tried to begin at the top, and in almost every case they work downward at a rapid rate. That is why so many promising plants for a short time, while they have the pens mated by one who knows, get along fairly well, and, after they begin to depend on themselves to mate the pens, go to pieces.

There is a great big opening for the farmer breeder, who will produce good all-purpose stock to head the yards, or more often the range of practical poultry people. Many such have the stock all right, but fail in the business end of it. They simply will not "fool" with it. Now, just try to imagine how inconsistent that expression, which we hear on every hand. The time, expense, and labor is the same for the flock, whether it is sold on the market or for people to raise from. And, say! honestly is it not worth a trifle of "fooling," to easily get $2 to $3 each for cockerels, that would only bring about fifty cents each on the market?

A crate that would carry two birds safely to their destination can be made at a cost of twelve cents each. Three lines in your favorite farm paper inform people what you have for sale, and the cost is a trifle, compared to the gain to be realized. Aside from the actual financial gain, it raises the work to the dignity of a business, and this is a certain keynote to success.

If there is someone of our poultry people, who desire to begin along the line of starting a pure-bred flock, or in the case of having choice birds and wishing to get their worth, just send in your problem to this department, and get help first hand from one who began from the ground. Didn't even have the bottom rung of a ladder to stand upon. Neither a building that would keep the chickens from freezing after they were raised.

One bitterly cold winter, a couple of dozen very choice birds were carried to the pet horse's stall, to keep them from getting their combs frozen. How the dear old fellow did resent it, too. One big cockerel that was named "Major," because he was always engineering things, would perch upon the horse's back early every morning and crow. It wasn't much, anyway, to do, but helped to save enough to build a house later.

There is nothing of the "fancier" about us, as it is usually understood. Just a big, vigorous farm flock, that never go half way around. Will be glad to tell you about the part that you care to know.

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

Ailing Animals.

Barrenness in Twins.

Please inform me if a heifer that was born a twin will breed.

The heifer born as a twin with a bull is usually hermaphrodite and barren, but this is not always the case.

Defective Eye.

I have a pure-bred seven-year-old cow, good breeder, good shape, but one eye is covered with red skin. The eye waters some and is closed most of the time.

It is very probable that this eye is past any chance of recovery. However, it might pay you to have a veterinarian examine it.

Injured Leg.

I have a four-months-old heifer calf whose leg when turned in pasture seemed rather stiff, but not swollen. A month and a half later the leg swelled above the knee and now has a lump half as large as a man's fist behind the leg above the joint.

This calf probably has been injured and the injury caused the formation of an abcess. However, you can tell better the nature of the swelling after examination. If soft in nature and away from joint it is probably an abcess and should be opened after cleansing knife and affected parts.

Necrotic Rhinitis (Sniffles).

We have a bunch of March and April pigs that are troubled with some disease. One side of the nose swells up to a big bunch, seems to itch, then breaks and eats, leaving a large hole. We have had some on which the sores came out on other parts of the body. We have been using plenty of dip and stock food, also have used liniment on the sores both before and after breaking. The hogs get very poor and some of them die. We have killed several that were bad. We have been feeding them mostly oats with good slop and fresh water. They have plenty of pasture to run in.

This trouble is one of the conditions that constitute the disease called sniffles. It is not possible to efficiently treat such diseases because of the difficulty of applying medicaments to the lesion and further because of the destructive changes in the bones of the nose and face. It is advisable, however, to clean and disinfect sheds and sleeping places.

Parents and Juvenile Club Work.

An illustration of the great importance of the attitude of parents toward the work of members of the boys' agricultural clubs which have been organized throughout the country by the department of agriculture is found by specialists in co-operative demonstration work in two cases reported from the same state. The incidents are accepted as showing the value of parental sympathy and consideration, particularly in the solution of the problem of keeping the members of the younger generation on the farm.

In one case it was found that the boy of the family was helped and encouraged from the time he first joined a corn club. His father permitted the use of one of the best acres on the farm, gave him barnyard manure and allowed the use of the necessary horses and machinery. The young club member produced more than 100 bushels of corn on his single acre the first year and has been consistently successful since. He has even established a reputation as a breeder of fine seed corn. During the four years of his membership in the corn, pig and other clubs he has won more than $400 in prizes, and, with his profits, has acquired ownership of seven head of pure-bred Duroc Jersey hogs, six head of well-bred cattle and a horse. The home is said to be ideal, the father and son being reported as "chummy as schoolboys." The boy has no thought of taking up life in the city, but is planning a constructive future on the farm.

In the second case the results have been wholly different. The young son of this family joined a kafir club, but when the crop was gathered the grain was placed in a general farm bin and he received no value from it. The following year he joined a pig club and when his father called attention to the lack of feed he hired himself to a neighboring farmer to secure funds. The money which he earned was, however, pocketed by the father. Wholly discouraged, the young boy shortly afterwards ran away from home and is now working in a city of a neighboring state.

The incidents have been used by the state demonstration agent of the state in which they occurred as the text for an urgent appeal to all parents to encourage their children in the constructive work they are undertaking in the clubs. One factor which will be helpful, it is pointed out, is permitting the young people to receive the full financial profits of their industry.

To Make Apple Jelly "Jell."

It is just about as easy to make jelly from apples, quinces, peaches or pears as from any other kind of fruit, if you know how, according to Miss Addie D. Root, of the Missouri College of Agriculture. All that is necessary is to add enough tartaric or citric acid to the juice to make it taste about as sour as a good sour apple. This usually means about a level teaspoonful to a quart of juice. It destroys the delicate flavor of peach and pear juice somewhat, but improves the flavor of sweet apple and quince juice.

Blackberries, blueberries, raspberries, partially ripe grapes, crab apples, sour apples and plums usually make good jelly because they have enough acid already and also contain a substance called pectin which must be present and must be brought out with the juice by heating if jelly is to be made. That is why jelly makers do not simply press out the juice from cold fruit. All apples and similar fruits have enough pectin for jelly-making purposes.

In making apple jelly, cover the fruit with water before cooking and boil twenty or thirty minutes. After boiling has continued ten or fifteen minutes add about three-quarters of a cup of sugar for every cup of juice. The sugar that will be required should have been measured into a pan and warmed in the oven for a while before it is added. It should be carefully stirred in to prevent burning.

As soon as the glasses are filled with the hot jelly they should be set in a cool place while jelling takes place. They should be sealed from the air, but if the jelly has been slightly overcooked it may be covered with panes of glass and allowed to harden in the sun. When it is well-set pour hot paraffin over the top and put clean tin covers on the glasses. Store them away in a dry, cool place where the jelly cannot mold.

Convenient Kitchen Arrangement.

In order to do good work in any line the workshop must be carefully planned, allowing the worker good light and plenty of fresh air, and the equipment used must be so arranged as to be convenient, thus saving time, steps and energy. The kitchen workshop is no exception.

Much of a woman's time is spent in her kitchen and it is necessary both for her health and for the accomplishment of good work that the windows be arranged so as to admit plenty of light and air. The finish of the room should be one that is easy to clean and keep clean and is bright and attractive. Have the woodwork plain so that there are no corners to catch dust and dirt. Food is stored and prepared in the kitchen and that room, therefore, should be kept most sanitary.

In arranging the kitchen the large equipment, stove, sink, table, etc., should be so placed that in the carrying out of a task retracing of steps in going from one fixture to another is done away with. The small equipment should be grouped around the fixture where they are used.

The accompanying illustration shows a convenient arrangement of table and shelves. The table is an ordinary table four feet long, two feet wide and three feet high, fitted with drawer for knives, etc. A pastry board is also fitted into it. Note the lower shelf of the table, where are kept bowls used often during the day, spices and such other articles as are in frequent demand.

Above the table is an excellent arrangement of shelf and hooks; everything is at hand and the worker does not have to leave her table for any materials needed. The shelves at the right hold flour, sugar, salt, cereal, etc. The lower shelf is wider than the upper one, allowing a bowl to be placed there and sugar, or whatever is needed, measured into it, and the jar does not have to be carried to the table and back again to the shelf.

The top of this particular table is covered with tin. Zinc also makes an excellent cover. Neither of these materials is injured by heat and they are easily kept clean and bright.

Eliminate everything from the kitchen that does not tend to lessen labor. It is not wise to have an overstock of implements to work with; they are often unnecessarily brought down, adding to the work of dishwashing and there are just that many more to handle and put away.

A KITCHEN WHERE THERE IS A PLACE FOR EVERYTHING AND EVERYTHING IN ITS PLACE.

Shrinking Cotton Materials.

Cotton naturally shrinks when wet. This property is greatly increased in the weaving as the warp threads are stretched to their full length and held in place by the sizing and starch used in finishing.

If the garment is to be laundered it is better to shrink the material before making it up, as it is not easy to make the proper allowance for shrinkage.

Fold the material smoothly and place flat in a tub or large receptacle, the bath tub is excellent. Pour in enough cold water to cover. When the material is thoroughly saturated, pour in hot water, gradually increasing the temperature until the water is as warm as the hand can stand. The hot water is needed to loosen the sizing.

The material should stand in the water overnight when possible, but at least two or three hours. Pour off the water and press as much out of the material as possible, but do not wring. Hang on a line in the open air, stretching out smooth and pinning along one selvage.

Before the material is thoroughly dry take it down and press.

One must be sure that the colors in the material are fast before attempting to shrink it.

How Do You Can Pimentoes?

To the Editor:—I have enjoyed reading the Home page for a long time and get much good from the answers to inquiries and the recipes.

Can any of the readers tell me how to can pimentoes for winter use? I am raising them this year for the first time and am told that they can be successfully canned. I will be grateful for any information regarding pimentoes and new ways of serving either before or after canning.

Mrs. C. R. D.

Braided Rugs.

Cut rags so, when bunched up, you have a strand about as thick as your little finger. If you wish smaller strands, make smaller braid, but it will take longer to sew.

Fasten three strands together and braid. Sew edges together with an over-and-over stitch.

Rugs can be sewed in several different shapes. As you sew the round ones you will have to continue to hold the braid a little full. Hold full only at the ends in oval-shaped ones.

Recipes.

Lemon Snow.—Two tablespoonfuls gelatine, one cupful cold water, three egg whites, two cupfuls boiling water, three-fourths cupful sugar, one-half cupful lemon juice. Soak gelatine in cold water five minutes, and dissolve in the boiling water. Add sugar and stir until dissolved; add lemon juice. Strain into a pan; set in a larger pan of ice water; cool slightly and then beat, using a wire whisk, until quite stiff. Add egg whites beaten until stiff, and continue the beating until mixture will hold its shape. Chill and serve with whipped cream.

Quince and Apple Butter.—Two quarts of pared quinces, two quarts of pared cooking apples, three cupfuls of granulated sugar, three cupfuls of water. Drop the pared quinces and apples into cold water containing a bit of salt, to keep them from turning dark; then put them through a coarse food chopper, or cut them very fine. Put into a preserving kettle with water and boil until tender, so they can be mashed. Add the sugar, and boil slowly for an hour and a half. This makes a very good, thick butter.

Yellow Tomato Butter.—Two quarts of yellow tomatoes, one large juicy lemon, one teaspoonful of salt, three cupfuls of granulated sugar. Do not skin, but wash and dry the tomatoes. Cut them into halves the long way and remove the seeds by pressing each half. Put on with the sugar and salt, and cook slowly for from an hour and a half to two hours, stirring frequently. Wash the lemon in hot water; cut into very thin slices, and add to the tomatoes and boil for ten minutes, stirring very carefully so as to keep the lemon slices whole. Put into sterilized glasses.

Tomato Sago Soup.—One pint tomatoes, three pints consomme stock, salt and pepper, two tablespoonfuls sago. Boil tomatoes and consomme in a saucepan for ten minutes, seasoning with salt and pepper. Then add sago and cook for fifteen minutes longer, stirring gently all the time. Serve at once.

Chocolate Cookies.—One-half cupful of butter, one-half cupful of sweet milk, one cupful chopped walnuts, one cupful of brown sugar, one egg, two teaspoonfuls of cocoa, one-half teaspoonful of soda, one cupful of seeded raisins, one and one-half cupfuls of flour. Cream sugar and shortening together; add milk, egg, walnuts, raisins and flour, which has been previously mixed and sifted with the soda and cocoa. Drop by spoonfuls on buttered tins and bake in a quick oven.

Buttered Rice with Peppers.—One cupful of rice, two quarts of boiling salted water, two sweet green peppers, one tablespoonful of butter. Cook the rice in the boiling salted water twenty minutes, or until tender but not broken. Drain in a colander and set in an open oven for five minutes to dry off. Seed the peppers and chop fine. Put butter in a frying pan over the fire and when it hisses add the minced peppers; toss and stir until smoking hot all the way through. Put the rice into a dish and pour the peppers all over it, loosening the mass with a fork to allow the sauce to penetrate.

THE YOUNG FOLKS

All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

Father Was a Soldier.

Dear Young Folks:—My papa takes this paper and I always read the letters and enjoy them so much that I will write, too. I am twelve years old and go to school at a small country school. I shall take up the sixth grade work this year.

My papa was a soldier in the Spanish-American war and was in the Philippines, China, Japan and the Hawaiian Islands. He has some curious things that he brought from those far-away lands. He often tells us about the people and their strange ways.

We live on a big farm and I can cook some, wash dishes, sweep and help mamma with the chickens. I can do tatting.

This is my favorite cake recipe. It is called Delicate cake: One and one-half cupfuls of sugar, one-half cupful of butter, one-half cupful of milk, two cupfuls of flour, one teaspoonful of baking powder, flavor with lemon or vanilla. Bake in two layers and put together with caramel, chocolate or white icing.

I raised a pet lamb this year, but it became so mischievous that we had to sell it.

I think it is fun to give riddles. Here is one: What goes up and down the hill and yet never moves?

—Eleanor.

Glad School Has Started.

Dear Young Folks:—I have always enjoyed your letters very much. I live on a 160-acre farm about nine miles from town. We have six horses and nine cows.

Our school started last Monday and I was glad because I like to go to school.

Mayme asked the riddle: What goes round the house and round the house, but makes only one track? I think the answer to it is a wheelbarrow. The answer to the other riddle: What is in Rome, but not in Italy; it is twice in a moment, but not in a second; it is in timber, but not in trees, is the letter "m."

—Glenna.

Weaves Beads To Sell.

Dear Young Folks:—I am twelve years old and have no mother. I read the letters in the paper every time it comes. I enjoy them very much.

I live on a 200-acre farm. We have eleven horses, forty hogs, seventy cattle, 350 chickens and three turkeys.

I have two sisters, one younger and one older than myself, and one brother.

I can tat, embroider, crochet and weave beads. I sell some of my bead work. My sister Lucile and I bought two calves and we expect to have quite a little sum when we sell them.

I see that the young folks are giving riddles so I will give one. What does the buffalo on the new nickels stand for?

—Bernice.

A Fine Pet.

Dear Young Folks:—I certainly love to read the letters in the Young Folks' department and I am always glad when the paper comes. The first thing I do is to look at the Young Folks' page.

I must tell you about our pet skunk. One day my brother went out to poison gophers and when he came home he brought us a little skunk. It was so tiny it could not see, so we put in into a box and kept it. One day I put it with an old cat and some kittens and the mother cat feeds it just like her own kittens and it follows her everywhere she goes. When we call "kitty, kitty" it comes just like the other kittens. We call it Tommy.

—Matilda.

International Sunday School Lesson.

Lesson for September 10, 1916.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

The Arrest of Paul.

LESSON TEXT—Acts 21:17-40.

GOLDEN TEXT—Thou shalt be a witness for him unto all men of what thou hast seen and heard.—Acts 22:15.

No study of the book of Acts is complete unless the teacher impresses upon his pupils the opportunities for living the Christian life in the normal environment of the home or school, at work or play. Deep interest attaches to every detail leading up to Paul's visit to Rome. Therefore let the teacher trace Paul's journey from Mileta to Jerusalem, which occupied about four weeks, and took place in the early part of the year A. D. 57.

I. The Arrival (vv 17-26). The Spirit revealed to the disciples and to prophets that if Paul went to this city he would be in great danger, and the Spirit was not forbidding, but only teaching him, for he knew Paul had a great work to do in Jerusalem, and that he only could do it. Everywhere Paul went he "searched for" (v 7) disciples, with whom he tarried and whom he enlightened in the way of truth. Arriving in Jerusalem, he appears to have made his home with Mnason, outside of the crowded city, thus being less exposed to danger and finding a place of rest. At a public reception (v 18) Paul reports of his work, and no doubt he laid his strongest emphasis on what God had wrought through him, among the churches of Asia. The leaders of the Jerusalem church received the gifts Paul brought from the Gentile churches, glorified God for what he had accomplished, but saw clearly that, to accomplish his statesmanlike purpose, something must be done to make clear that the false reports as to Paul's teaching were discredited (vv 20-22). They therefore, resorted to diplomacy (vv 23-26). To the many thousands of Jews gathered on this festival occasion in the city, some of whom were zealous for the law, they declared first that Paul taught all Jews which were among the Gentiles not to forsake Moses; se ond, that he had not taught them not to walk after the customs of Moses. The facts were Paul obeyed the Jewish ceremonial laws personally, as a matter of race, not as a condition of Salvation.

II. The Arrest (vv 27-36). Paul's attempt at conciliation resulted not in peace but in more discord. Every true servant of God is sure to be misrepresented, and it will not do always to attempt to set straight all the lies that are told about him. God will take care of the lies and of our reputations. Most of the charges that men, even Christians, bring against one another are based upon "supposition" (v 29). It was not a new experience for Paul to be mobbed. As the maddened Jews dragged him out of the temple he must have recalled the treatment of Stephen in which he, himself, had had a hand (7:57, 58). How frequent it is that we, ourselves, are in due time treated in the same way in which we have treated others (Gal. 6:7). It was the intention of the Jews to kill Paul at once without a trial (26:9, 10). They fancied they were doing God's service (John 16:2). This lesson is a striking example of the utter folly and wickedness of mob law. Paul's time had not yet come, and all the mobs on earth could not kill him until God permitted it.

III. The Arraignment (vv. 37-40). Tidings of the riot came to the chief captain, equivalent to our colonel (Acts 23:26). Paul was bound with two chains, one from each of his arms to a soldier, secured, yet left free to walk with his guards, thus fulfilling the prophecy of Agabus (v. 21). Mobs usually have great respect for soldiers, for they are inwardly cowardly. No sooner was Paul on the stairs which led to the top of the fortress than the mob, afraid that they were about to be balked of their vengeance, made a mad rush at him, with cries of "Kill him; kill him!" and Paul, unable in his fettered condition to steady himself, was carried off his feet and hurried off in the same path his Master had trod (John 19:15) and he was again to hear that cry. (Ch. 22:22). During all this tumult Paul had but one thought, how he might witness for his master, and bring some of his blinded accusers to a saving knowledge of Christ. Thus it was that he asked for the privilege of speaking, and most courteously did he make his request. He spoke to the captain in the Greek tongue, not in Hebrew, and great was the surprise of the captain.

Practical Application. When we are attacked, no matter for what cause, if we confidently look for deliverance and exercise self-control, God will take care of us.

Such conduct is disconcerting to our enemies.

Diplomacy is often dangerous and misunderstood.

Circumstantial evidence is never of great value.

There is, however, a desirable form of diplomacy as when Paul addressed the soldiers in his native tongue.

Paul's principle was in essentials, firmness; in non-essentials, liberty.

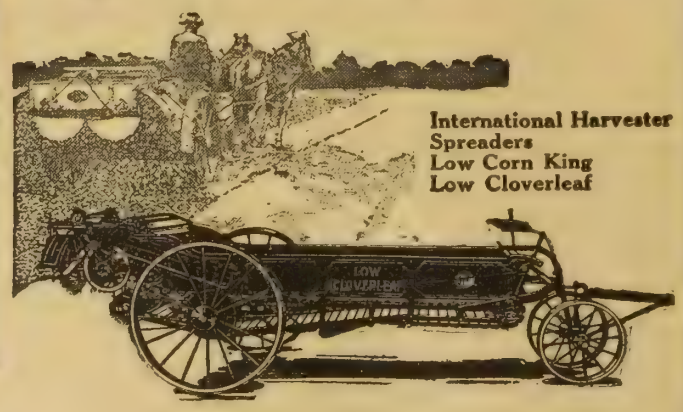
Offices: 300 F. R. A. BUILDING Oshkosh, Wisconsin

If your lumber dealer cannot supply plans, we will send them direct for 50c for garage or outbuilding, $1.00 for house or barn.

WON HIGHEST AWARD PANAMA-PACIFIC INTERNATIONAL EXPOSITION SAN FRANCISCO 1915

Eight Feet Wide, or Better



International Harvester Spreaders
Low Corn King
Low Cloverleaf

ONCE you have seen both kinds of work you will say: "There is certainly a wide gulf between the ordinary spreader and the modern **I H C** machine, with its good, wide-spreading device. Give me the up-to-date, time and labor-saving spreader."

International Harvester spreaders—Low Corn King and Low Cloverleaf—are made with wide spreaders that throw the manure out in a wide, even spread, and broken up into fine particles by the disks that give it a second beating. In this condition the soil takes up quickly and evenly the fertilizing elements.

Though they are narrow, conveniently handled spreaders, easy to drive right into stables for loading, they spread to a width of 8 feet, or better. This cuts the spreading time in half, increases the tractive power of the spreader by keeping the wheels off the slippery manure, and gives you the best machine made for top dressing. **I H C spreaders** are simply built, and very strong. They are low for easy loading. They are built in sizes to suit any buyer, and they do work that is uniformly satisfactory.

Be sure to see the **I H C** dealer who can sell you a **Low Corn King** or **Low Cloverleaf**—or write us for catalogue.

PART III. "Prince Charlie"

CHAPTER II.

A Recruit From the World.

"Oh, cam' ye here the fight to shun,
Or herd the sheep wi' me, man?"

SPRING, with its showers and promises, drifted into the dim perspective, as summer, with flaunting assumption, took possession of the foreground. All through the changing weeks rumors came from the south and east, telling of disaffection among the hereditary lords of the soil, and petty troubles in different localities, that, like low mutterings of far-off thunder, promised storms that might be remembered.

Some rust on the wheels of the slow-moving machinery of government had caused a delay in the dealings with the people on the reservations. Treaties ignored through generations, in both letter and spirit, are not calculated to beget faith in the hearts of the red nations, or teach them belief in the straightness of our tongues. Was it the fault of the Department of the Interior at Washington, or the dishonesty of their local agents?—the chicanery of the party in office or the scheme of some political ring that wanted to get in by bringing forward a cause for condemnation of the existing regime? Whatever one of the multitudinous excuses was finally given for neglect of duty—treaties, promises of government—Mr. Lo had now—as he has ever had—to bear the suffering in question, whether just or unjust.

Small wonder if, now and then, a spark of that old fire in the blood ignites, and even the most tamed spirits rise up ready to write pages of history in blood. The only wonder is that they ever pass by the house or the offspring of the white race without that call of the red heart for vengeance being too strong for the hand to resist.

Through the late winter, whether through storms or floods or the schemes of men, on one of the reservations to the south the rations had not been forthcoming; and from week to week excuses were given that were no longer listened to with credence by the Indians. In vain were visits made, first to the agency, next to the nearest fort, supplicating for their rights. One delegation after another turned back from those visits unsatisfied, told by the first that the rations would be distributed when they arrived, not before; told by the second that the War Department was not in any way responsible for deficiencies of the Department of the Interior, and could not interfere—at the same time advising them to be patient, as eventually their wants would be satisfied. Eventually! and in the meantime they could go back to their tribes and eat their horses, their dogs, and see their people grow weak as the children for the want of food.

Small wonder if one group after another of the younger braves, and even the older warriors, broke loose from the promise of peace and joined the hostile bands that thieved along the border, sweeping the outlying ranches of horses and cattle, and beating a retreat back into the hills with their booty.

Of course, the rations arrived eventually, and were distributed by those fair-minded personages whose honest dealing with the red man is proverbial along the border; but the provisions came too late to stem the tide of secession that had set in, and the War Department had found that, after all, it would be influenced by the actions of the Department of the Interior, and that its interference was demanded for the protection of the homes on the frontier. As the homes were the homes of white citizens, its action was, of course, one of promptness. White men's votes decide who shall continue to sit in the high places of the land, or who shall step down and out to make way for the new man of new promises.

But they found ordinary methods of war were of little avail against the scattered bands, who, like bees in the summer time, divided their swarms, and honey-combed the hills, knowing every retreat, and posted as to every movement by Indian runners and kindred left behind.

It was simply a war of skirmishing and one not likely soon to cease. Reinforcements came to the hostile tribes from all the worthless outlaws of the border—some of white, others of mixed blood; and from those mongrels resulted the more atrocious features of the outbreak. They fought and schemed with the Indian because they wanted his protection, and any proposed treaty for peace was argued against by them most vehemently. And while an Indian makes a good thief, a half-breed makes a better; but the white man, if his taste runs in that direction, is an artist, and to him his red brother is indebted for much teaching in the subtle art through many generations.

That, and like accomplishments, made them comrades to be desired by the tribes who depended for their subsistence on the country guarded by troops; and scientific methods of thievery were resorted to, methods that required the superior brain and the white face of the Caucasian.

Thus was the trouble fostered, and the contagion spread, until far-off tribes, hearing of it, missed now one, now another, of their more restless spirits; and the white authorities found it would not do to trust to the peace of any of the nations—the only surety was to guard it. This they tried to do, locating posts and stationing troops near even the most peaceable tribes—their presence suggesting the advisability of remaining so.

And, now through one, now another, and generally by MacDougall, the people at the ranch heard at times of the Arrow and of Genesee. They were with the troops, and were together; and the latter's knowledge of Indian tactics was counting much in his favor evidently, as his opinions were cited in the reports and prophecies of results, and his influence had decided more than one movement of the campaign that had won him the commendation of his superior officers—circumstances that were, of course, discussed pro and con by the people of the Kootenai. There was little of local news in so isolated a place, and Rachel declared they were all developing into gossips because of the avidity with which the slightest of events in their own region was talked over; and, of course, the Indian question was an all-absorbing topic, and to Aunty Luce was attended by a sort of paralysis of terror. In vain to point out the friendly listlessness of the Kootenais, their nearest neighbors of the red race, for the Kootenais were simple hunters or fishers, making war on none, unless now and then a detachment of thieving Blackfeet from east of the mountains would file through the old Flathead Pass and run off portions of their stock; in the time of the fishing, the greater part of the village would move for the season away from their pasture lands, in search of the fish that they smoke, dry, and pack in osier baskets for the winter. It was generally during that temporary flitting that a visit from those neighboring tribes would be made, and an assessment levied, to the extent of all loose cattle in reach, and an occasional squaw now and then. And so, though the Kootenais were on the most friendly terms with the few whites about them, their relations with their red brethren on the east, and across the line in the Northwest Territories were decidedly strained.

But it was useless to talk "good Indian" to Aunty, who was afraid to stay in the house or out of it; afraid to start back to Kentucky, yet sure that delay meant death. And all through the summer, let the rest have faith if they chose, yet the baby's wardrobe and her own were always packed ready for flight at the first sign of danger.

With this one exception the Indian question troubled the people at the ranch but little. They found too many duties in the new country to take up

their time and attention. The sheep-raising experiment showed signs of such thorough success that it would require more than the skirmishing of the races a couple of hundred miles away to disenchant Hardy with the country; and where he was content, Tillie was, of course; and Rachel—well, Rachel was deemed a sort of vagabond in regard to a settlement anywhere. She was satisfied with any place where the fences were not too high or the limits of her range too narrow.

She often wondered that the world in general knew so little of that beautiful corner of the earth. She knew that people flocked to "resorts" that possessed not at all the wealth of beauties that whimsical nature had scattered on those Indian hills.

In the fall, about a year after the cultus corrie, she began to think that, after all, they might meet with deserved appreciation some day, for one man rode up to them, not for stock, or to locate land, or for any of the few reasons that brought people to the Kootenai country, but simply and only for pleasure and rest—so he said.

It was late in September, and as he rode leisurely through the dusky shadows of the pines, and along the passionate restless path of some mountain stream, his expressive face showed a more casual interest in the prodigality of delightful vistas and the impressive grandeur of the mountains, as they loomed about him or slowly drifted beneath him.

All the beauty of autumn was around him, yet he himself looked like one of the people who belong only to summer, judging from his eager eyes and the boyish laugh that broke on the still air as he watched the pranks of some squirrels making holiday in their own domain.

Not that the stranger was so young. He was not a boy in years; but the spirit of youth, that remains so long with some natures, shone in his glance, and loitered about the sensitive mouth. In seeing him smile, one would forget the thread of premature silver that shone through the bronze of his hair. He was almost beautiful in face, yet his stature, which was much above the average, and his exceptionally complete proportions saved him from the beauty that is effeminate, but whatever beauty he possessed, however, was in every way refined.

It was noon when stragglers of sheep met his gaze, dotting with white the green and amber grasses of the great park, and showing, as he forded Missoula Creek, a picture before him, framed in the high wall of the hills, and restful with pastoral peace that was a striking contrast to the untamable wilds through which he had passed.

"Almost there," he whispered eagerly, as he rode along the corrals and was greeted by a tumbling lot of sheep dogs. "Will it be of use?"

Before he reached the gate he was met by Hardy, who, bareheaded, had left the dinner table to welcome a visitor whom, from the porch, all had decided was a stranger.

The host scattered the dogs. There were a few words, a shake of hands, and they could hear Hardy's hearty invitation to dismount.

Meanwhile, Aunty Luce was bustling about as fast as her stout, short form would allow her, arranging a place at the table for the late guest, and thanking her stars that a real gentleman was to be company for them once more—her opinion that he was a gentleman having foundation in the fact that he wore "store clothes" instead of the trappings of buckskin affected by the natives of the Kootenai.

They found he was possessed of more decided points due to the idea of a gentleman, both in breeding and education, and before many remarks were exchanged the rest of the family, as well as Aunty, were congratulating themselves on this acquisition from the world.

"Yes, I am altogether a stranger up here," he said pleasantly, in answer to a query; "and at Holland's they told me there was one of my statesmen up in this park; so I asked the way and started west, instead of north, as I had thought of doing."

"Doing a bit o' prospectin', then?" was MacDougall's query.

It was a visiting day of his, and he had been watching the newcomer's face with scrutinizing eyes ever since the first words of self-introduction, in which the visitor's name had been overlooked.

"Well—yes," answered the other slowly, as if he was not decided, or had not anticipated the question.

"I thought as much, since ye carry no hunting gear," remarked the trapper; "and in this country a man is likely to be the one thing or the other."

"And in this case it is the other," smiled the stranger, "as I have not as yet found any vocation; I have come out here to forget I ever had one—prospecting for a rest."

"Well, there is plenty of room here to rest in," said Hardy hospitably.

"Yes, or work in," added Rachel; "and a new country needs the workers."

Tillie threw an admonishing glance as payment for the uncivil speech, and the stranger turned his attention to the speaker. The contour of her face must have been pleasing, since he looked at it interestedly, as if forgetting in its contemplation the words uttered; and then—

"Indeed?" he said at last. "Well, who knows but that I may develop into a worker; is industry contagious here?"

And Rachel, whose tone had been more uncivil than her intention, felt herself put at a disadvantage by the suavity that was not a feature of Kootenai character.

"Indeed, then," said MacDougall, "it's gettin' to be a brisk, busy country these days, an' ye canna go a matter o' twenty miles without trippin' up on a settlement. An' ye come from Holland's without a guide? That's pretty good for a stranger in the parts, as I doubt na ye be, Mr.—" And he stopped suggestively.

The stranger laughed and drew a card from his pocket.

"I told Mr. Hardy my name at the gate," he observed, "but evidently it escaped his memory; he introduced me only as a stranger."

"It does not matter, however, what a man is called out here," returned Hardy. "It is the man that is valued in the West—not the name given him; now, back home they weighed about equal."

"And in my country," said MacDougall, looking up from the card, "here's a name that would carry ye many a mile, an' bespeak ye good will from many an old heart—Charles Stuart. It's a name to take unco' good care of, my man."

"I try to take good care of the owner of it, at all events," answered the stranger; "but it is not an uncommon name in America; there are few parts of the country in which I am not able to find a namesake."

"Indeed, then, an' I have run across none o' the name these seven odd year," said MacDougall; "an' then it was a man in the Bitter Root Mountains, who spelt it with the 'e-w' instead of the 'u,' an' had never e'en heard tell o' Prince Charlie."

"And you have known no one in this country by the name of Stuart?" through this country would set me on asked the stranger, his eyes seeming to watch at the same time both Hardy and the old man. Ivans and Jim had left the table and lounged out to the stables to smoke.

"No," answered Hardy; "we are comparatively newcomers here, but all the settlers within a radius of fifty miles are already known to us by name—it is not so difficult where white men are so scarce; and I have never heard of any Stuarts among them."

"Then I have dropped literally into a strange country," said Stuart, rising an' walking to the end of the porch; "and from what I have seen of it, a decidedly interesting one. Hunting good?"

"Excellent," returned Hardy. "We've been too busy to get to the hills so far this year, but now we have a little breathing spell, and if you would care to try your luck with game, I should take pleasure in showing you our hunting grounds."

"That is certainly kind of you," said Mr. Stuart heartily, "and I will accept the offer most gratefully. The fact is, I've been rather used up with a professional life and was in hopes a trip up through this country would set me on my feet again. Over there at Holland's they told me about your family, and—"

"Yes," completed Hardy, "a man with his family and household goods up in these hills is a marked individual; but my wife and cousin do not rebel at the exile; they are both philosophers, in their way."

(To be continued.)

WINCHESTER

HAMMERLESS SHOTGUNS
MODEL 1912
Extra Light Weight
Made in 12, 16 and 20 Gauges

There's no need of carrying a heavy gun. The use of Nickel Steel makes it possible to get extreme light weight with great strength. But it costs more, and so is not generally used. Winchester Model 1912 shotguns are constructed entirely of nickel steel, which makes it the lightest and strongest gun on the market. It is very handsome besides, and a reliable, fine-shooting gun. Be sure to see one before buying. Sold by all dealers.

THE REPEATER PAR EXCELLENCE

Stanolind
Gas Engine
Tractor Oil

is the most efficient lubricating oil for tractors or stationary gas engines, where kerosene is used for fuel.

Even under high temperature conditions there is little change in its lubricating body.

Reduces Friction to a Minimum

saves repair expense and adds life to your tractor engine.

Scored cylinders are a thing of the past with the farmer who accepts the recommendation of the Standard Oil Company and adopts this superior lubricating oil.

Guernsey Breeding Par Excellence.

THAT like produces like, and that there must be good breeding to produce good offspring is demonstrated in the two yearling bulls advertised for sale on page 28 by Geo. Lucia, Green Bay, Wis. These young bulls are pictures of ideal type and conformation. However, when you see their pedigrees you at once can see that it is an inherited quality, that has been bred into their ancestors for generations. They were sired by a son of the great bull, Imported Golden Hero of the L Etinary, that sired Stubbs' noted bull, Holden 4th. Imp. Golden Hero in turn was by Gov. of the Chene, that has sixty A. R. O. daughters, up to 684 pounds fat in a year, forty-six of which average 449 pounds and 111 of his granddaughters average 469 pounds fat, surely an impressive demonstration of the wonderful transmitting ability of this bull. The dam of these young bulls' sire is imported Goodwill II, of of the Grove, a 526-pound daughter of Gov. of the Chene. It will be seen, therefore, that they are sired by a line bred Gov. of the Chene bull. One of the young bulls for sale is out of a granddaughter of Imported Masher's

ONE of the Guernsey bulls advertised for sale on page 28 by Geo. Lucia, Green Bay, Wis.

Sequel and Gov. of the Chene, giving him three crosses of this wonderful sire. His dam, Imp. Sunlari, has milked forty pounds per day, testing 5 per cent fat. She is a daughter of Imp. Galaxy's Sequel, that was champion bull and won the King's silver cup. The other young bull for sale is out of the imported cow, Queenie of the Quevillette, that has an A. R. record of 427 pounds of fat. Mr. Lucia is also offering a few yearling and two-year-old heifers and young cows for sale. They are choicely bred and of good type. We advise our readers to send for the charted pedigrees of these animals.—Adv.

Heavy Producing Alcartra Blood.

A YEARLING bull advertised by George H. Gibson, Nashota, Wis., is one that our readers will do well to consider if in the market for a bull of serviceable age. He comes from the high producing Alcartra family on his dam's side and the Pontiac Rag Apple strain on his sire's side. His dam, Nig Johanna, is a sister Nig Alcartra 2d, that has six A. R. O. daughters, three with records of 25.49, 24.18 and 23.95. One of her daughters, Nig Alcartra Pearl, also has six A. R. O daughters, three with records of 27.54, 24.22 and 21.60. The dam of Nig Johanna is from a sister to the dam of Alcartra Polkadot, that has a record of 29.09 and whose granddaughter, Tilly Alcartra, that holds the world's record by giving 60,000 pounds of milk in two years. The sire of the young bull offered for sale is Korndyke Pontiac Piebe Burke, whose dam, Shewilldo Uneeda gave 26.36 pounds of butter in seven days. His sire, Dutchland Sir Pontiac Korndyke, is the son of Dutchland Sir Pontiac Rag Apple. An extended pedigree of this young bull shows him to be one of exceptional breeding and, although his dam as yet has no A. R. O. record his breeding and individuality make him worthy of heading a pure-bred herd. Breeders of high-grade cattle who are desirous of getting an exceptionally high-class bull from heavy, producing strain of blood should not overlook this opportunity. For extended pedigree and further information write to the above address.—Adv.

Dineen's Holsteins.

HIGH-GRADE Holstein cows, ranging from two to five years of age are advertised for sale on page 26 by C. F. Dineen, Cedarburg, Wis. These are 30-32 per cent pure blood, are of standard markings and good individuals throughout. They are now safe in calf to King Pontiac Mahomet 5th, a grandson of the King of the Pontiacs. His dam was Mechthilde Daisy Longfield, that has a record of 22.25 pounds of butter in seven days and has four A. R. O. daughters with very creditable records. Mr. Dineen is also offering a yearling bull ready for service. For further information write to the above address.—Adv.

A New Breeder.

DR. DAVID ROBERTS announces the sale of Roberts' De Kol Wayne, a bull twenty months old that weighed nearly 1,100 pounds, to S. P. Christiansen, of Iowa. The dam of this bull is Lynden Grove Betsy De Kol, that has a yearly record of 18,563 pounds of milk and a seven-day butter record of over twenty-two pounds. She averaged over eighty pounds of milk a day for the seven days she was on test. Mr. Christiansen is a young Holstein breeder and he is making a splendid start with this sort of stock. He will undoubtedly go far if he continues along the lines he has started. We advise our readers to call on Mr. Christiainsen and ask him if he is satisfied with his purchase.—Adv.

A 27.76-Pound Bull for Sale.

AN opportunity is given our readers to buy an exceptionally fine Holstein bull on page 26. This bull, Canary Homestead Oak De Kol 3d, was born February, 17 1915, so is ready for immediate service. We recently visited the Clovis Stock Farm at Menosha, where the bull was born and is now owned, and we do not hesitate to recommend him to our readers. He is a show bull in every sense of the word, being very well grown, with a good straight level back and rump, good tail setting and showing capacity and constitution. He was sired by Dr. Faville's noted bull, Canary Homestead Oak De Kol, whose three nearest dams average 32,20 pounds butter in seven days. His sire is the thirty-five-pound bull, Canary Paul Fobes Homestead. His dam is Oak De Kol 2d, a daughter of Homestead Jr. De Kol, that has seventy A. R. O. daughters, seven with records from thirty to 35.55 pounds butter in seven days. His dam, Oak De Kol 2d, is the daughter of the cow, Oak De Kol, one of the greatest cows ever owned in the S. B. Jones herd. She herself has a record of 31.54 pounds butter in seven days at ten years old and she has three A. R. O. daughters with records from twenty-five to 29.55 pounds. Her dam, Lady Oak 2d, has five A. R. O. daughters, three with records from thirty to 32.54 pounds butter. This is conclusive evidence of the high production ability of the Lady Oak family. The dam of the bull offered for sale is Friend Lucile Bawn, a big, fine cow weighing close to 1,700 pounds. She is of ideal dairy type and a heavy producer. She made 27.76 pounds butter in seven days, giving up to ninety pounds milk per day and had an average test of 4.04 per cent fat. Send for an extended pedigree and picture of this bull, for he is worth going a long way to get.—Adv.

Hampshire Swine and Shropshire Sheep.

THE Dane Stock Farm, Oshkosh, Wis., are breeding Hampshire swine, which they are advertising on page 27 and Shropshires which are being advertised on page 26. The Hampshire swine are of very desirable type, being stretchy and big, but not coarse. They are, in our opinion, of better type than those bred in the extreme south where they tend more to the razor back type. Mr. Dane has bred away from this char-

COLLYNIE VICTOR 387634, the prize-winning bull at the head of the herd of A. Menke & Sons, Markesan, Wis., whose advertisement appears on page 27.

acteristic and we believe he is developing a more desirable type of animal. At the present time he is offering spring pigs of both sexes and a few fall boars for sale. His Shropshires are the heavy, shearing strain of blocky type that feeders and breeders are finding most profitable. He has a fine lot of rams for sale at the present time. For further information in regard to the animals offered for sale kindly write to the above address.—Adv.

Ihde's Ayrshires.

THE Ayrshire herd of Herman Ihde, Neenah, Wis., whose advertisement appears on page 26 is one of which Wisconsin breeders may well be proud. The animals are not only well bred, but are of ideal Ayrshire conformation and are heavy producers. During the past year Mr. Ihde has been doing advanced registry testing and has completed some very creditable records, among them are the following cows: Nora of Neenah, gave 12,364 pounds of milk, making 443.16 pounds of butter fat; Fannie Dahlia, gave 12,057 pounds of milk and made 596.25 pounds of butter; Nora of Neenah's Beauty gave 10,801 pounds of milk, making 489.83 pounds of butter fat. The last-named cow won first prize in the Valentine contest of the National Association. At the present time Mr. Ihde is advertising a yearling bull ready for service out of the cow, Fannie Dahlia, that made 596.25 pounds of butter in a year. This young bull was sired by Netherton of Sand Hill, a son of Imported Netherton Saint Andrew. His dam, Bernice Clyde, has two advanced registry records made at three and four years of age of 587 and 623 pounds of butter. Her dam, Bessie Clyde, also has two advanced registry records and four advanced registry daughters. The sire of Bernice Clyde was Earl's Choice of Springhill, that has thirty-six A. R. daughters whose averaged test is 4.23 per cent fat. It will be seen that the young bull offered for sale is backed by high production blood. For pedigree and further information write to the above address.—Adv.

Kohlwey's Holsteins.

FRED KOHLWEY, Grafton, Wis., is offering a few registered Holstein bulls sired by Cedarlawn Champion 3d. This bull is out of the cow, Cedarlawn Bessie, that made 22.20 pounds of butter in seven days with her first calf. He was sired by Cedarlawn's Champion, the noted bull that heads the herd of C. A. Schroeder & Sons. One of the bulls offered for sale is out of a daughter of Sir Johanna De Kol, that has sixty-four A. R. O. daughters, twenty-four of which have records from twenty to forty pounds of butter in seven days. His daughters have held eight world records in the semiofficial eight months after calving classes and have taken the association prizes on fifty-five different records. For pedigrees and further information in regard to the animals offered for sale write to the above address. See page 26.—Adv.

Eighmy Buys Fine Holstein Bull.

MR. FRED PABST, Oconomowoc, Wis., reports the sale of a fine yearling bull through his advertisement in The Wisconsin Farmer to Robt. Eighmy, McFarland, Wis. He is a son of the thirty-one-pound bull, King Pontiac Champion, whose daughters are making such creditable records. His only daughters as yet of mature age recently made 1,024 pounds butter in a year. His young daughters are doing equally well and show indications of making great records as mature animals. The dam of this young bull has a record of 25.63 pounds butter in seven days, and is one of the "milkiest" things the writer has ever seen. Of almost ideal dairy conformation, she carries with it an exceptionally well-developed udder, long, smooth teats, and her belly is heavily covered with large and interlacing milk veins. She is a daughter of Hengerveld Model Johanna, that has thirty A. R. O. daughters, two of which made records this past spring of 30.50 and 31.51 pounds butter in seven days. Mr. Eighmy is to be congratulated on securing so good a bull to head his herd of pure-bred Holsteins.—Adv.

Heid's Guernseys.

A CHOICELY-BRED Guernsey bull is advertised for sale on page 28 by W. J. Heid, Ft. Atkinson, Wisconsin. He is of Langwater Skylark breeding and his dam has an A. R. O. record. The writer recently saw this bull and can recommend him to the readers of The Wisconsin Farmer. For pedigree and further information write to the above address.—Adv.

Kiesling's Guernseys.

A BULL calf born in March is advertised for sale on page 28 by E. H. Kiesling, Jefferson, Wis. He was sired by Glenwood Noble's Secret 23999 and

LISTEN! OLD WISCONSIN IS CALLING YOU TO STATE FAIR!

Take a Week of Rest and Recreation Seeing the Good Old Badger State on Parade, and at the Same Time Be Entertained and Inspired at a Cost Next to Nothing. Don't Hesitate! Come!

By OLIVER E. REMEY, Secretary State Fair.

Milwaukee, Sept. 5.—You have been working mighty hard all summer.

Nothing would suit you better right now or do you more good than about one week of real relaxation.

Be fine, wouldn't it, if you could take a week off, rest up and at the same time be informed, entertained and inspired at a cost you would hardly notice?

Appeals to you, doesn't it?

You like this grand old Badger State, because it's your state, and a rattling good old state. Some states may be a little stronger on a resource or two, but, taken all in all, it requires SOME state to beat old Wisconsin, as a general proposition.

Now, wouldn't you like to see just what this good old Badger State can do in the way of raising things—horses, cattle, sheep, swine, agricultural, horticultural, dairy products—what the women of this state can make with their own hands; what the farmer boys and girls can raise?

And wouldn't you like to listen to the best Italian band in the world, see a wild west and frontier show worth seeing, enjoy over twenty circus acts second to none anywhere, see a woman perform more and greater stunts with a flying machine than the famous Beachey performed, see four days of high-class harness racing and two days of automobile racing, see the greatest display of 1917 automobiles shown this year, enjoy a $20,000 free pageant in a big city—in fact, see a thousand and one other interesting and entertaining things and at the same time be one of immense crowds out for days of profitable enjoyment, with music and laughter everywhere and the good old state of Wisconsin showing you every way you turn just what she can do?

Sounds like a dream, doesn't it?

But it can be done.

Just come down to the State Fair Sept. 11th-16th.

You'll go back home rested, better informed and full to the brim of enthusiasm for your grand old state.

It isn't going to cost much—not one-half what it would cost to take a week's trip out of the state.

Make up your mind right now and you'll never regret it.

Come on; the old Badger State is daring you to take a look at her on parade!

REGISTERED HOLSTEIN COWS

W. W. Bird - - Cambria, Wisconsin

he is out of a heavy producing dam of choice breeding. The young bull is well marked and well grown. For further information write to the above address. —Adv.

Some Alcartra-Bred Heifers.

SOME richly-bred registered Holstein heifers are advertised for sale on page 26 by Mrs. Otto Volkman, Juneau, Wis. Here is an opportunity for our readers to procure some really high-class individuals both in breeding and conformation. A number of them are daughters of Alcartra Johanna Rue De Kol, one of the most richly bred bulls ever owned in the state. He is a brother of Alcartra Polkadot, being out of the same dam, whose record is well-known to all Holstein breeders. She sold twice for $1,000 and was shipped from Wisconsin to California and then resold to a breeder in New York state. She has five A. R. O. daughters, two with records of 32.54 and 31.25 pounds of butter in seven days. Her thirty-one pound daughter also has five A. R. O. daughters, one with a record above thirty pounds. One of her granddaughters, viz.: Tilly Alcartra, gave 60,000 pounds of milk in two years, which in weight is equivalent to fifty two-year-old steers, weighing 1,200 pounds each. The $50,000 bull, King Segis Pontiac Alcartra, is out of a granddaughter of Alcartra Polkadot. The sire of Alcartra Johanna Rue De Kol was Sir Johanna De Kol Rue, that has twenty-nine A. R. O. daughters, fifteen of which have records ranging from twenty to 31.69 pounds of butter in seven days. A number of the heifers offered for sale by Mrs. Volkman were sired by Fobes Watson De Kol, that is a grandson of both Fobes Tritomia Mutual De Kol and Mooie Mutual De Kol. Fobes Tritomia Mutual De Kol has thirty-eight A. R. O. daughters, four with records from 30.51 to 36.44 pounds of butter in seven days. His thirty-six-pound daughter recently sold for $4,600 at the great Holstein sale in Detroit, Mich., topping the sales of females. The extended pedigrees of these two sires show them to possess exceptionally heavy producing blood on both sides. These heifers are now bred to Colantha Boy Pride, whose sire, Dutchland Colantha Bell Boy, is a 27.89-pounds son of Colantha Johanna Lad. We advise our readers to investigate this offering of heifers at once.—Adv.

Scribner Farm to be Sold.

W. A. LAWSON who purchased the F. H. Scribner farm near the edge of Rosendale, Wis., last spring, is advertising the farm for sale. The Lawsons are obliged to dispose of the farm on account of the poor health of the senior Mr. Lawson. This is one of the well-known Wisconsin farms, Mr. Scribner, the former owner, having been prominent as a Jersey breeder. A four-year rotation plan has been used on the farm, keeping the soil in good condition.—Adv.

Kirkpatrick Bros.' Hogs.

STOCKMEN have an opportunity to get some good registered hogs at a very reasonable price from the herd of Kirkpatrick Brothers, Reedsburg, Wis. The Kirkpatrick Brothers are offering their entire herd for sale. They have a number of bred sows and young sows or boars five months old. See their advertisement on this page.—Adv.

Merriman's Guernseys.

SOME choicely bred Guernsey bulls of serviceable age and younger are advertised for sale on page 28 by S. A. Merriman, Fort Atkinson, Wis. These young bulls are being offered at special prices and our readers have an opportunity of securing some of the best blood lines of the breed. For further information in regard to these animals write to the above address. When writing kindly mention The Wisconsin Farmer.—Adv.

Wenham's Bates Milking Short-horns.

WE always enjoy a visit to the farm of George Wenham & Sons, Fort Atkinson, Wis., and never fail to look over their herd of milking Short-horns. This is one of the oldest herds of Bates Short-horns in the state of Wisconsin and is a herd of high production ability and choice breeding. When at the farm about three weeks ago we saw a fine bunch of young bulls, which we do not hesitate to recommend to the readers of The Wisconsin Farmer. Two of these bulls are ready for immediate service and, although a little thin at the time are of good, straight, level type and of strictly dairy conformation. In breeding they combine the Clay Buttercup and Wild Eyes families, two of the best

THE twenty-five-pound bull purchased by Mr. Robt. Eighmy, McFarland, Wis., from the Pabst Stock Farm, Oconomowoc, Wis. See page 26.

producing families of the Bates strain. Our readers who are in the market for a Short-horn bull of milking strain will do well to get in correspondence with these breeders at once. See page 28.—Adv.

An Old Established Chester Herd.

J. A. DOERR, Viroqua, Wis., didn't raise as many Chester Whites this year as in the past, but those that he has picked for the mail-order trade are good, the pick of the bunch. Mr. Doerr has been breeding Chesters for twenty years and in that length of time he has sent out some great animals. We know this to be a fact, for we have seen Doerr breeding in several of the prominent herds of the state. The spring pigs he is offering are sired by Elmo Chief, a grandson of St. Elmo and he is out of Sister First the noted show sow. Other pigs are by Prince I. X. L. a grandson of St. Elmo and Peacemaker. There is also a litter by S. M. Wonder, the good Derenthal boar. As above stated, Mr. Doerr hasn't as many boars for sale as he has had in previous years, but if you order you'll be pleased with the boar you receive. Write him and tell him what you want, you can depend on him when he says that he has a boar that will suit. Notice his advertisement in this paper. See this page.—Adv.

Edgewater's Holsteins and Guernseys.

THE Edgewater Stock Farm, Fort Atkinson, Wis., are offering for immediate sale 400 head of registered and high-grade Holstein and Guernsey cows and heifers. They have an exceptionally fine bunch of fifty registered Guernsey heifers on which they are making an extra low price. This is one of the leading dairy farms of Wisconsin and they handle close to a quarter of a million dollars' worth of cattle in a year. Our readers who are in the market for a carload of heifers, springers or young cows will do well to get in correspondence with this firm. See page 26.—Adv.

Some of the Winners at the Dane County Fair.

THE Dane County Fair held at Madison, Wis., August 29th to September 1st was the most successful ever staged by the association. The live stock display was grand in every respect, and there was strong competition in most every class. James Van Etta, Lima Center, Wis., had a wonderful showing of Clydesdale horses. His two-year-old stallion looks even better than he did last year. His following winnings of last year prove that he is a wonderful individual. He won first in class and grand champion at the following fairs: Cleveland, over all breeds at Columbus, Indiana State Fair, Illinois State Fair, first in class, junior and reserve champion at San Francisco. King's Emblem, his aged stallion, was grand champion over all breeds at Madison, showing against Percherons and Belgians. The Queen, an outstanding two-year-old filly, won the same honor in the mare division. There was an excellent showing of swine, Durocs predominating. E. H. Parker & Son, Janesville, won the most premiums. W. G. Bartholf, Burlington, had the grand champion sow and John L. Fisher, Janesville, won the purple ribbon on his great boar, King Defender. Madson & Sons, Madison had both champions in the Poland division. W. S. Scheibe, Burlington, cleaned the slate on his Chesters. This breeder has the best junior yearling boar we have seen.—Adv.

HOLSTEIN-FRIESIAN CATTLE.

Purebred Registered

HOLSTEIN CATTLE

The "Dairy Belt of the Northern States," so called in the past by various writers, has vanished. Holstein-Friesian cattle will thrive anywhere, and they are thriving and adding to the fortunes of mankind all over the nation, north, south, east and west. Big, hardy, healthy, consuming enormous quantities of feed and roughage, and transmuting it into large quantities of milk, Holsteins have proven to all the world that they are the dairy breed in all ways best suited to serve man, wherever he calls his home. There's big money in the big "Black and White" Holsteins.

W. C. Kenyon & Sons Elgin, Illinois

Smith's Short-horns.

GEORGE SMITH & SONS, Burnett, Wis., are offering a very nice lot of Short-horn bull calves bred along milking lines. These were sired by the bull, Milkman, whose dam gave over sixty pounds of milk per day testing 4.4 per cent fat. The Smith's Short-horns have been so in demand for the past years that at the present time they have not a bull of serviceable age on hand, but the calves they are offering are good enough so that you can afford to buy one at the present time and keep it until ready for service. For prices and description write to the above address. See advertisement on page 28.—Adv.

Timblin's Short-horns.

THE Short-horn herd of Timblin Bros., Eden, Wis., has become well known through the showing which has been done at many of the leading county fairs in the state. At the present time they are offering yearling bulls for sale sired by Clara's Prince. See advertisement on page 28.—Adv.

HOLSTEIN-FRIESIAN CATTLE.

Breeders Wanting 30-lb. Herd Sires

We Invite Your Attention to

Three Young Bulls

No. 151, calved March, 1916. Sire, Korndyke Segis Johanna 127132, a 38-lb. son of the 40-lb. bull, Johanna McKinley Segis by King Segis, and whose dam, Pontiac Lady Korndyke (A. R. O. record 38.03) is the highest record daughter of Pontiac Korndyke. Dam, Pabst Blackberry, a 31.68-lb. three year old by a 29-lb. grandson of Hengerveld De Kol. Second dam, a 23-lb. three-year-old by King Pontiac Champion, a 31-lb. son of King of the Pontiacs. Third dam, a 33.86-lb. daughter of De Kol 2d's Butter Boy 3d.

No. 156, calved April, 1916. Sire, King Pontiac Champion, has 41 A. R. O. daughters. The only one tested as a mature animal made over 1,000 lbs. butter in a year. Dam a 31.51-lb. daughter of Sir Hengerveld Model Johanna, that has twenty A. R. O. daughters, two above 30 pounds. Good A. R. O. breeding for several generations.

No. 152, calved April, 1916. Sire, King Pontiac Champion. A 30.38-lb. daughter of Hengerveld Model Johanna, a son of Hengerveld De Kol. Dam's dam, A. & G. De Freule De Kol 2d, a 29.68-lb. cow.

Several young bulls by the above sires, all out of A. R. O. cows, ranging in price from $100 up, depending on breeding and age. Be sure to address

PABST STOCK FARM, R. 30, OCONOMOWOC, WIS.

THE 30.90-LB. SHOW BULL
NORTH STAR VERA SIR BEETS 97406

AS we now have four crops of calves by this sire, we are compelled to offer him for sale. He is a show bull as his picture shows him. He is perfectly gentle and quiet, even with strangers, is a quick, sure server, and we guarantee him to be absolutely right in every way. He was born December 24, 1911. Sire, SIR BEETS CORNUCOPIA NETHERLAND, that was never defeated in the show ring. Dam, HAPPY HOME VERA ORMSBY, A. R. O. record 30.90. First check for $500 gets him.

FRED ALBRECHT WATERTOWN, WISCONSIN

2 Yearling Sons of the Richly-Bred Holstein Bull
KING HENGERVELD PONDYKE

THIS bull has 20 A. R. O. daughters, 2 with records over 30 pounds of butter in 7 days. He was sired by King of the Pontiacs, that has 175 A. R. O. daughters, 2 with records over 40 pounds. Bull No. 1, born December 18, 1914, ¾ white, good and straight. Dam, Kinsman Beauty, 19.25 lb. 7-day record, 675 pounds butter and 16,032 pounds milk in a year. She is a granddaughter of Pontiac Aaggie Korndyke. Price of bull $150. Bull No. 2, born September 24, 1915, ¾ white, very straight. Dam, Roberts' Fearless Lassie, a show cow, calved on show circuit so not yet tested, but will be this fall. Her dam and grandam both have 7-day and yearly records 757-784 pounds of butter for the year. Price $125. Send for extended pedigrees. Address **DR. DAVID ROBERTS, R. 4, WAUKESHA, WIS.**

A Richly Bred Aaltje Salo Bull

BORN February 28, 1915. Ready for immediate service. His dam, Aaltje Salo Netherland Mechthilde 78488, as a five year old made 23.35 pounds butter in seven days, 38 days after calving. She comes from a long line of heavy-producing ancestors. She not only has inherited this heavy-producing ability, but also transmits it. She has three A. R. O. daughters, one with a record of 28.63 pounds butter as a four year old. Her grandam, Aaltje Salo 5th's Netherland, has eight A. R. O. daughters holding the world's record for five years. The sire of the bull for sale is the 27-pound bull, DAISY JOHANNA 5TH, 1st prize two year old at the Wisconsin State Fair. Address

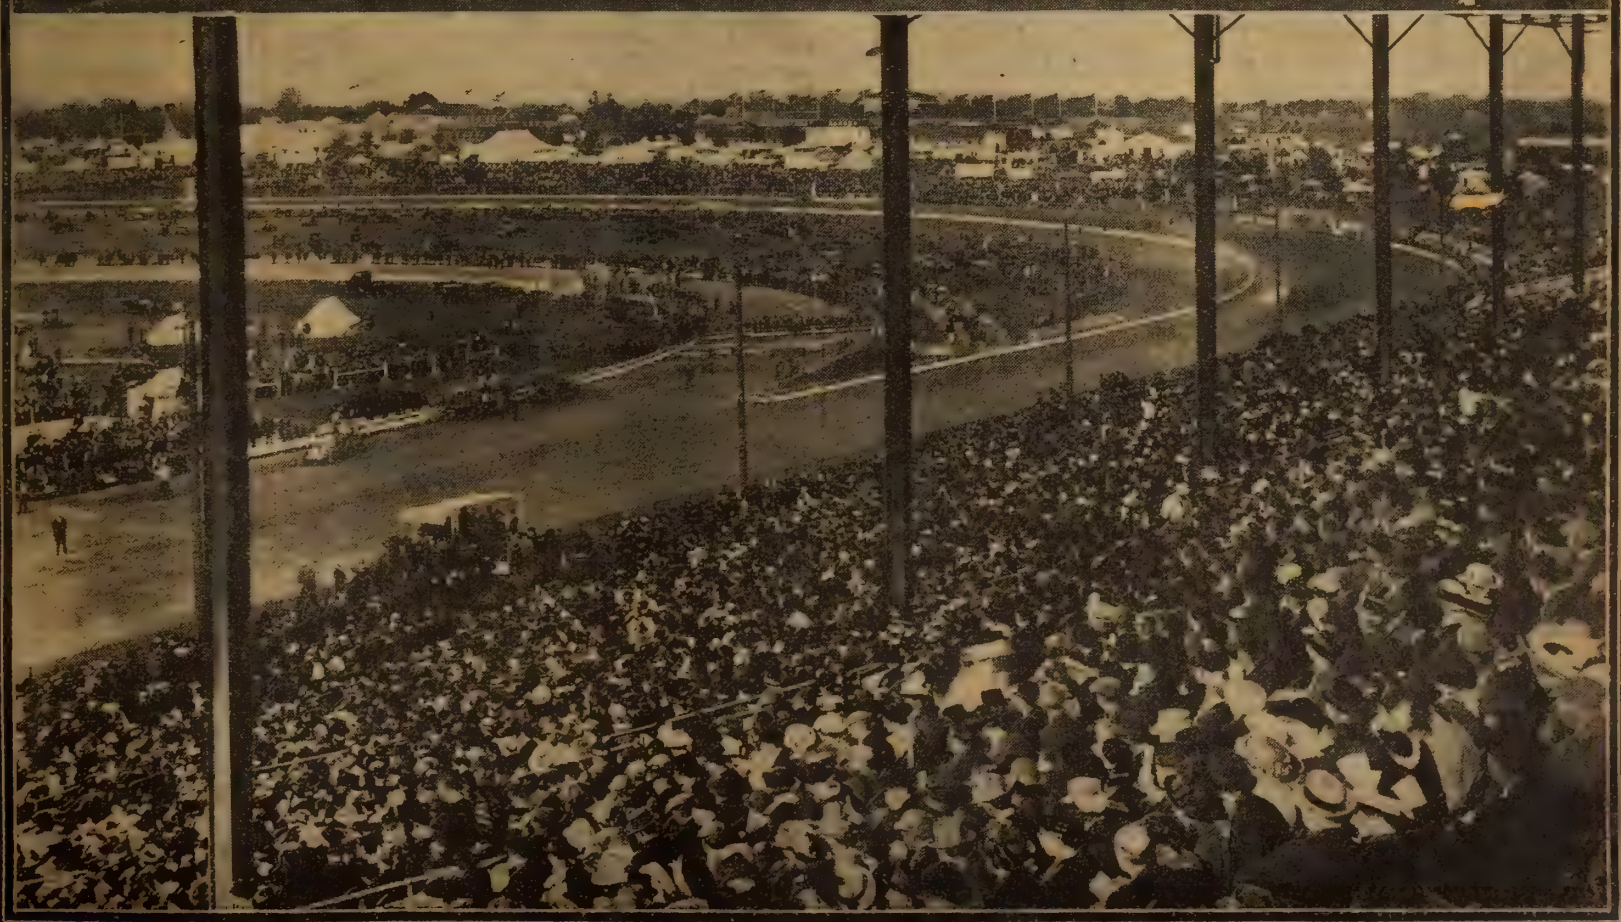
VOL. XLV. NO. 37. THURSDAY, SEPTEMBER 14, 1916. WHOLE NO. 1807



Reports of Grain Yields Are Good

Threshing Will Soon Be Finished—Silo Filling Has Begun—Corn Prospects Favorable—More Rain Is Needed.

WISCONSIN.

Barron County.—Threshing is done. Most of the small grain and corn is below normal. Oats are light, yielding from thirty to forty bushels per acre; barley is yielding a little better than oats, and rye is good, running from twenty to thirty bushels of grain of good quality. Corn has done well lately and its condition is about 85 per cent normal. A frost on September 2d hurt the corn and potatoes to some extent. Potatoes are poor and will not make more than 50 per cent of a crop. The yield of alsike clover is good.—Wm. Bartlett.

Chippewa County.—Threshing is practically all done. Barley and rye are fair, oats are light weight, and peas are good. Buckwheat has not been cut yet, but prospects are poor. The potato crop is a failure. Corn is coming [illegible] been harvested, and most of it threshed; the yields are good. Corn on heavy soil will make a fair crop if the frost holds off for a few weeks, but corn on light, sandy soil is practically dried up. We had a few showers during the last part of August, but they did not do much good. Most of the pastures are dried up. Potatoes will be light, and fruit and vegetables scarce.—Geo. Ashbacher.

Door County.—Threshing is in full blast, but the grains are turning out to be below the average. Oats are making about forty bushels per acre, barley thirty bushels and rye about thirty-five bushels. Peas are also below average, running about twenty bushels per acre. Corn is growing well, but needs rain. Potatoes are poor and also need rain. Beans are not filling out well, on account of drouth. Pastures are poor, and many cattle are being fed in the barn. The apple crop, especially fall apples, is very good.—L. E. Birmingham.

Dunn County.—The threshing returns show that oats and barley are fair crops, winter wheat is of good quality, but there is some cheat in it, and spring wheat is shrunken badly. Potatoes are very poor. Old pastures are dried up. The second crop of clover is fairly good and has plenty of seed in it. Plowing is almost impossible because the ground is too dry. Corn is well eared and nearly ready to cut. Rain is needed.—E. A. Finley.

Eau Claire County.—Corn is being put in the silo, but it is died out badly. The crop is not more than half normal. Oats that are threshed are light and making not more than from ten to thirty bushels per acre. Barley is also light, running from two to twenty-two bushels per acre. Buckwheat is making about one-third of a normal crop, having suffered from dry, hot weather. Some clover is being cut for seed. Pastures are dried up, and many live stock are being fed corn and hay. Except for a few early ones, the potato crop is a total failure. We have had no rain for more than six weeks and the ground is too dry for plowing.—C. A. Koll.

Florence County.—The principal crops, oats and barley, are running from thirty-five to forty-five bushels per acre in this locality. The potato crop is light. Fruit has not done well. Pastures are very good, and rain has been sufficient.—Phill Kelmes.

Forest County.—The extremely hot weather in August did some harm to oats and potatoes. Threshing has begun and, in general, the yields are good. Early potatoes promise well, but late ones did not set well. Corn has done well and the biggest hay crop in the history of the county has just been harvested. Pastures have plenty of good feed.—H. A. Kamm.

Grant County.—All crops are dried up, as we have had little rain for the last two months. Pastures are dry and cattle have to be given dry feed. Early potatoes are rotting and late ones will be a failure. Corn is looking well, considering the drouth it has gone through.—A. V.

Green Lake County.—Threshing is nearly finished; small grains are averaging about one-third less than last year's crops, and the quality is not so good. Rain is needed again for corn, pastures and late potatoes. The early corn is commencing to harden, and promises a fair crop.—G. B. W.

Iron County.—Weather conditions are fine. Oats are threshed and the yield has proven to be light. Meadows and pastures are in good condition. Garden truck and sweet corn are good. Early potatoes are fine in quality, but light in yield. Late potatoes are doing well. Live stock are in fine condition. —J. A. Becker.

Jackson County.—Small grains are nearly all threshed. The quality and yield are not as good as last year. Corn has been suffering from drouth in some parts of the county. The pastures and new seedings are suffering also. Late potatoes are practically a failure. Many silos are being filled now. A recent frost in the northeastern part of the county killed some of the corn, beans and buckwheat.—C. S. Ristow.

Jurneau County.—August was a dry month and pastures are short. Small grains are making fair yields of good quality. Corn is late and cannot make over two-thirds of a crop. We have a shortage of potatoes, although rain would probably make the late crop. At present, potatoes are selling at $1.60 a bushel.—J. H. McNown.

Kewaunee County.—Early potatoes are hardly worth digging. Late ones are fair. Garden truck and corn are very much in need of rain, and some of the corn is maturing too rapidly. Threshing is in full blast, and oats and rye are running above the average, while barley is running below. The ground is too hard to plow for fall seeding.—Fred Lutz.

La Crosse County.—Continued dry weather has hurt the potato crop, which will be very light. Corn is ripening fast and promises a good yield. Silo filling has begun and will have to be hurried, or corn will become too ripe. Lowland pastures are excellent, and [illegible] ing fine. Fewer [illegible] the market this [illegible] D.

[illegible] Corn is develop- [illegible], but will be a light crop. [illegible] are feeding corn to cows, in order to keep up the milk flow. Pastures are all burnt out. Much threshing is being done, and oats are yielding from forty-five to sixty bushels per acre. Late potatoes will be a complete failure unless rain comes soon. A large number of cattle are being sold on account of shortage of pastures. The cattle, sheep and hog exhibits at the Lafayette County Fair were excellent.—W. F. Pease.

Marinette County.—Threshing is about half done and grain crops are turning out lighter than last year. Oats are averaging from thirty-five to forty bushels per acre, while barley and rye are doing some better. Pastures are fair, but need rain. The potato crop will be very light. The second crop of clover was short in growth, but good in quality. Corn is doing fine, although rain is badly needed. Some fall plowing has been done, but the ground is too dry for good work. Cattle are doing well.—H. B. Pederson.

Price County.—Threshing is in full blast; all grain is light on account of late seeding last spring. Oats are running from twenty-five to fifty bushels per acre, which is about 35 per cent less than last year. Potatoes show large, long vines, but few tubers. Farmers claim this year's crop is about one-third less than last year's. Shippers are offering 90 cents per bushel for potatoes, as compared with 40 cents last year. Corn is doing fine and two weeks more of good weather will ripen the early corn. Pastures are in good shape and cattle doing well. From June 1st to September 1st this county averaged two rains a week.—J. W. F.

Sauk County.—Crop conditions, in general, are normal. The second cutting of clover was light. The new seeding, which seemed partly burnt out at the time the nurse crops were harvested, has been benefited by the recent rains, and now shows an excellent, even stand. Pastures also have revived noticeably. Corn is maturing rapidly and silo filling will soon begin. Corn is short in the stack, but has good ears. Potatoes look green and thrifty and prospects are much better than they were last year.—Richard F. Klemm.

Sheboygan County.—Continued fair weather has been pushing the corn crop along, so that there will be plenty of silage. The late potato crop will be light, blight having done considerable damage. Potatoes are now selling at $2.00 a bushel retail. Threshing has been in progress for several weeks. The yields are only fair; oats are averaging about fifty bushels per acre, and barley, forty bushels; rye is light and winter wheat is poor, due to winterkilling. The heaviest yield of oats reported here is seventy-five bushels per acre of Pedigree No. 1.—M. J. Hoppert.

Taylor County.—Threshing is in full blast. Oats are yielding fairly well, but barley and rye are poor. Hay and clover made splendid crops and were harvested in excellent condition. Pastures are getting better since the rains. Gardens are not up to average. Corn is doing well, but the potato crop will be short, especially the late planting.—John E. Miller.

Walworth County.—The season has not been good for milk production. Pastures are better now than they were a month ago. The early sowing of oats made about fifty bushels per acre, and barley went from thirty-five to forty bushels of grain of good quality. A large amount of grain has been sold. Corn is uneven and the greater part of it is short. Potatoes and garden truck have not done well this summer.—Ora P. Taylor.

Waushara County.—A light frost visited this county, but the damage done was slight. Winter rye is yielding far below the average. It is selling at $1.25 per bushel. Oats are not turning out well. Potatoes are scarce and the late planting needs rain. Cattle are in good condition. Corn is coming on well, and will make a crop if frost holds off a few weeks longer. The creameries have several motor trucks and teams to handle the cream in this section.—Lloyd H. Bovee.

MINNESOTA.

Goodhue County.—The prospects of bumper crops were ruined by the dry, hot wave, during which wheat and barley were injured in a few days' time. The hot wave is broken now, but the dry weather continues. A rain at this time might save the corn and potatoes. Corn is doing well, but potatoes are almost a failure. Pastures are very dry. Spring wheat is making from two to twelve bushels per acre only, but winter wheat averages better. Oats are fair, yielding from twenty-five to thirty-two bushels per acre. Apples are good, but storms have thrown many of them from the trees, thus making them unmarketable. Garden truck needs rain. —Otto W. Kolshorn.

BLIND MILTON DICTATING TO HIS DAUGHTER
From the original by Munkacsy, in New York Public Library

The Vision of the Blind

"Thousands at his bidding speed,
And post o'er land and ocean without rest;
They also serve who only stand and wait."

Was the spirit of prophecy upon John Milton when, more than two hundred and fifty years ago, he dictated those words to his daughter?

Did the "blind poet" have a vision of the millions of telephone messages speeding instantly over hundreds and thousands of miles of wire spanning the continent?

"They also serve who only stand and wait." The Bell Telephone is your servant even while it "only stands and waits." The whole system is always prepared and ready for your instant command.

Every wire and switchboard and telephone instrument is kept alive and responsive by an army of telephone workers.

Each one has his special part to do and, because he does it faithfully, countless messages speed throughout the length and breadth of the land, at every minute of the day and night.

APPLETON Husker and Shredder

Every year hundreds more farmers buy huskers, as they find the most economical, efficient way to save all the *value* of a corn crop is to husk the ears and make fodder of leaves and stalks. Appleton was the first successful husker. Appletons made years ago are giving good service today. Few parts, extra strong, mean long life, few repairs and sure *dependability*.

GUARANTEED TO DO MORE WORK WITH LESS POWER

than any husker of equal size. Appleton husks cleanest, shells least; has most efficient corn saver. Cuts or shreds leaves and stalks while husking ears. Fodder value saved from small acreage pays its cost. Easiest, safest to operate. Works in all conditions of corn.

Free Husker Book: describes 4 sizes for engines of 4 h.p. and up. Write for it now.

Appleton Mfg. Co., 5122 Fargo Street, Batavia, Ill.

Higher Prices for Furs

We *pay* higher prices because we *get* higher prices. Fur manufacturers know that the prices we give trappers, hunters and farmers for their pelts attract the best fur offered in the country. When they want especially fine furs they come to us, and are willing to pay extra. We are at centers of manufacture and have long established outlets. So send your furs to us. Get our price lists early. You are sure of the prices printed. No deductions for commissions, transportation, or anything else. Liberal grading. Prompt returns

THURSDAY, SEPTEMBER 14, 1916.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

THE MORTGAGE THAT NEVER COMES DUE.

THERE is one phase of the new farm loan law which I do not believe is clearly understood by the rank and file of farmers. This is in regard to the manner in which the loan is paid back. Farmers who borrow from the federal land banks will never have to repay the loan on a certain day; they will repay it gradually, on each interest-paying date. Let me explain, as best I can.

The average farm mortgage of today is made for five years, but I am advised by a life insurance official who has charge of the investments of his company (it is a well-known fact that most of our farm loans heretofore have been secured from life insurance companies) that the life of the average farm mortgage here in the grain belt is only three years. In that length of time it is either paid off, or the borrower cancels it and makes a new one, for either a larger or a smaller sum, dependent on whether he wishes to add more land to his holdings, increase his herds or otherwise widen or lessen his farm operations.

Under the new rural credit law, however, all this will be changed for the farmer who borrows from the federal land banks instead of from the present sources of capital. The law states that no loans shall be made by the new banks for less than five years nor more than forty years. And the principal is paid back on what is called the "amortization" plan. Now, this is quite a formidable sounding term, but in reality it is not nearly so formidable as it might appear at first. It simply means the progressive repayment of the loan's principal. When the federal land board was in the grain belt last week the chairman, Mr. George W. Norris, informed those of us who attended the public hearings that 1 per cent, added to the interest every year, would pay the loan off, in full, in thirty-three years. For instance—suppose I borrowed $1,000 and the rate of interest was 5 per cent, making my annual interest charge $50. If, instead of paying $50 a year, I paid $60 a year, in thirty-three years I would have the loan entirely paid off. Let me give you another instance. The figures are not original with me, nor have I had an opportunity to check them over, but I believe they are accurate. If I were to borrow $1,000 at 5 per cent interest and if, instead of merely paying the regular interest charge of $50 a year, I paid $80.24 a year, the loan would pay itself off in twenty years.

Now, let me show you the advantage of this new plan: The borrower is never confronted by any one certain (uncertain might be a better term, so far as the inability to pay is concerned) date when the principal comes due and the mortgage must be paid off, or it will be foreclosed. The borrower is constantly paying off the principal as he pays the interest, and in such small instalments as never to work a hardship upon him. The farmer who borrows $1,000 for thirty-three years and pays $60 a year instead of $50, or the farmer who borrows $1,000 for twenty years and pays $80.24 a year instead of $50, is never confronted with such an excessive payment that he cannot make it, nor has he the weight of a mortgage-foreclosure fear constantly hanging over him. Merely by paying $10 a year or $30.24 a year (as the case may be, in the two instances I have cited) he wipes out the entire mortgage principal in course of time. However, should he desire, he can reduce the principal in multiples of $25, or pay the mortgage off entirely on any interest-paying date, after it has run at least five years. It is not absolutely imperative that he continue the mortgage for the length of time assigned when the loan was made, but it must run at least five years, during which time payments must be made on the principal, proportionate to the length of time for which the mortgage was made.

I want this point clearly understood, if possible: The farmer who borrows under the new law never has to pay the debt back on one stipulated date; he pays it back gradually throughout the entire life of the mortgage. He cannot borrow from the federal land banks on any other terms. If he wants to borrow for merely three years and pay the debt off all at once, he must go to private capital or the insurance companies and banks, to whom he was in the habit of going before the new law was passed. But if he borrows from the federal land banks, even for the minimum length of time (five years), he pays the principal back, with the interest, in five annual instalments; he cannot borrow in any other manner. I hope I make myself clear on this point; it is most important.

As I told you last week, I am going to discuss the various phases of the new rural credit system, week by week, for the next month or two. Next week I shall attempt to show you how the farmer, who desires to borrow, must go about the first steps of the process, joining with at least nine other farmers in organizing a local farm-loan association. These phases of the new law all appear at first to be needlessly encumbered with red tape; perhaps a little discussion between us, before the banks are ready for business and while there is ample time to ask questions and to learn, may help us to give the new law the fair trial to which it is entitled.

TARIFF COMMISSION CREATED.

THE congress which adjourned Friday of last week did at least one good job, in my opinion. It created a non-partisan tariff commission, upon which devolves the duty of recommending proposed or desired changes in the tariff, with an eye to the needs of the various business interests of the country rather than of the political effect or the political capital which may be made thereof. My farmer friends who remember—and who of us can forget, with so much at stake?—how the administration before the present one attempted to betray the farmers of America in a lop-sided reciprocity arrangement with Canada will be especially jubilant, for the danger then to our farming interests was great and the escape a narrow one.

I do not know the full particulars of the bill as finally passed, at this writing, for in the closing hours of congress there are often many trades and perhaps some good features of the bill creating the commission were omitted at the last. But it will certainly be a relief to have the tariff on those things which the farmer produces and those things which he purchases established with an eye single to the farmers' needs and best interests, rather than to the effect which it will have upon the chances of victory of some political party at the next election, as has been the custom all too long. Just why so important a matter as the tariff should ever have been permitted to become a political issue, rather than one to be settled on business principles, is a mystery to me; but such has been the case for all too many years. We have had tariff revision after tariff revision, some upward and some downward, and practically all of them have simply resulted in disturbing the commercial balance and subjecting business to unnecessary uncertainties, in the interests of whichever political party happened to have the dominating hand. When the various schedules came up for final adjustment, the test was not the need of the nation or the welfare of the workers most directly affected so much as political exigencies and advancements. The welfare of the farmers of a certain section were traded off for the welfare of the miners of a section thousands of miles away, these trades enabling the party in power to entrench itself still more firmly and to punish those congressmen who stood in the way of the political preferment of those who held the whip hand for the time being.

Now, all this is to be changed. The president is to appoint a non-partisan commission, the duty of which shall be to investigate the tariff needs of the country, to determine the effect of tariff changes upon the workers directly affected and to report its findings to congress and the president. As the bill was originally drawn up, the very first industry to be represented on the commission was agriculture. A hard fight was made on this provision of the bill and it may have been stricken out at the last; I am not now advised. I sincerely hope that it was retained, for no industry has more at stake in tariff revisions than agriculture. This much I know: If the provision was stricken out, it was against the wish and will of the man who has been the head and front of this tariff commission fight for the past two years—my very good friend, Mr. H. H. Gross, to whom the farmers of America owe credit for the passage of the Smith-Lever bill, which brought the state agricultural colleges to their very door. Mr. Gross has championed the representation of agriculture on the commission ever since the first gun of the campaign was fired. I have talked with him on the subject several times and heard from him many times, and he has been determined throughout that the farmer should have a voice—and a loud one, too—in the determination of our future tariff schedules. When it comes to giving credit where it belongs for a good fight well conducted and valiantly won, Mr. Gross is the man. Readers of this paper will recall a splendid article he wrote a year or so ago, setting forth the value of the proposed non-partisan tariff commission to the farmer. I am telegraphing my congratulations to Mr. Gross today for the splendid fight he has won. I sincerely hope he was not obliged to surrender any of his principles at the last minute in order to insure the passage of the measure. Of this I shall have more to say later on, when full particulars are received by me.

AUTO, TRUCK AND TRACTOR

I AM INDEBTED to Mr. K. A. Kirkpatrick, agricultural agent for Hennepin county, Minnesota, for some splendid testimony on the question of the practical usefulness of the automobile to the farmer. Here is what Mr. Kirkpatrick has to say:

The automobile has revolutionized the marketing problem for the farmer who sells produce in the city. A farmer fifteen or twenty miles out of Minneapolis used to have to get up at 1 to 2 a. m. in order to get to market when it opened at 6 a. m. Now he sleeps until thirty or forty minutes of opening time. Then he gets back to the farm much earlier.

Many Hennepin county farmers own trucks to help them in marketing. About twenty-five trucks have been sold to Hennepin county farmers this summer. Especially the potato growers use them. One can carry a load to market and get the price allowed the farmer who ships, although this farmer must pay the shipping cost out of it. Then, he drives home with a load of manure. He can get this for nothing from the transfer barns, providing he can promise to haul regularly. With a team he can't contract for regular hauling.

The emergency value of the automobile is not to be lightly regarded. It endears the car to the farmer more than any other use, perhaps, because it is in the emergency that a car is appreciated. I know a farmer whose threshing rig broke down this fall, when an intricate piece, hard to duplicate, was ruined. It wasn't in the near-by town. It coldn't be described by telegraph with any certainty that the right piece would be returned. So the farmer drove to Minneapolis, 100 miles away, and got it with only the loss of one day's work. It would have taken from three days to a week any other way.

What he has to say interests me greatly, and, being in line with my own extensive observations and the testimony of farmers generally, I am convinced he is well within the truth in all his remarks. The automobile has revolutionized farm life and farming conditions as has no other factor in recent years. What Mr. Kirkpatrick has to say in regard to the increasing popularity of the motor truck among the farmers of his vicinity is right in line with information which comes to me from another portion of the grain belt: The territory adjacent to the Omaha stock market. Here is an item from a newspaper published in Council Bluffs, right across the river from Omaha:

Frank Skipton has broken all trucking records in this locality. Yesterday afternoon he left Council Bluffs with a big auto truck for the farm of W. D. Shaw, who lives near Briscoe, in Adams county, between sixty-five and seventy miles from Council Bluffs.

He loaded there thirty-one head of hogs, shoats weighing 100 to 125 pounds each. These were put on the truck on two decks and will be delivered today to W. P. Barnett at his farm near Weston. Mr. Skipton figures that he will be on the road with the shoats about four hours.

Many loads of hogs have been trucked to market from this locality to South Omaha, but this is the first time a bunch has been hauled such a distance. Mr. Skipton has been the pioneer in introducing the truck for the marketing of stock.

The custom of hauling hogs to the Omaha market in auto trucks is said to have become quite general, the eyes of many farmers having been opened to the advantages of this quick and easy transportation. What with the gasoline engine, the automobile, the truck and the tractor, the progressive and prosperous farmers of the grain belt are going about their work in a way of which their fathers never dreamed. Farming has certainly been revolutionized when we hitch the gasoline engine to the silage cutter and the feed grinder, plow and harrow our fields with a tractor, haul our hogs to market in an auto truck and take the whole family to town in an automobile for church, Chautauqua, institute, "movie" or other form of entertainment which rids the farm of its former loneliness and isolation and broadens the mind of every member of the family with the necessary contact with the outside world.

Better Service to Wisconsin Readers.

LAST week The Wisconsin Farmer published the first article on Wisconsin live stock winners at the Iowa State Fair and the first pictures taken of the Wisconsin stock which won best ribbons. No other agricultural publication in the state made any mention of this important information or published any pictures. The Iowa State Fair is the first of the great grain-belt fairs and it affords the first opportunity for stockmen to get a line upon the show herds of the year. For two years past Wisconsin has not sent out so many cattle or horses because of danger in shipping. Wisconsin did not get a chance to show off her fine dairy stock at the Panama-Pacific Exposition. Hence, there was a great deal of interest in the Iowa fair and especially among Wisconsin breeders, who were anxious to see what sort of a record our state breeders would make.

Following the Iowa fair is the Minnesota State Fair at Hamline. Wisconsin breeders were entered in almost every division and class of live stock at this fair. The Wisconsin Farmer was represented by experienced live stock men who have given us a report published in this issue. We venture to make the claim in advance that no agricultural paper, not even the Minnesota papers, will excel The Wisconsin Farmer in the report of this fair, and we feel confident that farm papers in this state will not give anywhere near so accurate or comprehensive a report as is contained in this issue. Our readers are invited to make a comparison of The Wisconsin Farmer reports and those of any other farm papers they may have at hand, and see for themselves whether we are right. This week our editorial staff is at Milwaukee, and the Wisconsin Farmer next week will publish as usual a complete report of our own state fair, covering not only the various divisions of live stock, but other departments and special interests as well. Our reports are written by our own editors, men who are busy in the state practically all of their time calling upon farmers and breeders. The Wisconsin Farmer uses no press reports, but its editors arrange and verify, just as closely as it is possible for them to do, every item covered.

The aim and policy of The Wisconsin Farmer is to do best those things which are worth doing. Our standards are governed by opinions of farmers and breeders as gathered by our own staff, who spend a very large share of their time on farms of this state.

Farm Management Is All Important.

ATTENTION of our readers has been called to the increased cost of farm implements, and the farmer has not only to meet this expense, but also increased cost of farm labor. It has been necessary for farmers to organize in some sections to try to meet the labor problem. These things lead to one important conclusion, and that is, that we must manage more carefully and by this plan bend every effort to increase farm profits. Every business in our country has found it necessary to manage more carefully in order to increase production and maintain profits. The farmer has never suffered from high prices. He occupies an ideal position in this regard.

Farm management is a matter of utmost importance to the farmer of today. There is nothing discouraging in the outlook to the man who understands the business of farming and who will look to the avenues of largest gain and profit by the markets which are best. Along with the high prices which have to be paid for labor and implements and the staple food products which the farmer must buy, comes high prices for grain and the highest prices for live stock which we have ever known. The last census report shows that there were 177,127 farms in Wisconsin, and the average value of products per farm was $1,507, divided as follows: A total of $838 for all crops and $669 for live stock enterprises. This census is about eight years old and it is fair to presume that on present prices the average production value of each farm in Wisconsin has increased and probably interest in live stock has increased the percentage of revenues from live stock enterprises. But the figures referred to are the only accurate ones we have at hand at this time.

Farm management as a study should teach us the crop and live stock enterprises which are most profitable. About one-seventh of the farm revenue in this state is derived from hay and forage crops and these crops are closely allied to live stock enterprises.

An insight into past experiences is afforded by reports of a number of farms to the government crop department. This shows that of the farms reporting from Wisconsin the average value of field crops was divided as follows: Corn, $199; wheat, $82; oats, $210; hay and forage crops, $253; barley, $145; rye, $79; and potatoes, $50. Conditions vary so on farms that it is not possible to advise definitely just what a man should raise to increase profits. But accurate records of costs will tell just as interesting a story on the management side as yields will tell concerning seed and cultivation. It is just as essential to know whether fields are profitable as it is to know whether cows give enough milk to pay for their keep. Fields which have failed to make sufficient profit with certain crops ought to be tried with something else, even if the scope of management extends to the use of additional stock to turn the crop into profits.

Farm management is not a high-sounding name nor a bugaboo to dodge away from. It is simply keeping cases on specific operations rather than lumping everything into one pot and in the end having no definite idea just where the profits were made.

Condemns Use of Grade Bulls.

THERE is an increasing interest on the part of breeders regarding the superior value of pure-bred live stock as compared with grades. At this time the subject is brought up by a Wisconsin subscriber, Mr. R. A. Kolb, who is special agricultural agent in Taylor county. Mr. Kolb writes:

In an editorial in a recent issue of your paper the question is asked, "Why use grade bulls?" and the article does not attempt to answer the question, but rather cites proof for not using a grade bull. Perhaps the question can be answered in part by another question, "Who is to blame for the use of grade bulls?" For every grade bull in use there have been two interested parties: (1) The man who bought the grade bull and is using him, and (2) the man who sold the calf and is using a pure-bred bull himself.

Who then is to blame? Surely not the first party, who has not used a pure-bred bull and does not appreciate the value. He uses a grade bull because he doesn't know any better and often is led to believe by the seller that the grade is just about as good as a pure bred. The blame rests with the owner of the pure-bred bull. The man knows better, for he wouldn't use one himself, but is willing to profit (?) by the ignorance of his neighbor. Surely no one would use grade bulls if no breeder sold them except to the butcher. Breeders of live stock are far too careless in this matter and in their hands lies the remedy. Less than two weeks ago the writer heard one of the foremost breeders of Wisconsin express his opinion on grade bulls. While he did not advocate the use of grade bulls, he countenanced and even attempted to justify their sale. There lies the danger.

What arguments can they offer in favor of this traffic?

(1) "If we do not sell this man a grade bull, someone else will, and we may as well take the money." While this is perhaps a good argument to take blood money, it little justifies the sale by a man who professes to be a breeder and who believes in building up good herds.

(2) "There are so many poor pure-bred bulls sold that a good grade is sometimes better than a poor pure bred." Since when have we advanced to such an extent in the question of moral ethics that we can say, "One wrong justifies another, or two wrongs make a right"? This argument might even hold water if all the grade bulls that are sold were good ones, when, in fact, but a very small per cent of them are. The average grade bull that is sold is only a trifle better than a scrub, for he is not the result of years of selective breeding, nor continued top crossing.

(3) "Pure-bred bulls are too expensive for some people." Are we who call ourselves live stock men going to use as flimsy an argument? When bulls fit to head any pure-bred herd (except where special mating is desired) can be bought for $100 and less, when bull calves of good breeding and from good herds though without official records can be bought for less than $50, when banks more than ever are willing to loan money for the purchase of good live stock, when federal and state departments of agriculture, the agricultural press and all other agencies combined are reaching out their arms to help the man in the purchase of better live stock, will we say farmers cannot afford the price of a pure-bred bull?

(4) "A grade bull is better than a scrub and it at least gives this man a start." This is good consolation for a blunt conscience. If a man sought to attain a high wall and besought our help and we gave him a ladder that reached half way up when we might as well have given him one to take him the entire distance, we would console ourselves and say, "At least we gave him a start."

The man who uses the grade bull is not to blame. He knows no better and he does not read of nor does he see the proofs to the contrary. As long as the men who own and use pure-bred bulls in their own herds are willing to sell them to their less informed neighbors and attempt to justify their act so long will men use grade bulls. The responsibility rests with men who know better. What we need is not proofs of the value of pure-bred bulls, but rather a sentiment among breeders that will condemn the sale of these counterfeits.

We take it for granted that Mr. Kolb has especially in mind the pure-bred dairy herd when he states that a young bull, fit to head a pure-bred herd, can be purchased at a figure as low as $50, because a well-bred, meritorious beef bull cannot be purchased for this price. However, the same principle applies in beef production as in dairying, and those who use the right type of pure-bred bulls are simply taking advantage of the law of inheritance to stamp improvement on the young stock. The individual who is content to use grade males in his herd year after year must make up his mind to lag behind the procession. If he is engaged in dairying he will find that his cows are not producing more than 200 pounds of butter fat a year while plenty of herds can be found that almost double this amount. While it is true that one may find individual grade cows that are good producers, it is likewise true that these cannot be expected to reproduce themselves unless prepotent pure-bred sires are used. Land is getting to be too high in price to trifle with the grade bull.

Picking and Storing Seed Corn.

E. C. DAVIS, of St. Peter, Minnesota, writes the following experience, indicating the care which is necessary in the selection and storage of corn for seed:

We aim to produce seed that will test close to 100 per cent without ear testing. To get such seed, we find it necessary to pick corn before any hard freeze, but not necessarily before the first hard frost. A severe freeze is apt to injure even the ripest corn, but the husks will protect the ears from light frosts.

We find that corn which is only dented will make good seed if properly cared for, but it is very difficult to handle without injury to the soft kernels, is difficult to cure without molding or loss of vitality, and lacks the weight, shelling percentage, and appearance of mature corn. The more mature the corn is the better, just as with other grain or with live stock.

In picking from the standing corn we go through the fields on foot, taking two rows at a time. Each man carries a grain bag with a strap over the right shoulder, the bag under the left arm with the opening to the front. This leaves both hands free. At convenient distances through the field we cut out a row or two of corn on which to empty the bags and to drive through with a wagon and load. The ordinary man can easily pick five to ten bushels a day of select ears in good corn. This would be enough for, say, at least forty acres.

The man who wants seed for eighty to 100 acres of corn can pick it in two days, exclusive of time required to hang the corn. The total cost of picking seed in this way and putting it on racks or hanging it by the husks or by twine is about fifty cents a bushel. Corn picked in this way is usually rather sappy and must be put on racks to dry at once. It must not be left in bags or piles over night, as it is liable to mold or heat and lose its vitality.

We cure all our seed on racks which hold each ear separate so that they cannot mold easily and also allows a free circulation of air. We find that artificial heat is not advisable in curing seed corn, as it is easy to get the heat too high and it also induces mold. Plenty of ventilation is the best method of removing the moisture from corn, as a good breeze will carry away more moisture than a large furnace will absorb. Ordinarily plenty of air is all that is needed to cure any seed corn. Of course, where there is a large bulk the ventilation must be very good. It is impossible to get too strong a circulation through the corn.

We are careful not to let our corn freeze before it is thoroughly dry, but after that we keep only enough fire to keep out the moisture and prevent extreme low temperatures.

We find that this method, which can be easily followed by any farmer, produces the very best grade of seed corn obtainable.

Those who expect to keep seed corn for sale will be interested in Mr. Davis' experiences, especially since his plans have met with great success in the years he has been working them out.

Forcing Hogs With Self-Feeder.

AN Illinois breeder, Mr. G. T. Hood, asks for information in regard to the best method of feeding pigs that now weigh about sixty pounds. He asks especially about the relative feeding value of a ration composed of barley and tankage fed in a self-feeder on the one hand and corn and tankage on the other.

In experiments conducted at the Wisconsin station in the feeding of barley meal and corn meal it required 435 pounds of corn meal to make 100 pounds of gain, and 471 pounds of barley. This is a difference of thirty-six pounds in favor of corn meal. In a second experiment where each lot of hogs was fed milk it required 330 pounds of barley and 398 pounds of milk to make 100 pounds of gain on the one hand and 306 pounds of corn and 371 pounds of milk on the other. Averaging both trials, it was found that it required 8 per cent more barley meal than corn meal to produce a given amount of gain. The result harmonizes with experiments conducted at other stations, indicating that barley is less valuable than corn for fattening swine, though it must be conceded that the difference is rather slight.

We can find no results of experiments in which tankage was fed in conjunction with barley and also with corn, but it is fair to assume that corn would hold the lead. In deciding whether an attempt should be made to feed barley or corn, the value of these grains locally would be the deciding factor. Where there is a supply of barley on hand it could be used to advantage and in that case a smaller proportion of tankage would be required than would be needed if corn constituted the bulk of the ration. There is this difference, however, between the two grains, that corn may be fed either on the ear or shelled without further preparation in the way of grinding or soaking, whereas barley is so hard that it must be prepared for feeding in advance. If a good grinding outfit is at hand it will pay to grind it, but, if not, very satisfactory results may be obtained by merely soaking it, and in that case it is not so well adapted for use in the self-feeder. Barley meal may be fed with a self-feeder with reasonable expectations of obtaining good results, but this is not the case with soaked barley.

WISCONSIN TRACTOR SHOW.

Demonstration at Madison Was Well Attended Considering the Weather and a Genuine Interest in Tractor Power for Farm Work Was Exhibited by the Visiting Farmers.

TENTED CITY IN WHICH TRACTORS AND ACCESSORIES WERE HOUSED AT MADISON DEMONSTRATION.

WISCONSIN farmers to the number of several thousand witnessed the successful performance of various makes of tractors at the closing demonstration of the season held in Madison last week. Though the weather was somewhat inclement for such a demonstration and the crowds were not so large as they would otherwise have been, the show was a success and those who did attend were well pleased. The manufacturers did their part and did it well. Manager F. M. White, head of the agricultural engineering division at the Wisconsin College of Agriculture, handled the show successfully and he wasn't responsible for the rain. The local committees, including the managers of the Madison branch, did exceptionally good work. The grounds selected included the old Allis farm across Lake Monona from Madison. Madison business men took special pains to entertain the visitors, providing band concerts, free picture shows, parades on the lake and other attractions. Transportation problems were handled satisfactorily and people were satisfied.

The question brought to the front by the Madison demonstration was whether the modern tractor is a practical machine for the Wisconsin farmer. Stripping the demonstration of its entertainment features, the real point for discussion was what a tractor will do and whether it is economy for a farmer in this territory to own one. A good many farmers were completely satisfied on this subject and others will give it more careful study.

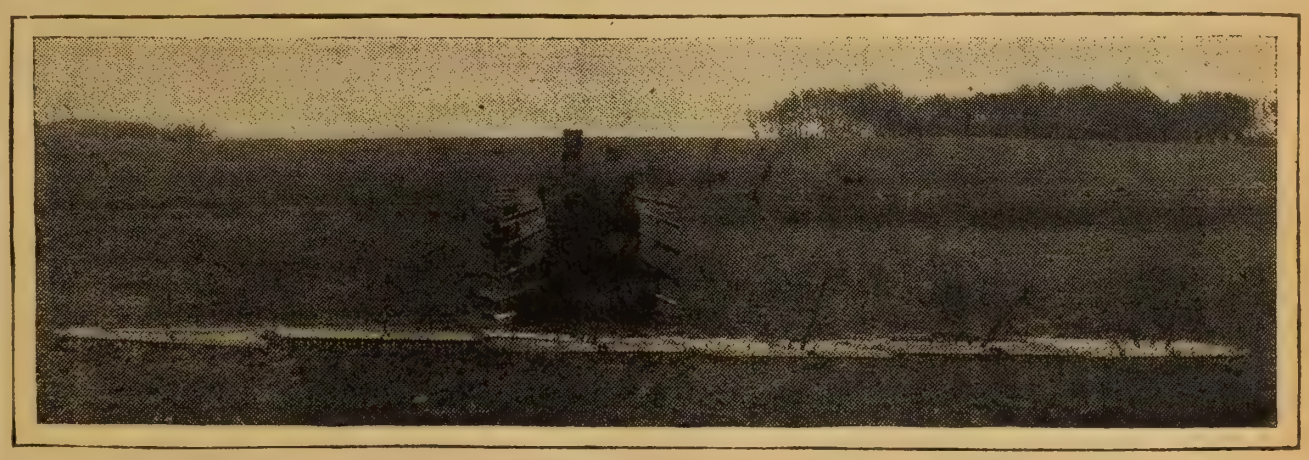
Conditions in Wisconsin are somewhat different than in other states where tractors have been used with great success. There are a good many small farms in the state and there is a good deal of rolling land. There is a large amount of land which can be handled with greatest profit as pastures for our hundreds of thousands of dairy cattle. We could not undertake to say the tractor has a place on the small truck farms of this state. Of course, it would be of no use in our cranberry marshes. But the man who has 160 acres of land devoted to general crops, and who is obliged to use six and ten horses or more, and, of course, the farmer who handles a larger tract and uses more horses, will be interested in what the tractor offers in the way of economy and increased efficiency. Even on farms of less than 100 acres the light tractor has proved an economical implement.

Time and experience will prove just where the tractor can be economically used. The demonstration was for the purpose of proving that the tractor will do the work which it is claimed it will do. For the purpose of establishing this point the Madison demonstration and the seven previous demonstrations held under the auspices of the associated manufacturers, afforded positive proof. No one could see the work done by the tractors in the fields on the Allis farm, and on other fields in the vicinity, and have a doubt about the efficiency of the tractor. This doubt about whether the tractor will deliver the goods has been removed by the great educational campaign which has just been closed. Tractors ranging in price from $400 to $2,500 and a few even higher in price, were used in practical field work at Madison. They plowed stubble ground, marsh land, sod which had not been turned in fifteen or twenty years, and stony ground and did it successfully and without any apparent damage to the machines. Plowing with a tractor and with the modern tractor plows with two to eight and even sixteen bottoms is an easy task. The machines handle the work without much grunting, and the operator can work much more rapidly than with horses. Not only can a much larger number of acres be plowed each day but plowing can be done better with a tractor. The power of the tractor is steady and even and in ordinary soil the plows can be set to turn a furrow six to eight inches with ease.

READY FOR A START AT ONE OF THE PLOWING DEMONSTRATIONS.

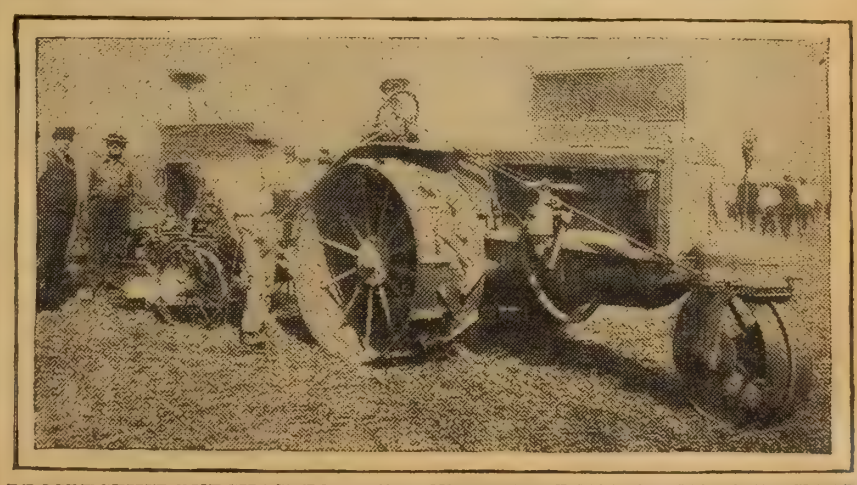
Most of the farmers who visited the Madison demonstration had never seen such an exhibition before. It was a wonderful sight to them. They spent the morning hours visiting the tents at headquarters grounds and examining the mechanism of the machines and the plows used. A great deal of interest was aroused in the cultivating machines. One firm exhibited a two-row cultivator which was operated in its small space in a tent and there was always a crowd about. Another firm kept a tractor engine running continuously with the working parts all exposed to view and this exhibit was interesting to everyone. Demonstrators were on the ground to explain the different principles involved in the several types of tractors shown. Plow companies were also

(Concluded on page 21.)



THIS LITTLE FELLOW FOLLOWED UP THE PLOWS AND DID THE WORK HANDILY.

BY THE USE OF THE BELT THE FEED GRINDER IS SOON SET GOING.



PROSPECTIVE PURCHASERS WERE INTERESTED IN THE VARIOUS TYPES

To Learn More About Clearing Land.

The Land Clearing Special through Upper Wisconsin last May and June was such a success that it has been decided to duplicate the performance again this fall. In co-operation with the Soo Line, the Wisconsin College of Agriculture, Agricultural Engineering division, will run a special train and give stump pulling and dynamite demonstrations beginning September 18th. The counties and towns which have been chosen for these demonstrations are as follows: Rhinelander, Oneida county; Philipps, Price county; Butternut and Marengo, Ashland county; Patzau, Douglas county; Birchwood, Washburn county; Taylor county, station not yet decided, and Owen, Clark county. Carl Livingston will be in charge of the demonstrations and his experience last spring and the success which attended his work indicates another very successful trip this fall.

A list of manufacturing firms co-operating in this effort has been supplied The Wisconsin Farmer and they are as follows: Hercules Manufacturing Co., Centerville, Iowa; Flynn Stump Puller Co., Superior, Wisconsin; A. J. Kirstin, Escanaba, Michigan; Zimmerman Steel Company, Bettendorf, Iowa, and the DuPont Powder Company, Wilmington, Delaware. The demonstrations will include practical work in stump pulling with hand, horse and steam power and also with blowing out stumps with dynamite. In addition there will be work in combining these two important forces in land clearing. The demonstrations last spring brought together about 8,000 farmers and settlers, about 90 per cent of whom were estimated to be directly interested in land-clearing problems.

Better Prices For Wisconsin Stock.

Mr. Andrew W. Hopkins, secretary of the Wisconsin Live Stock Breeders' Association, recently received a letter from Colorado asking for names and addresses of men who had good dairy stock for sale. The letter came from the state dairy commissioner and stated that such purchases as were made for shipment to Colorado would have to be in carload lots, a carload from each section. Mr. Hopkins wrote to Frank G. Swoboda, county agent in Langlade county, among others, and asked whether it would be possible to pick up a carload of Holsteins or Jerseys in that county. Mr. Swoboda replied as follows:

It is a matter of regret to us that Langlade county has no surplus dairy cows and heifers to offer at the present time. We would, most assuredly, like to participate in the generous profits resulting from the sale of high-grade dairy stock to western and southern buyers.

Many carloads of common stock are shipped monthly from this county, going mostly to Chicago and Milwaukee stockyards at a fair price, quality considered. Not a few farmers are getting visions of increased profits from well-bred dairy stock, and are using good pure breds. Their generous milk checks are proof of their wisdom. But far too many are still wasting their time and energy using low grades and scrubs.

The efforts of our cow-testing association and local cow-testing clubs, also several breeders' associations are doing much in stimulating the interest in better bred stock and better dairy methods. Almost every week sees new recruits to the ranks of pure-bred sires.

Within a very few years, Langlade county should be in a position to ship out good dairy grades in carloads. Keep us in mind for future inquiries.

Mr. Swoboda expresses in a nutshell the situation in a number of Wisconsin counties where there are not enough good surplus stock to fill such demands upon Wisconsin as the one from Colorado. It is fortunate that our breeders are beginning to see the possibilities in the pure-bred business.

In And Around Wisconsin

The report of the American Jersey Cattle Club for the week ending September 1, 1916, shows 276 bulls registered and 612 cows, making a total of 888. For the same week transfers recorded show 186 bulls and 438 cows, or a total of 624.

Dane county's tobacco crop is estimated at 22,000,000 pounds, which will probably break previous records. The crop will be worth about $3,000,000. Those who were discouraged with tobacco last year on account of the price and the weather missed it this year if they turned their attention to other crops. Of course, the unexpected high price has had a good deal to do with profits this year. While some contracted their fields at 11 and 12 cents, others have held back and are now offered as high as 18 cents for their product. The quality of tobacco in Wisconsin is unusually good, especially in sections which have shown it during the dry season.

There is something of a contest on in the vicinity of Bloomington, Wisconsin, and some rather interesting claims of yields of oats are being made in the Fennimore Times. M. V. Burris, superintendent of the Grant county farm, claimed seventy-five bushels to the acre and this was considered a pretty high mark for anyone else to measure up to. Now comes Frank Bohringer, who claims to have harvested eighty bushels to the acre and ninety bushels by weight from a twenty-acre field. Len Scott got 6,000 bushels of oats off ninety-five acres and Harry Tornowske, 5,100 bushels from ninety acres. Dave Baldwin threshed 4,000 bushels from sixty acres and Roy Bailie 5,220 bushels from eighty acres. Furthermore, the prospects for corn around Bloomington are good and the farmers say that a good many of them will be able to beat Mr. Burris' record on the county farm.

For the first time in the history of Kewaskum and vicinity, Washington county, Wisconsin, farm land recently changed hands at $200 per acre. The Rosenheimer and Day farm, better known as the Schield Stock Farm, is the property which brought this price. This is a fine stock farm and a splendid value, farmers say, at the price which was paid for it.

Mr. George Sterr, of Washington county, exhibited last week at the Hartford Times office some stalks of corn which, if they are an indication of the balance he has in his field, point to a bumper corn crop. There are about twenty acres in Mr. Sterr's field and ten acres of it is exceptionally good. Stalks taken from the better section of the field measured fourteen feet in height. The crop was planted May 22d. While the weather has been unfavorable for corn in Washington county, Mr. Sterr got a fine crop by the use of fertilizer which minimized the effect of the dry weather.

About 50 per cent of a crop is about all that we may expect from Wisconsin on potatoes this year. Last year the state produced 28,000,000 bushels and if the total is above 15,000,000 bushels this year the crop estimators will be surprised. The farmer who has good potatoes may expect to get a fancy price this year. In September potatoes sold as high as $2 to $2.50 per bushel in a number of the cities. This was the retail price. There is every indication of a small late yield in the leading potato centers. If we could have the crop two years ago and the present prices what a bonanza it would be for the potato grower.

An Automatic Silo Filler.

AN EFFICIENT silo filler is a necessity on the modern stock farm. One that will give good service for years and is operated easily and efficiently is the Rowell Automatic, manufactured by The I. B. Rowell Co., 1112 Lincoln Ave., Waukesha, Wis. The Rowell Company manufactures a complete line of sizes and repair parts can be easily obtained. The features in which the Rowell Automatic excels, are explained in the free catalog, which any farmer may have for the asking. When writing, mention that you saw the advertisement in this paper.—Adv.

ATLAS EXPLOSIVES

Make Your Stump Land Grow Big Crops For You

Don't let stumps and rocks cheat you out of any more money. Next year you can be plowing over every inch of ground where they now stand. For you can *blow* them out quickly and cheaply with

Atlas Farm Powder
THE SAFEST EXPLOSIVE
The Original Farm Powder

Punch a hole under a stump, load, light the fuse, and the stump is instantly blown out in kindling, ready to be carried away and burned. It doesn't take long to clear up a big field with Atlas Farm Powder.

There are many other ways Atlas Farm Powder will help you. Use it for subsoiling and get bigger crops—plant trees with it and they will grow twice as fast and bear earlier. Get prices from the Atlas dealer near you.

Book "Better Farming" Sent FREE

This illustrated book shows the improved method of clearing land, subsoiling, draining, tree-planting, etc. It explains how any farmer can grow bigger and better crops, and how Atlas Farm Powder can be made to replace expensive labor for many farm operations.

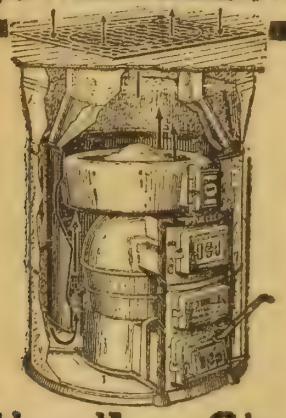
One Register Furnace Keeps Whole House Warm



Better than Stoves
Uniform Heat at all Times
—25% Saving in Fuel—

DO NOT go through another winter with the discomforts of stoves. Your women and children, who spend most of their time indoors in winter, will keenly appreciate well ventilated, comfortably heated rooms. The Mueller Pipeless Furnace does away with the inconvenience and danger of poorly stove-heated houses. Put in the

MUELLER PIPELESS FURNACE

Easily installed in any house—old or new, without tearing up floors or walls. Means pure air, clean house. Burns wood, coal or coke. Built of solid cast iron—lasts a lifetime. There are many reasons why you should consider only the Mueller.

Write for Free Booklet

Gives you all the facts about the Pipeless System of heating and the Mueller Pipeless Furnace. Gives full details of construction and shows pictures of installation. Tells how to apply it to your own home, old or new; how to tell the difference between good and poor furnaces—the things to look out for and the things to avoid. Booklet sent free on request.

L. J. MUELLER FURNACE CO.,
204 Reed Street Milwaukee, Wis.

As we are makers of heating systems of all kinds since 1857—regular hot air pipe furnaces, steam or hot water boilers and vapor heating systems—we are in a position to give you honest advice on your heating requirements.

WITH a stump puller that has *speed* and *strength* with *enormous pulling power*. The latest model puller backed by twenty-five years' experience. The

STEEL GIANT
Portable
Stump Puller

Equipped with new patented pulling features, Jiffy Couplings and our special Snub Take-Up. Develops single, double, triple and quadruple power—producing 135 h.p. Generous trial offer—strong, protective guarantee. Write to R. E. Choate, land-clearing expert, today for special land clearing information.

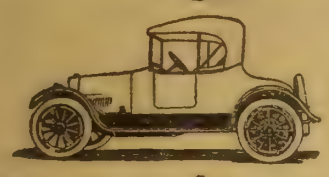
Reo

The "Best Thing" About Reo Cars



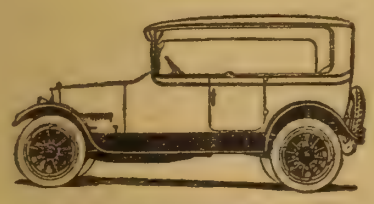
The New Four-Cylinder 3-passenger Reo Roadster, $875

The New Reo the Fifth, "The Incomparable Four," $875

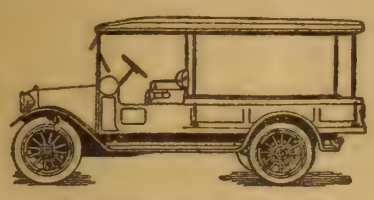
The New Four-Cylinder Reo Enclosed Car, $1025

The New 4-passenger Reo Six Roadster, $1150

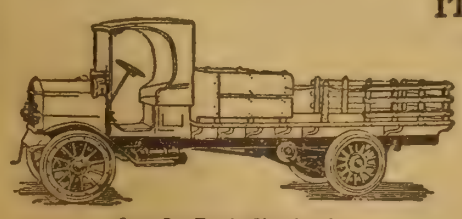
The New 7-passenger Reo Six Touring Car, $1150



The New Reo Six 7-passenger Sedan, $1750



1500-pound Reo "Speed Wagon," $1060



2-ton Reo Truck (Chassis only, with Driver's Seat and Cab), $1650

(All Prices are f. o. b. Lansing, Michigan)

IT WOULD BE DIFFICULT to say just what is the "best thing" about Reo automobiles and Reo motor trucks.

ONE WOULD SAY "the service that goes with every Reo." Another would say "uniform excellence" is "the best thing" about Reos.

BUT WE WOULD say without a second's hesitation that one of the best things is the fact that every Reo model is, long has been, and long will be, standard.

FOR IT DOESN'T MATTER when you buy a Reo—in season or out—this year, last year or next year—you have a car that is standard and the depreciation of which is less than that of any other automobile of similar price or passenger capacity.

YOU'D SAY REO QUALITY was probably the "best thing" about Reos—and of course, there's no gainsaying that.

REO QUALITY at Reo prices is universally recognized as "The Gold Standard of Values."

THAT IS THE BASIS of Reo prosperity, Reo demand and Reo reputation, of course.

BUT OTHERS MAKE good cars—in spots. By fits and starts as it were. This year a good model; last year one they are not so proud of; and next year—who knows?

THERE'S SO LITTLE consistency in the past performances of most of them, none can predict the future with any degree of accuracy.

BUT REOS RUN TRUE TO FORM always. If it's a Reo then it's a good car—no matter what year it was made.

IF IT'S A REO there's always a fixed value for it in the new, or in the "used car" market.

IS IT A NEW REO—it will command a premium. "You were lucky to get a Reo," is an expression a new owner hears frequently.

FOR EVERYBODY KNOWS that the demand for Reos is always greater than the factory output—always has been.

IS IT A 1911 MODEL—any dealer will tell you its present value—and they won't differ five per cent in their estimates.

THAT'S THE REMARKABLE difference between Reos and other cars—with only one exception. And that isn't a competitor of Reo.

CONSIDER THIS most carefully in your selection of a car—this fact, that every Reo model is standard from season to season.

IT IS A STAPLE, not a novelty, you buy when you buy a Reo.

AND IF YOU DO have to wait a few days for a Reo, whereas you can get other makes right off the floor—remember there's a reason, and that reason is the best possible reason why you should select a Reo for yours.

IT MEANS MONEY in pocket for you in years to come—as well as satisfaction from the day you do get your Reo.

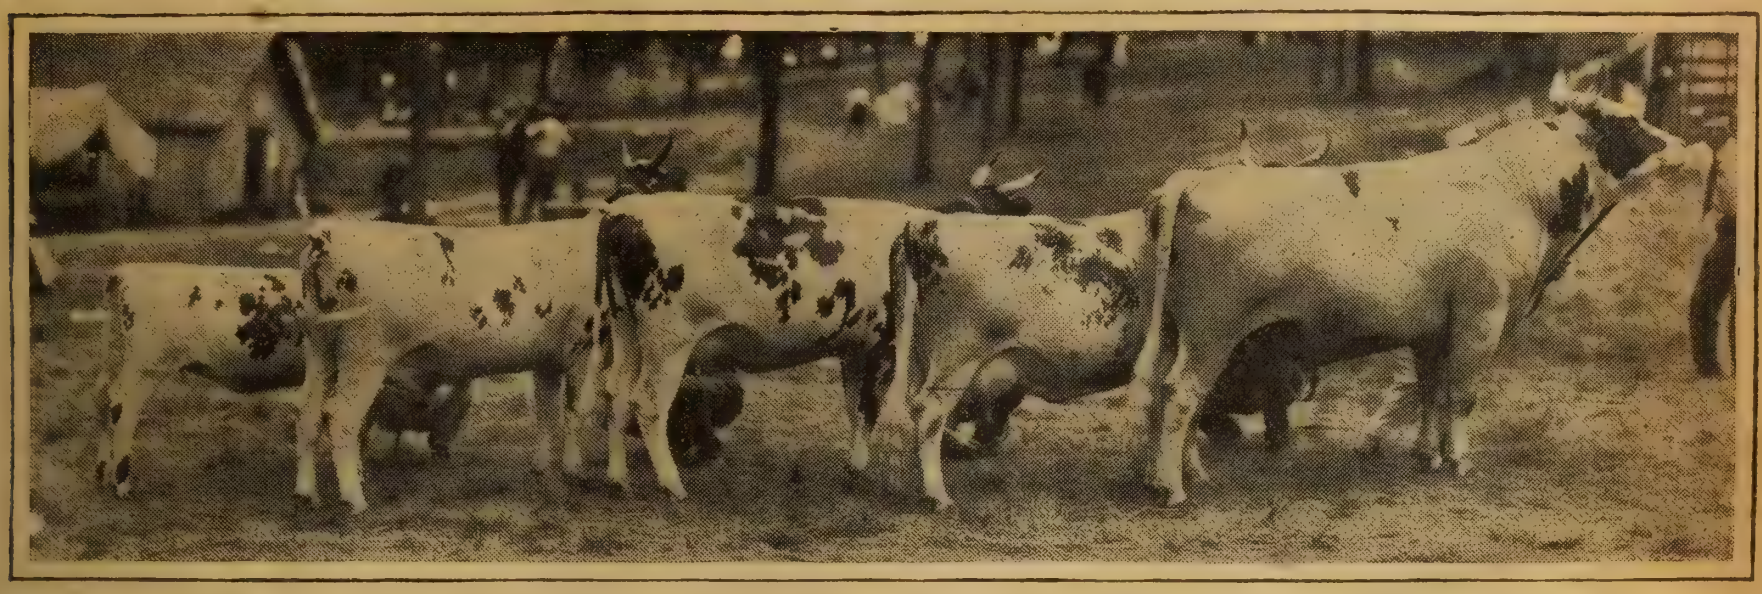
WISCONSIN STUDIES TRACTOR.

Most Important Factor in Agricultural Progress in the State This Season Has Been the Study of the Tractor and Its Practicability for Wisconsin Farms.

MINNESOTA'S GREATEST FAIR.

The 1916 Exposition at Hamline Breaks All Records For the Size, Number and Diversity of Its Exhibits—New Attendance Record Established For Opening Day of the Fair.

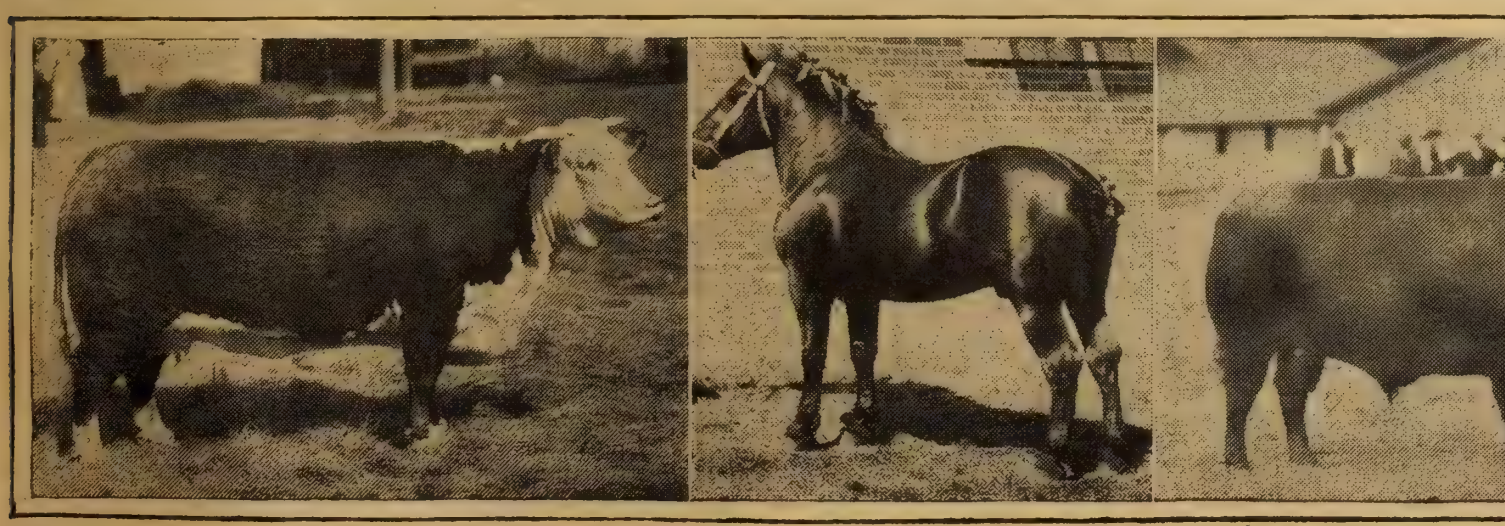


SECOND-PRIZE AGED AYRSHIRE HERD AT THE MINNESOTA STATE FAIR. OWNED BY FERNDELL FARM, LADYSMITH, WIS.

WITH exhibits more varied and excellent than ever before, live stock entries greatly increased over previous years, and many new and interesting features, the 1916 Minnesota State Fair and Exposition at Hamline last week passed into history as the most notable ever held by the state. Although outclassed at times by other states in the live stock and agricultural displays, Minnesota gives way to no other fair in the great diversity of exhibits which point out the great resources and capabilities of the state and the rapidly developing northwest from which it draws support. It is not a fair constructed entirely for farmers, as many others are planned, but it is also designed for the city folk, the office and the factory worker, as emphasis is laid on the manufacturing and industrial resources of the state as well as agriculture and live stock. So it remains that the Minnesota fair stands in a class by itself and is an exposition in every sense of the word. It may also be said without fear of contradiction that the exhibition last week was entirely in accord with the enviable reputation, won after a series of many successful fairs, that Hamline is the home of a fair and exposition that stands preeminent and second to none. Minnesota, a great state in herself, has the entire northwest to draw from and it naturally follows that the attendance records should exceed those of other western fairs and this year was no exception. The opening day (Labor Day, a holiday in St. Paul and Minneapolis) saw 93,454 persons pass through the turnstiles, as compared with 89,232 on the opening day last year, which is the record first-day attendance, excepting Labor Day in 1912, when Theodore Roosevelt's presence drew a crowd of 100,600. It was a great, seething crowd that thronged the spacious grounds on Labor Day and there are few fairs which could accommodate 93,000 persons. On Tuesday 30,437 persons filed through the gates, an increase of a few hundred over last year and a record second-day attendance, while an equal number braved the elements on Wednesday and trampled through the mud and rain all day to take advantage of the exceptional opportunity to see the splendid exhibit of live stock and other resources of the state on exhibit. The rain began early and fell continuously until night, but this did not deter the thousands who had come in from surrounding points for Live Stock Day.

GROUP OF BELGIANS SHOWN AT THE MINNESOTA FAIR BY WILLIAM CROWNOVER, HUDSON, IOWA.

Never was there a finer display of pure-bred live stock at the Minnesota Fair than was seen in the barns and the judging arena this year. The showing disclosed the rapid progress which Minnesota is making in live stock breeding and the fair officials are giving the breeders great encouragement through the offering of special prizes in what is known as the Minnesota classes, open only to breeders from that state. It is in live stock that some other fairs often excel Minnesota, but with the increased interest it is evident that in a few years Minnesota will always be in the front rank in this respect, as it must be borne in mind that the dairying possibilities of the state are being very rapidly developed and that Minnesota is bringing in many fine animals for foundation purposes from other states. Mr. John C. Simpson, secretary, who is in a splendid position to watch the increase in pure-bred live stock breeding, predicts that Minnesota and the northwest will make greater strides along this line during the next decade than any other section of the country and the fine quality of the Minnesota animals shown this year tends to bear out his predictions. The Minnesota herds came into competition this year with some of the best from Iowa, Wisconsin, Illinois and other states and the competition was very keen, as the departments were exceedingly well balanced, there being good showings in all classes. There was not the tendency often seen at some other fairs to have an especially strong showing of one breed and weak in another, as all classes were well filled, there being twenty-five to thirty animals each in the younger classes in the cattle departments and eighteen to twenty animals each in the older classes. Mr. T. G. Patterson, superintendent of cattle, reported about 850 head shown and that the quality was the finest he had ever seen at Minnesota. The entries ran into much higher figures, but many breeders became alarmed at the threats of a railroad strike and failed to show up when the fair opened. Minnesota can always be depended upon to hold a good horse show and this year's turnout was no exception, something like 600 horses being exhibited. As an indication of the diversity of interest at the Minnesota fair the evening light horse shows may be cited. At these society competes with their fashionable turnouts for the ribbons, while on the forenoons the coliseum was crowded with those who love the drafters and are interested in the judging. The sheep show was much larger than in 1915, there being thirty-two more pens and all classes were filled, Shropshires leading in breeds. Supt. F. S. Marshall was very highly pleased with the



VERNET QUEEN 8TH, SENIOR AND GRAND CHAMPION HEREFORD COW AT MINNESOTA FAIR. OWNED BY LA VERNET STOCK FARM, JACKSON, MISS.

SINGMASTERS' KEOTA INSIGHT, SECOND-PRIZE PERCHERON STALLION, 3 YEARS AND UNDER 4.

BLACKCAP STAR, FIRST-PRIZE AGED ANGUS BULL, OWNED BY C. D. & E. F. CALDWELL, BURLINGTON JUNCTION, MO.

showing of Minnesota stock in the state classes and the growing interest in sheep raising in the state is indicated by the large showings of Minnesota breeders. The swine show was the best ever held, there being a great increase in the number of swine from Minnesota farms and the entries from other states were especially large this year. The state in the boys' pig contests, which are being conducted in various counties, is doing a splendid work and the showing of pigs by these boys was excellent and the fair is to be complimented upon the part it has taken in this work. About forty herds competed in the Poland China and Duroc Jersey futurities, which are designed to increase interest in these breeds and the American Yorkshire Club held its first national show in connection with the fair. An extra hog barn was added this year and it is predicted it will be necessary to add at least two additional barns to take care of the swine exhibitors next year. The cattle entries were so large that there was not sufficient room in the barns for all and the Ayr- herds were quartered in tents, showing being the larg- years.

The ... standing features which ... attracted the attention of the visitor to Agricultural Hall was the large number of progressive counties which had sent exhibits and the splendid showing of forage crops and corn. No building on the fair grounds was of so much interest to the visitor concerned in the agricultural progress of the state and Supt. Frank B. Logan was highly pleased with the showing. Any doubt that Minnesota will not have mature corn this year was dispelled by the display of corn, which was not only large but high in quality, and Prof. J. G. Moore, of Madison, who judged the grains, complimented the grain display in the highest terms. The small grain was not up to the high standard of 1915 because of the hot weather, but the showing of threshed grains was very good, weather conditions considered. It was light and the color a trifle off, especially the barley and wheat. The showing of potatoes was good, although the Minnesota crop varies this year. Mr. Logan reported that the crops were good in the southern and northern parts of the state, while in the territory surrounding the Twin Cities it was almost a failure because of the dry weather. This bears out the statement that Minnesota is a state with many varieties of climate and soil. An interesting and added feature was the exhibit of Minnesota Indians, this display showing what the Indians on the reservations in that state are doing along agricultural lines. They displayed all kinds of vegetables and grains and the showing of corn, mostly of the flint varieties, was good. The exhibit was encouraging, as it proved that the Indians are contributing their share to the agricultural growth of Minnesota and those who neglected to spend a few minutes in the Indian booth missed a real treat. In connection with the corn exhibited by individual growers were the samples grown by the boys entered in the acre corn-growing contests conducted in various counties and the showing by these boys indicates the great value of the work and what it means to the future of the state. Twenty-one counties, as follows, exhibited: Aitkin, Becker, Beltrami, Cass, Cook, Crow Wing, Itasca, Kittson, Koochiching, Morrison, Todd, Wadena, Washington, Cottonwood, Dakota, McLeod, Nicollet, Olmsted, Pipestone, Renville and Sibley. The exhibits were a revelation of the agricultural resources of the state and the showings made by the far northern counties were a surprise. Notable among these was that of Cook county, which lies in the northeastern corner of the state, abutting the Canadian line and without a railroad in the county. The grasses and forage crops shown in this booth ranked with those of any other county and in these crops every booth was at its best. The county exhibits tend to bring out the best which can be produced in the respective counties and in this way there is assembled a display of grains, both sheaf and threshed; vegetables, fruits, grasses and forage crops that could hardly be assembled by the state in any other way at any price. So the fair in offering big prizes and cups to the winners in each of the three districts—southern, central and northern—brings together a great agricultural display. Cass county took first in the northern division, Wadena in the central and Sibley in the southern division. C. L. Blanchar, of Sherburne, won the corn contest, winning sweepstakes with the best ten-ear sample of both white and yellow dent corn and the best individual ear. With all these various sections contributing it is not to be wondered at that the agricultural display at Hamline last week set a new record.

The Minnesota fair has always been especially strong in its horticultural department and it is doubtful if a finer display of fruits, vegetables and flowers was ever brought together than was assembled in the horticulture building at Hamline last week. It was a treat to the eye to walk through this commodious, well-lighted and well-arranged building which the fair has provided for this department and with an apple display that ranks with the great national apple shows, it is not to be wondered at that Minnesota has won the reputation of a great fruit state. "Every Apple Shown Grown in Minnesota" read the big sign which greeted the visitor on entering the building, and it must have been hard for one not familiar with Minnesota's fruit-growing capabilities to realize that the large commercial showing of more than 500 boxes of apples was all Minnesota grown. This display stretched across one entire corner from the floor to the ceiling and was most pleasing, while beside it were more than 4,000 plates of fruit shown by individual growers. The "Home of the Wealthy Apple," as the Lake Minnetonka region has become known, was well represented. The Minnesota horticultural display stands second to none and few state fairs, if any, have given so liberally of prizes to encourage this department. In the center of the big building plays a bubbling fountain, spraying at its base a wonderful floral display, and a visit to the Minnesota fair is never complete without a few hours in this building. The showing of garden truck was very fine, and it was not thought possible to bring together this year so fine a display, considering the hot weather with which the gardeners had to contend.

The dairy building this year was the center of unusual interest with its splendid display of butter and cheese. The judges pronounced the 275 tubs of butter on display to be of the highest quality ever seen at the Minnesota fair, which illustrates the progress that state is making in dairying. Not only are new creameries springing up weekly, but the quality is being constantly improved and the prize-winning creamery butter received a score this year of 97. This tub was turned out by George Deeg, a buttermaker in the creamery at Owatonna, while Mrs. August Lundeen, of Forest Lake, took first on her tub of dairy butter with a score of 93. There were ten entries of dairy butter. There are now more than 900 creameries in the state, most of which are co-operative, and Supt. Andrew French, of the dairy department, was highly pleased with the display. The fair has provided a splendid building with refrigeration for the butter and cheese and the showing of creamery fixtures; separators, etc., this year was the largest in history, the building being taxed to take care of the exhibitors. Twenty-three cheeses were shown, one Swiss, five brick and seventeen cheddar. Minnesota is placing more emphasis on the creamery rather than the cheese factory, and this showing of cheese was highly satisfying. The dairy school of the University of Minnesota had an interesting exhibit showing the food value of milk, how to care for the milk from the farm to the creamery, and other important matters connected with modern, successful dairying. The food and dairy commission was also represented with a splendid exhibit, calling attention of the visitors to the magnitude of the dairy industry in Minnesota and the work the commission is carrying out. It was a notable dairy exhibit and one of which the state fair may well feel proud.

Poultry has always been a big show at Minnesota, and all previous records were broken this year, not only in number of fowls shown, but also in quality. One hundred and seven fanciers displayed a total of 2,500 birds with the Barred Rocks leading in number, and the decision of the fair a few years ago to confine the show so far as possible to the leading utility breeds is apparently working out to splendid advantage. The superintendent of this department is Mr. Leslie Parlin, of St. Paul, who has held this position for thirty years. For forty-three years he was a breeder of Buff Cochins, and it is with much pride than he has seen the Minnesota show grow from one of 245 birds thirty years ago to one with 2,500 birds in 1916 with only the foremost utility breeds entered. This was 400 more birds than were ever shown before and the big building, noted for its size, light and ventilation, was taxed to capacity, it being necessary to double up to take care of all the entries. When this building, with its 43,000 square feet of floor space, was built a few years ago, it was thought it would be large enough for years to come, but it now appears that an addition will be necessary. An especially interesting feature of the Minnesota poultry show is the arrangement for the display of flocks. Instead of cooping them in small pens the flocks are shown in wire enclosures in the center of the building, where the fowls are on the floor and have plenty of room to show themselves off to the best advantage. The Northern Orpington Club and the Minnesota branch of the Rhode Island Red Club both held their shows in connection with the state fair show, and the turn-

Make Big Money
Year After Year
In Your Own County

Practically every farm in your territory needs draining. The owners will pay well for the work. You can ditch ten times quicker with a Buckeye than by hand and can make more money than you'd make on 100 acres of good land.

Turn your spare time into money with the

"A Perfect Trench at One Cut"
BUCKEYE Traction Ditcher

It cuts ditches of different widths and depths, through any soil. Ditch in perfect grade all ready for tiling. Operates under its own power and two men can operate.

The Buckeye has proved itself equal to every test and a money maker for its owners. Many are finding it even more profitable than farming.

Pays Better Than 100 Acres

"I certainly think the Buckeye Traction Ditcher is O. K. or I would not have bought my sixth one. We have dug from 30 to 300 rods in 10 hrs. according to soil and depth. We consider 120 rods an average day's work. A man can make more money with a Buckeye than with the best 100 acres I know of."—C. C. Mann, Washington C. H., Ohio.

"My net earnings with the Buckeye in 84 days were $1,902. The treatment and service your company has given me is all that any fair minded man could ask."—Ed Uvaas, Larsen, Wis.

out of these breeds was very large and representative.

Mention of the agricultural features of this fair, without notice of the machinery exhibit, would be incomplete. All previous records were broken and every foot of exhibit space was in use for the first time in the history of the fair. The interest in farm machinery was never stronger and the exhibitors were kept busy throughout the week. Something like 3,000,000 square feet of space was used by the machinery people and more than a score of makes of tractors were to be seen daily in action in their tents and in actual operation on Friday afternoon on machinery hill.

The automobile show this year outranked all previous shows, and most of the 1917 models were on display. The show room in the great liberal arts building was far too small to accommodate all who wished to show, and additional buildings and tents had to be provided. The interest in the automobile show was manifest by the great crowds which constantly thronged the show rooms, and the exhibitors reported a very satisfactory week.

The woman's building was the center of great interest this year, many innovations being introduced. Probably no fair has the arrangements for taking care of the exhibits of this kind that Minnesota has, and the style show which was conducted there this year was attended by thousands of visitors.

The fair this year operated its own souvenir concession booths. This was a new venture and all novelties, such as canes, etc., were sold from booths conducted by the fair. The ruling off of the concession men cost the fair something like $1,500 in fees, but it was hoped to recover this amount by the sale of its own souvenirs and novelties from the fair's booths. This eliminated from the grounds the "barkers" and others which follow these concessions who have often made themselves objectionable, although no protest has been made against the merchandise they sell. The midway has been eliminated and in its place were high-class shows, and the fair is to be congratulated on this movement.

Breeding Cattle.

SHORT-HORNS.

As always, the Short-horn show drew the crowd at the ringside. This year seems to be the inning for young stuff in Short-horn circles, and perhaps the young stuff should always have an inning. The aged classes were small but good; the young classes were large and better. The show was furnished entirely by Wisconsin, Minnesota and Iowa exhibitors and was interesting on account of the general fitness, uniformity and absence of poor lots. Mr. Jas. Tomson, of Carbondale, Kan., made the awards carefully and with much deliberation, weighing differences before each decision. The aged bull class brought out Marr's Avon from the Oloff herd, which was made senior champion over Toyne's two-year-old bull, East Lawn's Champion. The senior bull calf class brought out the strongest array of young bulls in the show. Good Stamp, from the Anoka herd, led the bunch and was later made junior and grand champion bull of the show. The aged cow class was headed by Maxwalton Queen with white heifer at foot. Next to her stood Village Lassie 2d with the eighteen-hour-old heifer calf, Hamline Lassie, at foot. Maxwalton Queen was defeated for the senior purple ribbon by Simplicity 7th, a toppy heifer, lacking something in depth, from the Hill herd. Eliason's junior yearling heifer, Lady Crocus, was given the junior purple ribbon, but failed to get the premier honors, which went to Simplicity 7th. The blues were quite well distributed in group classes. Anoka Farms were strong in the younger groups.

The exhibitors: Anoka Farm, Waukesha, Wis.; Carpenter & Carpenter, Baraboo, Wis.; S. G. Eliason, Montevideo, Minn.; Herr Bros. & Reynolds, Lodi, Wis.; Walter J. Hill, Northcote, Minn.; Eben E. Jones, Rockland, Wis.; Ogle Bros., Minnesota Lake, Minn.; L. C. Oloff, Ireton, Iowa; Otis Herd, Willoughby, Ohio; Leslie Smith & Son, St. Cloud, Minn., and Frank Toyne & Son, Lanesboro, Iowa.

Judge, James G. Tomson, Carbondale, Kan.

The awards:

Bull 3 Years or Over (3 shown)—1st Oloff on Marr's Avon; 2d Hill on Royal Silver; 3d Eliason on Cornerstone.

Bull 2 Years and Under 3 (2 shown)—1st Toyne & Son on East Lawn's Champion; 2d Hill on Thaxton's Secret 2d.

Senior Yearling Bull (2 shown)—1st Carpenter & Carpenter on Sultan Mine 2d; 2d Eliason on Cumberland's Archer.

Junior Yearling Bull (3 shown)—1st Hill on Type's Model; 2d Herr Bros. & Reynolds on Royal Choice 2d; 3d Eliason on Silver King.

Senior Bull Calf (17 shown)—1st Anoka Farms on Good Stamp; 2d Smith & Son on Clansman; 3d Hill on Duke of Northcote; 4th and 8th Herr Bros. & Reynolds on Ruby's Knight and Future Sultan; 5th Oloff on Marr's Avon 2d; 6th Carpenter & Carpenter on Collynie Cullen 2d; 7th Anoka Farms on Lavender Stamp.

Junior Bull Calf (10 shown)—1st and 2d Anoka Farms on Kilblean Champion and Augusta's Sultan; 3d Herr Bros. & Reynolds on Royal Ruby; 4th Smith & Son on Lord Lavender; 5th Oloff on Pride of Avon; 6th Jones on Collynie Cumberland.

Cow 3 Years or Over (4 shown)—1st Carpenter & Carpenter on Maxwalton Queen; 2d Toyne & Sons on Village Lassie 2d; 3d Jones on Verbena of Oakdale; 4th Oloff on Lady Bell 6th.

Cow 2 Years and Under 3 (5 shown)—1st and 5th Hill on Simplicity 7th and Victoria Princess 8th; 2d Eliason on Daisy Lass 3d; 3d Toyne & Son on Bonnie Belle 14th; 4th Jones on Crescent Cumberland.

Senior Yearling Heifer (4 shown)—1st Carpenter & Carpenter on Collynie's Best; 2d Toyne & Son on Eastlawn's Lassie; 3d Herr Bros. & Reynolds on Lady Holly; 4th Hill on Northcote Beauty.

Junior Yearling Heifer (9 shown)—1st Eliason on Lady Crocus; 2d Herr Bros. & Reynolds on Duchess' Last; 3d Jones on Jubilee Cumberland; 4th Hill on Silver Blythsome; 5th Toyne & Son on Lovely Goods; 6th Carpenter & Carpenter on Collynie Mysie.

Senior Heifer Calf (19 shown)—1st and 2d Anoka Farms on Anoka Blossom 2d and Anoka Clipper 2d; 3d and 6th Smith & Sons on Maid of Orange and Mayflower; 4th Hill on Gipsy Maid of Northcote; 5th Eliason on Lady Clara 9th; 7th Herr Bros. & Reynolds on Rare Gift; 8th Jones on Victoria Cumberland.

Junior Heifer Calf (8 shown)—1st Oloff on Avon Aryess; 2d Eliason on Miss May 5th; 3d Anoka Farms on Augusta Anoka 3d; 4th Carpenter & Carpenter on Collynie Mint Drop 2d; 5th Hill on Blossom of Northcote; 6th Herr Bros. & Reynolds on Lancaster Maid 3d.

Senior Champion Bull—Oloff on Marr's Avon.

Junior and Grand Champion Bull—Anoka Farms on Good Stamp.

Senior and Grand Champion Female—Hill on Simplicity 7th.

Junior Champion Cow—Eliason on Lady Crocus.

Graded Herd (3 shown)—1st Hill on herd headed by Royal Silver; 2d Eliason on herd headed by Cornerstone; 3d Toyne & Son on herd headed by East Lawn's Champion.

Young Herd (4 shown)—1st Eliason; 2d Carpenter & Carpenter; 3d Herr Bros. & Reynolds; 4th Jones.

Calf Herd (7 shown)—1st Anoka Farms; 2d Smith & Sons; 3d Herr Bros. & Reynolds; 4th Eliason; 5th Carpenter & Carpenter.

Get of Bull (7 shown)—1st Anoka Farms on get of Sultan Stamp; 2d Smith & Sons on get of Sultan Mayflower; 3d Herr Bros. & Reynolds on get of Master Ruby; 4th Eliason on get of Archer Sultan; 5th Carpenter & Carpenter on get of Lord Cullen.

Produce of Cow (4 shown)—1st Carpenter & Carpenter on produce of Barmpton Leaflet; 2d Herr Bros. &

How to Make Sure

A dollar invested in a hydrometer will give you an accurate knowledge of your battery's health. Use the coupon and be on the safe side.

Willard Storage Battery Co.,
Cleveland, Ohio

Please send me one hydrometer syringe, for which I enclose one dollar.

Name_____

Address_____

Town_____ State_____

Make of Car_____

Take Your Battery's Pulse and Temperature

It doesn't pay to guess.

Just because your storage battery *seems* to be working all right is no guarantee of its condition.

There's an easy way to be sure, and being sure saves many a dollar and considerable annoyance.

Test your battery at least twice a month with a hydrometer. If you don't have such an instrument, you should have. It's a handy thing for filling your battery, too. Take your battery's temperature once in a while on hot days with a dairy thermometer. 100° is the danger mark.

A well charged battery is the first step towards good starting and lighting. Send us the coupon for a hydrometer, or ask for a list of Willard Service Stations, where one of these may be purchased. Then learn about our 90-day free service plan for Willard Battery buyers.

HEREFORDS.

Herefords are coming to the front in Minnesota. One could not expect the showing at Hamline to equal that made at Des Moines either from the quantity or quality standpoint. However, many of the tops of last week appeared at Minnesota and bolstered up by four herds from the Gopher state, the white faces were as strongly represented as they have been in recent years. Some of the Minnesota cattle lacked fitting and appeared at a decided disadvantage in their pasture clothes; others of them were good enough to give an account of themselves in many of the classes. Mr. Thos. Mortimer, of Madison, Neb., worked carefully and selected the good ones with the eye of a master. Bonnie Brae 60th that was placed third in the aged class at Des Moines, took the blue over Gay Lad 16th, another Harris entry which took the blue in the class at Iowa. Bonnie Brae 16th won grand champion bull honors over the junior yearling bull, Gay Lad 40th from the Harris herd that was junior champion bull. Vernet Queen 8th, the aged cow from the La Vernet Stock Farm was grand champion female as at Iowa last week. Miss Gay Lad 32d, the Harris senior yearling heifer was junior champion[illegible]ong Minnesota exhibP. Sorenson made a good showPatter & Sons also deserve

[illegible]xhibitors: R. W. Christie, Wood [illegible]is, Harris, Mo.; La [illegible]ackson, Miss.; Geo. A. Miller, Faribault, Minn.; L. E. Potter & Son, Springfield, Minn.; C. P. Sorenson, Balaton, Minn.; Robert Waldron, Byron, Minn.

Judge, Thomas Mortimer, Madison, Neb.

The awards:

Bull 3 Years or Over (4 shown)—1st and 2d Harris on Bonnie Brae 60th and Gay Lad 16th; 3d Sorenson on Standard 13th; 4th La Vernet Stock Farm on Vernet King 4th.

Bull 2 Years and Under 3 (2 shown)—1st Sorenson on Cedar King 1st; 2d La Vernet Stock Farm on Vernet Prince 16th.

Senior Yearling Bull (3 shown)—1st Harris on Repeater 57th; 2d Potter & Son on Prime Donald 2d; 3d La Vernet Stock Farm on Vernet Prince 31st.

Junior Yearling Bull (8 shown)—1st and 2d Harris on Gay Lad 40th and Repeater's Model; 3d Christie on Warren Fairfax; 4th and 6th La Varnet Stock Farm on Vernet Prince 36th and Vernet Prince 42d; 5th Sorenson on Dispatcher; 7th Potter & Son on Morgan; 8th Miller on Mikey.

Senior Bull Calf (10 shown)—1st, 2d and 4th Harris on Repeater 86th, Repeater 89th and Repeater 83d; 3d and 5th La Vernet Stock Farm on Vernet Prince 46th and Vernet Prince 43d; 5th Potter & Son on Prince Favorite; 6th and 7th Sorenson on Standard Lad 6th and Beau Standard.

Junior Bull Calf (3 shown)—1st and 2d La Vernet Stock Farm on Real Comfort and Vernet Prince 50th; 3d Christie on Stephen Fairfax.

Minnesota Bull 3 Years or Over (1 shown)—1st Sorenson on Standard 13th.

Minnesota Bull 2 Years and Under 3 (1 shown)—1st Sorenson on Cedar King 1st.

Minnesota Senior Yearling Bull (1 shown)—1st Potter & Son on Prime Donald 2d.

Minnesota Junior Yearling Bull (4 shown)—1st Christie on Warren Fairfax; 2d Sorenson on Dispatcher; 3d Potter & Son on Morgan; 4th Miller on Mikey.

Minnesota Senior Bull Calf (1 shown)—1st Christie on Stephen Fairfax.

Cow 3 Years or Over (11 shown)—1st and 4th La Vernet Stock Farm on Vernet Queen 8th and Maple Lass 28th; 2d and 3d Harris on Fairview Bonnie 2d and Miss Gay Lad 15th; 5th Potter & Son on Disturbing Fancy; 6th Miller on Ruth; 7th Waldron on Emerald; 8th Sorenson on Dorrine.

Cow 2 Years and Under 3 (6 shown)—1st and 5th La Vernet Stock Farm on Vernet Princess 23d and Vernet Princess 15th; 2d and 3d Harris on Miss Perfection 9th and Miss Repeater 28th; 4th Sorenson on Ruby; 6th Waldron on Miss Bean 2d.

Minnesota Cow 3 Years or Over—1st Potter on Disturbing Fancy; 2d Miller on Ruth; 3d Waldron on Emerald; 4th Sorenson on Dorrine.

Minnesota Cow 2 Years and Under 3 (2 shown)—1st Sorenson on Ruby; 2d Waldron on Miss Bean 2d.

Senior Yearling Heifer (6 shown)—1st Harris on Miss Gay Lad 32d; 2d and 5th La Vernet Stock Farm on Vernet Princess 26th and Primrose; 3d Potter & Son on Lorelie; 4th Sorenson on Isabel; 6th Potter & Son on Fairy.

Junior Yearling Heifer (7 shown)—1st and 2d La Vernet Stock Farm on Vernet Pricess 33d and Vernet Princess 36th; 3d Harris on Miss Gay Lad 37th; 4th Robt. G. Waldron on Erma; 5th and 6th Sorenson on Standard's Lady 21st and Standard's Lady 22d.

Senior Heifer Calf (7 shown)—1st Harris on Miss Repeater 70th; 2d, 4th and 5th La Vernet Stock Farm on Vernet Princess 41st, Vernet Princess 38th and Vernet Princess 42d; 3d Potter on Princess Pearl; 6th Sorenson on Fancy; 7th Miller on Bonnie Belle.

Junior Heifer Calf (6 shown)—1st and 3d La Vernet Stock Farm on Vernet Princess 45th and Vernet Princess 46th; 2d Harris on Miss Repeater 75th; 4th Harris on Miss Repeater 74th; 5th Sorenson on Standard Lass 2d; 6th Potter & Son on Miss Promise.

Senior and Grand Champion Bull—Harris on Bonnie Brae 60th.

Junior Champion Bull—Harris on Gay Lad 40th.

Senior and Grand Champion Cow—La Vernet Stock Farm on Vernet Queen 8th.

Junior Champion Cow—Harris on Miss Gay Lad 32d.

Graded Herd (3 shown)—1st La Vernet Stock Farm on herd headed by Vernet King 4th; 2d Harris on herd headed by Bonnie Brae 60th; 3d Sorenson on herd headed by Standard 13th.

Young Herd (3 shown)—1st Harris; 2d La Vernet Stock Farm; 3d Potter & Son.

Calf Herd (3 shown)—1st Harris; 2d La Vernet Stock Farm; 3d Potter & Son.

Get of Bull (4 shown)—1st Harris on get of Gay Lad 6th; 2d La Vernet Stock Farm on get of Point Comfort 14th; 3d Potter & Son on get of Fairview Prince; 4th Waldron on get of Beaumont Jr.

Produce of Cow (3 shown)—1st La Vernet Stock Farm on produce of Indirect C.; 2d Potter & Son on produce of Winsome Queen; 3d Waldron on produse of Eunice.

ABERDEEN ANGUS.

The Aberdeen Angus show at Minnesota this year was the best Doddie show ever staged at Hamline. The show, of course, was not so large as that at Des Moines, but lacked in spiciness only by the absence of the Escher & Ryan herd. Caldwells and Congdon & Battles clashed again as last week and fought it out for the top places, with Caldwells capturing practically all of the blues and all but one of the purples. Two Iowa exhibitors, two from Minnesota and one from North Dakota furnished the rest of the showing, some of them coming in for an occasional first or second. The tops of the show were the best in the land. Some of the inferior lots were tail enders and it is to be hoped the exhibitors of the poor ones will be somewhat more liberal with the feed cross before again attempting to compete or even lead out against regular Angus Cattle. Mr. John Garden, of Wapello, Iowa, went over most of the classes quickly and found the good ones. Even this master of the science of judging beef cattle had his hard work to do in some of the classes as did Mr. Robbins last week at Des Moines. He studied some over the two-year-old bull class, but tied the blue on Blackcap Bertram over the low-set Knight of Rosemere. Blackcap Bertram later carried away the senior and grand championships, defeating his stable mate, Epistos, the junior champion here and junior and grand champion at Des Moines last week. Pride Pettie, Caldwell's aged cow again forged to the top, winning the blue in a strong class of ten with at least five excellent cows below her, and the purples as senior and grand champion female. Queen of Rosemere 5th, the blue ribbon junior heifer calf from the herd of Congdon & Battles was junior champion female.

The exhibitors: C. D. & E. F. Caldwell, Burlington Junction, Mo.; Congdon & Battles, North Yakima, Wash.; R. W. Frank, Renwick, Iowa; Hartley Stock Farm, Page, N. D.; Aug. Ohrman, Claremont, Minn.; J. F. Roberts, Atlantic, Iowa; John Stevenson, Delhi, Minn.

Judge, John Garden, Wapello, Iowa.

The awards:

Bull 3 Years or Over (5 shown)—1st Caldwell on Blackcap Star; 2d Congdon & Battles, on Barbarian of Rosemere; 3d Frank on Bromo; 4th Ohrmann on Prince Adam.

Bull 2 Years and Under 3 (6 shown)—1st Caldwell on Blackcap Bertram; 2d Congdon & Battles on Knight of Rosemere; 3d Hartley Stock Farm on Ensign of Glencarnock; 4th Roberts on Bullion of Quietdale.

Senior Yearling Bull (5 shown)—1st Caldwell on Blatant; 2d and 3d Congdon & Battles on Prizemore and Blackright; 4th Frank on Blackcap of Edenwold.

Junior Yearling Bull (6 shown)—1st Caldwell on Epistos; 2d and 3d Congdon & Battles on Cherokee and Ericmere 2d; 4th Stevenson on Glen of Campbell Park.

Senior Bull Calf (8 shown)—1st and 4th Roberts on Quo Vadis 5th and Eatoris; 2d Hartley Stock Farm on Best Bomano; 3d Caldwell on Eidart.

Junior Bull Calf (7 shown)—1st and 3d Congdon & Battles on Quality Lad of Rosemere 3d and Blackburr of Rosemere; 2d Caldwell on Unnamed; 4th Roberts on Erra's Lad.

Cow 3 years or Over (10 shown)—1st and 4th Caldwell on Pride Pettie and Esthonia 12th; 2d and 3d Congdon & Battles, on Quissy of Meadow Brook and Pride of Rosemere 5h.

Cow 2 Years and Under 3 (6 shown)—1st Congdon & Battles on Bell's Eclipser; 2d Hartley Stock Farm on Eulotta; 3d Caldwell on Pride of Autumn; 4th Frank on Pride McHenry 130th.

Senior Yearling Heifer (4 shown)—1st Caldwell on Blackbird Velvet; 2d Roberts on Erica Roberts 10th; 3d Frank on Mayetta F.; 4th Congdon & Battles on Blackbird of Rosemere 20th.

Junior Yearling Heifer (10 shown)—1st and 4th Caldwell on Eritus 2d and Blackcap 59th; 2d and 3d Congdon & Battles on Heather of Rosemere 4th and Pride of Rosemere 9th.

Senior Heifer Calf (6 shown)—1st and 2d Caldwell on Erica Eudora and Esthonia 15th; 3d and 4th Hartley Stock Farm on Elint• E. 3d of Page and Black Lassie of Glencarnock.

Junior Heifer Calf (7 shown)—1st Congdon & Battles on Queen of Rosemere 5th; 2d Caldwell on Blackcap Echo 3d; 3d Congdon & Battles on Frida 4th of Meadow Brook; 4th Roberts on Erica Roberts 11th.

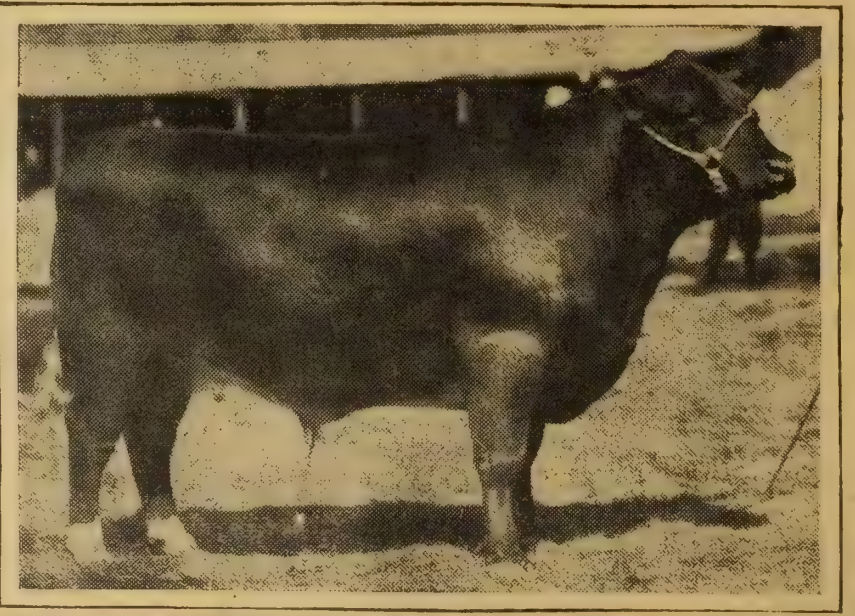
Senior and Grand Champion Bull—Caldwell on Blackcap Bertram.

Senior and Grand Champion Cow—Caldwell on Pride Pettie.

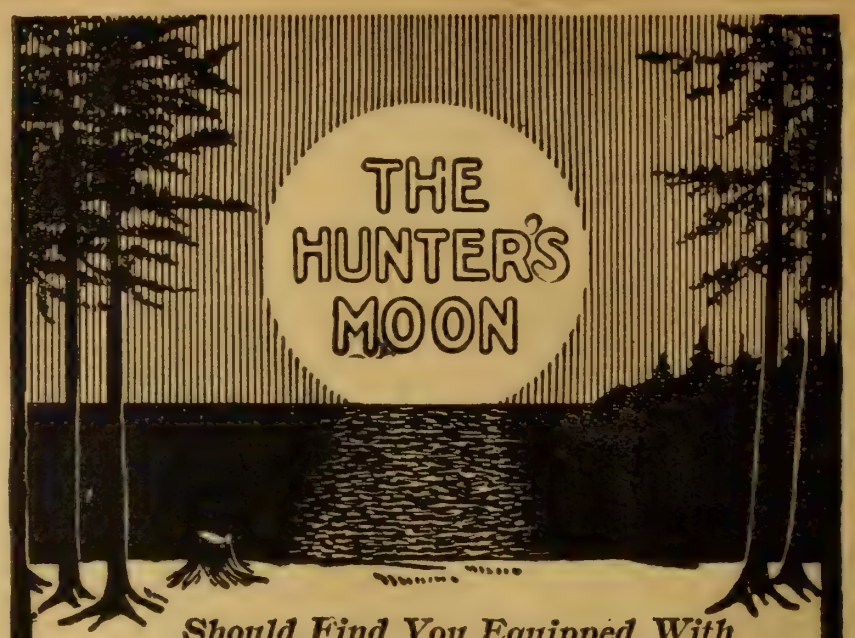
Junior Champion Cow—Congdon & Battles on Queen of Rosemere 5th.

Graded Herd (5 shown)—1st Caldwell on herd headed by Blackcap Bertram; 2d Congdon & Battles on herd headed by Barbarian of Rosemere; 3d Hartley Stock Farm on herd headed by Engine of Glencarnock; 4th Frank on herd headed by Bromo; 5th Ohrmann on herd headed by Prince Adam.

Young Herd (3 shown)—1st Caldwell; 2d Roberts; 3d Frank.



LOYAL OF MEADOW BROOK, FIRST-PRIZE ANGUS STEER, SPAYED OR MARTIN HEIFER AT MINNESOTA FAIR. OWNED BY CONGDON & BATTLES, NORTH YAKIMA, WASH.



Should Find You Equipped With

WINCHESTER

RIFLES AND CARTRIDGES

They will insure your success as they have that of thousands of other hunters. Don't take the chance of spoiling your hunt by using other makes, but take along Winchester Rifles and Cartridges—the always-reliable kind. You can get them to suit your ideas, as Winchester Rifles are made in Single Shot, Repeating and Self-Loading (or so-called automatic) models, and in various calibers; and Winchester Cartridges are made in all the different sizes. Ask your dealer about them and he will tell you they are "O. K."

THE **W** *BRAND GETS THE GAME*

Cook With Gas

Gas for cooking not only means easier work for the housewife, but it means quicker meals, no coal, wood or ashes to carry, no getting up an hour earlier to start the fire, no "boiling hot" kitchen in summer time. Not only that, but when you have a

SEVERANCE GAS MACHINE

you can light your home from cellar to attic with clear white gas light. No smoky, dangerous oil lamps to bother with. The Severance Gas Machine makes perfect gas for cooking and lighting—gives you all the conveniences of city gas no matter where you live. Thousands in use—have been for 10 to 15 years—every one giving perfect satisfaction. Absolutely safe—easy to install in any new or old home—backed by the strongest kind of a guarantee. Adapted for churches, schools, stores, public buildings, etc. No installation too large for us to handle.

WRITE TODAY for illustrated folder and full details. When you learn what the Severance will do for you, you won't think of getting along without one.

SEVERANCE GAS MACHINE CO.

62 S. Galena Ave. Freeport, Ill.

Calf Herd (3 shown)—1st Caldwell; 2d Roberts; 3d Frank.

Get of Bull (6 shown)—1st Caldwell on get of Undulata Blackcap Ito 2d; 2d Congdon & Battles on get of Oakville Quiet Lad; 3d Hartley Stock Farm on get of Earl Eric of Ballindalloch; 4th Ohrmann on get of Black Bishop.

Produce of Cow (4 shown)—1st Caldwell on produce of Erica 15th of Keillor Park; 2d Congdon & Battles on produce of Rita Pride; 3d Frank on produce of Pride's Fancy 2d; 4th Roberts on produce of Ellunda 3d.

GALLOWAYS.

The show of Galloways was small but creditable, the illy fitted ones, so common in many Galloway shows, being absent. Little Mary 2d of L. F. and Carlota of L. F., three-year-old cow and two-year-old heifer shown by Isaac Lincoln, Aberdeen, S. D., were brought out in especially good form, the aged cow being made grand champion female of the show. Mr. John Garden, who judged these classes, found his senior champion bull in Choicemaster Jr. and grand champion bull in Earl Black, a nicely turned senior bull calf.

The exhibitors: H. & G. Croft, Bluff City, Kan.; Isaac Lincoln, Aberdeen, S. D., and O. H. Swigart & Sons, Salisbury, Mo.

Judge, John Garden, Wapello, Iowa.

The awards:

Bull 3 Years or Over (3 shown)—1st Croft on Choicemaster; 2d Lincoln on Emperor of Drumlaurig; 3d Swigart & Sons on Stanley's Othello.

Bull 2 Years and Under 3 (1 shown)—1st Lincoln on Knault of L. F.

Senior Yearling Bull (1 shown)—1st Croft on Mintmaster.

Junior Yearling Bull (2 shown)—1st Lincoln on General; 2d Croft on Hannah's Laddie.

Senior Bull Calf (5 shown)—1st Lincoln on Earl Black; 2d Croft on Jerome D.; 3d Swigart & Sons on Stanley Baron.

Junior Bull Calf (2 shown)—1st Croft on Ralph of Greenbush; 2d Swigart & Sons on Clio's Othello 3d.

Cow 3 Years or Over (3 shown)—1st Lincoln on Little Mary 2d of L. F.; 2d Swigart & Sons on Nellie Melville; 3d Croft on Daisy Dimple.

Cow 2 Years and Under 3 (3 shown)—1st Lincoln on Carlota of L. F.; 2d Swigart & Sons on Othello's Nell; 3d Croft on Carrie S.

Senior Yearling Heifer (3 shown)—1st Croft on Lady 2d of Greenbush; 2d and 3d Lincoln on Meadow Queen and Mandy.

Junior Yearling Heifer (3 shown)—1st Croft on Floss 6th of Greenbush; 2d Swigart & Sons on Clio 3d of Avondale; 3d Lincoln on Little Mary 5th.

Senior Heifer Calf (4 shown)—1st Croft on Evelyn of Greenbush; 2d Swigart & Sons on Pride 16th; 3d and 4th Lincoln on Lady Florence 5th and Fatema 5th.

Junior Heifer Calf (3 shown)—1st Croft on Luella of Greenbush; 2d Swigart & Sons on Lucy 2d of Avondale; 3d Lincoln on Beatrice 6th of L. F.

Senior Champion Bull—Croft on Choicemaster.

Junior Champion Bull—Lincoln on Earl Black.

Senior Champion Cow—Lincoln on Little Mary 2d of L. F.

Junior Champion Cow—Croft on Luella of Greenbush.

Grand Champion Bull—Lincoln on Earl Black.

Grand Champion Female—Lincoln on Little Mary 2d of L. F.

Graded Herd (3 shown)—1st Lincoln on herd led by Knault of L. F.; 2d Croft on herd led by Choicemaster; 3d Swigart & Sons on herd led by Stanley's Othello.

Young Herd (2 shown)—1st Croft; 2d Lincoln.

Calf Herd (3 shown)—1st Croft; 2d Lincoln; 3d Swigart & Sons.

Get of Bull (3 shown)—1st Lincoln on get of Secretary of Crosslee; 2d Croft on get of Choicemaster; 3d Swigart & Sons on get of Othello of Avondale.

Produce of Cow (3 shown)—1st Lincoln on produce of Lockstay Little Mary; 2d Croft on produce of Floss 6th; 3d Swigart & Sons on produce of Clio 2d of Avondale.

RED POLLS.

The showing of Red Polls at Hamline was not so large as that made at Des Moines last week and on the whole places were not quite so strongly contested. However, the quality of the show was high, two of the strongest herds at Iowa taking practically all the blues and reds here. Prof. W. F. Handschin, of Urbana, Ill., upset some of the dope of last week. In making his awards he strove to pick out the working animal that carried quality, smoothness and fleshing tendencies. The blood of Teddy's Best was again much in evidence throughout the showing. Teddy's Best had no great difficulty in carrying away premier bull honors, contending for final honors with Leslie, a low-set, rather thick senior yearling bull from the Hill herd. In the aged cow class Jean Duluth Brunhill defeated Constant, the wearer of the blue at Iowa. This decision would have been popular at Des Moines last week. An upset also occurred in the two-year-old heifer class, Jean Duluth Purity getting the blue over Caroline, who drew the blue last week. Jean Duluth Brunhill was made senior champion female, but was defeated for premier honors by the senior calf, Brownie, which Professor Handschin designated as "some calf." Jean Duluth had first-prize aged herd, but Hill was first in all other group classes.

The exhibitors: J. H. Aultfather, Austin, Minn.; W. S. Hill, Alexandria, S. D.; Jean Duluth Farm, Duluth, Minn.

Judge, W. F. Handschin, Urbana, Ill.

The awards:

Bull 3 years or over (4 shown)—1st Jean Duluth Farm on Teddy's Best; 2d Hill on Teddy's Perfection; 3d and 4th Aultfather on Calender and Cremo Boy.

Bull 2 Years and Under 3 (2 shown)—1st Hill on Curtis; 2d Jean Duluth Farm on Earl.

Senior Yearling Bull (2 shown)—1st Hill on Leslie; 2d Jean Duluth Farm on Proctor Knot 2d.

Junior Yearling Bull (3 shown)—1st Hill on Bernie; 2d Jean Duluth Farm on Proctor Knot 4th; 3d Aultfather on Improver.

Senior Bull Calf (3 shown)—1st Jean Duluth Farm on Teddy's Panama; 2d Hill on Raber; 3d Aultfather on Le Roy Boy.

Junior Bull Calf (3 shown)—1st Aultfather on Crown Prince; 2d Hill on Red Joe; 3d Jean Duluth Farm on Pilot Lee.

Minnesota Bull 3 Years or Over (3 shown)—1st Jean Duluth on Teddy's Best; 2d and 3d Aultfather on Calender and Cremo Boy.

Minnesota Bull 2 Years and Under 3 (1 shown)—1st Jean Duluth Farm on Earl.

Minnesota Senior Yearling Bull (1 shown)—1st Jean Duluth Farm on Proctor Knot 2d.

Minnesota Junior Yearling Bull (2 shown)—1st Jean Duluth Farm on Proctor Knot 4th; 2d Aultfather on Improver.

Minnesota Senior Bull Calf (2 shown)—1st Jean Duluth Farm on Teddy's Panama; 2d Aultfather on Le Roy Boy.

Minnesota Junior Bull Calf (2 shown)—1st Aultfather on Crown Prince; 2d Jean Duluth Farm on Pilot Lee.

Cow 3 Years or Over (6 shown)—1st and 3d Jean Duluth Farm on Jean Duluth Brunhill and Jean Duluth Lady Watts; 2d and 5th Hill on Constant and Pearl; 4th Aultfather on Emerald.

Cow 2 Years and Under 3 (4 shown)—1st and 3d Jean Duluth Farm on Jean Duluth Purity and Ringlet; 2d Hill on Caroline; 4th Aultfather on Cherrie.

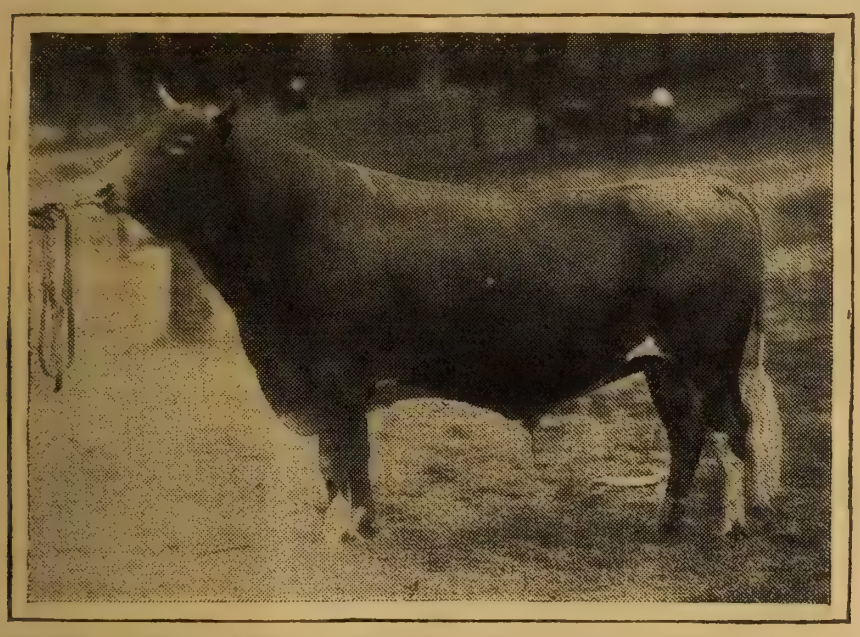
Senior Yearling Heifer (3 shown)—1st Hill on Fern; 2d Jean Duluth Farm on Liza Again; 3d Aultfather on Damsel.

Junior Yearling Heifer (5 shown)—1st Hill on Niobe; 2d and 3d Jean Duluth Farm on Jean Duluth Dimple and Jean Duluth Winona; 4th Aultfather on Milker.

Senior Heifer Calf (6 shown)—1st and 2d Hill on Brownie and Penelope; 3d Jean Duluth Farm on Teddy's Dorothy; 4th Aultfather on Dorcas.

Junior Heifer Calf (4 shown)—1st Hill on Clover; 2d and 3d Jean Duluth Farm on Jean Duluth Bamby and Jean Duluth Bonny Zita; 4th Aultfather on Carnation.

Minnesota Cow 3 Years or Over (3 shown)—1st and 2d Jean Duluth Farm on Jean Duluth Brunhill and Jean Duluth Lady Watts; 3d Aultfather on Emerald.



HAYES CHERUB II, SENIOR AND GRAND CHAMPION GUERNSEY BULL AT MINNESOTA FAIR. OWNED BY W. W. MARSH, WATERLOO, IOWA.

Velie $1085

BIGGER

With four inches greater length of body, and corresponding increase of room, the new 1917 Velie Six gives unusual space to passengers on both seats. With this extra comfort is the unmatched luxury of the Velie's deep tufted genuine leather and curled hair upholstery. Finer cannot be obtained at any price—for it is not made. This is a body surpassing even the Velie's former creations in style, grace and charm of design. Its mirror finish 20 operations deep is *lasting*.

BETTER

A more powerful Velie-Continental motor—refinements of engineering that give maximum energy to every drop of fuel, it is the last word in economy—Timken axles front and rear, a distinctively high-priced feature—these are indications of 1917 Velie quality all through, which make a car equal to any road and grade—sturdy and durable—silent, supple; so thoroughly equipped and so responsive that women drive it with the utmost ease.

Eight Body Styles

Model 28, five-passenger Touring, $1085; four-passenger Companionable Roadster (original and exceptionally smart type), $1085; two-passenger Roadster, $1065.

Enclosed bodies, exclusively designed: Cabriolet, $1485; Touring Sedan, $1685; four-passenger Sociable Coupe, $1750; Town Car, $2200.

Model 27, seven-passenger Six, completes the line; 124-inch wheelbase, 45 h. p., 35 x 4½ tires, 4-speed transmission. The utmost in luxury and refinement. Price, $1550. Catalog on request.

Five hundred new dealers have joined our Sales organization since our 1917 announcement. The Velie has a nation-wide distribution this year.

Young Herd (3 shown)—1st Hill; 2d Jean Duluth Farm; 3d Aultfather.

Calf Herd (3 shown)—1st Hill; 2d Jean Duluth Farm; 3d Aultfather.

Get of Bull (3 shown)—1st Hill on get of Meddler; 2d Jean Duluth Farm on get of Knot; 3d Aultfather on get of [illegible].

[illegible] shown)—1st Hill on [illegible]; 2d Jean Duluth [illegible] Jean Duluth Betta Longfield; 4th Culver on Buffalo Parthenia Skylark.

Cow 3 Years and Under 4 (3 shown)—1st Mayo on Mayowood Fernwood De Kol; 2d Baird Bros. on Nockdair Segis Prairie Flower; 3d Jeans on North Star Canary Beets.

Cow 2 Years and Under 3 (7 shown)—1st and 2d Baird Bros. on Nockdair Segis Netherland Prize and Nockdair Segis De Kol Violet; 3d Culver on Pride Merelle of Hollanden; 4th and 5th Vander Schaaf on Queen of Enterprise Stock Farm and Korndyke Enterprise De Kol Segis.

Senior Yearling Heifer, Dry (10 shown)—1st Mayo on Barnes Colantha Pietertje; 2d and 4th Culver on Miss Clissie Ormsby Rue and Far Oaks Royal Lady Ormsby; 3d Iowana Farms on Iowana Pauline; 5th Baird Bros. on Nockdair Segis Longfield Rose.

Junior Yearling Heifer (8 shown)—1st Culver on Far Oaks Violet Ormsby; 2d Iowana Farms on Iowana Fayne Julia; 3d Mayo on Canary Vanelle; 4th and 5th Baird Bros. on Nockdair Segis Korndyke Lottie and Nockdair Segis Valentine.

Senior Heifer Calf (14 shown)—1st Mayo on Johanna Ondine Soo; 2d Culver on Far Oaks Skylark Ormsby; 3d Jeans on Willow Ridge Pietertje Ormsby; 4th Iowana Farms on Iowana Prima Donna 2d; 5th Baird Bros on Nockdair Segis Goldbron.

Junior Heifer Calf (8 shown)—1st Culver on Nockdair Segis Cornucopia; 2d Jeans on Willow Ridge Mercedes Ormsby; 3d Baird Bros. on Nockdair Segis Gelsche; 4th Iowana Farms on Jessie Oak Fobes Mooie; 5th Mayo on Johanna Woodcrest Ruth.

Senior and Grand Champion Bull—Iowana Farms on Colantha Dutchland Snowdrop.

Junior Champion Bull—Baird Bros. on Nockdair King Segis Perfection.

Senior and Grand Champion Cow—Mayo on Mayowood Fernwood De Kol.

Junior Champion Cow—Mayo on Johanna Ondine Soo.

Graded Herd (4 shown)—1st Baird Bros. on herd headed by Bairdland Segis Sir Prize; 2d Culver on herd headed by Sir Ormsby Korndyke Mechthilde; 3d Jeans on herd headed by Willow Ridge Korndyke Skylark; 4th Van der Schaaf on herd headed by North Star Cornucopia Sir Beets.

Young Herd (5 shown)—1st Jeans; 2d Culver; 3d Baird Bros.; 4th Van der Schaaf; 5th Iowana Farms.

Calf Herd (5 shown)—1st Baird Bros.; 2d Jeans; 3d Culver; 4th Van der Schaaf; 5th Iowana Farms.

Get of Bull (5 shown)—1st Baird Bros. on get of Bairdland Segis Sir Prize; 2d Jeans on get of Sir Korndyke Heng De Kol 40th; 3d Culver on get of Sir Ormsby Korndyke Mechthilde; 4th Iowana Farms on get of Johanna Fayne; 5th Van der Schaaf on get of Sir Gelsche Walker Segis 8th.

Produce of Cow (5 shown)—1st Culver on produce of Fidgety Clissie 2d Rue; 2d Baird Bros. on produce of Rose Barbetta Longfield; 3d Iowana Farms on produce of Star Watson; 4th Jeans on produce of Sethje Uilkje Burke; 5th Van der Schaaf on produce of Queen of the Canarys De Kol.

Dairy Cattle.

HOLSTEINS.

The Gopher State has at least five of the best black and white herds in the country, and only a few short years back lovers of this most popular breed of real milk producers were wont to feast their eyes on real examples of the breeders' art. The "big men" of Minnesota were not out this year and the Holstein show lost much of its educational value because of their absence. It may be philanthropic for men like Moscrip, Irwin and Schroeder to stay at home and give the other fellow a chance, but the Minnesota State Fair is too great an exposition of the state's resources to justify the carrying out of this policy, and people want to and should be given the opportunity to see the best. Undoubtedly the big ones will be out next year. The Holstein show lacked its former greatness, both in numbers and in the character, quality and uniformity of exhibits. Mr. W. S. Moscrip, of Lake Elmo, Minnesota, made the awards and went through the classes with the precision and alertness of a past master of the art. In many of the classes it was a problem of awarding the least desirable animal. However, some excellent animals were brought out. Colantha Dutchland Snowdrop, the two-year-old bull shown by Iowana Farms, is a great bull—smooth, straight, with a great deal of Holstein character. He won easily in class and was senior and grand champion bull, defeating the junior champion bull, Nockdair King Segis Perfection, the junior yearling shown by Baird Bros. for final honors. The three-year-old cow class brought out a fine typy cow from the Dr. Mayo herd in Mayowood Fernwood De Kol. She is straight along the back, wide at the rear and shows lots of temperament; but she was too far advanced in milk to show as good an udder as possible. She defeated the senior heifer calf, Johanna Ondine Soo, an excellent heifer from the same herd, for final cow honors. Boost for a big Holstein show at Hamline next year.

The exhibitors: Baird Bros., Waukesha, Wis.; V. S. Culver, Stillwater, Minn.; H. L. Elliott, Hopkins, Minn.; G. G. Hartley, Floodwood, Minn.; Iowana Farms, Davenport, Iowa; Wm. Jeans, Withrow, Minn.; Kelly Bros., St. Paul, Minn.; Dr. C. H. Mayo, Rochester, Minn.; Dr. David Roberts, Waukesha, Wis., and Chas. Vander Schaaf, Sparta, Wis.

Judge, W. S. Moscrip, Lake Elmo, Minn.

The awards:

Bull 3 Years or Over (3 shown)—1st Mayo on Johanna Ondine Grahamholm Lad; 2d Culver on Sir Ormsby Korndyke Mechthilde; 3d Baird Bros. on Bairland Segis Sir Prize.

Bull 2 Years and Under 3 (6 shown)—1st and 3d Iowana Farms on Colantha Dutchland Snowdrop and Iowana De Cola Fayne; 2d Vander Schaaf on North Star Cornucopia Sir Beets; 4th and 5th Jeans on Willow Ridge Korndyke Skylark and King Pietertje Ormsby Korndyke.

Senior Yearling Bull (2 shown)—1st Iowana Farms on Iowana Mercedes Homestead; 2d Jeans on King Korndyke Colantha De Kol.

Junior Yearling Bull (2 shown)—1st Baird Bros. on Nockdair King Segis Perfection; 2d Jeans on Willow Ridge Korndyke Veeman.

Senior Bull Calf (12 shown)—1st Roberts on Roberts' Abbekerk Pontiac; 2d and 4th Baird Bros. on Farsee Sir Segis Hengerveld and Nockdair King Pontiac Segis; 3d Mayo on Mercedes De Kol Grahamholm Lad; 5th Jeans on Willow Ridge Skylark.

Junior Bull Calf (9 shown)—1st and 2d Baird Bros. on Nockdair Segis Fobes Boy and Nockdair Segis George; 3d Hartley on Count Paul Segis Pontiac; 4th Culver on Far Oaks Sir Ormsby Pauline; 5th Jeans on Willow Ridge Skylark Burke.

Cow 4 Years or Over (6 shown)—1st and 5th Vander Schaaf on Princess Inka Canary Dido and Queen of the Canary's De Kol; 2d Jeans on Lulu Pietertje Ormsby; 3d Baird Bros., on Rose Barbetta Longfield; 4th Culver on Buffalo Parthenia Skylark.

Cow 3 Years and Under 4 (3 shown)—1st Mayo on Mayowood Fernwood De Kol; 2d Baird Bros. on Nockdair Segis Prairie Flower; 3d Jeans on North Star Canary Beets.

Cow 2 Years and Under 3 (7 shown)—1st and 2d Baird Bros. on Nockdair Segis Netherland Prize and Nockdair Segis De Kol Violet; 3d Culver on Pride Merelle of Hollanden; 4th and 5th Vander Schaaf on Queen of Enterprise Stock Farm and Korndyke Enterprise De Kol Segis.

Senior Yearling Heifer, Dry (10 shown)—1st Mayo on Barnes Colantha Pietertje; 2d and 4th Culver on Miss Clissie Ormsby Rue and Far Oaks Royal Lady Ormsby; 3d Iowana Farms on Iowana Pauline; 5th Baird Bros. on Nockdair Segis Longfield Rose.

Junior Yearling Heifer (8 shown)—1st Culver on Far Oaks Violet Ormsby; 2d Iowana Farms on Iowana Fayne Julia; 3d Mayo on Canary Vanelle; 4th and 5th Baird Bros. on Nockdair Segis Korndyke Lottie and Nockdair Segis Valentine.

Senior Heifer Calf (14 shown)—1st Mayo on Johanna Ondine Soo; 2d Culver on Far Oaks Skylark Ormsby; 3d Jeans on Willow Ridge Pietertje Ormsby; 4th Iowana Farms on Iowana Prima Donna 2d; 5th Baird Bros on Nockdair Segis Goldbron.

Junior Heifer Calf (8 shown)—1st Culver on Nockdair Segis Cornucopia; 2d Jeans on Willow Ridge Mercedes Ormsby; 3d Baird Bros. on Nockdair Segis Gelsche; 4th Iowana Farms on Jessie Oak Fobes Mooie; 5th Mayo on Johanna Woodcrest Ruth.

Senior and Grand Champion Bull—Iowana Farms on Colantha Dutchland Snowdrop.

Junior Champion Bull—Baird Bros. on Nockdair King Segis Perfection.

Senior and Grand Champion Cow—Mayo on Mayowood Fernwood De Kol.

Junior Champion Cow—Mayo on Johanna Ondine Soo.

Graded Herd (4 shown)—1st Baird Bros. on herd headed by Bairdland Segis Sir Prize; 2d Culver on herd headed by Sir Ormsby Korndyke Mechthilde; 3d Jeans on herd headed by Willow Ridge Korndyke Skylark; 4th Van der Schaaf on herd headed by North Star Cornucopia Sir Beets.

Young Herd (5 shown)—1st Jeans; 2d Culver; 3d Baird Bros.; 4th Van der Schaaf; 5th Iowana Farms.

Calf Herd (5 shown)—1st Baird Bros.; 2d Jeans; 3d Culver; 4th Van der Schaaf; 5th Iowana Farms.

Get of Bull (5 shown)—1st Baird Bros. on get of Bairdland Segis Sir Prize; 2d Jeans on get of Sir Korndyke Heng De Kol 40th; 3d Culver on get of Sir Ormsby Korndyke Mechthilde; 4th Iowana Farms on get of Johanna Fayne; 5th Van der Schaaf on get of Sir Gelsche Walker Segis 8th.

Produce of Cow (5 shown)—1st Culver on produce of Fidgety Clissie 2d Rue; 2d Baird Bros. on produce of Rose Barbetta Longfield; 3d Iowana Farms on produce of Star Watson; 4th Jeans on produce of Sethje Uilkje Burke; 5th Van der Schaaf on produce of Queen of the Canarys De Kol.

JERSEYS.

Mr. Hugh Van Pelt, who placed the awards in Jersey classes, was well pleased with the showing of his favorite breed at Hamline. It was the best-balanced show among the dairy breeds, and was especially remarkable on account of the absence of poor ones. Lots of quality marked the show, and, as a whole, the cattle were in good shape. Had all the cattle been properly fitted, the show would have been strong. As it was, the island cattle made one of the best ever at Minnesota; and one of the strongest things in its favor was that it was largely a home state show, the bulk of the money staying with Gopher exhibitors. A feature was the ten cups offered as special prizes by business concerns of the twin cities.

The senior champion bull, Gamboge's Vellum's Majesty, came from the herd of M. D. Munn. He is a bull good enough to win in almost any Jersey company and had no difficulty in capturing the grand champion ribbon. Munn's junior yearling, Medora's Raleigh, was made junior champion bull. Munn won another purple on the aged cow, Combination Speckled Hip, a typy, deep-bodied cow. She was defeated for the premier ribbon by Brackett's junior yearling heifer, Mon Plaiser's Goldie 2d, the junior and grand champion heifer which Mr. Van Pelt considers a wonder. She is straight in all her lines and shows an abundance of dairy quality, character, capacity and breed type.

The exhibitors: Mrs. J. D. Anderson, Robbinsdale, Minn.; C. R. Brackett, Long Lake, Minn.; W. S. Dixon, Brandon, Wis.; Elmhurst Farm, Wayzata, Minn.; J. W. Love, Wayzata, Minn.; M. D. Munn, Forest Lake, Minn.; C. J. Morck; Kenyon, Minn.; M. E. Neprud, Westby, Wis.; A. M. Peterson, Coleraine, Minn.; F. D. Underwood, Wauwatosa, Wis., and Mrs. A. H. Williams, St. Paul, Minn.

Judge, H. G. Van Pelt, Waterloo, Iowa.

The awards:

Bull 3 Years or Over (5 shown)—1st and 4th Munn on Gamboge's Vellum's Majesty and Mermaid's Jersey King; 2d Elmhurst Farm on Viola's Elmhurst Jolly; 3d Underwood on Noble's Fawn Prince; 5th Neprud on Pogis of Mapleshade.

Bull 2 Years and Under 3 (1 shown)—1st Morck on Noble of New Leland.

Senior Yearling Bull (7 shown)—1st and 3d Munn on Viola's Combination Prince and Castor's Golden Jolly; 2d and 5th Love on Jolly's Eminent and Queen's Combination Lad; 4th Dixon on Oxford Ixia Majesty.

Junior Yearling Bull (7 shown)—1st Munn on Medora's Raleigh; 2d Love on Combination Majesty; 3d Underwood on Frederick's Knight; 4th Dixon on Cupid's Oxford Majesty; 5th Brackett on Carola's Noble Fox.

Senior Bull Calf (5 shown)—1st Underwood on Frederick's Jim Conners; 2d Dixon on Gauntlet's Oxford Majesty; 3d Brackett on Plymouth's Elmhurst Jolly; 4th Munn on Speckled Hips You'll Do; 5th Love on Dona's Cupid.

Junior Bull Calf (10 shown)—1st and 4th Brackett on Rose's Elmhurst Jolly and unnamed; 2d Dixon on Oxford King Togo; 3d Underwood on Frederick's Lord of Few Acres; 5th Elmhurst Farm on Combination Oxford Majesty.

Cow 4 Years or Over (3 shown)—1st Munn on Combination Speckled Hip; 2d Neprud on Golden King's Maid Fern; 3d and 4th Elmhurst Farm on Tucker's Sophia and Pansy's Emigrant Maid; 5th Underwood on Sultan's Emily.

Cow 3 Years and Under 4 (1 shown)—1st Underwood on Belvidere's Fairy.

Cow 2 Years and Under 3 (5 shown)—1st and 4th Underwood on Noble's Lady Halene and Iceland's Lady Eleanor; 2d Dixon on Jolly's Oxford Buttermilk; 3d Elmhurst Farm on Viola's Plus You'll Do; 5th Neprud on Fern's Royal Bess.

Senior Yearling Heifer, Dry (5 shown)—1st and 5th Underwood on Lady Bashua and Lady Dunlop; 2d Dixon on Majesty's Oxford Queenie; 3d Love on Cupid's Belle Forfarshire; 4th Elmhurst Farm on Sweet Myrtle 3d.

Junior Yearling Heifer (5 shown)—1st Brackett on Mon Plaiser's Goldie 2d; 2d and 4th Munn on Fern's Rioter's Queen and Burneb's Freida; 3d Dixon on Oxford Queenie Princess; 5th Neprud on Kitty May King.

Senior Heifer Calf (11 shown)—1st and 5th Munn on Golden Fern's Triumph and Jersey's King Maid; 2d and 3d Dixon on Oxford Majesty Maid and Double Oxford Queenie; 4th Underwood on Frederick's Lady Margaret.

Junior Heifer Calf (10 shown)—1st Dixon on Majesty Oxford May; 2d Neprud on Fern's Prudy Pogis; 3d Elmhurst Farm on Jolly Easter Belle Ona; 4th Underwood on Frederick's Lady Marjorie; 5th Love on Cupid's Countess.

Senior and Grand Champion Bull—Munn on Gamboge's Vellum's Majesty.

Junior Champion Bull—Munn on Medora's Raleigh.

Senior Champion Cow—Munn on Combination Speckled Hip.

Junior and Grand Champion Cow—Brackett on Mon Plaiser's Goldie 2d.

Graded Herd (4 shown)—1st Munn on herd headed by Gamboge's Vellum's Majesty; 2d Underwood on herd headed by Noble's Fawn Prince; 3d Elmhurst Farm on herd headed by Viola's Elmhurst Jolly; 4th Neprud on herd headed by Pogis of Mapleshade.

Young Herd (1 shown)—1st Dixon.

Calf Herd (3 shown)—1st Dixon; 2d Elmhurst Farm; 3d Neprud.

Get of Bull (3 shown)—1st Dixon; 2d Underwood; 3d Elmhurst Farm; 4th Neprud; 5th Love.

Produce of Cow (5 shown)—1st Brackett; 2d Dixon; 3d Underwood.

GUERNSEYS.

From many standpoints the Guernsey showing at Hamline was a disappointment. There were no extraordinarily sensational animals brought out according to Mr. Chas. L. Hill, who made the awards. At the tops there were some excellent animals, but there was too much difference between the two ends of almost every string shown. Some real culls were shown. They were not even fair county fair exhibits and were no credit to the breed, the exhibitors or the fair at Hamline. From the two-year-old heifer class two exhibits were rejected by Mr. Hill as not being anywhere near fit to show as Guernseys, and there were others shown that he wished taken out.

As usual, the showing made by W. W. Marsh was strong. All purple ribbons except that for junior champion cow, were won by Marsh—Hayes Cherub II, his aged bull, being made senior and grand champion bull, and his senior bull calf, Flora's Memento, capturing the purple for junior honors. His aged cow, Hayes Wena IV, a smooth, strong-bodied cow, with excellent head and neck, and carrying a well-balanced udder, won senior and grand champion female honors. Hartley won junior champion female honors on the junior heifer calf, Bella's Gold Lassie.

The exhibitors: Jens Arnbul, Albert Lea, Minn.; Albert W. Bragg, Albert Lea, Minn.; G. G. Hartley, Floodwood, Minn.; Jean Duluth Farm, Duluth, Minn.; G. H. Lammers, Le Sueur, Minn.; W. W. Marsh, Waterloo, Iowa; J. Cyrus Ott, Albert Lea, Minn.; Robt. L. Ott, Albert Lea, Minn.; Geo. C. Stone, Twig, Minn.; M. S. & C. A. Skaar, Hayward, Minn.; Chris Skaar, Hayward, Minn.; Victor Stiehl, Albert Lea, Minn.; W. R. Sweet, Albert Lea, Minn., and D. D. Tenney, Crystal Bay, Minn.

Judge, Chas. L. Hill, Rosendale, Wis.

The awards:

Bull 3 Years or Over (5 shown)—1st Marsh on Hayes Cherub II.; 2d Hartley on Gold Lassie's Julian; 3d Tenney on Blue Belle Sequel; 4th Bragg on Glenwood Sequel; 5th Lammers on Sir Henry Hubert.

Bull 2 Years and Under 3 (5 shown)—1st Marsh on Cherry's Memento of Iowa; 2d Jean Duluth Farm on Starlight's Excelsior of Jean Duluth; 3d Tenney on Duke Stanford's Glenwood of Shorewood; 4th Stone on Masher Rockingham; 5th Lammers on Royal Yeksa.

Senior Yearling Bull (1 shown)—1st Tenney on Charmante's May King.

Junior Yearling Bull (1 shown)—1st Jean Duluth Farm on May Rose Yeksa Starlight.

Senior Bull Calf (7 shown)—1st and 4th Marsh on Flora's Memento and Beauty Mar; 2d Jean Duluth Farm on Marathon Rose King; 3d M. S. & C. A. Skaar on Maisie's Marvel; 5th Stone on Caribou Rockingham.

Junior Bull Calf (5 shown)—1st Jean Duluth Farm on Lady Gree's May King of J. D.; 2d Marsh on Millie's Lord Mar; 3d Tenney on Sequel's Duke of Shorewood; 4th Ott on Eclipser of Wildwood; 5th Stone on Caribou Strong Anchor.

Cow 4 Years or Over (9 shown)—1st, 3d and 5th Marsh on Hayes Wena IV. Hayes Snowdrop III and Rose des Houards 52d; 2d and 4th Hartley on Bella II du Grand Fort and La Noce of Riverside Farm.

Cow 3 Years and Under 4 (4 shown)—1st and 2d Marsh on Hayes Express IX and Hayes Snowdrop 6th; 3d Stone on Neronic; 4th Jean Du Luth Farm on Jean Du Luth Phyllis.

Cow 2 Years and Under 3 (2 shown)—1st Marsh on Hayes Mabel; 2d Jean Du Luth on Jean Du Luth Coronet.

Senior Yearling Heifer dry (10 shown)—1st Sweet on Bony of Urban View; 2d and 5th Marsh on Cherub's Rose of the Pine and Belle of Prairie; 3d Jean Du Luth Farm on William's May Rose of Jean Du Luth; 4th Hartley on Island Farm's Home Lassie.

Junior Yearling Heifer (9 shown)—1st and 3d Marsh on Cardun of the Prairie and Cherub's Deanie of the Prairie; 2d Jean Du Luth Farm on Lysette's May Rose; 4th Tenny on Sequel's Deanie; 5th Hartley on Golden Chene Starlight.

Senior Heifer Calf (12 shown)—1st Jean Du Luth Farm on Gree's May Rose; 2d, 3d and 4th Marsh on Cherub's Lily La Pine, Cherub's Fluerie Mar and Memento's Snowdrop; 5th Stone on Caribou Berta.

Junior Heifer Calf (8 shown)—1st Hartley on Bella's Gold Lassie; 2d and 3d Marsh on Hayes Moss Rose and Hayes Golden Cherry 15th; 4th Jean Du Luth Farm on Jean Du Luth Roselight; 5th Stone on C Gold Pail.

Senior and Grand Champion Bull—1st Marsh on Hayes Cherub II.

Junior Champion Bull—Marsh on Flora's Memento.

Senior and Grand Champion Cow—Marsh on Hayes Wena IV.

Junior Champion Cow—Hartley on Bella's Gold Lassie.

Graded Herd (3 shown)—1st Marsh on herd headed by Hayes Cherub II; 2d Jean Du Luth Farm on herd headed by Starlight's Excelsior of Jean Du Luth; 3d Lammers on herd headed by Sir Henry Hubert.

Young Herd (3 shown)—1st Marsh; 2d Jean Du Luth; 3d Hartley.

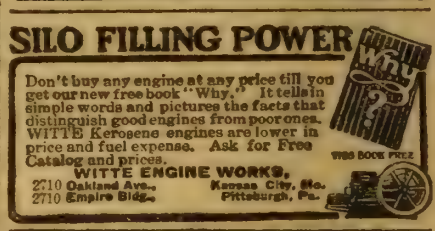
Calf Herd (3 shown)—1st Marsh; 2d Jean Du Luth and 3d Hartley.

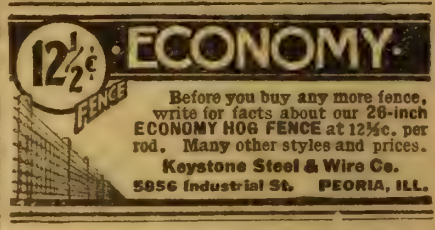
Get of Bull (4 shown)—1st Marsh on get of Hayes Cherub II; 2d Jean Du Luth on get May King of Linda Vista; 3d Tenney on get of Minnette's Sequel; 4th Hartley on get of Gold Lassie's Julian.

Produce of Cow (5 shown)—1st Marsh on produce of Hayes Golden Cherry II; 2d Hartley on produce of Bella II du Grand Fort; 3d Jean Du Luth on produce of Coquette of Haddon; 4th Tenney on produce of Duchess of Chateau a' Ietcoq; and 5th Skaar on produce of Lassie Baby.

AYRSHIRES.

The Scotch dairy breed made a strong showing at Hamline, seventy head being led before Mr. W. S. Moscrip, who passed judgment. The herd from the J. J. Hill Estate made a strong showing, as did also the herds of Ferndell Farms and Dr. David Roberts, of Wisconsin. In the aged bull class the Hill bull, Duchrae Success, a deep, strong, level bull with an abundance of Ayrshire type and character, had no difficulty in carrying away the blue. He later drew the purples for senior and grand champion bull honors of the show. Junior champion bull honors went to Roberts' Pride Cavalier, a senior bull calf shown by Roberts. The aged cow class was strong and brought out some good females. From this class came Barboigh Kate, shown by the Hill Estate. She is a well-lined cow with an abundance of tempera-





ment, deep, with a good mammary system, and carrying a good udder. Premier female honors were quite easily hers. Junior champion honors fell to Ferndell Farms on the junior yearling heifer, Ferndell's Felicity. The 1916 show of Ayrshires may be put down as one of the best ever at Minnesota.

Junior Yearling Heifer (8 shown)—1st Ferndell Farms on Ferndell's Felicity; 2d Roberts on Roberta Cavalier Belle; Hill Estate on Arrahwana of N. Oaks.

The exhibitors: Ferndell Farms, Ladysmith, Wis.; J. J. Hill Est., Gladstone, Minn.; R. E. Lynch, Zimmerman, Minn.; Dr. David Roberts, Waukesha, Wis.; Summit Park Farm, Wayzata, Minn; John F. Wilcox, Excelsior, Minn.

Judge, W. S. Moscript, Lake Elmo, Minn.

The awards:

Bull 3 Years or Over (4 shown)—1st Hill Est. on Duchrae Success; 2d Roberts on Roberts' Cavalier; 3d Ferndell Farms on Victor of Ladysmith; 4th Summit Park Farm on Oldhall Spicey John.

Bull 2 Years and Under 3 (2 shown)—1st Ferndell Farms on Ferndell Victor; 2d Roberts on Robert Fairy Duke.

Senior Yearling Bull (4 shown)—1st Hill Est. on North Oak Marshall; 2d Roberts on Roberts of Waukesha; 3d Ferndell's Lessnessock Gem.

Junior Yearling Bull (3 shown)—1st Ferndell Farms on Ferndell's Anticipation; 2d Roberts on Roberts of Hamline; 3d Lynch on Highland of Old Orchard.

Senior Bull Calf (4 shown)—1st Roberts on Roberts' Pride Cavalier; 2d and 3d Ferndell Farms on Ferndell's Credit and Ferndell's Trust; 4th Summit Park Farm on Oldhall White John.

Junior Bull Calf (9 shown)—1st Hill Est. on Royal Beau of North Oaks; 2d and 3d Ferndell Farms on Ferndell's Arrogance and Ferndell's Loyalty; 4th Roberts on Roberts' of Dousman; 5th and 6th Wilcox.

Minnesota Bull 3 Years or Over (2 shown)—1st Hill Est. on Duchrae Success; 2d Summit Park Farm on Oldhall Spicey John.

Minnesota Senior Yearling Bull (1 shown)—1st Hill Est. on North Oaks Marshall.

Minnesota Senior Bull Calf (1 shown)—1st Summit Park Farm on Oldhall White John.

Minnesota Junior Bull Calf—1st Hill Est. on Royal Beau of North Oaks; 2d Wilcox on Unnamed.

Cow 4 Years or Over (9 shown)—1st and 4th Hill Est. on Barboigh Kate and Lauriston Eileen; 2d Roberts on Value's Pride of Oak Valley; 3d Ferndell Farms on May of Hillcroft.

Cow 3 Years and Under 4 (2 shown)—1st and 3d Roberts on Belle Roberta and Queen Roberta.

Cow 2 Years and Under 3 (7 shown)—1st Ferndell Farms on Silver Pet of Ferndell; 2d and 4th Hill Est. on Howie's Beauty and Della's Dream of North Oaks; 3d Summit Park Farm on Lily Luce of Summit Park; 5th Wilcox on Jean of Old Orchard.

Senior Yearling Heifer, Dry (6 shown)—1st and 5th Roberts on Roberta Value's Pride Cavalier and Roberta of Hartland; 2d Hill Est. on Agnes of North Oaks; 3d and 4th Ferndell Farms on Snow Flake of Ferndell and Pearl of Ferndell.

Minnesota Cow 4 Years or Over—1st and 2d Hill Est. on Barboigh Kate and Lauriston Eileen.

Minnesota Cow 2 Years and Under 3—1st Hill Est. on Howie's Beauty; 2d Summit Park Farm on Lily Luce of Summit Park.

Minnesota Senior Yearling Heifer, Dry—1st Hill Est. on Agnes of North Oaks; 2d Wilcox on Blossom of Old Orchard.

Senior Heifer Calf (7 shown)—1st and 2d Roberts on Roberta Belle of Waukesha and Roberta Southwick Cavalier; 3d Ferndell Farms on Ferndell's Fashion.

Junior Heifer Calf (5 shown)—1st and 2d Ferndell Farms on Ferndell's Fidelity and Ferndell's Mode; 3d Wilcox on unnamed.

Senior and Grand Champion Bull—Hill Estate on Duchrae Success.

Junior Champion Bull—Roberts on Roberts' Pride Cavalier.

Senior and Grand Champion Cow—Hill Estate on Barboigh Kate.

Junior Champion Cow—Ferndell Farms on Ferndell's Felicity.

Graded Herd (4 shown)—1st Hill Estate on herd headed by Duchrae Success; 2d Ferndell Farms on herd headed by Ferndell Victor; 3d Roberts on herd headed by Roberts' Cavalier.

Young Herd (3 shown)—1st Ferndell Farms; 2d Roberts; 3d Hill Estate.

Calf Herd (4 shown)—1st Roberts; 2d Ferndell Farms; 3d Hill Estate.

Get of Bull (5 shown)—1st Ferndell Farms on get of Victor of Ladysmith; 2d Roberts on get of Duke of Waukesha; 3d Hill Estate on get of Howie's Flash Jim.

Produce of Cow (4 shown)—1st Roberts on produce of Waukesha Belle; 2d Ferndell Farms on produce of Rose Lotis; 3d Wilcox on produce of Nana of Old Orchard.

BROWN SWISS.

H. W. Ayers, of Honey Creek, Wis., was the sole exhibitor of Brown Swiss cattle, leading seventeen head before Mr. Hugh G. Van Pelt who judged these classes. While there was no competition, Mr. Ayers' exhibit was brought out in fit shape and would have stood up against strong competition. All classes and championship prizes went to Mr. Ayers.

MILKING SHORT-HORNS.

An exhibit of Short-horns from the herd of May & Otis, Willoughby, Ohio, was made at Hamline. Putting it briefly, they did not make much of a hit with the cattlemen present. We don't wish to be misunderstood. We are thoroughly in sympathy with the dual-purpose move, but can't see the wisdom of making another dairy breed, especially when some of the dairy breeds would undoubtedly produce better veal calves; and if steers resemble ancstry we would hope for better steers from dairy cows we have seen than from some of the cows shown as milking Short-horns. Neither of the two aged bulls shown looked like Short-horns. The first-prize winner looked like an ox and the other lacked the middle so necessary in a useful animal of any kind. Among the females were some good straight-lined animals, but some were decidedly poor in conformation, lacking in heart girth, middle and straightness of rump. We believe Short-horns will give milk, but let's get "Short-horns" first.

Judge, Andrew Boss.

The awards:

Bull 2 Years or Over (2 shown)—1st and 2d May & Otis on Knight of the Glen and Corporal Clay.

Bull 1 Year and Under 2 (1 shown)—1st May & Otis on British Prince.

Cow 3 Years or Over (6 shown)—1st, 2d, 3d and 4th May & Otis on Braemer Beauty, Atrosia, Rosebud and May Granville.

Cow Under 3 Years (2 shown)—1st and 2d May & Otis on Peach Blow and Roxie Darlington.

Fat Cattle.

The exhibitors C. D & E. F. Caldwell, Burlington Junction, Mo.; Congdon & Battles, North Yakima, Wash.; Herr Bros. & Reynolds, Lodi, Wis.; Walter J. Hill, Northcote, Minn.; August Ohrman, Claremont, Minn.; C. P. Sorenson, Balaton, Minn.; L. C. Oloff, Ireton, Iowa.

Judge, Andrew Boss.

Steer, Spayed or Martin Heifer 2 Years and Under 3 (3 shown)—1st Congdon & Battles on Loyal of Meadow Brook; 2d Hill on Benefactor; 3d Caldwell on Billie Berg.

Steer 1 Year and Under 2 (4 shown)—1st Caldwell on unnamed; 2d Oloff on Avon d'King; 3d Herr Bros. & Reynolds on White Velvet; 4th Ohrman on Claremont.

Steer Under 1 Year (3 shown)—1st Sorenson on Standard Lad 4th; 2d Caldwell on unnamed; 3d Oloff on Roan King.

Champion Steer—Caldwell on unnamed.

Herd, consisting of one steer 2 years and under 3, one 1 year and under 2, and one under 1 year (1 shown)—Caldwell.

Horses.

PERCHERONS.

Percherons again demonstrated their strength and popularity at Minnesota. The show was not so large as some former shows in the palmy days of the importing business, but it testified well to the steady growth of the Percheron business in the Gopher State, and showed remarkable improvement in the general quality of the class of material brought forward by home state exhibitors. Two of Des Moines' strongest exhibitors appeared at Hamline, where they met some strong competition from some of Minnesota's best showmen. Among Minnesota exhibitors Hurdcroft Farm made a strong showing, as did also Finch Bros. The Minnesota female classes made an attractive showing. Singmaster's aged stallion, Lagos, added another purple to his list at this show, without any question as to his right to bear it away. Fair Hope, the spanking two year old from the same stables, who was reserve Iowa champion at Des Moines, was made reserve champion. In the female classes the principal rub came in the placing of the champion mare. Malice, Singmaster's four-year-old mare, contended with the three-year-old Carnante from Gregory Farm. The Corsa mare is drafty, a big, toppy three year old with strong back and strong bone. Malice has splendid quality in bone, well turned pasterns and well furnished. Mr. Wm. Bell, who judged classes tied the purple on the three year old, which decision was well received. The get of Jalap won over that of Carnot in the group classes.

The exhibitors: C. G. Anderson, Hector, Minn.; Champlin Bros., Clinton, Iowa; Cloverdale Horse Farm, Harmony, Minn.; W. S. Corsa, White Hall, Ill.; Wm. Crownover, Hudson, Iowa; Finch Stock Farm, Moorehead, Minn.; B. C. Fick, Lake City, Minn.; Hurdcroft Farm, Monticello, Minn.; P. W. Jordan, Beardsley, Minn.; H. R. Lyon, Wayzata, Minn.; R. A. McHattie, Newport, Minn.; W. M. Olson, Hutchinson, Minn.; L. W. Orr, Hastings, Minn.; Jas. O'Hara, Harmony, Minn.; J. O. Singmaster & Son, Keota, Iowa, and University Farm, St. Paul, Minn.

Judge, William Bell, Wooster, Ohio.

The awards:

Stallion 4 Years or Over (14 shown)—1st and 2d Singmaster & Son on Lagos and Majorat; 3d Corsa on Carnoise; 4th Finch Stock Farm on Leonidas; 5th Champlin Bros. on Klermont.

Stallion 3 Years and Under 4 (7 shown)—1st, 2d and 5th Singmaster & Son on Mandou, Keota Insight and Nadir; 3d Finch Stock Farm on Marshall; 4th Crownover on Koda Besique.

Minnesota Stallion 3 Years or Over (6 shown)—1st Jordan on Kaporal; 2d Cloverhill Horse Co. on Sir Donald; 3d Orr on Colon; 4th University Farm on Ronsin.

Stallion 2 Years and Under 3 (13 shown)—1st, 2d and 4th Singmaster & Son on Hope, Eugene and Eustac; 3d Corsa on Carnorad; 5th Hurdcroft Farm on Herbert.

Stallion 1 Year and Under 2 (9 shown)—1st and 2d Singmaster & Son on Lagnot and Blackstone; 3d and 5th Corsa on Carvalentine and Carori; 4th Finch Stock Farm on Joffree.

Minnesota Stallion 1 Year and Under 3 (7 shown)—1st Hurdcroft Farm on Cocatia; 2d Anderson on Calor; 3d O'Hara on Brilliant; 4th Orr on Superior.

Stallion Foal (3 shown)—1st, 2d and 3d Lyon on foal of Lucian, foal of Liquette and foal of Lyne.

Mare 4 Years or Over (9 shown)—1st and 2d Singmaster & Son on Malice and Magicienne; 3d Hurdcroft Farm on Satinette; 4th Finch Stock Farm on Dollie D.

Mare 3 Years and Under 4 (9 shown)—1st Corsa on Carnante; 2d Singmaster & Son on Nains; 3d Jordan on Ninette; 4th Hurdcroft Farm on Keota Fair Maid.

Filly 2 Years and Under 3 (8 shown)—1st and 3d Singmaster & Son on Keota Kyrielle and Keota Ellinore; 2d Corsa on Carjante; 4th Hurdcroft Farm on Gazelda.

Filly 1 Year and Under 2 (14 shown)—1st and 2d Singmaster & Son on Keota Clarice and Maplegrove Snowball; 3d Crownover on Mayette; 4th Corsa on Carwinsome.

Mare and Foal (2 shown)—1st Hurdcroft Farm on Keota Fair Maid and foal; 2d H. R. Lyon on Lyne and foal.

Filly Foal (1 shown)—1st Hurdcroft Farm on foal of Keota Fair Maid.

Champion Stallion—Singmaster on Lagos.

Champion Mare—Corsa on Carnante.

Get of Stallion (4 shown)—1st Singmaster & Son on get of Jalap; 2d Corsa on get of Carnot; 3d Finch Stock Farm on get of Hamon; 4th Orr on get of Colon.

Produce of Mare (6 shown)—1st Corsa on produce of Jante; 2d Finch Stock Farm on produce of Manderene; 3d Hurdcroft Farm on produce of Cocotte; 4th Orr on produce of Rosette.

Breeders' Group (3 shown)—1st Singmaster & Son on group headed by Lagos; 2d Corsa on group headed by Carnoise; 3d Jordan on group headed by Kaporal.

BELGIANS.

The 1916 showing of Belgian horses at Minnesota was one of the best—both as to quantity and quality—ever seen at the Hamline grounds. The good ones at Des Moines appeared here and competition was as keen, if not keener, because of the appearance of the Finch string. Mr. Wm. Bell, of Wooster, Ohio, made the awards in all classes and placed the ribbons with much deliberation and precision. The aged stallion class of twelve head furnished plenty of competition at the top, with Alfred de Bree Eyck, from the Irvinedale stud, plainly at the top. "A draft horse" and he is described. Deep, stylish, strong, well furnished, with good feet, well-turned pasterns, clean, flinty bone and strong hocks, a good horse, he had no hard task to carry away the blue in class and the purple as champion stallion. The two-year-old stallion class was especially strong. Jupiter, the blue ribbon bearer in class, was a wonderful big Belgian for his age. Anna du Balcon was again first in a class of eight aged mares. The champion mare came from the yearling filly class. Crownover's filly, Paramount Lola, a beautiful roan with good body and underfurnishing, was made champion mare, an honor also won at Iowa last week. In the group classes Crownover took all the blues.

The exhibitors: Champlin Bros., Clinton, Iowa; Wm. Crownover, Hudson, Iowa; Finch Stock Farm, Moorhead, Minn.; C. G. Good, Ogden, Iowa; Chas. Irvine, Ankeny, Iowa; H. Lefebure & Sons, Fairfax, Iowa; R. A. McHattie, Newport, Minn.; A. F. Noltimier & Son, St. Paul Park, Minn., and W. M. Rich, Buffalo Lake, Minn.

Judge, William Bell.

The awards:

Stallion 4 Years or Over (12 shown)—1st Irvine on Alfred de Bree Eyck; 2d Champlin Bros. on Paul de Roosbeke; 3d and 4th Finch Stock Farm on Buffalo and Remi.

Stallion 3 Years and Under 4 (4 shown)—1st and 2d Irvine on Irvinedale Jean and Irvinedale Rowdy; 3d Finch Stock Farm on Harcourt; 4th Noltimier & Son on Belvedere.

Stallion 2 Years and Under 3 (10 shown)—1st and 3d Good on Jupiter and Mont De O. R.; 2d Lefebure & Sons on Indigine; 4th Crownover on Marquis.

Stallion 1 Year and Under 2 (11 shown)—1st Champlin Bros. on Julet de Roosbeke; 2d and 3d Crownover on Paramount Volner and Paramount Farceur; 4th Finch Stock Farm on Walker's Best.

Champion Stallion—Irvine on Alfred de Bree Eyck.

Stallion Foal (2 shown)—1st Lefebure & Sons on Clairon du Balcan; 2d McHattie on unnamed.

Mare and Foal (1 shown)—1st McHattie on Jupille and foal.

Mare 4 Years or Over (8 shown)—1st Lefebure & Sons on Anna du Balcan; 2d Crownover on Omerine; 3d Good on Margot; 4th Finch Stock Farm on Denise.

Mare 3 Years and Under 4 (7 shown)—1st Lefebure & Sons on Susan; 2d, 3d and 4th Noltimier & Son on Queen, Delia and Sarah.

Filly 2 Years and Under 3 (6 shown)—1st, 2d, 3d and 4th Crownover on Lisla, Salome, Dinette and Rosette.

Filly 1 Year and Under 2 (8 shown)—1st and 2d Crownover on Paramount Lola and Paramount Delsant; 3d Good on Oakdale Fushia; 4th Irvine on Jupiter's Belle.

Filly Foal (1 shown)—1st Lefebure & Sons on Reminette.

Champion Mare—Crownover on Paramount Lola.

Get of Stallion (4 shown)—1st Crownover on get of Farceur; 2d Finch Stock Farm on get of Bismarck; 3d Lefebure & Sons on get of Jules Remi; 4th Noltimier & Son on get of Cognac.

Produce of Mare (3 shown)—1st Crownover on produce of Civette; 2d Finch Stock Farm on produce of Turca; 3d McHattie on produce of Jupille.

Breeder's Group—1st Crownover on herd headed by Farceur; 2d Lefebure & Sons on herd headed by Jules Remi; 3d Noltimir & Son on herd headed by Belvidere.

SHIRES.

Alex. Galbraith had no trouble in making Shire awards at Hamline. The R. Connor Co. had practically the entire exhibit and brought out some very promising young Shires that could have stood more competition than they met. They showed breeding and quality, but could have stood more fitting.

Judge, Alexander Galbraith.

The exhibitors: R. Connor Co., Auburndale, Wis.; Wm. Crownover, Hudson, Iowa, and Finch Stock Farm, Moorhead, Minn.

Stallion 4 Years or Over (1 shown)—1st Connor Co. on Royal Patch.

Stallion 1 Year and Under 2 (2 shown)—1st Connor Co. on Lumberman's Dray King; 2d Finch Stock Farm on Hawkstone Drayman.

Mare 4 Years or Over (3 shown)—1st Crownover on Fuchia; 2d and 3d Connor Co. on Wigtofa Violet II and Wigtoft Violet.

Mare 3 Years and Under 4 (1 shown)—1st Connor Co. on Wigtoft Violet III.

Filly 2 Years and Under 3 (2 shown)—1st and 2d Connor Co. on Dray Queen Star and Dray King Fashion.

Filly 1 Year and Under 2 (1 shown)—1st Connor Co. on Queen of Fashion.

Champion Stallion—Connor Co. on Royal Patch.

Champion Mare—Connor Co. on Dray Queen Star.

Get of Stallion (1 shown)—1st Connor Co. on get of Saltfleet Dray King.

Produce of Mare (1 shown)—1st Connor Co. on produce of Wigtoft Violet.

Breeder's Group (1 shown)—1st Connor Co. on herd headed by Royal Patch.

DRAFT HORSES.

The exhibitors: Henry J. Bardin, Minneapolis, Minn.; Richard F. Jones & Sons, Lake Crystal, Minn.; R. A. McHattie, Newport, Minn.; T. B. Taylor, Mapleton, Minn.

Judge, Dr. Carl Gay.

The awards:

Gelding or Mare 4 Years or Over (4

The Tractor For Small Farms

To meet the demand for a reliable tractor for small farms, we are building our famous EAGLE two-cylinder engine in tractor form. You get a perfectly-balanced, compact and *dependable* tractor that hits the hard places and goes through with power to spare—and still works smoothly. And when you put it at threshing, cutting silage or other belt work,

You Get Power—And to Spare

You want a tractor that will give you perfect service for *both* your belt and traction work—one that is built as much for the one purpose as for the other. Safety, convenience, steadiness, simplicity, quick action, perfect control and surplus power make the EAGLE the ideal tractor for the small farm. The EAGLE Valve-in-Head Motor, which gives cleaner combustion and more power than the ordinary type of engine, is one of the secrets of the success of EAGLE GAS TRACTORS.

31½

Horsepower

Overl

TRADE MARK REG.

This newest Overland is the world's most powerful low-priced car.

It has a 31½ horsepower en bloc motor that is a perfect marvel for speed, power and endurance.

By increasing the bore of the motor from 3⅛ to 3⅜ inches we are able to offer a power plant which at 1950 R. P. M. develops full 31½ horsepower.

Tests under every condition in all parts of the country demonstrate that it easily develops better than fifty miles per hour on the road.

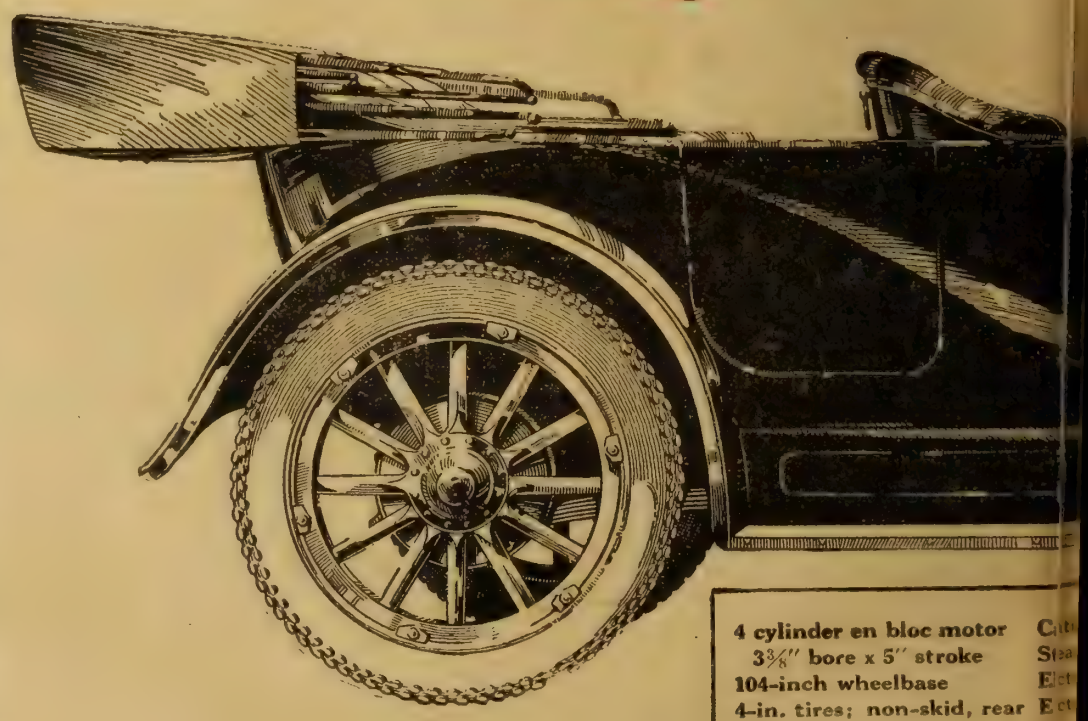
Speed of course varies under different conditions, but in practically every instance it has been getting fifty miles an hour and with ease.

We have scores of telegrams showing that eighteen to twenty-five miles per gallon of gasoline is not unusual.

The performance of this car is almost beyond belief.

Take any other low-priced car on the market. Pit it against this new Overland. Compare them for sheer speed, for abundance of power, for riding comfort and economy, and you'll find this car will back anything else clean off the boards.

That's a strong statement, but a fact nevertheless.



4 cylinder en bloc motor
3⅜" bore x 5" stroke
104-inch wheelbase
4-in. tires; non-skid, rear

Roadster $620

F.O.B. TOLEDO.

Magnetic speedometer
Complete equipment
5-passenger touring $635
Roadster $620

Try it yourself and see. Here are more important facts.

It has four-inch tires which are more than generous for a car of this size.

Not only has it a large and roomy body, but it has an attractive, up-to-date streamline body.

It has the latest and most improved system of ignition.

It has the cantilever springs—the easiest riding springs in the world.

What's more, it's complete. Not a thing to buy. You get the finest Auto-lite electric starting and lighting system, magnetic speedometer, one-man top, demountable rims and practically every accessory found on the highest priced cars.

From a driving standpoint, the new car is ideal. It's light, easy to handle and anyone can drive it.

Take one look and be convinced.

And mark these words—the car is destined to be regarded and referred to as one of the really great achievements of the great automobile industry.

Yet it only goes to prove how big production can cut cost and save you money.

First come, first served. See the nearest Overland dealer and place your order now.

Judge, Carl W. Gay.

The awards:

Stallion 3 Years or Over (6 shown)—1st Lynes on Montgomery; 2d Morgan Horse Farm on Tommy Dean; 3d Bertha Maier on Allen Franklin.

Stallion 2 Years and Under 3 (2 shown)—1st Hacklander on Foxie J.; 2d Morgan Horse Farm on Archie L.

Stallion 1 Year and Under 2 (1 shown)—1st Morgan Horse Farm on Fred Dean.

Mare and Foal (2 shown)—1st A. G. Maier on Princess and foal; 2d A. G. Maier on Frances and foal.

Mare 3 Years or Over (10 shown)—1st and 2d A. G. Maier on Princess and Peggy Ross; 3d Hacklander on Brownie Girl.

Mare 2 Years and Under 3 (4 shown)—1st A. G. Maier on Fern Highland; 2d Morgan Horse Farm on Polly Taylor; 3d Bertha Maier on Florence.

Filly 1 Year and Under 2 (1 shown)—1st Morgan Horse Farm on Flossy Hudson.

Stallion or Filly Foal (2 shown)—1st and 2d A. G. Maier on Princess Fairy and Glen De Jarnette.

Champion Stallion—Lynes on Montgomery.

Champion Mare—A. G. Maier on Princess.

Get of Stallion (1 shown)—1st Morgan Horse Farm on get of Dart.

Produce of Mare (4 shown)—1st A. G. Maier on produce of Princess; 2d Morgan Horse Farm on produce of Minnie Dean; 3d Lynes on produce of Lady L.

Breeder's Group (1 shown)—1st Hacklander on group headed by Foxy J.

CLYDESDALES.

Hon. Alexander Galbraith, of Edmonton, Canada, passed upon the Clydesdales in his customary able manner. The showing was not up to the standard this breed of horses ought to set. There were a lot of good, useful sorts out, but many of them lacked fitting and there was not a real phenomenon in the bunch. Some of the horses hadn't been away from heavy farm work for more than two weeks. Such cannot be expected to be toppy. Barron Bros. brought out the best exhibit, winning both championships, their two-year-old stallion, Allworthy Baron, being made champion stallion, and Lady May, an excellent three-year-old mare, being made champion female as at Iowa last week. Eben A. Jones also made a very creditable showing. His two-year-old filly, Sweet Marie, carries a lot of Clyde character and an abundance of quality, but lacked the substance and was not so straight a mover as Lady May and was given reserve champion position. The University of Minnesota deserves mention on the three-year-old filly, Minnesota Princess, a very good Clyde mare that is a good mover and was brought out in good shape.

The exhibitors: Barron Bros., Elkton, S. D.; B. C. Fick, Lake City, Minn.; Eben A. Jones, Bangor, Wis.; Richard F. Jones & Sons, Lake Crystal, Minn.; James D. Slater, Winnebago, Minn.; T. B. Taylor, Mapleton, Minn., and University Farm, St. Paul, Minn.

Judge, Alexander Galbraith.

The awards:

Stallion 4 Years or Over (4 shown)—1st Fick on Scottish Mint 3d; 2d Barron Bros. on The Pinnacle; 3d Slater on Chief of Green Hill; 4th Taylor on Prince.

Stallion 3 Years and Under 4 (3 shown)—1st Barron Bros. on Baron Kilmarnock; 2d Eben A. Jones on W. J. Bryan; 3d Taylor on Captain Jinks.

Stallion 2 Years and Under 3 (4 shown)—1st Barron Bros. on Allworthy Baron; 2d University of Minnesota on Sir Rollo; 3d Jones & Sons on Forward Boy; 4th Taylor on Harry Lauder.

Stallion 1 Year and Under 2 (3 shown)—1st Eben A. Jones on Trooper's Barron; 2d and 3d Barron Bros. on Arcadia Prince and Donald Davidson.

Stallion Foal (3 shown)—1st Barron Bros. on Davidson's Heir; 2d Eben A. Jones on Royal George; 3d Taylor on Baron's Pride.

Mare and Foal (5 shown)—1st and 2d Barron Bros. on Mayflower and Fanny with foal; 3d Eben A. Jones on Maud Trooper and foal; 4th Jones & Sons on Rosebud of Cranna and foal.

Mare 4 Years or Over (5 shown)—1st Eben A. Jones on Grove Girl; 2d and 3d Barron Bros. on Fanny and Mayflower; 4th Jones & Sons on Lady Maud.

Mare 3 Years and Under 4 (5 shown)—1st Barron Bros. on Lady May; 2d University of Minnesota on Minnesota Princess; 3d Eben A. Jones on Lady May; 4th Taylor on Lady Attractive.

Filly 2 Years and Under 3 (1 shown)—1st Eben A. Jones on Sweet Marie.

Filly 1 Year and Under 2 (4 shown)—1st and 3d Barron Bros. on Arcadia Flower and Primrose; 2d Eben A. Jones on Silver Bell; 4th Jones & Snos on Princess Abella.

Filly Foal (4 shown)—1st Eben A. Jones on Mollie Darling; 2d Taylor on Merry's Queen; 3d Jones & Sons on unnamed; 4th Barron Bros. on Flower of Arcadia.

Champion Stallion—Barron Bros. on Allworthy Baron.

Champion Mare—Barron Bros. on Lady May.

Get of Stallion (2 shown)—1st Barron Bros. on get of The Pinnacle; 2d Eben A. Jones on get of Young Criterion.

Produce of Mare (4 shown)—1st Barron Bros. on produce of Mayflower; 2d Jones & Sons on produce of Maud Trooper; 3d Barron Bros. on produce of Lady Prentice

Foals, Stallion or Mare (1 shown)—1st Bunn on Velvet.

Champion Stallion—Bunn on Forest John Brown.

Champion Mare—Bunn on Bess.

Swine.

POLAND CHINAS.

As usual, the Poland Chinas predominated again this year; in fact, there was the greatest gathering of big Polands ever seen at the Minnesota State Fair. Judge Phillips had his hands full from start to finish, and while there was considerable complaint on his placings in the pig classes, in all his work was very satisfactory to the exhibitors. The futurity classes were very strong and the swine barn was packed while they were being judged. Several boars were shown that weigh right at 1,000 pounds and sows weighing from 700 to 800 were common. It was some show and any exhibitor who got a place has reason to feel proud. As with the other breeds, many Poland China boars are being sold at from $15 to $25 higher, which certainly shows that the swine "game" is on a solid footing. When it comes to Poland Chinas the Minnesota State Fair is second only to Iowa. There is only one serious drawback to the showing of swine at this fair, and that is the absence of a pavilion in which to show hogs. If a fair is to be an educational feature it should be so arranged that the people could see the hogs while they are being judged. The Poland Chinas were judged in the alleyway of the swine building and very few people could get to the ringside. We hope that in the near future a swine show pavilion will be erected consistent with the other good buildings on these fair grounds.

The exhibitors: Gerlick & Barker, Mankato, Minn.; H. O. Tellier, Farmington, Minn.; W. J. Graham, Howard Lake, Minn.; John Conzemius, Hasting, Minn.; G. Grabow, Renville, Minn.; J. D. McDonald, North Bend, Wis.; Wm. McCoy, Rochester, Minn.; Kritzick Bros., Howard Lake, Minn.; E. J. Cowles, West Concord, Minn.; A. E. Ribble & Son, Preston, Minn.; John Devaney, Montrose, Minn.; J. M. Glasier, St. James, Minn.; Geo. Schlitzgen, Lake Elmo, Minn.; H. W. Van Valken, Osakis, Minn.; C. F. Gummert, Renville, Minn.; E. Swanson, North Branch, Minn.; G. W. Wheeler & Son, Kasson, Minn.; A. Terril, Montrose, Minn.; Sherman Stacy, Montrose, Minn.

Judge, Chas. W. Phillips, New Sharon, Iowa.

The awards:

Boar 2 Years or Over—1st Graham on Big Price; 2d Glasier on G. Big Price; 3d McDonald on McChief; 4th Gummert on Orange Big Bone; 5th Gerlick & Barker on Choice Expansion.

Boar 18 Months and Under 24—1st McDonald on King James; 2d Gerlick & Barker on Big Expenses; 3d Stacy on Mouw's Choice; 4th Grabow on Big Bengant.

DUROC JERSEYS.

Several new faces were seen in the Duroc Jersey department this year and the noticeable feature was the fact that these new men were the heaviest winners in the younger classes. In numbers the show of this breed was up to its usual standard and in several of the classes the competition was the strongest ever seen on the Minnesota State Fair grounds. The addition of the Duroc Futurity at this fair was the feature of the show and some great "under six months" pigs were shown—twenty-five gilts and twenty-seven boars. E. J.'s Crimson Wonder, the senior and grand champion boar is an excellent individual and was the favorite of the ringside, yet he had a close second in Van's Wonder. The sow classes were strong, especially the junior and senior yearlings and some great sows of these ages were shown. Judge Pearson did excellent work and no dissatisfaction was manifested by any of the exhibitors. Many sales are being made and better prices are being received than at any of the former shows.

Exhibitors: P. J. Fosse, St. Cloud, Minn.; B. W. Blanksma, West Concord, Minn.; Jno. Swenson, Willmar, Minn.; F. S. Vanderhyde, West Concord, Minn.; C. F. Johnson, North Branch, Minn.; E. H. Engle, West Concord, Minn.; Fred E. Johnson, North Branch, Minn.; J. J. Cain, Skyberg, Minn.; J. W. Cartwright, Burlington, Iowa; Spies Bros., Beaver Creek, Minn.; L. F. Atwater, Bangor, Wis.; J. W. Thomas, North Bend, Wis.; F. M. Washburn, Lake Crystal, Minn.

Judge, T. B. Pearson, Thornton, Ind.

AMERICAN DUROC JERSEY SPECIAL.

Best Duroc Jersey Herd under 1 Year, Consisting of Boar and Three Sows, Bred and Owned by Exhibitor—1st Vanderhyde; 2d C. F. Johnson; 3d Fosse; 4th Swenson.

BERKSHIRES.

There was a good showing of Berkshire swine and some of the best herds in the country were on exhibition at Hamline. Whitmore Bros., of Wisconsin; Iowana Farms, of Iowa, and Brae Burn Farms, of Illinois, furnished the strong competition though some other breeders caused trouble for the judge in several of the classes. The Northwest never was much of a Berkshire country, but there seemed to be more interest manifested this year than ever before. Good sales are being reported.

Exhibitors: D. A. Gamintz, St. Paul, Minn.; Iowana Farms, Davenport, Iowa; Brae Burn Farms, Lake Forest, Ill.; Whitman Bros., Lyons, Wis.; C. L. McNelly, McIntosh, Minn.

The Awards:—

Boar 2 Years or Over—1st Iowana Farms on Rival's Iowana Baron; 2d Whitmore Bros. on Aldor's Climas; 3d Iowana Farms on Iowana Rival Champion; 4th McNelly on Reno's Duke.

Boar 18 Months and Under 24—1st and 2d Iowan Farms on Artful King 2d and Iowana Rival 2d; 3d Brae Burn Farm 4th Whitmore Bros. on Black Joe 17th; 6th McNelly on Dietrich's Choice.

Boar 12 Months and Under 18—1st and 2d Whitmore Bros. on Sallie's Artful Rival and Rival Berryton.

Boar 6 Months and Under 12—1st and 2d Brae Burn Farm; 3d and 4th Iowana Farms on Iowana Baron 14th and Iowana Royal 29th.

Boar Under 6 Months—1st and 2d Iowana Farms on Iowana Royal 25th and Iowana Royal 26th; 3d Whitmore Bros. on Aldora's Lad; 4th Brae Burn Farms.

Sow 2 Years or Over—1st Iowana Farms on Iowana Peaceful 2d; 2d Brae Burn Farm on Artful Belle 118th; 3d Whitmore Bros. on Rival's Fair Duchess; 4th Brae Burn Farms on Romford's Belle 1st.

Sow 18 Months and Under 24—1st Iowana Farms on Iowana Lady 32d; 2d Brae Burn Farms on Duke's Lady Lee; 3d Iowana Farms on Iowana Lady 16th; 4th Brae Burn Farms on Brae Burn's Schoolmaster.

Get of Boar—1st Iowana Farms; 2d McNelly; 3d Whitmore Bros.

Produce of Sow—1st Iowana Farms; 2d McNelly; 3d Whitmore Bros.

CHESTER WHITES.

To use the phrase of some of the prominent showmen, they say that the showing of Chester Whites was the "best ever." Nearly all of the old "standbys" were on the job and several new breeders were represented. Men that have watched the showing of this breed for several years past say that there has been as many Chester White swine on the grounds, but never before has there been as many real outstanding animals. Size was quite noticeable among the Chesters this year and the big ones, other points being equal, were given the preference over the smaller type. One aged boar was advertised as weighing 1,100 pounds and he was a very good boar in every respect. A beautiful silver trophy was given for the best under six months herd and this was won by H. A. Derenthal. Several good sales of Chesters have been made.

Exhibitors: E. H. Kahl, Germania, Iowa; Henry Bless & Son, Wells, Minn.; Lewis Anderson, Jackson, Minn.; Fred Luchsinger, Lake Elmo, Minn.; W. R. Kieth, West Concord, Minn.; H. A. Derenthal, Wyckoff, Minn.; J. Johnson, Sleepy Eye, Minn.; W. F. Barr, Ames, Iowa; W. W. Vaughn, Lyons, Wis.

Judge, T. B. Pearson, Thornton, Ind.

The awards:

Bour 2 Years or Over—1st Barr on Wm. A.; 2d Kahl on Chickasaw Kossuth; 3d Bless & Son on Leader; 4th and 5th Vaughn & Sons on Onward and Great Wonder.

Boar 18 Months and Under 24—1st Derenthal on Calloway's Kind; 2d and 3d Anderson on Royal King and C. Wonder; 4th Barr on Wm. King; 5th Johnson on White Hall.

Boar 12 Months and Under 18—1st Kahl on Premium List; 2d Bless & Son on Wm. 2d; 3d Barr on Wm. A.'s Model; 4th Keith on Improver's 2d; 5th Johnson on Kingsley.

Boar 6 Months and Under 12—1st Barr on W. I Am; 2d Derenthal on Wonder; 3d Kahl on Chickasaw's Goods; 4th Barr on Wm. A.'s Pride; 5th Anderson on St. John.

Boar Under 6 Months—1st Derenthal; 2d and 3d Kahl on Highland's Greatest and Kahl's Masterpiece; 4th Derenthal; 5th Anderson.

Sow 2 Years or Over—1st Barr on Elmo Princess; 2d Derenthal on Wykoff Queen; 3d Kahl on Hawkeye Lady; 4th Johnson on Alice; 5th Vaughn & Sons on Miss A.

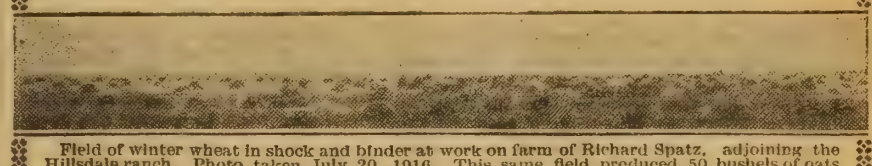
Read This Without Fail

The Golden Prairie District of Wyoming is the Only Sure Crop Country of the West

We are now placing on the market in farm tracts our celebrated Hillsdale Ranch

This is the driest season since the settlement of the country, but we can show you, within three miles of Hillsdale in the neighborhood of this ranch and on no better land, fields of grain (some on sod breaking, too), that would more than pay for the land at our selling price.

DID YOU READ our full page announcement in The Wisconsin Farmer of August 10th? If not, please look up your file. It is on page 9, and invites you to come to the Golden Prairie right now where you can purchase at about what two years' rent will amount to in the Central states as choice a farm as the sun shines on and have included, free, the assignment of a five years' lease on an equal acreage of adjoining state land.



Field of winter wheat in shock and binder at work on farm of Richard Spatz, adjoining the Hillsdale ranch. Photo taken July 20, 1916. This same field produced 50 bushels of oats per acre in 1915, the wheat shown being drilled into the oats stubble in September.

And while you have the issue of August 10th in your hand you can easily turn to page 12, where you will see some pictures of farm scenes adjoining our Hillsdale ranch and read what the Editor thinks of the Golden Prairie District after his second annual visit.

Fill out and mail us at once the coupon found below. It will bring you, without cost, valuable information regarding a district where within a few years farm land values will be as high as they are in the most favored sections of the Central states.

FEDERAL LAND COMPANY

Burns, Wyoming

FEDERAL LAND COMPANY, BURNS, WYO.

Gentlemen: Please mail me at once full descriptive literature of your Hillsdale ranch and the Golden Prairie District of Wyoming.

Name.....

Address.....

Remember this: That we are protected from hot winds and extreme heat by the snowcapped Rockies, always on clear days in plain view to the southwest. This is fully explained on page 3 of the booklet entitled "Wheat Growing and General Farming Without Irrigation in the Golden Prairie District" which will be sent to all who fill out and mail us the above coupon.

WISCONSIN FARMS

FINE land, black loam with clay subsoil, improved land, good buildings, near schools, churches, good roads, basement barns, silo, etc., 17 miles west of Green Bay, Wis. Average price per acre, $100. The garden spot of Wisconsin.
Kuehne & Fiedler Seymour, Wis.

FOR RENT—200 ACRE FARM IN WAUKESHA county, good buildings, excellent soil, would like tenant to purchase one-half interest in stock and work farm on shares, or if tenant has good stock would consider uniting herds. Must be practical farmer. Address Geo. W. Adams, 330 Caswell Block, Milwaukee, Wisconsin.

PROSPERITY IN CANADA

$90,000,000 in new wealth added in 1915. Enormous crops and low taxation make farmers rich. Wheat average, 36.16 bushels per acre in Alberta, 28.75 bushels per acre in Saskatchewan, 28.50 bushels per acre in Manitoba. Taxes average $24 and will not exceed $35 per quarter section, includes all taxes; no taxes on improvements. Free schools and full religious liberty, good climate. Get your farm home from the Canadian Pacific Railway. 20 years to pay. Good land from $11 to $30 per acre; irrigated lands from $35, and the government guarantees your land and water titles. Balance, after first payment, extended over nineteen years, with interest at 6% privilege of paying in full any time. Before final payment becomes due your farm should have paid for itself. We will lend you up to $2,000 in improvements in certain districts, with no security other than the land itself. Particulars on request. Ready made farms for sale. Special easy terms. Loans for live stock. In defined districts, after one year's occupation, under certain conditions, we advance cattle, sheep and hogs to farmers up to a value of $1,000. We want you; we can afford to help you. We own the land; we want the land cultivated. Our interests are mutual. Buy direct and get your farm home from the CANADIAN PACIFIC RAILWAY. Send for free book. J. S. Dennis, Assistant to the President, Canadian Pacific Railway, 82 Ninth Ave., Calgary, Alberta, Canada.

Improved Farms

AND cut over lands in the dairy belt of northern Wisconsin at bargain prices. If you intend to buy do not fail to write us asking for our list.
Hamilton & McClure, Westboro, Wisconsin

LAND in Dawson and Prairie Counties, Montana, on ten-year terms. On new line of Great Northern Railway, just building. The last chance for good farming land in Montana at low prices. Higler Loan and Realty Company, Lewiston, Montana.

FOR Minnesota improved farms and land bargains, write or call on H. A. Hanson, 242 Temple Court, Minneapolis, Minnesota.

DAIRY

Dunbar's Cow Leads Geneva Association.

The Geneva Cow-Testing Association had four cows during the month of August with forty-pound records of butter fat or better. The best producer for the month was a three-year-old Holstein owned by Harry Dunbar. Her record was 1,553 pounds of milk testing 3.3 per cent fat and making a total butter fat of 51.2 pounds. Mr. Harrington's Durham, aged six years, gave 1,156 pounds of milk testing 4 per cent and netting 46.2 pounds of fat. The other cows in the forty-pound class for the month were owned by William Schulz and J. W. Finnell and both were grade Holsteins.

A Factory That Runs Every Day.

The model dairy farm is a factory that runs every day of the year; its permanency and prosperity is assured. In proportion to the work it accomplished the plant which provides the power for this factory and houses various activities to which it may be applied, may well receive the same consideration that the power house of any factory receives.

The building used for a power plant at Elk Lake Farm (Wisconsin) is not a model, yet a presentation of its construction may serve to provoke a discussion of a more ideal and satisfactory plant.

It is centrally located and easy of access from the other buildings. It is well built and provided with storm doors and windows. The inside dimensions are fifteen by forty feet, with nine-foot ceiling. It could be eight or ten feet less in length and still accomplish its purpose.

The floor is of concrete, sloping to a drain near one end. The foundation extends above the floor at all points, so that water does not come in contact with the wood construction.

At one end of the building is the gasoline engine, the pump, the separator and the boiler. The engine is a four horse power and is sufficient for all purposes for which it is used, except grinding feed. It has been demonstrated that a six-horse-power engine can be used to develop one or more horse power with the same economy of fuel as a smaller engine, so it would be wise to install the larger size.

A door at the back of the building opens in front of the engine. Through this door a rope transmission is passed when grinding feed or shelling corn in the granary some seventy-five feet distant. The wood saw is also in line with the door and is run by a belt from the line shaft. This shaft is one and seven-sixteenths inches in size, extending lengthwise of the building and attached to the ceiling with drop hangers about eight feet apart. These hangers are so arranged that they are near the pulleys that bear the heaviest load. Split wood pulleys are used.

The separator is run from a governor pulley attached to the ceiling and belted to the line shaft.

A pump near the engine furnished water for a tank in the attic of the power plant. This tank supplies water to all parts of the building as well as to the barn and stock tank.

Water is pumped to a tank in the attic of the house by an elevated pump laid so it will drain. This method, however, is not recommended, for it will freeze in cold weather if care is not exercised.

A water tube boiler about twenty inches in diameter and six feet high furnished steam and hot water for all purposes and also heats the building. This form of boiler, while a little more expensive to install, is much cheaper in the end than the upright flue boiler. It fires quickly, steam being raised in ten minutes.

By connecting the steam pipe with the cold water pipe water can be drawn to any temperature.

The dairy utensils are washed and sterilized in the power plant building. The common creamery sink is used for washing. It is made of galvanized iron and is large enough to wash a ten-gallon can conveniently. Above the sink is a water pipe which supplies by a turn of a faucet water at any temperature desired. A faucet at the bottom of the sink drains it.

A wide shelf of convenient height and covered with galvanized iron is placed near the sink. A one-fourth-inch steam pipe extends upward through a hole in this shelf for the purpose of sterilizing the dairy utensils.

Near the separator is a small tank in which the cream is cooled. It is slightly elevated, so it will drain to the stock tank by the underground pipe which furnished the water from the storage tank above. A steam pipe is connected with the pipe supplying the barns so the water may be warmed for the stock in cold weather.

At the other end of the building stands a simple looking machine, guaranteed to keep the women of the household young, beautiful and sweet tempered. Incidentally it does the family washing. This piece of machinery should attract special attention, because it conserves the energy and vitality of the homemakers of the farm. Both the washing machine and wringer are run by the gasoline engine. The washing machine rests on an extension bench upon which the other tubs are placed that are used in the washing. The wringer is so attached to the bench that it can be moved from one tub to the other as needed without detaching it. It operates by a foot lever and may be instantly stopped by removing the foot, thus preventing any tearing of clothes or breaking of machinery by overcrowding.

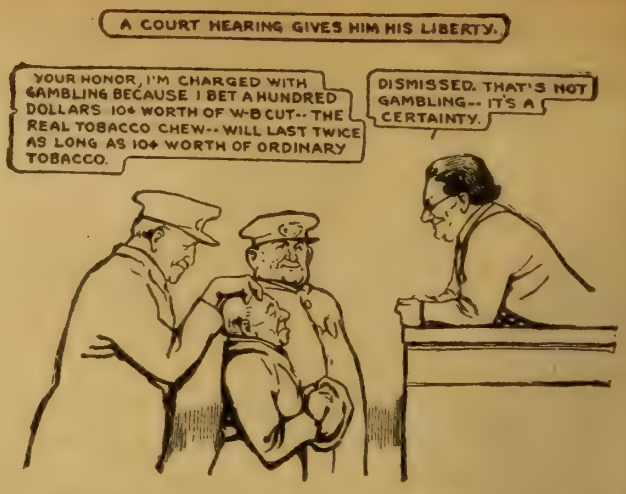
The tubs may be filled with either hot or cold water by a short hose attached to a water pipe near the machine. The clothes may be boiled if so desired by injecting steam into the tubs through the hose. There is no carrying of water. The pipes bring the supply to the points needing it, the drain conveys away the waste.

The housewife provided with this equipment for washing finds her work quickly and satisfactorily done with comparatively small effort on her part. Not only is labor saved but the kitchen is no longer on Monday morning a watery scene of soapsuds and confusion.—[Wisconsin Yearbook.

Try Baraboo.

Why not motor to Baraboo, Wis., and attend the Sauk County Fair from September 19th to 22d? Come on Wednesday, September 20th, "Ford Day," and win one of these prizes: Prizes of $10.00, $5.00, $2.00, and the next ten cars, $1.00 each to the parties who travel the greatest distance to the fair in a Ford car. Also $10.00, $5.00, $2.00 and $1.00 each to the next ten cars of any other make which travel the greatest distance to the fair on Wednesday (concession people barred). This is a bona fide offer, which will be judged by the committee in a fair and impartial manner. Free entry to the grounds made with the clerk on parking space before 2:00 p. m. Awards announced at 3:00 p. m. at grand stand. Look for automobile prizes, motorcycle races and horse races, free acts, baseball, music, lectures and demonstrations. No immoral shows—no gambling. Come and see the clean, up-to-date, popular fair that is always doing something new. Admission—Adults, 40c; children, ten to fourteen years old, 25c; under ten, free. Automobiles and teams, 25c, same as last season.—Adv.

Ask your neighbor to subscribe for The Wisconsin Farmer.



RICH tobacco makes a world of difference—there's satisfaction in store for the fellow who breaks over to W-B CUT Chewing. Tuck a little bit of a nibble into your cheek and learn what tobacco satisfaction is—that's Surprise No. 1. Notice how long one little chew lasts—that's Surprise No. 2. *Rich* tobacco and the touch of *salt* that keeps bringing out the flavor are what make the big difference.

Something doing for dealers that carry W-B CUT—10c a pouch.

BAIN'S PEERLESS SEED CORN DRYER

PREPARE for NEXT YEAR'S CORN CROP

The thirty thousand farmers who used our mouse-proof Dryers and selected their seed corn carefully last fall had 100% good seed corn last spring.

Circular Dryer 3½ feet in diameter but has 300 feet drying space. Corn put on with double galvanized hooks. Each ear has complete circulation of air around it, thus curing every kernel. No moulding, heating or souring. Corn cured on the Dryer will increase the average farmer's corn crop from 10 to 25%.

The price of Dryers has not advanced, although built of steel. Dryers made in two styles and four sizes, ranging from 600 to 1500 ears.

Wisconsin Tractor Show.

(Continued from page 5.)

there in force and their names were familiar to farmers who have used their products for many years.

Great emphasis was placed at the demonstration upon the use of tractor power for plowing. The visitors learned that ten acres a day is not a record day's work with a good tractor and good plows. They compared this feat with the two or three acres which may be plowed in a day by using horse power. Naturally the tractor showed off to splendid advantage. The visitors were quick to notice the good corners which can be made with the modern tractor, and the deep tillage. On every tongue was the inquiry as to full cost. An average tractor pulling three bottoms and turning ten acres a day will consume from twenty to twenty-five gallons of fuel. It can easily be figured that the tractor fuel cost for the same acreage plowed will be less than the horse feed cost. Furthermore, the horse feed cost goes on just the same whether the animal is at work or not, while the tractor fuel cost is nothing when the machine is not in operation. The matter of investment must be taken into consideration and there are many Wisconsin farmers whose places are not large enough to warrant the purchase of a tractor outfit merely for the purpose of plowing. Even if they could save money on their plowing job, they would have the money tied up in an idle machine. Hence it has come to the sense of the tractor people that their machines must serve other purposes, and it was demonstrated at Madison that the tractor is by no means a machine which must remain idle on days when the plowing had been completed. The tractor may be used as a hauling force almost any day in the year. It can be hitched to the harrow or the seeder or the surface packer. It has been found practical to turn several furrows with a tractor of sufficient power and follow the plow with a packer or harrow, completing both jobs with one pull. This is indeed saving power cost as well as saving labor cost. It makes it possible for the operator to get his work done without being tired out and to accomplish other jobs about the farm when the tractor has completed its task. Furthermore, tractor power insures such speed that plowing can often be done at a season when horse-drawn implements could not accomplish the task in time. The tractor will pull the hay machinery just as well as horses and much more rapidly. The tractor runs the mower and the self-binder and we all know how important speed sometimes is in these operations. The tractor will pull the road grader, will haul heavy loads to town, is a splendid aid to land clearing, and, in fact, handles, when properly equipped, most of the big jobs about the farm which we have depended upon the horses to perform. Larger tractors will do more work than smaller ones, but their original expense, and the cost of operation must be taken into consideration, and the largest tractors exhibited at Madison would not be found practical for the average Wisconsin farm.

It is scarcely necessary to dwell upon the dependability of the tractor. The problem for the farmer is to determine the displacement of horses which a tractor would cause in his individual case and he can easily figure out what investment he can economically put in a tractor. One of the leading tractor makers advertises that his tractor will pull three fourteen-bottom plows at a depth of seven inches anywhere six horses can pull a gang plow six inches deep. This is stating the matter in an understandable way. Some such test as this must be applied by the purchaser of a tractor who wants to be satisfied with his purchase and operate on an economical basis. The tractor is not a toy. Neither is it a pleasure vehicle. It is a work machine, designed to take the place of the work horse, not to the extent of entirely eliminating the work horse, but to the extent the tractor can do work cheaper and quicker and better than it can be done by the horse. Few Wisconsin farmers would be interested in the tractor if it had the plow hitch only. Tractors are double-rated as to horse power; a tractor is spoken of as a 10-20 or a 12-25, or an 8-16, or a 20-40, etc. This means that the tractor has ten horse power on the draw bar and twenty horse power on the belt, taking the first instance for an example. In practically every machine the rated horse power at the draw bar is just 50 per cent of the rated horse power at the belt. Some very fine rigs for belt work were shown at Madison. One company operated a tractor at its branch house platform all day filling a silo. The same power could be hooked up to a corn sheller or feed grinder. This belt power is one that is needed upon thousands of Wisconsin farms. Belt power may be utilized on threshing outfits and in every line of work where engine power is utilized from the belt. Thus the tractor made a utility machine and not a plowman's power for a few days and an idler for the balance of the year.

SUCH A RIG WILL WIND UP THE DA Y'S WORK IN A HURRY.

There is one great reason why farmers, as a rule, have confidence in the working operation of a tractor. Farmers have become acquainted with the gasoline engine through the automobile. They also used engines burning oil on their farms. They can readily see that the same power could be hooked up for tractors, and they believe that this power is dependable. They know that great principles have been worked out for the automobile, which can be easily applied to the tractor. Because of the progress which has been made in the automobile, it has not been necessary to wait for years to get a tractor which would operate successfully.

The Wisconsin Farmer expects to see many tractors sold in this state within the next few years, and, furthermore, we expect to see the operation of these tractors uniformly successful. Farmers have learned to use good sense in buying machinery. They will take into consideration their land, the size and character of it. The farmer who has an enterprising boy, well adapted to mechanics, will not have to worry long about the labor problem if he has a good tractor. The tractor has come in at a time when farm labor is scarce, and it may be a great help for that reason. Our young men on the farm run automobiles and motorcycles with a minimum of trouble, and they will have a similar experience with the tractor. The tractor will help hurry up the tough jobs on the farm, and on this account it will become a factor in keeping the boy on the farm.

Interest in accessories was almost as keen as interest in the tractors exhibited. The makers of engines, bearings, carburetors, ignition systems, etc., had fine displays. Special displays were given at Madison by the College of Agriculture, the U. S. Government Forestry Division, and the Wisconsin Highway Commission. Makers of oils and greases had booths at the demonstrations and explained the value of oils in their varying constituencies. The tractor show might be called a day's short course in farm power. It was a splendid education for the farmer and his boys, who took the time and trouble to attend.

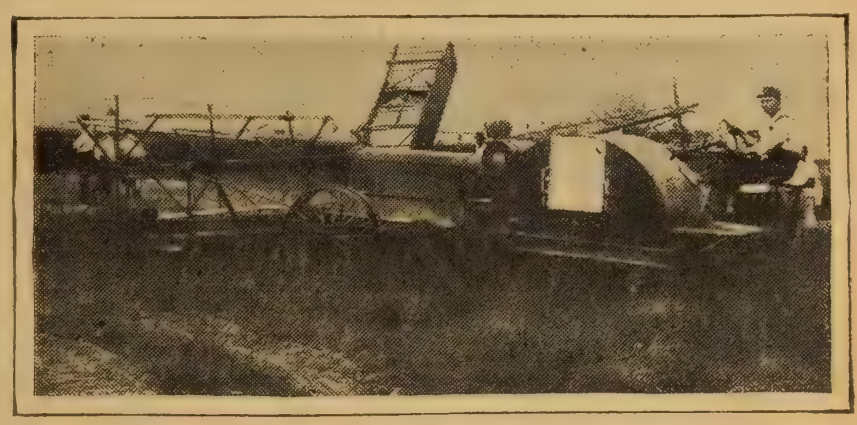
Arrangements for the final tractor demonstration of the season were in good hands. Locally the Rotary Club, Madison Commercial Association and the Board of Commerce boosted the demonstration. The Rotary Club took the lead. F. M. White, head of the agricultural engineering division of Wisconsin University, was local manager. Andrew B. Helstrom, president of the Rotary Club, represented that organization and Mr. Edward J. Samp, the Board of Commerce. Henry Fauerbach, Leo Porter, Charles Doring, and H. L. Brubaker were representative citizens who had charge of Venetian Night, the special lake attraction. Mr. L. L. Luneschloss, was an energetic worker, and it was through his labors that the excellent grounds were secured. Mr. John St. John was an active member of the executive committee and Lew Hirsig was financial secretary. Mr. M. W. Thompson, represented the Commercial Association and A. M. Frisk spent a considerable time and labor on general arrangements. More than a score of other citizens had places on the committees and performed their work faithfully.

The eight tractor demonstrations held this summer under the direction of the manufacturers from the greatest single force ever promoted for the education of farmers. The manufacturers spent more than $2,000,000 in exhibits, transportation and publicity. The expense of transporting the exhibits averaged $40,000 a week for eight weeks. The expense of individuals who accompanied the exhibits was enormous. Farmers and dealers were brought in for miles to see the demonstrations. The exhibits were carried more than 4,000 miles. There were 200 regular employes. About 1,000 special employes were engaged at each demonstration point.

Mr. J. B. Bartholemew, of Peoria, Illinois, is president of the National Tractor Demonstration Circuit Association and Mr. A. E. Hildebrand, of Bloomington, Illinois, is manager. Mr. Hildebrand managed the first tractor show at Fremont, Nebraska, five years ago. Weather was uniformly good at all the demonstration points, Madison having the least luck in this respect of any demonstration city. The demonstration was strictly a farm power and implement affair. No implements were exhibited except those drawn or propelled by tractor power. No horse plows were exhibited. There were no side shows at any of the demonstrations. There was no disorder and no strife among the exhibitors. Each tractor operator was given a space in which to plow and a depth to plow. No record was kept of the winners of the contests, but the honors were well divided. Throughout the entire trip, with several scores of tractors exhibiting two or three times daily only two tractors broke down in the field. The manufacturers got along together very amicably, and they enjoyed a social session at Madison at the wind-up of the demonstration.

The following is a list of exhibitors at the Madison demonstration:

Advance-Rumely Thresher Co., Inc., La Porte, Ind.
Allis-Chalmers Mfg. Co., Milwaukee, Wis.
Avery Co., Peoria, Ill.
B. F. Avery & Sons, Louisville, Ky.
Balso Oil Co., Toledo, Ohio.
Beeman Garden Tractor Co., Minneapolis, Minn.
Bullock Tractor Co., Chicago, Ill.
Bull Tractor Co., Minneapolis, Minn.
Byrne, Kingston & Co, Kokomo, Ind.
J. I. Case Plow Work, Racine, Wis.
J. I. Case T. M. Co., Racine, Wis.
Champion Spark Plug Co., Toledo, O.
Deere & Co., Moline, Ill.
Delco Farm Lighting Co., Dayton, Ohio.
Eagle Mfg. Co., Appleton, Wis.
Electric Wheel Co., Quincy, Ill.
Emerson-Brantingham Imp. Co., Rockford, Ill.
French Battery Co., Madison, Wis.
Grand Detour Plow Co., Dixon, Ill.
Gray Tractor Mfg. Co., Minneapolis, Minn.
Happy Farmer Tractor Co., Minneapolis, Minn.
Hart-Parr Co., Charles City, Iowa.
Holt Mfg. Co., Peoria, Ill.
Huber Mfg. Co., Marion, Ohio.
Hyatt Roller Bearing Co., Chicago, Ill.
International Harvester Co. of America, Chicago, Ill.
Interstate Engine & Tractor Co., Waterloo, Iowa.
Janesville Machine Co., Janesville, Wis.
Joliet Oil Tractor Co., Joliet, Ill.
Killen-Strait Mfg. Co., Appleton, Wis.
Kokomo Electric Co., Kokomo, Ind.



TRACTOR POWER IS AVAILABLE IN THE HARVEST FIELDS.

(Concluded on page 23.)

THE HOME

Letters intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Editor Home Dept., Wisconsin Farmer, Madison, Wis.

How Much Is Your Garden Worth?

According to a bulletin entitled "Preservation of Food in the Home," issued by the extension department of the North Dakota Agricultural College, a garden of one-half to one-third acre will produce sufficient fresh vegetables for the average family's use during the summer and also a surplus to store or can. Such a garden, says this bulletin, will produce vegetables worth at wholesale $50 to $75, at retail approximately $125, and when canned over $300.

We should like to know what has been the experience of our Home page readers in utilizing the product of their gardens. Do you think the home canning of fruits and vegetables is profitable? Counting every item of cost in home canning, do you consider that you have made a good investment of time and materials, or do you think it is cheaper to buy the same canned products in town? There is a whole lot of work connected with canning and there are a good many items of cost outside the products themselves, such as cans, rubbers and all the necessary equipment, and we have been wondering if any of our readers have found their gardens as profitable as this bulletin would indicate a garden may be.

Let us hear from those who have made it a practice to store away in the family larder all the surplus of the garden and orchard. There may be those who have let good material go to waste because they did not know the value of the canned product. If you have tried putting up your winter's supply of fruits and vegetables from your own garden, and also buying the supply in town, tell us which you consider the cheapest and best. If possible, give actual figures so that our readers may know there is no guesswork about it.

Hot Dishes For Children in Country Schools.

In the belief that a hot dish at noon, if only a bowl of milk soup or a cup of good cocoa, is highly important to school children, many schools throughout the country are either supplying a regular hot luncheon to school children or are providing a single hot dish with which the children coming from a distance can supplement the cold food in their lunch baskets.

To assist schools wishing to undertake this desirable activity, either through teachers or groups of co-operating mothers, the home economics specialists of the United States Department of Agriculture, in Farmers' Bulletin No. 712, suggest the following economical and easily prepared bills of fare for the school lunch:

1. Vegetable-milk soup, crackers, nuts, fruit, plain cake.
2. Meat and vegetable stew, bread and butter, sweet chocolate.
3. Boiled custard, lettuce sandwiches, fruit, cookies.
4. Dried codfish chowder, crackers, fruit, maple-sugar sandwiches.
5. Bean soup, crackers, baked apples, sponge cake.

In addition the school can serve hot cocoa, cooked fruits, berries and liquid or other foods which it is difficult to carry in baskets. Almost any school by the use of paper cups can make good milk available to children at noon.

As the serving of an entire luncheon calls for considerable equipment and dish washing, many country schools will find it easier to supply simply one hot dish, a cup of cocoa or a glass of good milk. The milk could easily be provided through arrangements with parents or near-by farmers and is particularly useful to children in warm weather when it is impracticable for them to bring bottles of milk in their baskets.

It is in the small country schools with only one teacher that the midday meal presents the most difficult problems. Only a teacher with ingenuity and enthusiasm for her work can carry out the plan, and even with such a teacher the active co-operation of parents is highly important.

The donation of a few utensils and articles of food by some of the patrons may be the initial step which will later gain the support of the entire district.

The simplest equipment includes a large kettle, measuring cup and spoons, paring knife, mixing spoon, dish pans and towels. The pupils should be willing to bring plates, cups, bowls and spoons from home. The boys and girls can easily make curtained shelves for the utensils. A fireless cooker, which permits the preparation of meat stews, meat and bean soups and cereal mushes can easily be made by the pupils as a class exercise.

The older girls, taking turns in groups, commonly prepare the special dish for the day. In good weather the luncheon can be served out of doors, but at other times it may be necessary to serve it on the children's desks. This will not be objectionable if the desks are first cleaned and covered with clean paper or paper towels, and if the building is well ventilated and screened against flies. Safe water for drinking, washing hands, cooking and washing dishes is essential, and any water that is at all doubtful should first be boiled.

Is Making Braided Rug.

To the Editor:—I have begun to cut up rags for a braided rug, but do not quite know how to sew the braids together or what stitch to use. Will some reader of the Home department who has made these rugs be so kind as to give me the benefit of her experience? Do you let the braids overlap or do you join them together at the edges? What kind of stitch do you use? I imagine one would need to use a strong stitch. I shall be very grateful for this information.

I want to make several of these rugs. The colors I intend to use for the first rug are old rose or rose, yellow and gray, with a touch of green and light blue. Other color combinations I like are as follows: Old rose, cream, black and pale blue; lavender, gray, old rose and cream. I cut the strips from solid-colored rags and white ones dyed. M. C. O.

More Canning Experience.

To the Editor:—I saw in the issue of August 24th an article in regard to canning without sugar. I wish to add

MICHAEL JOSEPH HOGAN, JR.
At fourteen months this sturdy little chap weighed forty-three and one-half pounds, was three feet, four inches tall, measured twenty-eight inches around the chest and twenty-one inches around the head.

my mite after forty years' experience in cooking fruit in cans, also canning without sugar.

I will give directions, also length of time for cooking different fruits. The article referred to says to pour boiling water over the fruit after it is put in the can, and to cook thirty minutes after the water begins to boil. I wouldn't give much for the pears and peaches cooked that long. The fruit stays hot for a long time after the cans are taken from the water and pears and peaches would be cooked too much.

The rules and time for cooking that I am sending I have used for years with splendid success and I am sure anyone will have good ' k canning this way.

Fill the cans with fruit, shaking down thoroughly and filling clear to the top. Then pour cold water into the can until it is full to the neck. Put the covers on loosely and place the jars in your boiler with false bottom of wood underneath. I usually place a cloth over the bottom under the jars, letting it come well up on the sides. Now fill the boiler with cold water to the neck of the jars. Heat slowly at first.

LENGTH OF TIME TO BOIL.

Fruit	Time
Plums	10 minutes
Small sour pears—whole	30 "
Bartlett pears—halved	20 "
Peaches—halved	8 "
Peaches—whole	15 "
Sour apples—quartered	10 "
Tomatoes	20 "
Cherries	5 "
Blackberries	6 "
Raspberries	6 "
Strawberries	8 "
Wild grape	10 "

Let stand about five minutes after boiling is completed, then put on rubbers and cap and screw down gently with the hand. Let stand five minutes and screw down again. Then set away in a cool, dark place.

In using sirup in canning this way be sure it is thoroughly boiled and cold before pouring over fruit.

AMOUNT OF SUGAR TO QUART.

Plums	8 ounces
Cherries	6 "
Raspberries	4 "
Strawberries	8 "
Small sour pears—whole	8 "
Peaches	4 "
Bartlett pears	6 "
Wild grapes	8 "
Sour apples	6 "

I hope my experience in canning will be of some benefit to other readers of the Home page. Mrs. G. F.

Information About Cakes.

To the Editor:—I should like to give for the benefit of other readers some hints on cake making and baking that have been of value to me.

Cakes may be classified under two heads: Cakes without butter are called sponge cakes; those with butter are called cup cakes.

Use an earthenware bowl and a wooden spoon to mix cakes. Test the oven with a piece of white paper. If the paper turns a light yellow in five minutes it is ready for sponge cake; if dark yellow in five minutes it is ready for cup cake.

Cakes should not be moved in the oven until they have risen to their full height. During the first period the cake should rise, but not brown; during the second period it should still rise and brown in spots; during the third period it should get light brown all over, and during the fourth period get darker brown and shrink from the sides of the pan.

When done take out of the oven lightly and set on something level. Do not touch or move it until it is cold, as this causes the cake to fall.

To mix sponge cake beat the whites of the eggs until very stiff and the yolks until thick. Sift the sugar into the whites, beating all the time. Add the yolks and flavoring, still beating. Sift the flour and do not beat after the flour is added or the cake will be tough. N. N.

Keep Bowls From Splitting.

The wooden chopping bowl often splits, causing much dismay to the housekeeper and the expense of getting a new one. This can be obviated by a very small "ounce of precaution." When the bowl is new, before you use it at all, stand it in a pan of boiling water for a few minutes to open the pores of the wood. Now rub olive oil over it, part of which will be absorbed by the wood. It keeps the wood from splitting. Wooden kitchen utensils may be treated in the same way.

Child's Doll House.

A doll house which will please almost any child can be made with small expense by fastening together two orange crates. This will form a four-room house. Cover the outside with oatmeal paper, which will resemble the new cement houses. Paper the inside with wallpaper of a small pattern. Cover floors with denim. Furniture can be bought at a 10-cent store.

Household Hints.

Winter flowering bulbs will arrive this month. A good supply of daffodils, hyacinths and tulips should be potted for winter blooms.

In baking bread be sure when rising it forms a thin crust before putting into oven, and when taking it out of the oven listen and see that it does not "sing," because if it "sings" it is not done.

Pot off the best flowering plants you want in the house this winter and at the same time start some nasturtium plants for indoor use.

A variation of the patchwork quilt is one made from alternating squares of pink and white or blue and white or lavender and white sateen, one set of squares being worked in simple embroidery stitch with a wreath or other design.

An excellent contrivance for cleaning off muddy shoes can be made at home with little labor or expense. Get a large-sized scrub brush of a coarse variety and fasten it upside down on the porch step or floor, being careful to fasten it securely. This will clean off the shoes quickly, thus saving work, and to the busy housekeeper who has to keep the porches and floors clean it is invaluable as a time saver.

At house-cleaning time try placing the rugs and carpets over bed springs, and whipping them instead of hanging them on the clothes line and beating in the old way. Never shake a small rug—clean in the manner described above or lay flat on porch and sweep thoroughly.

When serving chicken in a small family cut up chicken the same as for frying and divide into two messes. The first day stew one-half, making noodles to go with the gravy. The next day smother the second half in the casserole with sweet or Irish potatoes.

Recipes.

Pear Honey—Four quarts of pears, four cupfuls of granulated sugar, four cupfuls of water, one-half cupful of lemon juice. After washing, pare and grate the pears into the water so they will not discolor. Put them into a preserving kettle over the fire, bring to a boil and add the sugar. Boil for from fifteen to twenty minutes and add the lemon juice. The pear honey must be clear and the thickness of strained honey. Put into glasses and cover with

paraffin and set on a cool shelf till wanted. Bartlett pears, when not too ripe, make the best pear honey.

Candied Sweet Potato.—Nine sweet potatoes, two cupfuls brown sugar, one-fourth cupful beef fat, one-half lemon (sliced thin), two cupfuls boiling water. Peel and cut up the sweet potatoes and put them into a pot with the beef fat. Add the water, brown sugar and sliced lemon. Cook over a very slow fire until soft. The sirup should be very thick and the potatoes soft and brown.

Grape Ketchup.—Three quarts stemmed grapes, two pounds brown sugar, two cupfuls vinegar, one teaspoonful cayenne, two tablespoonfuls each ground cinnamon, ground cloves and allspice, one tablespoonful salt. Cook grapes, run through colander to remove seeds, add sugar, vinegar and spices. Boil until it thickens and seal.

Mock Lemon Pie.—One cupful sugar, one tablespoonful cornstarch, yolks of two eggs (well beaten), a small lump of butter, one scant teaspoonful cream of tartar, one cupful of hot water, one teaspoonful lemon extract. Mix all well together and cook until you are sure it will set when poured into the crust, which has been previously baked. Beat the whites of the eggs, sweeten and spread on top of pie. Set in a hot oven until a light brown.—Mrs. J. E. B.

Drop Cookies.—One cupful sugar, one-half cupful butter, one-half cupful milk, two eggs (well beaten), two teaspoonfuls baking powder, two cupfuls flour, flavor to taste. Drop in pan with teaspoonful and bake in medium-hot oven.—Dorothy N.

Chopped Pickle.—Green tomatoes, one-fourth as much cabbage as tomato, onions to taste, whole cloves tied in bags, white or brown sugar, vinegar. Chop tomatoes with chopping knife, put in colander to drain. Chop cabbage, boil with tomatoes in small quantity of vinegar. Chop cabbage, boil with tomatoes in small quantity of vinegar. Boil carrots in salted water until well done, chop and add to cooked tomatoes and cabbage. Drain the whole and prepare fresh vinegar, sugar and spices. Bring to a boil and put in jars.

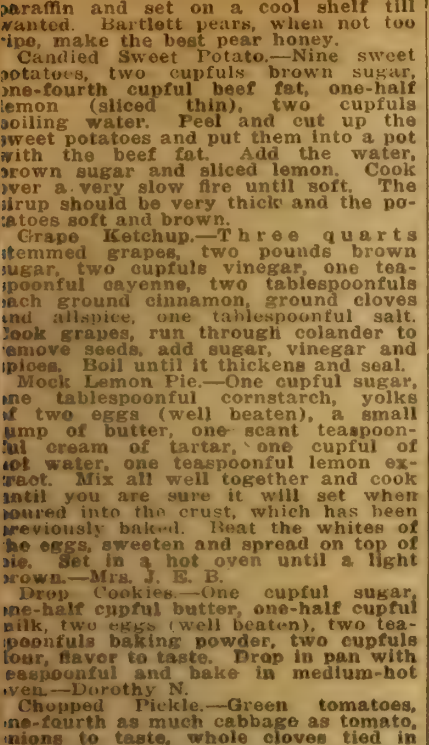
Our Fashion Department.

All Patterns, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want, and inclose 10c for each number. We agree to fill all orders promptly and guarantee safe delivery.

Catalog of Fall and Winter Fashions

Send 10c in silver or stamps for our up-to-date 1916 large fall and winter catalog, containing over 1000 designs of ladies', misses' and children's patterns, as well as the latest embroidery designs, also a concise and comprehensive article on dressmaking, giving valuable hints to the home dressmaker. Address all orders for patterns and catalogs to WISCONSIN FARMER, Madison, Wis.



1513 Waist-1512 Skirt.—A trim and up-to-date costume. Waist 1513 cut in sizes: 34, 36, 40, 42 and 44 inches bust measure. The skirt 1512, is cut in sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It will require 10 yards of 36-inch material for the entire costume for a medium size. Two separate patterns, 10 cents for each pattern.

1843—A smart and pretty frock for mother's young miss. Cut in 5 sizes: 6, 8, 10, 12 and 14 years. It requires 3¼ yards of 44-inch material for a 10-year size.

1847—Boys' coat, a comfortable top garment. Cut in 5 sizes: 4, 6, 8, 10 and 12 years. It requires 3 yards of 44-inch material for a 10-year size.

1836—Dress for misses and small women. Cut in 3 sizes; 16, 18 and 20 years. It requires 6½ yards of 44-inch material for an 18-year size. The skirt measures about 3½ yards at the foot.

1664—Ladies' empire night gown. The pattern is in 3 sizes: Small, medium and large. It requires 5½ yards of 36-inch material for a medium size.

Waist 1832-Skirt 1835—A smart combination. Waist 1832 cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt 1835 cut in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It requires 3¾ yards of 44-inch material for the skirt in a 24-inch size. The waist requires 3 yards of 44-inch material. The skirt measures about 3½ yards at the foot. Two separate patterns 10 cents for each pattern.

1502—Ladies' "overall" apron. The pattern is cut in 3 sizes: Small, medium and large. It requires 4⅝ yards of 36-inch material for a medium size.

1328—Ladies' shirt waist with convertible collar. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. In size 36 the pattern will require 2⅜ yards of 44-inch material for a 36-inch size.

1563—Overblouse dress for juniors. The pattern is cut in 3 sizes: 12, 14 and 16 years. It requires 2½ yards for the guimpe, and 5½ yards of 27-inch material for the dress for a 14-year size.

1528—Girls' dress with sleeve in either of two lengths. The pattern is cut in 4 sizes: 6, 8, 10 and 12 years. It requires 2½ yards of 44-inch material for an 8-year size.

1820—Ladies' house or home dress, with sleeve in either of two lengths. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 7¼ yards of 36-inch material for a 36-inch size.

1538—Ladies' six-gore skirt with plaits. The pattern is cut in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It requires 5 yards of 44-inch material for a medium size.

International Sunday School Lesson.

Lesson for September 17, 1916.
(By E. O. SELLERS, Acting Director of Sunday School Course.)

Prisoner in the Castle.

LESSON TEXT—Acts 22.
GOLDEN TEXT—He is my refuge and my fortress.—Ps. 91:2.

Paul was rescued from the mob by the prompt action of Lysias, and was saved from scourging by revealing his Roman citizenship (21:27-22:29). Every true life, real social service, patriotism and national righteousness rest upon the value of conversion to Christ. The fundamental message of the Christian church must always be regeneration. With this message Billy Sunday is gripping the large cities, and Dr. John R. Mott is reaching the student life of the world.

I. Paul's Account of His Early Life (v. 1-5). By his use of the Greek tongue he obtained permission to deliver this address, and by his wise use of the Jewish language he gained the attention of the excited crowd. Paul asserted his Jewish origin. (Acts 21-39). Tarsus, where he was born, had a university which rivaled those of Athens and Alexandria, and Paul had probably heard its great philosophers. Paul was an educated man; he was brought up in Jerusalem from his early boyhood at the feet of Gamaliel, its greatest teacher. Thus his religious training was according to the law of the fathers, and as "touching the righteousness which is of the law," he was blameless (Phil. 3:6). He was zealous for God, doing what he thought he would have him do even when "persecuted this way," the way of forgiveness, salvation and righteousness. Jesus said, "I am the way." Paul was at this time an instrument in the hands of the rulers, carrying out their plans, but he exceeded them in his zeal for "the traditions of our fathers (Gal. 1:14). He was not at all like those Pharisees whom Christ condemned as "white sepulchers." He was not what we would term today, "a bad man."

II. Paul's Turning Point (vv. 6-21). Paul seems to pick out three different crises in this rehearsal. (1) His interview with Christ, when he saw Jesus as he really was in his glory, a living risen Savior (Cor. 9:1; 15:8). He had positive proof of the resurrecion from the dead. This proof convicted him of sin. He had heard Jesus call. He had asked Jesus what he would have him to do. He was ready to obey, and something was given him to do. The light which he met on that journey arrested him in his mad course. The voice gave him his directions. In obedience to the command, "Arise and go," he gained knowledge and skill. (2) He lights upon his interview with Ananias (v. 14) where he received personal help from an experienced Christian. In the darkness and conflict of those three days of loneliness the questions must have been: Could he leave rank, honor, friends? Could he enter the service of the despised one and suffer reproach, danger and death? During this conflict he must have had before him the vision of what God would have him do, and the work for which he chose him (vv. 16-18). His vision and commission constituted a strong motive for right decision. During the vision he came into the light, and confessed his faith by his baptism. As a result of those three days and his interview with Ananias he came to know God's will more fully. The next step was of course (3) his public avowal (See Acts 2:38; Heb. 10:22; Rom. 10:13; I Cor. 6:11). The purpose of Paul's whole life and mission was changed.

III. Paul's Dangerous Position (vv. 20-30). The mob gave him audience until his words about the Gentiles. His declaration that God had commanded him to go upon a mission to the Gentiles was an offense to the Jews, and his words fell like a "spark upon an inflammable mass of fanaticism." They broke out into a frenzy of excitement, and made preparations to stone him. An oriental mob is hideous beyond degree, howling, yelling, cursing, gnashing their teeth, flinging their arms, casting off their garments (v. 23), throwing dust into the air to relieve their excitement and to express their execration. It was a manifestation of their uncontrollable rage. The opposition of a mob is no proof that the person it curses is wrong.

Immediately preparations stopped. The commander was called and, learning that Paul was a free-born Roman citizen, he had cause to be afraid that he had gone too far.

To assert Roman citizenship falsely was punishable with death.

The chief captain told Paul that with a great sum he had obtained his Roman citizenship, but Paul's reply was, "But I am Roman born."

Paul was well cared for after this, and, in order to find out why the Jews were so opposed to him, the captain summoned the Sanhedrin to meet the following day, thus unconsciously giving Paul another opportunity to proclaim the gospel of Jesus Christ.

Paul indeed was ready to be bound, and also to die at Jerusalem for the name of the Lord Jesus.

He knew how his Lord had been bound (John 18:12), and he rejoiced in the fellowship of his suffering (Phil. 3:10) yet he claims his right as a citizen for there is no need of morbidly seeking unnecessary disgrace or pain.

Land-Clearing Special Dates.

Dates set for land-clearing demonstrations on the Soo Line were announced last week as follows:

Birchwood, Monday, Sept. 18th, C. P. West, Hayward, in charge local arrangements.

Weyerhauser, Wednesday, Sept. 20th, G. Housholder, in charge local arrangements.

Patzau, Friday, Sept. 22d, J. M. Walz, Superior, in charge of local arrangements.

Exeland, Monday, Sept. 25th, C. P. West, Hayward, in charge local arrangements.

Gilman, Wednesday, Sept. 27th, R. A. Kolb, in charge local arrangements.

Owen, Friday, Sept. 29th, Gunder Gunderson, in charge local arrangements.

Medford, Monday, Oct. 2,, R. A. Kolb, in charge local arrangements.

Other stops as dates are, Philipps, Oct. 4th; Butternut, Oct. 6th; Marengo, Oct. 9th; Glen Flora, Oct. 11th; Rhinelander, Oct. 13th; North Crandon, Oct. 16th, and Armstrong Creek, Oct. 18th.

In case it is impossible to hold the demonstration on the day set it will be held on the following day.

YOU Are Paying $2 to $4 Too Much For Your Coal!

We Will Show You How to Cut Coal Bills Almost In Half

THE place for you to buy your coal is at our mines. Direct from the big Tecumseh mines, located in Knox County, Indiana. Buy direct from the mine owners themselves and pay only the mine wholesale price. Get Tecumseh Coal the same as hundreds of Indiana farmers are doing and have done for years. They know from actual experience that Tecumseh gives them better coal value, more heat and less waste at a lower price per ton. And besides the big saving in money we offer, consider this:

Tecumseh Coal

is mined from the famous number five vein in Knox County, Indiana. Reputed by the State Geologist to produce the *very best* coal mined in the state consequently the Middle West. Tecumseh will give you extra coal quality at a lower price. We absolutely guarantee Tecumseh Coal to prove out 13,400 B.T.U.'s (heat units) to the coal pound with only 9% ash and 9% moisture. Our guarantee spells pure coal quality; coal that is clean, minus slate and dirt. It means added heat with less actual waste at a lower cost per ton.

Tecumseh Users Save $50 to $100 on Season's Supply

You can do the same. Find out how much we really can save you. A postal card will bring you complete information. Don't pass this up. You can see it means money to you. Write us today—let us prove this story of coal economy. We want you to know more about our monstrous big mines—our latest model mining equipment and our wonderful money-saving "direct-from-mines-to-you" coal plan. Write now while the thought is in your mind.

PART III. "Prince Charlie"

CHAPTER II—Continued.

YES?" and Stuart's agreement had the intonation of a man who hears, but ceases to grasp the sense of words. He glanced at Hardy, a swift, quickly withdrawn scrutiny, and then said: "Do you know, Mr. Hardy, I should like to propose myself for membership in your household for a few weeks; would it be deemed an impertinence? I can't stay at Holland Centre with any comfort, and this place of yours seems to be a haven of rest. Could you give me space to live in for a while, without my being a nuisance to the establishment?"

"Yes, and welcome," answered Hardy. "You don't seem to appreciate what a treat it is to have a visitor from civilization ride our way; and one from our old state is especially in demand. I was going to propose that you move your outfit up here and make the ranch your headquarters while in the country. A nuisance! No, sir."

And thus was the simple ceremony concluded that introduced this stranger to the Hardys, to the general satisfaction of all concerned. Rachel was the only member who did not seem especially delighted.

"Oh, yes, he is clever and entertaining," she agreed to Tillie, "and his manner is so charming and insinuating that I may end by falling in love with him; but I am beginning with an unreasonable desire to say snappy things to him."

"I should say it was unreasonable—a thorough gentleman, of fine family connections. He mentioned several Kentucky families that Hen might know what his standing was back home, and his profession is that of medicine—I noticed the M. D. on his card; and altogether I cannot see what ground you have for objecting."

"I am not objecting—bless the man! no," returned Rachel; "only, because a man has acquired a charming manner and possesses a handsome face is no reason for me devoting myself to admiration of him, like Aunty Luce. She is jubilant over having so fine a gentleman to wait on. You are discreetly elated over having so charming a person to entertain; even Miss Margaret (Miss Margaret was the baby)—everything feminine about the place has succumbed. And I suppose my reason for keeping on my own side of the fence is that I'm jealous. I am no longer first in the affections of anyone about the place. MacDougall is likely to swear allegiance at any time because his name is Stuart—and, above all, Charlie Stuart; even Jim is wavering in the balance, and shows a wonderful alacrity in anticipating the wishes of this tenderfoot. Is it any wonder I rebel?"

"Well, for the comfort of the rest of us do not begin a civil war," admonished Tillie, and was only reassured by a promise that there should be no active hostilities. "If you are more comfortable in war than in peace go south and fight with the skirmishing Indians," suggested the little woman.

"I will," said Rachel. "If you get any more civilized recruits up here to make the place tame and commonplace I will seek service under the standard of the Arrow, or Genesee." And at the mention of the last name Tillie discreetly subsided.

The girl found the raw recruit rapidly making himself a power in the social world of the ranch. There was something of charming grace in the man's personality; and that rare gift of a sympathetic nature that had also the faculty of expression, at once accorded him the trust of women and children.

It may be that a degree of physical beauty influenced them also, for his fine, well-shaped head was very good to look at; the poise of the erect, tall figure bespoke serene self-confidence; the curves of his lips, slightly hidden by a mustache, gave a sweetness of expression to the lower part of his face; while the wide brows and fine eyes gave an intellectual cast to a personality that did not lack attractive points.

"The lad has the old grace o' the Stuarts," MacDougall affirmed, sticking to his fancy of connecting the old blood royal with the slip of the name grown on alien ground. "And it is much the same free-handed manner o' the old stock—free o' their smiles, an' winning o' hearts by the clasp o' the hand; but there's a bit about this one that is a rare puzzle to me. I think like enough it's the eyes, they're main handsome ones; but I'm always a-rackin' o' my brains to tell where I've seen them before."

Rachel, to whom this speech was made, only laughed.

"He has never been West until now, so you cannot have seen them," she argued; but her tone made the old man regard her with attention.

"What do ye mean by that, lass?"

"Oh, nothing, only he says so;" and then she went into the house, leaving her guest sitting on the bench of the porch.

"The Stuart," as the others had already dropped into calling him, after MacDougall, had been at the ranch about a week. The proposed hunt was yet to be; and in the meantime he rode through the parks, and saw all that was near-about the ranch. He talked stock raising with Hardy, medicinal herbs with Aunty Luce, babies with Tillie, and with Rachel numerous worldly topics of interest, that, however, never seemed to change the nature of their acquaintance; which remained much as it was the first day—on her side, arms burnished and ready for action; on his, the serene gentleness of manner, almost a caress, a changeless good humor that spoke volumes for his disposition, and at times forced even her into a sort of admiration of him.

The health-recruiting trip he had come on, he was evidently taking advantage of, for he almost lived out-of-doors, and looked wonderfully healthy and athletic for an invalid. In the house, he wrote a great deal. But the morning Rachel left MacDougall on the porch, the Stuart came sauntering up the path, the picture of careless content with himself and the world. "Where has Mr. Hardy gone?" he inquired, seating himself on the porch. "I've been looking for him out at the pens, but the men have all disappeared."

"Gone up the range for the yearlin's that strayed off the last week; but they'll no go far."

"I wanted to ask Mr. Hardy about mail out here. How often is it brought to the ranch?"

"Well," said the old man; between the puffs of his pipe, "that depends a bit on how often it is sent for just whene'er they're a bit slack o' work, or if anybody o' them wants the trip made special; but Hardy will be sendin' Jimmy across for it, if it's any favor to you—be sure o' that."

"Oh, for that matter—I seem to be the most useless commodity about the ranch—I could make the trip myself. Is Jim the usual mail carrier?"

"Well, I canna say; Andrews, a new man here, goes sometimes, but it's no rare thing for him to come home carrying more weight in whisky than in the letters an' Hardy got a bit tired o' that."

"But haven't you a regular mail carrier for this part of the country?" persisted Stuart.

MacDougall laughed shortly at the idea. "Who'd be paying the post?" he asked, "with but the Hardy's an' myself, we might say, barring the Kootenais; an' I have na heard that they know the use of a postage stamp."

"But someone of their tribe does come to the Centre for mail," continued Stuart in half argument—"an Indian youth; have you never seen him?"

"From the Kootenais? Well, I have not, then. It may be, of late, there are white men among them, but canna say; I see little o' any o' them this long time."

"And know no other white people in this region?"

"No, lad, not for a long time," said the old man, with a half sigh.

The listener rose to his feet. "I think," he said, as if a prospect of new interest had suddenly been awakened in his mind—"I think I should like to make a trip up into the country of the Kootenais. It is not very far, I believe, and would be a new experience. Yes, if I could get a guide, I would go."

"Well," said MacDougall drily, "seeing I've lived next door to the Kootenais for some time, I might be able to take ye a trip that way myself."

Rachel, writing inside the window, heard the conversation, and smiled to herself.

"Strange that Kalitan should have slipped MacDougall's memory," she thought; "but then he may have been thinking only of the present, and the Stuart, of months back. So he does know some things of people in the Kootenai, for all his blind ignorance. And he would have learned more, if he had not been so clever and waited until the rest were gone, to question. I wonder what he is hunting for in this country; I don't believe it is four-footed game."

(To be continued.)

Free Information on Land Clearing.

IDLE stump land can be made valuable and productive at small cost with the Steel Giant stump puller, made by the La Plant Choate Mfg. Co., Cedar Rapids, Iowa. Every farmer who has this kind of land on his farm can increase his profits with the Steel Giant. It has speed and strength with enormous pulling power and will clean up the stump fields in a surprisingly short time. A force equal to 135 horse power can be exerted by it. Having had more than twenty years' experience in their line, the company do not hesitate to put a strong protective guarantee on their product and will be glad to make a trial offer to farmers who are interested. R. E. Choate, land-clearing expert, will send a lot of valuable information on land clearing to anyone who will write him in care of the company mentioned above. Here is an opportunity to get some valuable suggestions free on the land-clearing problem. See page 6.—Adv.

MY 1917 MODELS NOW READY!

NO OTHER SPREADER COMPARES WITH IT

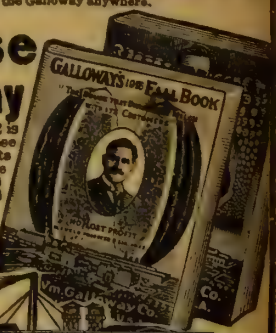
COSTS ONLY $87.50

JUST READ THESE 1917 IMPROVEMENTS!

They mean that every Galloway Spreader is built stronger and better than before. The beater bolts are 1-16 in. larger with lock nuts. Beater bar bolts increased in size and strength. Beater teeth longer and stronger than ever which means they now tear the toughest manure finer than ever and spread it easier. Heavier bolts hold the beater bars in the beater head. Rear shaft increased in strength—higher carbon steel used. Additional bolts strengthen (beyond actual necessity) the beater bracket. Larger drive sprockets, which mean lighter draft than ever. The fifth wheel castings are larger and increased in strength—spreader box steadier in turning. Rear conveyor shaft now made of No. 40 carbon steel. All steel tongue. All metal parts thoroughly coated with asphaltum weather-proof paint. Spreader box better finished and painted. Galloway WIDE SPREADING V-RAKE on every machine WORTH $15 on any spreader, COSTS YOU NOTHING EXTRA. INVINCIBLE, IRRESISTIBLE, PATENTED ROLLER FEED—an EXCLUSIVE GALLOWAY FEATURE, makes it SUPERIOR to all other feeds on all other machines—the SECRET OF OUR LIGHT DRAFT. The mechanical principle in the same as MOVING A HOUSE ON ROLLERS. THIS FEATURE ALONE WORTH $25 on any spreader, EXCLUSIVE AGAIN on the Galloway, costs you NOTHING EXTRA. PATENTED AUTOMATIC STOP, uniform clean out push board, WORTH $10 EXTRA on any spreader, EXCLUSIVE on the Galloway, costs you NOTHING EXTRA. These are a few of the features you will find on the Galloway, which are PROTECTED BY GALLOWAY PATENTS. Don't buy a spreader of any make or kind until you have tried a genuine GALLOWAY 1917 MODEL No. 5, No. 1A or No. 8 at our risk, without obligating yourself in any way. Thirty days' field trial and returnable to us within one year if not perfectly satisfactory. Remember, we manufacture this spreader in our own factories and sell it direct from factory to farm. Do not confuse the Galloway spreader with lower priced machines made to sell for a price, which are all cheap, worthless imitations. Over 60,000 Galloway Spreaders in use. These and other features make the Galloway Spreader more invincible than ever in actual field work. No big, cumbersome, four-horse team or three-horse team needed to handle a Galloway. Two average horses can spread with the Galloway anywhere.

Complete particulars and details of this 1917 model spreader now ready.

A Postal Gets These Two Books—Write Today



Which tell the whole story. No. 1 is my 250-page four-color catalog. No. 2 is my 100-page fall supplement to the big spring book. YOUR copies of these books are now ready to mail. Ask for yours today. Remember a postal gets them. They will save you from $100 to $200 on your fall purchases because they are crammed full of standard quality merchandise priced at one small factory profit. Gasoline engines, farm tractors, farm implements of all kinds, household goods, clothing, sewing machines, furniture, kitchen utensils, automobile accessories, sporting goods, shotguns, ammunition of standard high quality makes and grades, all priced to you at one small profit based on great volume. Ask for these books now!

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

Wisconsin State Fair Horse Sale.

WE ARE just in receipt of a letter from Fred Pabst, manager of the Wisconsin State Fair Horse Sale, notifying us that there has been a number of additional horses consigned to the sale to be held at the state fair on Friday, September 15th. There has already been consigned twenty-five Percheron stallions and mares, fifteen Hackneys, three Belgians and one Shire. The offering is one of exceptional quality, and the readers of The Wisconsin Farmer are advised to attend this sale. The writer has personally inspected a large part of the offering and is highly pleased with the offering as a whole. The Edgewater Stock Farm, Fort Atkinson, are consigning nine head of Percherons—two Percheron stallions and seven mares. They are big, drafty animals of good type, and we advise our readers not to miss seeing these animals. Seven head will be entered in the show ring and are creditable candidates for ribbons. Fred Pabst, Oconomowoc, Wis., is consigning four Percheron stallions and fourteen Hackney stallions and mares. Three of the Percheron stallions are sired by Imp. Journal, and are creditable sons of this worthy sire. The two-year-old son, King Coco, is a blocky, heavy-boned horse with a close-coupled back, good hips, good head and chest and an extra good mover. The yearling son, Dan Dandy, is a toppy individual with plenty of middle, heavy bone and a very good set of pasterns. Another son of Journal is out of a dam of Baccerrat breeding, the stallion that sold for $5,000 to Kellogg, of Green Bay. E. E. Rosenkranz, of Oconomowoc, is consigning an extra good Imported stallion that we advise you to look up before the sale. The Welch Farm, Ripon, Wis., is consigning a number of high-class animals. Dopp Brothers, Ixonia, are consigning a toppy stallion, and several others are consigning some first-class animals. The Hackneys being consigned by Fred Pabst, are high-class animals, many of them having been exhibited at the leading horse shows throughout the Middle West. Every lover of good driving horses should plan to be at the ring side when these horses are sold, and do not fail to bring your check book with you, for there will, no doubt, be a number of opportunities to buy a fancy driving horse at a price that any lover of good driving horses can afford to pay. Every farmer should have a good driving horse or driving team, regardless of whether he has an automobile or not, and here will be an opportunity to get the best obtainable. Send for a catalog of the sale, which gives pedigrees, pictures and descriptions of the animals to be sold. Catalogs may be obtained by writing to Fred Pabst, R. No. 30, Oconomowoc, Wis.—Adv.

ONE of the Short-horn cows recently sold to George C. Sherman, Minneapolis, Minn., by H. B. Drake & Sons, Beaver Dam, Wis., whose advertisement appears on page 29.

A Foreword About the Grant County Sale.

SOME three weeks ago the writer spent a couple of days in Grant county, Wis., visiting the breeders that are going to consign boars to the Grant county Poland China boar sale to be held at Lancaster, October 10th. About forty head have been cataloged, two each from twenty herds. Stop to think what you might expect by picking the two best boars out of each one of twenty herds, wouldn't you expect to find forty boars about as good as could be produced? That is just what you will find in this sale. We have seen all the boars that will go in this sale and there won't be a poor boar in the offering. Burlie Dobson, Lancaster, Wis., is secretary and if you want a catalog, he will be glad to mail you one if you will send him your name. If you are going to be at the Wisconsin State Fair leave your name with him at the Dobson & Eastman pens, but whatever you do, don't overlook this sale.—Adv.

Milking Short-horns.

WHY not own a few good dual-purpose cattle and if the Short-horns as a breed please you, the William Bros.' cattle as individuals will please you. They have a small, but select herd of females and a few young bulls. The prices they ask are not out of reason for the class of cattle they breed and sell. Communicate with them, they have a good herd and are worthy of your patronage. In writing please mention The Wisconsin Farmer. See page 29.—Adv.

Hendricks' Poland China Boar Offering.

WE have been advised that the Poland boar sale to be made by E. W. Hendricks, Hazel Green, Wis., September 28th, will be the first one of the kind ever held in the state. All we have to say is that there will be a grand lot of spring boars sold on the above date and anyone wanting a boar to put at the head of a registered herd of sows or to grade up a plain herd, should not miss this sale. In the first place, Ed has the boars in fine shape—you will not find them loaded with fat or in show condition, but you will find boars that will appeal to you and the kind that makes good at maturity. Many Poland China herds in Wisconsin need more stretch in their herd boars, you can get that, with the other good essentials if you'll attend this sale. The bulk of the offering is sired by Black Jumbo, without a doubt the largest boar doing service in the state, and one that is siring a uniform lot of big Polands. Of course, you will want a catalog, for that will give you the details of the pedigrees. One of these boars is among the best, sired by Jumbo, out of Spring Valley Gold, going back to the great sire, Blue Valley Quality. Watch for this boar. Two more by Jumbo out of A Wonder 107353 dam, a good cross, and two choice boars. Four boars out of a half sister to Black Jumbo sired by Big Oakland. Three choice boars by Black Jumbo out of Wisconsin Giant dam. Three great prospects in some March boars by Black Jumbo out of A Long Expander dam. These are among the very best. Three line bred Big Bones appealed to us. This is a strain that has certainly made good, and a line-bred boar is the right kind. We could go on and write a couple of columns about these good boars, but you simply must see them to appreciate the offering. The catalog is very descriptive and you should be sure and get one. Simply send your name and address to E. W. Hendricks, Hazel Green, Wis. Plan to attend this sale. It will be to your interest, but if you can't attend in person, T. P. Shreve will represent The Wisconsin Farmer at this sale and handle your buying instructions to your satisfaction. Write him in care of Mr. Hendricks. See page 28.—Adv.

WAHATOMICA NELL CLOTHILDE, one of the Holstein cows in the herd of Cook Bros., Burlington, Wis. See advertisement on page 30.

The Stoehr Duroc Jerseys.

WHEN we visited M. Stoehr, Viroqua, Wis., we found him with about fifty pigs of March and April farrow and of the lot, we saw some that were outstanding. Mr. Stoehr has a right good boar in Professor C., he a son of Professor B, he in turn a grandson of the noted Professor. This is a junior yearling and a boar with size and quality and the pigs by him are as good as any on the farm. Prince Wilhelm is the senior herd boar, a two year old sired by Lucky Model by Minnesota Model out of a daughter of Marion's Wonder. This boar has done Mr. Stoehr a great deal of good and the boars sold sired by him have made good. Two of the best sows on the place are sired by Fancy Col. Again he by Fancy Col. out of a Defiance dam. These sows have plenty of scale and are the dams of some of the good pigs. One of them is the dam of the junior yearling herd boar. Mr. Stoehr is offering some good boars and gilts unrelated and they are being priced very reasonable. Get his prices and when writing mention The Wisconsin Farmer. See page 29.—Adv.

Hampshire Association Under Way.

SEVERAL of the Hampshire breeders of Wisconsin met at Madison, October 31sts for the purpose of forming a state Hampshire Association. This is an excellent move on the part of the breeders and there is no reason why it should not bring great results. No breed of swine has come to the front more rapidly than the Hampshire and this was brought about by the individual merit of the breed and not by any special advertising campaign or "boom." Messrs. Laird, of Prairie du Chien; Damon, of Richland Center, and Bush, of Fond du lac, prominent Hampshire breeders of the state, were instrumental in calling this meeting, and they were appointed as a committee to draw up a constitution and by-laws to be presented at the annual meeting to be held during the farmers' week next winter. We were surprised to learn that there are over 100 men in the state of Wisconsin breeding Hampshires and it is certainly high time that an association of this kind was formed. During the next few months an effort will be made to get as many charter members as possible. Mr. D. S. Bullock, of the Wisconsin Live Stock Breeders' Association was elected temporary secretary and if you are interested in this breed of swine you should write him at Madison and become a member of this association. There will be a combination sale of bred Hampshire sows held at Madison during farmers' week next winter. This will be a grand opportunity to advertise this breed and it is up to the breeders of the state whether this sale will be a success or not. If they will consign good sows, success is assured, but if this sale is to be used for the dumping grounds of inferior stuff, the future of the Hampshire in Wisconsin will not look very bright.—Adv.

SIR JOHANNA FAYNE MOOIE, whose daughters are advertised for sale on page 30 by Edward O. Mueller, Appleton, Wis.

Grove Bros.' Holsteins.

GROVE BROS., Columbus, Wis., whose advertisement appears on page 30 report the sale of a fine young bull to H. J. Willbrubs, Cashton, Wis. This is the 22.29-pound bull they were advertising for the past few weeks. His dam made 22.29 pounds butter in seven days. His sire was the 29.55-pound bull, Maplecrest Hengerveld De Kol, one of the most richly bred bulls in the state. He combines in the closest possible degree the great producing blood of Pontiac Aaggie Korndyke and Friend Hengerveld De Kol, that together have more daughters making from 1,000 to 1,300 pounds butter in a year than any other two bulls of the breed. Another son of this bull is advertised for sale on page 30. His dam is Lady Johanna Pauline, whose A. R. O. record is 20.90.—Adv.

Fond du Lac County Jersey Breeders' Sale.

THE Fond du Lac Jersey Breeders' Association will hold their first annual consignment sale, Tuesday, November 26th, at Brandon, Wis. The Jersey breeders of Fond du Lac county have long been recognized as among the best in the state. Not only have the Jersey cattle in Fond du Lac county been known for their high production ability and for the register of merit records which they have made, but as individuals they stand second to none in the United States. For the past twenty years Jersey cattle from the herd in this county have been heavy winners in practically all the big show rings in the middle West. Among the consignors to this sale are J. H. Dixon, Brandon, Wis., who is recognized all over the United States as a master breeder and a judge of Jersey cattle. He is consigning a fine lot of individuals, many of which are fit to go into any show ring. Ed Bruins, of Fairwater, is also consigning a fine lot of animals. The winnings of his herd at the state fair last year is evidence that he is breeding the right type of animals. C. A. Peterson, of Rosendale, a well-known Duroc and Jersey breeder is consigning a few head. There will also be a number consigned from herds at Oshkosh and Princeton, Wis. Catalogs giving pedigrees, description and pictures will be sent on application to the secretary of the association, C. A. Peterson, Rosendale, Wis.—Adv.

McAllister's Guernseys.

THE oldest herd of Guernsey cattle in Brown county, Wis. is that of J. C. McAllister, of Green Bay. The females in the herd are of Benjamin and Fanzine lines of breeding. Many of the cows are granddaughters of Franzine 2d, a fine advanced registry cow. At the present time Mr. McAllister is advertising a number of yearling bulls for sale that are ready for service. These were sired by Dusk Glenwood 16207. He was by Selma Glenwood, that has fifteen A. R. daughters, one of which, Allenwood Primrose, as a two year old, made 589 pounds of fat in a year. Selma's Glenwood was by Glenwood Boy of Haddon and of the cow, Selma of Pinehurst that made 762 pounds of fat in a year. Glenwood Boy of Haddon has twenty-six A. R. daughters with records as high as 965 pounds of fat in a year. The dam of Dusk Glenwood is an advanced registry daughter of Corollet's son that has eleven A. R. daughters. The young bulls are of good, straight conformation and well marked. For further information in regard to breeding and prices write to the above address. See page 30.—Adv.

A 27.76-pound Holstein bull. Write-up on his breeding appeared on page 24, in the issue of September 7th. He is now being advertised for sale on page 31 by the Clovis Stock Farm, Menasha, Wis.—Adv.

Columbia County Poland China Sale.

THE Columbia County Asylum, Wyocena, Wis., will hold a sale of big-type Poland China boars and gilts at the county building on Thursday, October 19, 1916. They will sell forty boars and gilts sired by Columbia Pete 226375, the biggest boned hog in the country. He was sired by Wisconsin Orange, that was bred by the noted big-type Poland China breeder, J. O. James. Wisconsin Orange was by Peter Mouw's noted boar, Big Orange. There will also be spring pigs sired by Columbia Wonder, a grandson of Gritters' noted boar, A Wonder and Peter Mouw's noted boar, Big Bone 2d. There will also be several litters offered for sale sired by Big Bone Jumbo and E. W. Hendricks' noted boar, Black Jumbo. In a letter recently received from the superinten-

Will Increase Advertising Space

LIVE stock men who advertise in The Wisconsin Farmer come back year after year. They know that The Wisconsin Farmer brings results. Read what Arthur Rust, R. R. 4, West Allis, Wis., breeder of Holstein-Friesian cattle, says:

We have sold more than twenty bulls during the last year at very satisfactory prices. We have made so many good sales through The Wisconsin Farmer that we are going to increase our space for the coming year.

Let The Wisconsin Farmer help you sell your stock. Write our field man in your territory today.

The Wisconsin Farmer - Madison, Wisconsin

Guaranteed Circulation, 90,000.

dent, S. C. Cushman, he says, "This stuff is very well grown. I also expect to put in a few of our tried sows. This will make a very choice offering and I think will bring out more people than a straight boar sale." Catalogs are being issued showing the breeding of the animals to be offered and may be obtained by writing to S. C. Cushman, Wyocena, Wis.—Adv.

Mueller's Holsteins.

THE registered Holstein cows advertised for sale on page 30 by Edward O. Mueller, Appleton, Wis., are a fine lot of individuals. They are well bred, being daughters of Sir Johanna Fayne Mooie and Fobes Fayne De Kol. Sir Johanna Fayne Mooie is a son of the noted bull, Sir Johanna Fayne, that has twenty-five A. R. O. daughters with records up to 31.31 pounds of butter in seven days. Six of his first junior two-year-old daughters to be tested had records of better than twenty pounds of butter in seven days. One of his daughters recently completed a record of 23,549 pounds of milk and 941 pounds of butter in a year. Her full sister made nearly twenty-nine pounds of butter in seven days. Not only are the daughters of Sir Johanna Fayne heavy producers, but as a whole are fine individuals, many of them being almost perfect individuals. Sir Johanna Fayne Mooie, the sire of the cows offered for sale, was sired by Sir Johanna Fayne and his dam is a daughter of Sir Johanna Fayne. A number of the other cows offered for sale were sired by Fobes Fayne De Kol, a son of Fobes Tritomia Mutual De Kol and out of a thirty-pound daughter of Homestead Junior De Kol. These cows are now all safe in calf to Johanna Chief De Kol, a son of Sir Johanna De Kol, sire of the noted forty-pound cow, Johanna De Kol Van Beers. Sir Johanna De Kal has fifty-one A. R. O. daughters, that have been very heavy producers, several of them making world records. Our readers who are in the market for Holstein cows of milking age are advised to correspond with Mr. Mueller at once.—Adv.

A 28.71-Pound Holstein Bull for Sale.

A 28.71-pound Holstein bull is advertised for sale on this page by A. G. Pingel, Chilton, Wis. This bull is a fine individual and backed by high production blood. His dam, Dinah Johanna Abberkerk 2d, made 28.71 pounds of butter and 623.70 pounds of milk in seven days. In 300 days she gave 16,177.90 pounds of milk and made 677.45 pounds of butter. This bull was sired by Oakhurst Milk and Butter King, a son of the $10,000 bull, The Milk and Butter King, and out of the cow, Aaggie Duchess Oakhurst, that made 25.05 pounds of butter in seven days. An extended pedigree of the bull advertised for sale shows him to be richly bred. Mr. Pingel has a fine lot of daughters from this bull and recently sold a number of his two-year-old daughters to J. A. Martin, of Darlington, Wis., who is one of Wisconsin's best judges of cattle. For further information in regard to the bull offered for sale write to the above address. When writing kindly mention The Wisconsin Farmer.—Adv.

Making Sure of Your Batteries.

WELL-CHARGED batteries are necessary to secure best results from your electric lighting plant, your automobile, or other power devices on the farm. The farmer who uses storage batteries can easily make sure that his batteries are in good condition by occasionally testing them with one of the dollar hydrometers, manufactured by the Willard Storage Battery Company, Cleveland, Ohio. The company has just announced a new ninety-day free service plan for Willard Battery buyers, too. Read the advertisement on page 11 and send for a hydrometer and information about the new service plan. When writing, mention that you saw the advertisement in The Wisconsin Farmer.—Adv.

The Hunter's Equipment.

THE man who likes to hunt will feel the call to the woods and fields soon, and then he'll want the best equipment obtainable, so as not to risk missing the game on account of faulty rifle or cartridges. Winchester rifles and cartridges are always reliable. The rifles are made in a variety of models, so that every hunter can get one to suit his ideas, and the cartridges come in all sizes. They can be bought of any dealer. See the advertisement on page 12. When purchasing your rifle or ammunition, be sure to mention that you saw the advertisement in this paper.—Adv.

Cutting Down the Fuel Bill.

MUCH money is wasted every year through buying expensive coals that do not give full value in heat per ton. Tecumseh Coal, mined by the Martin-Howe Coal Company, 1937 McCormick Building, Chicago, gives added heat with less actual waste than some other coals, and it costs less per ton. Users of Tecumseh coal have saved from $50 to $100 on a season's coal supply. Read about the Tecumseh mines and Tecumseh coal in the advertisement on page 23, and write to the company for more information. Tell them you saw the advertisement in this paper.—Adv.

A More Powerful Car.

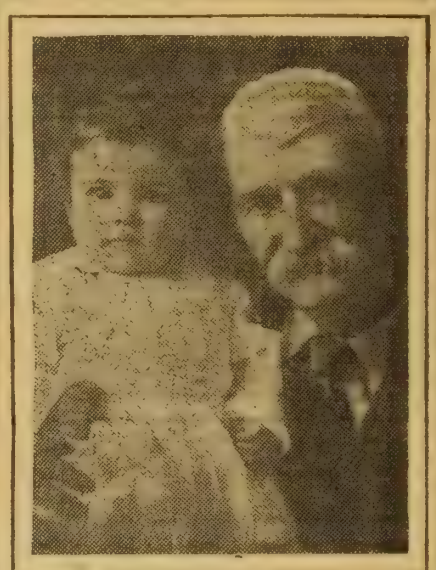
SETTING new standards of style and charm of design, comfort and power has become a habit with the Velie Motor Vehicle Co., 118 Velie Place, Moline, Ill. The new 1917 Velie Six adds to the length, and, therefore, to the comfortableness of the machine. Improvements in the engine make it more powerful, and at the same time, more economical than previous models, because it gives the greatest amount of energy from every drop of fuel. It surpasses all previous models in charm of design. Read about it in the advertisement on page 13 and write for catalog or see your nearest dealer. When writing, mention that you saw the advertisement in The Wisconsin Farmer.—Adv.

Buying Houses at Wholesale Prices.

MUCH of the worry of planning and superintending the building of the new home is eliminated when houses are built from Gordon-Van Tyne standard plans. Ready-cut material may be purchased to fit the plan you choose, or the house may be built from standard material in the usual way. Buying direct of Gordon-Van Tyne saves 25 to 50 per cent of your lumber bill. The Gordon-Van Tine Co., 6057 Gordon St., Davenport, Iowa, has five big books showing plans of their houses, barns, silos, garages and descriptions of building materials. The house plan book contains plans and interior views of 300 houses. Any of these books may be had for the asking. Read about them and about the Gordon-Van Tine ready-cut system of building, in the advertisement on page 32, then fill out the coupon telling which books you want and mail it to the company. And don't forget to tell them that you saw the advertisement in this paper.—Adv.

A Car That is Standard.

IT pays to buy a car that is standard from season to season. Cars that embody radical changes from season to season go out of style as quickly as the daughter's last year's hat. But a Reo car can be used several seasons without making the owner feel that he is behind the times. For that reason the Reo does not rapidly depreciate in value. There is always a market for the Reo because it is a good, standard car, no matter what year it was made. Read more about the Reo in the advertisement on page 7, and write the Reo Motor Car Company, Lansing, Mich., for further information, or consult local agent. Be sure to mention that you saw the advertisement in this paper.—Adv.



THE oldest and youngest Guernsey breeders in Brown county, Wis. J. McAllister and his grandson, Carrol J. Lucia, Green Bay, Wis. See advertisement on page 30.

Keeps House Warm Easily.

WELL-HEATED and comfortably ventilated rooms are necessary for the health and comfort of the farm women and the children who spend much of their time indoors during the winter months. The L. J. Mueller Furnace Co., 204 Reed St., Milwaukee, Wis., manufactures a one-register furnace which can be easily installed in any house without tearing up the floors or walls. It means pure air, well-distributed heat, and a clean house. The advertisement on page 6 tells more about the Mueller Pipeless Furnace. A free booklet will be sent for the asking. When writing the company say that you saw the advertisement in this paper.—Adv.

Lessen the Kitchen Labor.

ANY household equipment which will lessen the kitchen work of the busy farm women deserves investigation. The Severance Gas Machine, manufactured by the Severance Gas Machine Co., 62 S. Galena Ave., Freeport, Ill., not only enables the housewife to cook more efficiently, quicker, and with greater comfort, but it will light the house with a bright, white light. The machine makes a perfect gas for cooking and lighting. It is safe and practical. See the advertisement on page 1; and write to the company for illustrated folder. When writing mention that you saw the advertisement in this paper.—Adv.

Explosives for the Farmer.

THE use of explosives on the farm is increasing. They are not only essential in stump blasting, quarrying and ditch digging, but are now being used in tree planting. Experiment stations have proved that fruit trees planted in blasted holes develop deeper and stronger roots. The Atlas Powder Co., Wilmington, Del., has striven to meet the demand for explosives on the farm by manufacturing Atlas farm powder, the safest explosives for farm use. It is easy to handle, with the least amount of danger. See the advertisement on page 6 and send to the Atlas Company for their free book on "Better Farming." Tell them you saw the advertisement in The Wisconsin Farmer.—Adv.

The Husker a Good Investment.

IN order that the full value of the corn crop may be saved farmers are using husking machines and saving the leaves and stalks for fodder. A dependable husker, which is guaranteed to do more work with less power than other makes of the same size is the Appleton husker and shredder, made by the Appleton Manufacturing Co., 5122 Fargo St., Batavia, Ill. The fodder value saved from a small acreage pays the cost of the Appleton. See the illustrated advertisement on page 2. Write for the free husker book describing the machines. When writing mention that you saw the advertisement in this paper.—Adv.

Guaranteed Drain Tile.

A GOOD drainage system transforms the swampy field into fertile land. But when putting in a drainage system it pays to get the best drain tile on the market in order to insure good service. Haeger drain tile is guaranteed. The farmer runs no risk when he builds his drainage system of Haeger tile. The manufacturers, Haeger Brick & Tile Co., No. 1 State Bank Building, Dundee, Ill., have published a helpful book, "Farm Land Drainage," which will be sent free on request. Read their advertisement on page 24 and send for the book. Mention that you saw the advertisement in this paper.—Adv.

Scales a Paying Investment.

THE farmer who attempts to get along without good scales may cheat himself or others. Reliable scales are necessary to keep a check on farming operations and to insure a square deal in your business deals. The Moline Plow Company, Moline, Ill., manufactures an accurate scale, the McDonald pitless scale, which costs little, is easy to set up and gives a lifetime of reliable service. Write to Department 30 for illustrated literature, or see the McDonald pitless at your dealers. When writing mention that you saw the advertisement in this paper.—Adv.

Saving Money on the Furnace.

HEATING the farmhouse is a problem that deserves serious consideration. Forty per cent of the original cost of your heating plant, and one-third of the fuel bill can be saved by purchasing a Bovee Pipeless Furnace, manufactured by the Bovee Furnace Works, 204 W. 8th St., Waterloo, Iowa. Bovee furnaces are guaranteed, too. See the illustrations in the advertisement on page 20. Then send for the illustrated catalog telling more about these economical heating plants. When writing tell them that you saw the advertisement in this paper.—Adv.

Where to Stop in Chicago.

WHEN in Chicago you will want to stop at a comfortable, good hotel, within easy reach of the business district. You will want good service, and good food, at moderate prices. There is a hotel which just fits these requirements. It is the new Kaiserhof, on Clark, near Jackson Boulevard. Read about it in the advertisement on page 10 and send for circular 100, so that you will be familiar with the hotel when you go to Chicago. Mention that you saw the advertisement in this paper.—Adv.

Making Money on Furs.

FARMERS who hunt can now obtain higher prices for pelts. Becker Bros. Co., Dept. E3, 416 N. Dearborn St., Chicago and 129 W. 29th St., New York, are offering liberal payment for pelts, particularly for good specimens. They make a liberal grading with no deduction for commissions and transportation. See the advertisement on page 2 and write for information. Tell them that you saw the advertisement in this paper.—Adv.

RED POLL cattle are still in demand and if you contemplate buying a few females or a bull get into communication with J. W. Salter & Sons, Unity, Wis. They have a good herd of well-bred cattle and are fine gentlemen with whom to do business. Tell them what you want and they'll tell you whether they can fill your order or not. Mention The Wisconsin Farmer.—Adv.

WE realize that a prospective buyer often writes different advertisers at the same time, asking for prices and description of their stock. If you are going to want a Chester White boar, write Wm. Kirst, Tomah, Wis. He has some very choice boars and we feel sure they will suit you when they arrive at your station. Mention this paper.—Adv.

PADDY by the noted Schoolmaster and C. Evans by Combination 2d head the Chester White herd of A. J. Gray, Mt. Hope, Wis. If this breeding appeals to you let him describe what he has for sale in the spring boar line. He will sell boars and gilts and he don't ask a big price for them. Please mention this paper when writing.—Adv.

HAUK BROS., Cassville, Wis., advise that they have had many inquiries for females, but they didn't have any more to sell at this time. They have recently sold a good yearling bull and have a couple around a year old that they are pricing at this time. If you are interested in this breed, it will be worth your while to visit this herd, they have an excellent herd of cattle. Get their prices and descriptions, it will pay you.—Adv.

L. P. MARTINY, Chippewa Falls, Wis., needs no introduction in the Northwest, for no breeder of the state enjoys a larger acquaintance. Don't forget to visit his pens at the Wisconsin State Fair. We haven't seen his show herd recently, but from past experiences we feel sure that he will be out with a strong herd. He will have some choice boars for sale and you all know the Martiny guarantee.—Adv.

Sheep.

The best showing of sheep ever seen at the Minnesota State Fair was on exhibition this year. Exhibitors that have shown at this fair for several years said that it was the best show, individually, that they had ever seen at this fair. Flocks from several states competed for the prize money and of the more popular breeds the competition was very strong. The Shropshires led in numbers and it was a wonderful showing on this breed. Mr. John Miller, Claremont, Ont., officiated as judge and gave general satisfaction.

HERE IT IS HENDRICKS' GREAT POLAND CHINA BOAR OFFERING

HAZEL GREEN, WIS., THURS., SEPT. 28, '16

40 HEAD---THE BEST I HAVE IN SPRING BOARS AND GILTS---40 HEAD

MANY sired by Black Jumbo 221231, the largest smooth boar in Wisconsin. He is a wonderful sire and the boars I am selling have great backs, good feet, nice depth and have that length that many breeders need in their herd.
This is my first boar sale and one of the first ever held in the state and for that reason I am giving you the best I could raise.
A few boars by North Side Wonder, Smooth Price and Long Joe. To sell five choice spring gilts by Black Jumbo out of A Wonder dam (143421).
Can't tell you all the good ones. Just remember it is the best lot of Poland China boars ever gotten together in the state. Come and see Model Major 2d, my latest addition and some boar. There is a catalog for you. Have you received it? Send your address and don't forget the date and place—

FEATURE
Will sell BIG OAKLAND, a senior yearling sired by the noted OAKLAND'S EQUAL and out of A WONDER BELLE by A WONDER 107353. Here's your chance.

Breeders Wanting 30-lb. Herd Sires

We Invite Your Attention to

Three Young Bulls

No. 151, calved March, 1916. Sire, Korndyke Segis Johanna 127132, a 38-lb. son of the 40-lb. bull, Johanna McKinley Segis by King Segis, and whose dam, Pontiac Lady Korndyke (A. R. O. record 38.03) is the highest record daughter of Pontiac Korndyke. Dam, Pabst Blackberry, a 31.68-lb. three year old by a 29-lb. grandson of Hengerveld De Kol. Second dam, a 23-lb. three-year-old by King Pontiac Champion, a 31-lb. son of King of the Pontiacs. Third dam, a 33.86-lb. daughter of De Kol 2d's Butter Boy 3d.

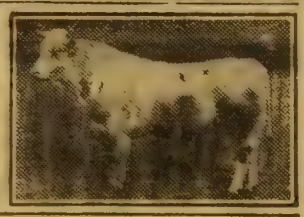
No. 156, calved April, 1916. Sire, King Pontiac Champion, has 41 A. R. O. daughters. The only one tested as a mature animal made over 1,000 lbs. butter in a year. Dam a 31.51-lb. daughter of Sir Hengerveld Model Johanna, that has twenty A. R. O. daughters, two above 30 pounds. Good A. R. O. breeding for several generations.

No. 152, calved April, 1916. Sire, King Pontiac Champion. A 30.38-lb. daughter of Hengerveld Model Johanna, a son of Hengerveld De Kol. Dam's dam, A. & G. De Freule De Kol 2d, a 29.68-lb. cow.

Several young bulls by the above sires, all out of A. R. O. cows, ranging in price from $100 up, depending on breeding and age. Be sure to address

PABST STOCK FARM, R. 30, OCONOMOWOC, WIS.

THE 30.90-LB. SHOW BULL NORTH STAR VERA SIR BEETS 97406



AS we now have four crops of calves by this sire, we are compelled to offer him for sale. He is a show bull as his picture shows him. He is perfectly gentle and quiet, even with strangers, is a quick, sure server, and we guarantee him to be absolutely right in every way. He was born December 24, 1911. Sire, SIR BEETS CORNUCOPIA NETHERLAND, that was never defeated in the show ring. Dam, HAPPY HOME VERA ORMSBY, A. R. O. record 30.90. First check for $500 gets him.

FRED ALBRECHT WATERTOWN, WISCONSIN

2 Yearling Sons of the Richly-Bred Holstein Bull KING HENGERVELD PONDYKE

THIS bull has 20 A. R. O. daughters, 2 with records over 30 pounds of butter in 7 days. He was sired by King of the Pontiacs, that has 175 A. R. O. daughters, 2 with records over 40 pounds. Bull No. 1, born December 18, 1914, ¾ white, good and straight. Dam, Kinsman Beauty, 19.25 lb. 7-day record, 675 pounds butter and 16,032 pounds milk in a year. She is a granddaughter of Pontiac Aaggie Korndyke. Price of bull $150. Bull No. 2, born September 24, 1915, ¾ white, very straight. Dam, Roberts' Fearless Lassie, a show cow, calved on show circuit so not yet tested, but will be this fall. Her dam and grandam both have 7-day and yearly records 757-764 pounds of butter for the year. Price $125. Send for extended pedigrees. Address **DR. DAVID ROBERTS, R. 4, WAUKESHA, WIS.**

A Richly Bred Aaltje Salo Bull

BORN February 28, 1915. **Ready for immediate service.** His dam, Aaltje Salo Netherland Mechthilde 78488, as a five year old made 23.35 pounds butter in seven days, 38 days after calving. She comes from a long line of heavy-producing ancestors. She not only has inherited this heavy-producing ability, but also transmits it. She has three A. R. O. daughters, one with a record of 28.68 pounds butter as a four year old. Her grandam, Aaltje Salo 5th's Netherland, has eight A. R. O. daughters holding the world's record for five years. The sire of the bull for sale is the 27-pound bull, DAISY JOHANNA 5TH, 1st prize two year old at the Wisconsin State Fair. Address

ARTHUR RUST WEST ALLIS, WISCONSIN

Come to Detroit
The Automobile Center
And
LEARN THE AUTOMOBILE BUSINESS

Detroit trained men get preference over all others and get jobs quickly. No other city, no other school can give you what Detroit offers. Every factory knows us, endorses our school, glad to get our graduates, offers them territory in which to sell cars and start garages.

EARN $75.00 TO $300.00 A MONTH

Our equipment is complete. Students actually build cars from start to finish, getting factory training in assembling, block testing, road testing, everything. Special complete course in Oxy-Acetylene Brazing and Welding, separate from regular course. All leading types of starting, lighting and ignition systems in operation. 6 cyl. Lozier and 8 cyl. King used for road instruction. We have a new Chalmers "6" chassis with overhead cam shaft motor.

DETROIT IS PLACE TO LEARN—Start Any Time

There are 44 Auto Factories in Detroit. You can't get this advantage anywhere else. You make faster time here and get practical instructions. School open all the year. Enter classes any time, any day. Three classes daily, morning, afternoon and evening. Auto factories write and phone for men constantly to fill permanent places. Why not fit yourself for one of these good paying positions?

START A GARAGE—SELL CARS—BE INDEPENDENT

We have completed arrangements with the Auto Factories to put them in touch with graduates who intend entering business for themselves. Also made arrangements with a large Eastern Investment firm (worth millions) to back competent, reliable, Michigan State Auto School graduates, who want to enter garage and selling business. These capitalists know where the money is to be made.

ACT QUICKLY—NOW. Get full particulars, "Auto School News" and new catalog—both ABSOLUTELY FREE. Or better still, jump on a train and come to Detroit as hundreds have done, and LEARN RIGHT.

MICHIGAN STATE AUTO SCHOOL, THE OLD RELIABLE SCHOOL,
1409 Auto Bldg., No. 11-19 Selden Ave., Detroit, Mich., U. S. A.

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

Questions and Answers.

Valves Need Grinding.

I have a model 17 Chalmers. It has a Rayfield carburetor with high and low speed adjustments. Compression is poor on two cylinders. The motor runs smoothly on high speed, but misses considerably on low speed, and shoots a blue flame out of the air-valve of the carburetor. It is generally hard to start, and when running idle, it will speed up and then slow down, and then speed up again. Is the trouble on account of poor compression, or on account of defective carburetor adjustment?

Answer.—Your trouble appears to be largely due to poor compression and the poor compression is due to leaky inlet valves. Probably the exhaust valves also need grinding. Grinding the valves and cleaning out the carbon will probably remedy the trouble. Carbon accumulations in the cylinders could also cause the trouble by causing preignition.

Auto Will Not Run.

I have a 1912 Flanders 30. I have had it about a month. When I first got it, it ran fairly well; but never did hit on all cylinders. It was rather hard to start without priming. I ran it about a hundred miles and then ground the valves. The car ran well for ten miles. Then I stopped for about two hours, and the engine cooled off. Then I tried to start it. It would start all-right, but would soon stop. After several attempts, I got it running, and it pulled as it never did before all the way home. I let it stand about an hour, and then it acted as it did before. Now if I start it, I have to hitch a team to it and pull it around for an hour. I laid the trouble on the carburetor. The carburetor has no adjustment on the gas—just one on the air valve. Do you think I would get better results with another carburetor?

Answer.—Everything points to poor gasoline or a stoppage in the carburetor, probably by lint or dirt. Water in the gasoline might cause the same trouble. Disconnect the carburetor from the gasoline line and see that the gasoline runs through freely. Then remove the carburetor and clean it thoroughly. Obtain some really good gasoline if possible to try the car out. The ordinary grade of gasoline on the market at present is very poor and is the cause of much starting trouble. Your car being old, no doubt the intake valve stems are loose in the guides. This permits the air to leak into the intake and may cause starting trouble.

Carburetor Trouble.

I have a 1914 Maxwell car, equipped with a Zephyr carburetor. The motor is hard to start after standing awhile, even in warm weather. It runs best with hot air even in summer. Using cold air, the water heats quickly, so that it boils. When starting up the car, it lacks power and fires into the exhaust. It never works well on the first mile drive. It is slow to respond to the throttle. The carburetor works best with the smallest jet. The compression is good, and the ignition is good. How does a car act when there is an air leak in the intake or around the valve stems? Are the valves at fault?

Answer.—Nearly everything you have mentioned indicates that your carburetor is using too much gasoline. The heating of the motor, the backfiring in the muffler and the necessity of using hot air in summertime all indicate that the carburetor is adjusted for too much gas. Since you have already tried the smallest nozzle without sufficiently reducing the amount of gas you will have to lower the gasoline level in the bowl of the carburetor. The float of your carburetor is probably waterlogged. Put in a new float and your troubles may end. If the gasoline level is still too high change the levers so as to close the float valve sooner.

An air leak prevents the adjustment of the carburetor for smooth running at all speeds. Either the motor will run well on low and miss on high or miss on low and run well on high. As a rule, a motor with an air leak will not throttle down well on account of the uncertain mixture. A leak around the valve stems has the same effect as a leak at the manifold. An air leak is easily detected. Squirt a little gasoline around the valve stems and intake manifold joints while the motor is running. If there is a leak the motor will speed up or slow down. If the engine speeds up it is a sign that the mixture is lean.

Charging Magnets.

How much current is required to properly charge the magnets of an automobile magneto, using a six-volt battery and coil? What size wire should be used to make the coil, and how many pounds of wire is required?

Answer.—A great deal depends upon the size of the magnets. The greater the number of turns in the coil the less the current required. For all ordinary cases a coil wound from No. 28 B. S. G. enameled or single cotton-coverel wire should give good results, using about five pounds of wire.

Dynamo and Battery.

I have a private electric lighting plant using a twenty-six-volt, eighty-ampere storage battery. Could I install a thirty-two-volt, 200-ampere battery and charge it with my generator? The generator will produce thirty volts, fifteen amperes at 1,600 R. P. M. At what speed would it have to run to generate twenty amperes? What would the voltage be at this speed? Would the extra speed hurt the generator?

Answer.—Your generator is rather small to charge the thirty-two-volt battery. It could be used if care is taken not to let it become too hot. It would have to be run at a speed of about 2,000 R. P. M. At this speed it should generate about forty volts twenty amperes. The amperage depends upon the amount of resistance in the circuit. The more the resistance the less the amperage. If the generator heats badly put more resistance in the circuit so as to cut down the amperage. The heating is proportional to the square of the amperage. If your generator is well made it should stand a speed of 2,000 R. P. M.

Charging Storage Battery.

I have a Knapp dynamo motor that has a safe capacity of six volts, four amperes. When run at 3,000 R. P. M., it generates eight volts. I also have a six-volt, forty-ampere Thornward storage battery. How can I charge the storage battery with the dynamo? How can I tell which is the positive wire and which is the negative wire of the dynamo? The brushes are both alike. When my battery is partly exhausted, it works like an open-circuit battery. What causes this? How many six-volt, twenty-four-candle-power lights can I run with the battery? How long will the battery last with one charge?

Answer.—The dynamo is rather small to charge the battery. To give the battery a complete charge the dynamo would have to generate eight volts. It would have to run about twelve hours to give the battery a complete charge. The wiring is very simple. Connect the positive pole of the battery to the positive pole of the generator and the negative pole of the battery to the negative pole of the generator, placing a switch in the line to break the circuit. The current of the battery must not be allowed to flow back into the generator, as it might demagnetize the field. Keep the switch open when the generator is not running.

To determine the positive and negative wires of the generator dip the ends of the wires in a bucket of salt water. Bubbles will be given off most freely from the negative wire.

A storage battery stores and liberates electricity by chemical action. This action takes place more rapidly when the battery is fully charged. Your battery is probably somewhat sulphated, due to overdischarge or lack of electrolyte. This accounts for its slow action when partially discharged. Keep the plates well covered with the electrolyte. Your battery would not run more than one twenty-four-candle-power light. One charge might run the light eight hours, but it would not be advisable to run it more than four without recharging the battery.

Paper-white narcissus grows well when set in water in berry dishes with small stones to hold the bulbs in place. Have the bottom of the bulb at the surface of the water when the dish is filled. Keep in a cool, dark place until the roots have formed.

The Wisconsin Farmer

THURSDAY, SEPTEMBER 21, 1916.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

THE FARMER AND THE TARIFF COMMISSION.

I AM in receipt of a letter from my very good friend, Mr. H. H. Gross, the man to whom farmers are indebted (as I pointed out last week) for the passage by congress of the Smith-Lever act, bringing the state agricultural colleges to their doors, and the creation of a non-partisan tariff commission, removing the tariff from politics and insuring a businesslike adjustment of the schedules. Mr. Gross had telegraphed me a day or two before the final vote on the tariff commission was taken in the senate, asking me to wire Senator Cummins, of Iowa, (always an ardent champion of whatever benefits the farmer) and urge him to stand determinedly for the commission and the important provisions for the representation of agriculture, adequate salaries for the commissioners and so on. I complied with Mr. Gross' request, with the result as outlined in his letter to me, which I take the liberty to print herewith in full:

My dear Mr. Pierce: I wish to thank you for your good letter of September 8th and your telegram to Senator Cummins. The senator certainly put up a strong fight for us, he did everything that one could ask.

We have a tariff commission in which no political party will have majority control. It has the broadest powers that can be given it under the constitution. The compensation is less than it should have been. A very mean and unfair fight was made against this. The salaries ought to have been maintained at as high a figure as those on any other commission. However, the president told me he thought he could get the men he wanted at the present salary, and if he does and is fortunate in his selection, this legislation will make history and practically eliminate the tariff from the realm of politics.

I made a hard fight for the recognition of agriculture and labor. Many in the house and senate believed that these two great industries should be recognized. The administration did not approve it, and the ways and means committee were practically a unit against it. This was the line of argument: I discussed it for over an hour with the committee. Of course, you understand, without the approval of the committee, we would have had hard sledding. They said: "Well, who should represent agriculture; should it be the cotton farmer of the South, the stock grower of the West, a man from the corn belt, the wheat belt, etc.?" My reply was that the president had always been able to get a man as secretary of agriculture who represented the entire industry, and I thought there were men big enough in agriculture to take a broad view, who would not take the position simply for the purpose of seeing what they could do for their particular line of work, but what they could do for the whole field of agriculture and the country generally.

I asked the Farmers' National Congress to help along this line, also the National Grange. I was assured by a man who stands close to the president and is supposed to act for him, that the president preferred to have no restrictions of that kind; that he could get a better commission without these restrictions than with them, and that it was his purpose to be fair to all interests.

In arguing for labor, they asked what industry should have the honors, whether the iron workers, the wood workers, those in the textile industries, etc. They said: "Go a step further and the manufacturers should be represented, and what industries in that field should be selected?" You can understand that men who wish to find reasons for not doing a thing can always manage to bring up those that look to be sound on the surface.

It is now up to the president to make the appointments and I hope he will not kill the commission with scientists and school-teachers, but will have a commission broadly representative of all the people —men of affairs who have a grasp of world conditions.

I think Senator Cummins is entitled to a vote of thanks for the splendid fight he made for us.

With high regards, believe me,

Very truly yours H. H. GROSS.

I sincerely regret that the provision for the direct representation of agriculture on the commission was not retained in the bill, but there is nothing to prevent the president appointing such a representative and I earnestly hope this will be done. No man is more entitled to primary consideration when the tariff schedules are made than the farmer, who creates the bulk of our national wealth and who is our invariable anchor in time of financial stress. The president has it within his power to appoint a strong commission of highly representative men, big enough to look at this tariff question in a nonpartisan light and be actuated solely by a desire to bring about the greatest good to the greatest number.

In the meantime, farmers must not forget to whom they owe a debt of gratitude for this important legislation. I am going to ask Mr. Gross to write an article for this paper, giving credit where it is due, so we may all know just who have been our friends, and I can promise this article for an early issue. Mr. Gross is too modest to include himself in any such list, but, personally, I would put his name the very first, for he has devoted his entire time for more than a year to working on this matter. I do not know whether he would consider going upon the commission or not, but if he would accept, he is the very man to head the body. I shall have more to say on this subject later on.

HOW TO BORROW UNDER THE NEW LAW.

LAST week I set forth how the mortgages under the new federal farm loan act are to be paid back, a little bit each year, rather than the full amount on any one certain date. I promised to tell, this week, how farmers, who desire to borrow under the new law, must go about their borrowing. I shall try to make this as plain as possible. In the event there is any point that is not perfectly understood I will appreciate it if my readers will write to me. What we want, and need, is to get this new law thoroughly understood, so as to give it a fair and full trial.

To begin with, at least ten farmers must band together to borrow money under the new law. They need not be friends, acquaintances or even neighbors, although it would be preferable if they were. More can get together for the purpose if desired, but there must be at least ten. They are actuated by a common motive: To secure money on farm mortgages at a low rate of interest (4, 5 or 6 per cent—the law says not more than 6) and for a long time. Now, these farmers call a meeting. It may be held in a schoolhouse, a hall, a church or in one of their houses most convenient to them all. When they come together, they discuss the subject informally and decide to form themselves into an association to borrow money on mortgages. They appoint a committee to draw up the necessary articles of association. These may follow a prescribed form furnished by the federal land bank, or they may be written originally by some farmer present; it does not matter. Having proceeded thus far, the farmers who have joined the association say how much they want to borrow and what land they propose to mortgage as security for the loan. Any farmer who joins the association may borrow any amount ranging from $100 (the minimum) to $10,000 (the maximum). The total to be borrowed by the ten farmers who form the association must be at least $20,000. Having proceeded thus far, the farmer borrowers select three of their number to act as a sort of preliminary appraisement committee. They inspect the farms of all the proposed borrowers and put what they believe to be a fair and just valuation on the premises. Then the articles of association are signed by all the ten farmers forming the association and the appraisement is signed by all the three farmers forming the committee and these two documents are sent to the federal land bank of the district. Shortly thereafter, that federal land bank will send out an appraiser to see if the local appraisement is a correct one, and it will not be long—if everything is found satisfactory—until the money is received and the mortgages executed, to run at least five years and forty years if desired.

There remain a few intermediate steps, however. Each farmer who joins in with at least nine other farmers to form a local association of at least ten members must subscribe for stock in the association to the amount of 5 per cent of the loan he wants. That is, if he wants to borrow $100, he buys $5 worth of stock; if he wants to borrow $5,000, he buys $250 worth of stock, and so on. Thus he becomes a shareholder in the federal land bank from which he secures his loan. This money is not kept by the local association, but is sent on to the federal land bank of the district and stock is issued by that bank for the amount thus sent in. This stock is part security for the loan made by the farmers, but it may (and probably will) pay dividends, so that it will prove a good investment. If the farmer, who wants to make a loan, cannot pay in ready cash for the amount of the stock he must take, the amount will be deducted when the federal land bank sends the money to him on his mortgage. Thus, if he borrows $5,000 and must take $250 worth of stock and does not have the ready money for this, the bank will send him $4,750 ($5,000 less $250) and the transaction will be closed, except as he may receive dividends on his $250 worth of stock from time to time. When he pays off his loan in full, his stock is cancelled and the money returned to him. This stock is in no sense a tax or commission; it is simply so much deposited in the bank, to be returned in full when the loan is paid off.

I have heard the point raised against the new law that farmers cannot borrow unless they guarantee one another's debts. This is wrong. The most that any farmer in any local association can be made to pay, even should the association fail, is 10 per cent of his loan. He has already subscribed 5 per cent in stock, so he cannot be made to pay more than 5 per cent more, no matter what happens. Let me give a specific example. Suppose I borrow $1,000 on one of my farms. I am obliged to pay $50 for stock before I get the loan. Suppose the association to which I belong goes broke, because the farmers, to whom the money was loaned, fail to make their payments on account of drouth or wet weather or grasshoppers, or for any other reason. I can be obliged to pay another 5 per cent of my loan, or $50 more, making $100 altogether. But that is the limit under the law. I cannot be compelled, by any process, to pay another cent. So the risk of joining in with nine other farmers is not as great as might appear, especially in view of the fact that no farmer borrower can secure a loan which is more than 50 per cent of the appraised value of the land and 20 per cent of the improvements thereon.

If I have not made myself perfectly plain, I want to suggest two things: First—that you write to me and tell me what is not clear, so I may give you further details; second—that you write to the Federal Farm Loan Board, at Washington, and ask for their circular No. 2, which is designed to help farmers who want to borrow. And while it will not be possible to make any loan under the new law until the twelve federal banks are located and opened (which will hardly be for four months, at least) the local associations can be organized at once and the applications prepared for the desired loans. It will be a case of "first come, first served," and those who get the preliminaries attended to early will be the first to secure the loans, just as soon as the banks are actually opened for business.

BULLETINS ON HOME TOPICS.

I AM in receipt of a letter from a subscriber who is ambitious to become proficient in domestic science, but who does not know how to set about her task. She writes me as follows:

Dear Mr. Pierce: An article in your paper for August 6th, "Shall She Go to Town School?" interested me very much, especially what you said about the extension work. I am enclosing an envelope that you may send me the names to write to. I am so anxious to be a domestic science teacher. Fifteen years ago when I left school I was doing second-year work at the North Dakota Agricultural College. Since then I have been housekeeping at home. My youngest sister is now in Virginia finishing her school work and I am still at home. How can I continue my studies here?

I have written, giving what information I could and sending my correspondent a collection of bulletins which I happened to have on hand, covering a variety of domestic science topics, which can hardly fail to instruct and interest her. In this case, as in all others, I am only too glad to be of whatever service I can, for I hold this to be one of the duties of a publisher—to aid his readers in getting the best there is in life and in satisfying their laudable ambition to get ahead in the world.

I want to take this occasion to advise all my readers to get in touch with the extension department of their state agricultural colleges. Now, for example, in regard to this domestic science subject on which my correspondent writes me. I went through my files hurriedly, and I find that practically every state here in the grain belt has issued an assortment of bulletins covering a variety of subjects which can hardly fail to interest the women members of the farm household. Here, for instance, is Wisconsin, with many interesting bulletins. Here is North Dakota, with bulletins on "The Rural Hot Lunch" and "Preservation of Food in the Home." Here is Minnesota, with bulletins on "Bread Making" and "House Heating." Here is Iowa, with bulletins on "Prevention of Disease" and "Home Furnishing." Here is Nebraska, with bulletins on "Rural Clubs for Women" and "Lunches for the Rural School." Here is Missouri, with bulletins on "Country Hams and Bacon," "Home Making," "Canning in Glass by the Cold-Pack Method," and so on and on. Likewise, I found in my files a collection of bulletins from the United States Department of Agriculture on such subjects as these: "Beautifying the Home Grounds," "House Ants—Kinds and Methods of Control," "Canned Fruit, Preserves and Jellies—Household Methods of Preparation," "Canning Tomatoes at Home," "Food for Young Children," and so on. All these bulletins are to be had without cost. Would it not be well for every farm household to be well supplied with them? I think so.

James M. Pierce

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-In-Chief

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

1912 Grand Ave. Des Moines, Ia. | 201 Washington Bldg. Madison, Wis.

SUBSCRIPTION RATES—Single subscriptions, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of fifty or more, 25 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription prices in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing give the same name and initials as you gave before or state both the old and new names, and explain why you make the change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address WISCONSIN FARMER, MADISON, WISCONSIN

The 1916 Wisconsin State Fair.

WISCONSIN has made a long stride toward a real state fair and exposition. At the time this is written the detail figures of cost and receipts for the 1916 state fair are not available, but weather conditions may cause a financial loss. But this is not material. The state fair should be continued and improved even if it is run at a loss. It is an educational institution worth more than it has ever cost the state and if succeeding fairs are to be as great an improvement as the 1916 fair was over its predecessors, surely we can afford to make some investment for the great value which these expositions will be to the agricultural and live stock interests of Wisconsin.

The 1916 fair was a clean show of high quality in every department. The raucous, suggestive "Pike" attractions were missing. Wisconsin has accomplished something in getting rid of low-grade side shows which have had space on the ground for years until this fair. Still there was plenty of amusement of a better order, and sensational aeroplane flights, bolloon leaps, good racing, fireworks, etc.

The stock show was better than ever before, quality standing out as the prominent feature. There were larger stock shows on the fair circuit this season but none better. The dairy show especially was a strong indication of the improvement of breeding in this state. The beef show was not large but the individual animals would show up well and give keen competition for the best ribbons at any of the fairs. The hog show was larger than Wisconsin has even seen and hogmen taxed the capacity of the new barns the first year. Already there is need of more room. The sheep show was also housed in new quarters this year and splendid animals were shown. In the poultry division about 4,000 birds were exhibited, putting the Wisconsin show second only to New York. Wisconsin is a good state for poultry, the climate being ideal and markets the best. In the dairy products division the exhibits were cut short by recent dry weather, but the quality was above that of last year. The county exhibits, twenty-seven in all, were of an exceptionally high order, and the bee and honey department was much larger and better than in previous years. Although the horticulture department was given more room than formerly it did not have enough. The automobile show was much superior to that at the 1915 fair. The University of Wisconsin exhibit was the best that has been shown at any fair. The educational and boys' and girls' sections were inspirational, and the foundation has been laid in these departments for big things at future fairs. Special attention was paid to women's work, pure foods and health topics. The machinery exhibit was interesting and featured by many exhibits of Wisconsin manufacturers.

The fair ground was in fine condition. The new grand stand accommodates about double the number of people who could be seated last year. The grounds were well cared for and Secretary Remey had numerous signs directing visitors to various exhibits and departments. There was an abundance of good music and splendid order. Wider walks and more of them are badly needed at the grounds. It seems impossible to have a fair without some rain and this might as well be provided for. Large and permanent quarters for the main exhibits of the fair are necessary. The exposition grounds should be in such shape as to cause a minimum of discomfort in bad weather.

The success of the fair this year, and its superiority in practically every department over previous fairs, is due to the energetic work done by C. P. Norgord, commissioner of agriculture, and C. E. Remey, secretary. The fair board has been active in all this work and is entitled also to credit. The members of the fair board are as follows: Frank Johnson, Darien; C. W. Harvey, Beaver Dam; E. J. Roethe, Fennimore; Thomas Saxe, Milwaukee; R. J. White, Milwaukee; G. N. Mihils, Fond du Lac; H. D. Griswold, West Salem; B. F. Wilson, Wausau; Robert McDowell, Oconto; L. I. Roe, Stanley; W. M. Rowe, Sarona.

Back of the success of any large fair must be the work of the superintendents of the various departments. The men and women who had this work in charge in Wisconsin this year were capable and energetic and to their untiring efforts a great deal of the success is due. The superintendents in each department were as follows:

Administration Bldg.—Oliver E. Remey.
Admissions—A. H. Jenson, Edgerton.
Agriculture—E. L. Luther, Madison.
Amphitheater Arcade—D. W. Larkin, Sturgeon Bay.
Amusements—Thomas Saxe, Milwaukee.
Automobiles—B. J. Ruddle, Milwaukee.
Bees and Honey—N. E. France, Platteville.
Cattle—C. W. Claflin, Muskego.
County Exhibits—E. L. Luther, Madison.
Dairy—Fred Marty, Monroe.
Dept. of Health—F. W. Luening, Milwaukee.
Education—G. W. Davies, North Freedom.
Forage—E. T. Hayhurst, Watertown.
Grand Stand—J. S. Miller, Madison.
Grounds—M. J. Sweeney.
Horses—W. K. Caldwell, Morrisonville.
Horticulture—N. A. Rasmussen, Oshkosh.
Machinery—J. A. Chinnock, Hudson.
Physician—J. R. Newman, Madison.
Poultry-Pigeons—G. W. Hackett, North Freedom.
Privileges—C. W. Harte, Watertown.
Publicity—J. S. Smith, Milwaukee.
Public Safety—Capt. W. F. Mehl, Milwaukee.
Purchasing Agent—M. F. Blumenfeld, Madison.
Sheep—Ira M. J. Chryst, Hudson.
Speed—R. J. White, Milwaukee.
Swine—James Dillon, Mondovi.
Transportation—A. W. Kalbus.
Veterinarian—Dr. O. H. Eliason.
Women's Rest, Hospital—Mrs. H. E. Stadler, Waukesha.
Woman's Work—Mrs. V. W. James, Eau Claire.
Young People's Clubs—T. L. Bewick, Madison.

Wisconsin Farmer Cups Go to North Bend.

THE WISCONSIN FARMER has been making an effort to stimulate interest in the hog business in Wisconsin and this year we offered silver cups to the winners in the Poland China futurity class and the exhibitor of Durocs who showed the best litter of four pigs. These cups were awarded to J. D. McDonald, of North Bend, winner of The Wisconsin Farmer trophy last year, and J. W. Thomas, also of North Bend. Mr. McDonald is a Poland China breeder and Mr. Thomas prefers the Durocs. The Wisconsin Farmer is pleased to note that the exhibit of hogs this year was the largest in the history of the Wisconsin State Fair. There is every reason to believe that the show will be even larger and better next year.

Wisconsin Potato Growers' Convention.

THE 1916 state convention of the Wisconsin Potato Growers' Association will be held November 21st-24th at Eau Claire. Premium lists, rules on exhibits, score card, directions for selection of stock and for arrangements of county exhibits and exhibits in school classes were sent out by Sec. J. G. Milward, of Madison, last week. Copies of these announcements may be had by addressing Mr. Milward. Plans have been completed for the entertainment of the show. This has not been a very good potato season, and the recent frosts have done some damage, but it is a good season in which to make a study of the various problems which the potato grower has to go up against in all kinds of weather. Eau Claire is centrally located, and easily accessible on the leading roads of Wisconsin. The city is well supplied with good hotels and will be able to entertain the show and visitors in good shape. Because of the activity of the Wisconsin Potato Growers' Association, Wisconsin has come to the front as a potato growing state and the show at Eau Claire this year will without doubt be the largest potato show in the country. Wisconsin leads all states in the Union in community growing of standard market varieties, in official seed inspection and in organized field work. This work is supported in twenty-six counties. The potato is not only a good crop for the settler but also for the older farmer, provided he will interest himself in seed selection, proper cultivation, a determined fight on insects and diseases, and systems of marketing standard varieties by community societies. It is becoming possible under the direction of the Wisconsin Potato Growers' Association to take this crop out of the haphazard class and make it pay regularly substantial profits.

Increased Use of Concrete on Farms

A BULLETIN has been issued by the Iowa Experiment Station discussing in an interesting way some uses of concrete on farms, especially where permanent construction is desired. According to this bulletin, concrete offers a building material which is permanent, sanitary, reasonably low in first cost and very low in upkeep expense. Furthermore, concrete does not require expert workmen to handle it successfully, as the farmer can do his own concrete work at odd times and thus save considerable in labor cost. There are right and wrong ways of performing every farm task and the same is found true in the making of concrete.

A few precautions must be taken, according to this bulletin, if good concrete results. The proper proportions of sand, coarse stone and cement is of first importance, though it goes without saying that good products must be used at all times. Then there is the matter of mixing, which must be thorough, and the mixed concrete must be put in place properly re-enforced where necessary.

Good sand and cement and clean water are absolutely necessary in order to make good concrete. It is not practical for the farmer on the average job to test his cement. In most cases it would be unnecessary, because the cement which is made by the leading companies is reliable. He should see that the cement is stored in a dry place and that there are no lumps in it. A lump usually means that some moisture has reached the cement and it has started to set. The lumps should be thrown out or the cement discarded.

More often the sand is poor rather than the cement. The tendency is to use too much very fine sand. Fine sand requires more cement and is more apt to be dirty than coarse sand. The sand should be clean. Dirt prevents the bond between the sand and cement. The presence of dirt can sometimes be told by the appearance of the sand. Some of the sand may be rubbed between the hands and if it makes the hands dirty, it is probably too dirty to use. Another common test is to pour into a tall glass jar or tube five inches of sand and fill with water. After this is thoroughly shaken, the silt or clay settles on top of the sand. If there is more than one-fourth inch of clay, the sand is too dirty to use. Sometimes the gravel which is being used has stones which are nothing more than hardened clay, which may be broken under pressure of the hand. This would make poor concrete, because concrete cannot be any stronger than the weakest material put into it. Porous stone will absorb moisture and then when it freezes will swell and crack the concrete. A great many cracks in concrete are caused by the poor quality of stone which is used. Both the sand and the stone must be clean and hard if first-class concrete is to be expected.

Leaves, roots and other organic matter should be removed from the sand before mixing. Where the sand has been scooped up from the ground, care should be taken to see that no dirt is scooped up with the sand.

It is a rather hard job to wash sand unless specially prepared to do so. A little may be washed by the following method: Build a platform of boards, giving them a slope of about one foot in twelve. At the lower end and the side, nail six-inch boards on edge. Spread the sand evenly over the platform and wash with a hose. As the sand washes down to the lower end of the platform, the clay or silt is taken out and passes off with the water. It is better to get clean sand in the first place than to try to wash very much by this method.

Clean water is necessary for good concrete. The use of water full of green scum from a pond or stock tank is to be condemned. Water that is fit for drinking is fit for concrete work.

The correct proportion of sand, cement and stone to use is very important in the making of concrete. Proper proportioning increases the strength of the concrete and also effects a saving in cement, which is usually the most expensive material. The amount of cement to use is sometimes based upon the amount of voids or air spaces in the sand. Fine sand will have from 40 per cent to 50 per cent voids and, therefore, will require one-half cement or a 1:2 mixture. But a 1:2 mixture is too expensive for ordinary work, so we use coarse stone or gravel to cheapen the mixture. The sand and cement will fill in the air spaces of the gravel and make a solid concrete. A 1:2:4 mixture means one part cement, two parts fine sand and four parts gravel. The value of using gravel or coarse stone is that it strengthens the concrete and cuts down the cost.

The danger of using gravel just as it comes from the bank is twofold; first, there is not, as a rule, enough coarse material in it, and, second, the gravel is not uniform. Good results cannot, in general, be expected from bank gravel or fine sand. In screening out bank gravel, two screens are used. All that passes a one-fourth-inch mesh is called sand. The other screen is used to reject everything above a certain size. For line posts use nothing that will be caught on a three-fourths-inch mesh screen, while, for foundation, as large stones as three-inch may be used. These two screens separate the material into sand and gravel. It can then be mixed in the proper proportions. The following table gives the proportions recommended for the different classes of work:

A 1:2:3 mixture for—
- One-course barnyard pavements.
- One-course floors, walks and roofs.
- Fence posts, sills and lintels.
- Water troughs and tanks.

A 1:2:4 mixture for—
- Re-enforced concrete floors, beams and columns.
- Engine foundations and work subject to vibration.

A 1:2½:4 mixture for—
- Building walls above foundation.
- Silo walls.
- Base for two-course pavements.

A 1:3:5 mixture for—
- Basement walls and foundations.
- Base of two-course sidewalks and floors.
- Mass concrete footings.

There are fairly accurate methods of determining the voids in sand and coarse materials, but, as a rule, the farmer does not care to take the trouble to do this. He prefers to use the proportions which have been found to produce good results in practice.

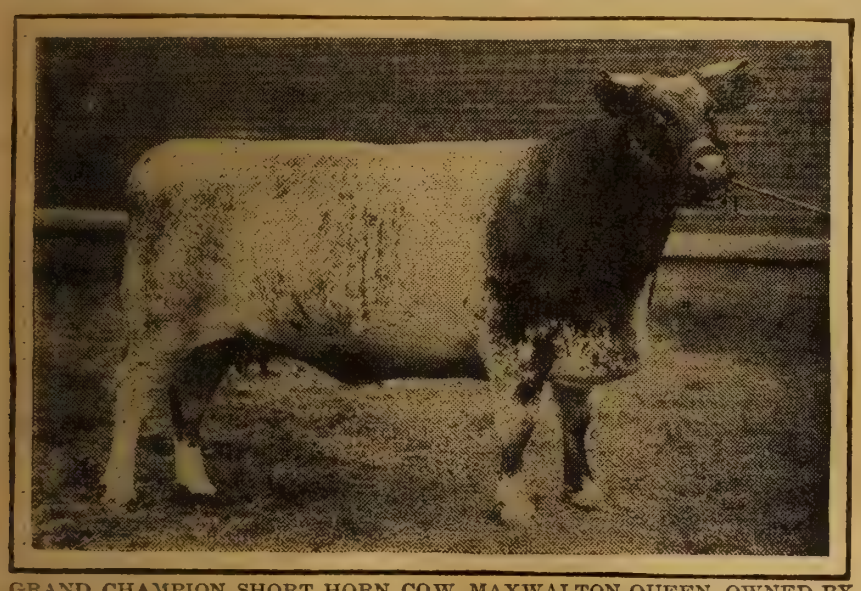
STATE FAIR SETS NEW RECORD

Best Fair in the History of Wisconsin and a Total of 175,000 People Passed Throug the Gates. The Fair Lacked About $12,000.00 of Making Expenses This Year.

MOST OF THE FARMERS WHO VISITED THE WISCONSIN FAIR CAME IN AUTOMOBILES.

THE Wisconsin 1916 State Fair passed into history last week. It was the best exposition of live stock and agricultural products the state has ever seen. The fair was featured by high quality of displays in every department, by an increased number of exhibits in every department except one, and by a clean, moral, educational atmosphere. For the first time in years and, best of all, a "pikeless" fair netted a larger return from the concessions than was received last year, with all the objectionable features included. The 1916 exposition was open to the world in the live stock departments. There were a few outside exhibitors, but Wisconsin stockmen took most of the money in premiums.

The fair cost approximately $120,000. The attendance was 175,800, as compared to 125,666 in 1915. This gain of 50,000 in attendance represents the difference between the fair last year and this year. The biggest day this year was Thursday, when 65,705 people passed through the gates. There were about 8,000 cars inside the grounds on Thursday. A large majority of people, both from city and country, came by automobiles. The railroad transportation to and from the fair is not nearly so important a matter as in former years. With good weather and plenty of gasoline, at reasonable rates, the fair could almost be made a success without railroads. This is not said to minimize the importance of the railroads, which gave fine service to and from Milwaukee. Of course, practically all the exhibits came by freight.



GRAND CHAMPION SHORT-HORN COW, MAXWALTON QUEEN, OWNED BY CARPENTER & CARPENTER, BARABOO, WIS.

SENIOR CHAMPION HEREFORD BULL, MAPLE'S LAD 56TH, OWNED BY J. C. ROBINSON & SON, EVANSVILLE, WIS.

there was no "pike." There were no attractions of any kind which might be called objectionable. It has previously been maintained that the lure of the "pike" was necessary to attract the crowds to the state fair. Secretary of agriculture, Mr. C. P. Norgord, and his associates and co-workers have proved that the contrary is true, for those who wanted to sit in the grand stand. There was really only one good day for a grand stand crowd, and on that day the race course was wet and very heavy. Because of these conditions the receipts in the grand stand were much less than they should have been. The fair will cost the state of Wisconsin between $10,000 and $12,000. This sum represents the

---

We have never known a state fair to have so many different varieties of weather. Monday was children's day and there were almost 43,000 people on the grounds. The weather conditions were favorable. Tuesday a light, drizzling rain fell throughout the entire day, and the attendance dropped to 11,003. Wednesday was a hot day, with rain threatening in the afternoon. The attendance was 28,071. The high mark of attendance was on Thursday, when 65,705 were registered at the turnstiles. The weather was partly cloudy. Late in the afternoon there was a brisk wind. The weather was decidedly cold on Friday and Saturday; so cold as to be uncomfortable

difference between the cost of the fair and the receipts. The receipts at the gate last year were $35,152.75. This was for five days. The receipts this year at the gate for seven days were $58,726.25. As usual, there is only one element to blame for the failure to make expenses and that is the weather. The fair was well worth seeing and it was clearly demonstrated that people were anxious to see it.

Everything considered, the fair has made splendid progress under the present management. It is now sufficiently established to warrant further improvements on the grounds and more buildings of a permanent character. It was something of a surprise to find this year that the new hog barns were not large enough to take care of the show. The hog exhibit has outgrown its quarters the first year. There were about 2,000 hogs exhibited at the fair. The sheep exhibit included about 700 head. There were 850 cattle in all departments and about 400 horses. The poultry show numbered 4,000 birds, and the county exhibits included more than one-third of the counties of the state. With such great interest in agriculture and live stock matters it is apparent that the fair must go on and be enlarged so that it may fairly represent the interests of a great state like Wisconsin. Sec. O. E. Remey advises us that $25,000 will be available the coming year for improvements about the grounds. One problem which demands attention is that of drainage. It having been demonstrated that we nearly always have rain during the Wisconsin State Fair, there remains but little to be done but to prepare for rain. It is very inconvenient to get about the grounds in wet weather, especially about the live stock barns. Permanent walks should be laid and these should be wide enough to accommodate large crowds. It may be advisable to have a covering over the walk connecting the judging pavilions and some of the stock barns. A large percentage of those who are directly interested in live stock will come to the fair whether it rains or not, and every effort should be made to accommodate them. The fencing about the grounds will be completed during the coming year and $25,000 will be expended on a poultry building.

The Wisconsin Farmer this week publishes detailed reports of the several departments of the fair, including the live stock awards, awards in the agricultural, horticultural, poultry, butter and cheese and educational departments. These matters are handled separately and need not be given further mention here.

Mr. C. P. Norgord, secretary of agriculture, said to a representative of The Wisconsin Farmer that he believes the workers in charge of this year's fair accomplished everything which could be expected with the funds which they had at their command. Another section has been added to the grand stand since the last fair, making the seating capacity now 12,000, and another is still to be added before the original plan is carried out. But the Wisconsin fair has been unfortunate in having bad weather and it has never been possible to cash in to any considerable extent on the grand stand. Good racing is always provided, but horses can't make much time in the mud and spectators will not pay extra for seats when rain is falling upon them.

We doubt if any company of men have ever given such conscientious personal attention to the details of the state fair as Mr. Norgord and his associates did this year. All members of the board and all superintendents and other helpers worked harmoniously with Mr. Norgord and the result was apparent in a better organized state fair in all departments.

The added room in the new grand stand made it possible to house the splendid exhibit of the University of Wisconsin, which was formerly placed in the dairy building. The University of Wisconsin did herself proud at this fair. The college of agriculture exhibit was in charge of L. F. Graber and included a large part of the exhibit shown last winter at the Panama-Pacific Exposition. Free moving pictures conducted by the university and other special attractions were of great interest, especially on the rainy days. Wireless telegraph instruments and exhibits of the federal forestry division were visited by many of the state fair crowd. The highway commission had a special exhibit on the grounds and the fishery exhibit was an object of special attention as usual.

Music and special attractions were almost always in full swing for the entertainment of the fair visitors. Mr. Thomas Saxe, of Milwaukee, was in charge of this department of the fair and as an amusement man of long experience he accomplished more than any other member of the board would have been able to do. One of the special musical attractions was Thaviu's Italian Band, of fifty musicians. This band opened and closed the Panama-Pacific Exposition. The Cuba City, Wisconsin, band also gave concerts on the grounds and a number of other smaller organizations and orchestras were used. The vaudeville show included about twenty acts, all of which were of a high order.

Mr. Joseph S. Smith, editor of the Wisconsin Motorist, was in charge of publicity for the Wisconsin Fair, and he got splendid value from the appropriation of $10,000, which was allowed his department. Mr. Smith was also very active in securing information for newspaper men who reported the fair. While The Wisconsin Farmer editors make up their own reports of awards in every department, we appreciate the service which a man of Mr. Smith's caliber can give to the newspapers which are obliged to get their reports out in a few hours.

The farm paper editor looks at the state fair as an educational institution and as a reflector of the live stock and agricultural conditions of the state. Thus, in the dairy divisions this year there was a falling off in exhibits because of the short pastures of the past few weeks. Last year we had a poor showing of corn at the fair, due to the wet and cold weather. This year there was some splendid 1916 corn on display. The corn was well matured. Last year stockmen were afraid of quarantine, and outside exhibitors were barred, but this year no such feeling existed and a splendid stock show in every department was the result. One of the surprising things in connection with the fair was the splendid exhibit of fruits in a year when fruits have not yielded as they did last season.

The city of Milwaukee has apparently awakened to the opportunity which is presented by a state fair and exposition. Had it not been for the loyalty of Milwaukee people, the state fair would have lost much more money this year than it did. Milwaukee people aided in attractions down town, including parades of decorated automobiles, fireworks, etc., and these were greatly appreciated by visitors.

A fair beginning was made this year in the department covering health and foods, under the direction of Fred W. Luening, deputy commissioner of the Public Health, in Milwaukee. Exhibits of bedroom, bathroom and kitchen furniture and arrangements were shown and literature given out on the subject of sanitation. Air, sunshine and better foods were emphasized. There is room for expansion in this department and The Wisconsin Farmer would like to see a woman's building erected, in which special quarters should be provided for health and food exhibits and for a baby welfare exhibit. The Wisconsin State Fair should have a baby show, in which our best along this line are exhibited and judged. We understand the management of the fair has had this up for consideration, but has been obliged to defer action, because of lack of a suitable place. In another year, or two years at most, we hope to see these matters given wider attention.

Wisconsin has long been a great timber state and our lumber interests are still very important in the commercial life of the state. Visitors at the fair were very much interested in the exhibit of the associated lumber companies. These people are prepared to furnish farmers with plans for almost any kind of a farm building, and they have statistics to prove the life of Wisconsin woods which have been used for building material. The exhibit of the lumbermen of the state was one of the most interesting on the grounds, and, we have no doubt, the literature handed out will result in a livelier trade in the state along these lines. It is claimed that wood, as a building material, has not advanced in price in several years, while the finish and quality of the product is being improved.

BEST DISPLAY BEEF CATTLE

Suggestion of Cover Over the Street From Cattle Barns to the Judging Pavilion Is Made by Wisconsin Farmer Writer.

LOVERS of beef cattle were greeted by the most pleasing sight they have ever seen in the big cattle pavilion at the Badger State Fair grounds this year. It has been the custom in the past few years for one to see nothing but the milk breeds when entering the main entrance, but this year things took on a new appearance. Instead of the beef cattle being crowded into one corner, or allowed to seek lodgings outside in improvised sheds, they this year filled about half the cattle barn, and a look in the main door revealed the beautiful White Faces from three of the good herds in the country. The writer remembers only three or four years ago, when a few Herefords were on show at Milwaukee, that some of the authorities said that the big barn would soon have to be turned over entirely to the dairy breeds. Dairy cattle, of course, predominated this year, but the showing of beef cattle looked like olden times, and never has the Wisconsin State Fair had as strong a showing of Herefords and Angus. The Short-horn show might have been stronger, but Wisconsin has at least four of the best showmen in the middle West circuit, and they were true to their home state and made an excellent showing. This is a young Short-horn year all the way through, and the showing of older cattle at Wisconsin was light, but the young stuff was excellent. A cover over the street from the cattle barn to the pavilion would add much to the convenience of the cattle men, especially when a general rain such as fell Tuesday is falling.

SHORT-HORNS.

The Short-horn exhibit was a Wisconsin show entirely. Last year the isolation caused by the fear of foot-and-mouth kept out some exhibits of Short-horns. This year no such barrier existed, but for some reason no outside exhibitors appeared. Wisconsin was once a Short-horn state. Wisconsin people still show a favorable attitude toward the cosmopolitan breed although it does not enjoy the great popularity it once did in the Badger state. The show was not large, but it was attractive. Fewer "fagenders" appeared this year than last. Practically all of these cattle found their places at Hamline last week and with few exceptions placings ran about the same as at last week's meeting. Very little aged stuff appeared at any of the shows this year. Young cattle had their inning. So it was at Wisconsin. Carpenter & Carpenter and Anoka Farms brought out their aged bulls in vigorous breeding condition. These two bulls along with Griswold Brothers' aged bull, constituted the aged bull class where Imp. Lord Cullen captured the blue and had no competition for senior purple rights. He was defeated, however, for grand champion honors by Good Stamp from the Anoka herd, the senior bull calf that was conceded premier honors at Hamline last week.

Grand champion female honors quite rightly went to Maxwalton's Queen, Carpenter & Carpenter's aged cow. She could very comfortably and without injustice have carried at least one purple ribbon before this week. Herr Brothers & Reynolds carried off junior female honors on the junior yearling heifer, Duchess' Last, a sweet heifer with true lines, an abundance of quality and beautifully balanced. She could have carried more flesh and weight and might well have stood higher a week ago.

The exhibitors: Anoka Farms, Waukesha, Wis.; Carpenter & Carpenter, Baraboo, Wis.; Griswold Bros., Livingston, Wis.; Herr Bros. & Reynolds, Lodi, Wis.; Eben E. Jones, Rockland, Wis.

Judge, W. A. Dryden, Brooklin, Ont., Can.

The awards:

Aged Bull (3 shown)—1st Carpenter & Carpenter on Imp. Lord Cullen; 2d Anoka Farms on Imp. Rusper Champion; 3d Griswold Bros. on Hopeful Sultan.

Senior Yearling Bull (2 shown)—1st Carpenter & Carpenter on Sultan Mine 2d; 2d Griswold Bros. on Kintore.

Junior Yearling Bull (4 shown)—1st and 4th Herr Bros. & Reynolds on Royal Choice 2d and Ruby's Archer; 2d Anoka Farms on Village Archer; 3d Griswold Bros. on Clifton Chief.

Senior Bull Calf (8 shown)—1st and 2d Anoka Farms on Good Stamp and Lavender Stamp; 3d and 5th Herr Bros. & Reynolds on Ruby's Knight and Conformation; 4th and 6th Carpenter & Carpenter on Collynie Cullen 2d and Collynie Cullen; 7th Jones on Viscount Cumberland.

Junior Bull Calf (6 shown)—1st and 2d Anoka Farms on Kilblean Champion and Augusta's Sultan 2d; 3d and 6th Jones on Collynie Cumberland and Admiral Cumberland; 4th Carpenter & Carpenter on Collynie Cullen 3d; 5th Herr Bros. & Reynolds on Royal Ruby.

Aged Cow (5 shown)—1st and 4th Carpenter & Carpenter on Maxwalton Queen and Royal Queen; 2d Griswold Bros., on Village Maid 2d; 3d Anoka Farms on Beatrice 8th; 5th Jones on Verbena of Oakdale.

Heifer 2 Years and Under 3 (2 shown)—1st Jones on Crescent Cumberland; 2d Anoka Farms on Brahk's Anoka.

Senior Yearling Heifer (3 shown)—1st Carpenter & Carpenter on Collynie's Best; 2d Herr Bros. & Reynolds on Lady Holly; 3d Griswold Bros. on Pearlette.

Junior Yearling Heifer (6 shown)—1st Herr Bros. & Reynolds; 2d and 6th Jones on Jubilee Cumberland and Crystal Cumberland; 3d Carpenter & Carpenter on Collynie Mysie; 4th Anoka Farms on Anoka Augusta 2d; 5th Griswold Bros. on Broadhooks Queen.

Senior Heifer Calf (11 shown)—1st, 2d and 3d Anoka Farms on Anoka Blossom, Anoka Clipper 3d and Anoka Brahks; 4th, 5th, 6th and 7th Herr Bros. & Reynolds on Goldie's Ruby, Rare Gift, Ruby's Garland and Village Princess 6th; 8th Carpenter & Carpenter on Collynie Sultana 2d.

Junior Heifer Calf (8 shown)—1st and 2d Anoka Farms on Lovely Anoka and August Anoka 3d; 3d Jones on Collynie Belle; 4th, 5th and 7th Carpenter & Carpenter on Collynie Mint Drop 2d, Sadie and Collynie Broadhooks; 6th Herr Bros. & Reynolds on Lancaster Maid 3d; 8th Griswold Bros. on Cumberland Rose.

Senior Champion Bull—Carpenter & Carpenter on Imp. Lord Cullen.

Junior and Grand Champion Bull—Anoka Farms on Good Stamp.

Senior and Grand Champion Cow—Carpenter & Carpenter on Maxwalton Queen.

Junior Champion Female—Herr Bros. & Reynolds on Duchess' Last.

Aged Herd (1 shown)—1st Anoka Farms on herd headed by Imp. Rusper Champion.

Young Herd (4 shown)—1st Herr Bros. & Reynolds; 2d Carpenter & Carpenter; 3d Jones; 4th Griswold Bros.

Calf Herd (4 shown)—1st Anoka Farms; 2d Herr Bros. & Reynolds; 3d Jones; 4th Carpenter & Carpenter.

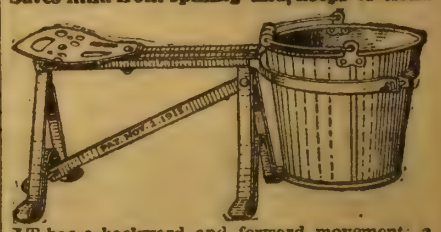
Get of Sire (4 shown)—1st Anoka Farms on get of Sultan Stamp; 2d Herr Bros. & Reynolds on get of Master Ruby; 3d Jones on get of Prince Cumberland; 4th Carpenter & Carpenter on get of Imp. Lord Cullen.

Produce of Cow (4 shown)—1st Herr Bros. & Reynolds on produce of Village Princess 5th; 2d Anoka Farms on produce of Sinnissippi Broadhooks; 3d Carpenter & Carpenter on produce of Bampton Leaflet; 4th Jones on produce of Golddust Crescent.

HEREFORDS.

The 1916 showing of white faces at Milwaukee was undoubtedly the strongest turn out of this famous and popular beef breed ever seen at a Badger State Fair. The strong string from La Vernet Stock Farm fresh from the sharp conflicts in strong competition at Des Moines and Hamline was met here by the well-fitted and excellent turn out from the Maples herd of J. C. Robinson & Son, of Evansville, Wis. This is the first state fair at which the Maples herd was shown this fall and they up-

THE OSCILLATING MILK STOOL
Saves milk from spilling and keeps it clean



IT has a backward and forward movement; a sliding seat; and a swinging pailholder; adjustable to fit any ordanary sized milk pail. You can adjust the heighth of the pail up or down. It is built of steel and will last a lifetime. Big Seller. Every farmer wants it. PRICE $1.75. We want AGENTS. Write for our Special Proposition.
REX MFG. CO. - WATERLOO, IOWA

Only $2 Down
One Year to Pay!
$24 Buys the New Butter-fly Jr. No. 2. Lightrunning, easy cleaning, close skimming, durable. Guaranteed a lifetime. Skims 95 quarts per hour. Made also in four larger sizes up to 6 1-2 shown here.

30 Days' Free Trial Earns its own cost and more by what it saves in cream. Postal brings free catalog, folder and "direct-from-factory" offer. Buy from the manufacturer and save money.

held the honor of the home state by capturing both of the premier purple ribbons. The show was made better by the addition of the well-fitted string brought out by the veteran breeders, C. A. Watson of Illinois.

Mr. Dryden had no easy job on his hands in some of the classes which were close. He objected strongly to over ripeness, softness of flesh and gaudiness at the pin bones. Robinson's two-year-old bull, Maples Lad 56th, was quite easily first in class, but had more of a rub in defeating Vernet King 4th for senior champion honors. The junior bull honors went to the senior yearling, Vernet Prince 31st that was defeated by the senior champion for premier honors.

Some real dope was upset in the female classes. In the aged cow class Vernet Queen 8th, the up to then undefeated animal that had so far in 1916 taken two grand champion ribbons—at Des Moines and Hamline—was relegated to fourth place here and her stable companion, Maple Lass 28th, bore away the blue. Mr. Dryden called attention to the favorite's gaudiness and her softness of flesh. The senior and grand champion female of the show was uncovered in the two-year-old heifer class when Maple's Lass 38th, from the Maples herd was considered good enough to be placed above Vernet Princess 23d after much consideration on the part of the judge. Vernet Princess 23d took the blues in strong competition at both Des Moines and Hamline, but the Robinson heifer is some two-year-old Hereford heifer. It may be interesting to watch the future placings of these two classes. La Vernet's senior heifer calf, Vernet Princess 42d was made junior champion female.

The exhibitors: La Vernet Stock Farm, Jackson, Miss.; J. C. Robinson & Son, Evansville, Wis.; C. A. Watson, Apple River, Ill.

Judge, W. A. Dryden.

The awards:

Aged Bull (1 shown)—1st La Vernet Stock Farm on Vernet King 4th.

Bull 2 Years and Under 3 (4 shown)—1st and 2d Robinson & Son on Maple's Lad 56th and Maple's Lad 61st; 3d Watson on Gay Master.

Senior Yearling Bull (2 shown)—1st La Vernet Stock Farm on Vernet Prince 31st; 2d Watson on Masquerador 7th.

Junior Yearling Bull (4 shown)—1st Robinson & Son on Maple's Lad 76th; 2d and 3d La Vernet Stock Farm on Vernet Prince 36th and Vernet Prince 42d; 4th Watson on Perfection 12th.

Senior Bull Calf (6 shown)—1st and 2d Robinson & Sons on Maple's Lad 82d and Maple's Lad 83d; 3d La Vernet Stock Farm on Vernet Prince 46th.

Junior Bull Calf (5 shown)—1st Robinson & Son on Maple's Lad 93d; 2d and 3d La Vernet Stock Farm on Real Comfort and Vernet Prince 50th.

Aged Cow (5 shown)—1st La Vernet Stock Farm on Maple Lass 28th; 2d and 3d Robinson & Son on Bonnie Dee and Beauty.

Heifer 2 Years and Under 3 (4 shown)—1st Robinson & Son on Maple's Lass 38th; 2d and 3d La Vernet Stock Farm on Vernet Princess 23d and Vernet Princess 15th.

Senior Yearling Heifer (5 shown)—1st and 2d La Vernet Stock Farm on Vernet Princess 26th and Primrose; 3d Robinson & Son on Maple's Lass 56th.

Junior Yearling Heifer (5 shown)—1st and 2d La Vernet Stock Farm on Vernet Princess 33d and Vernet Princess 36th; 3d Robinson & Son on Maple's Lass 68th.

Senior Heifer Calf (6 shown)—1st and 2d La Vernet Stock Farm on Vernet Princess 42d and Vernet Princess 43d; 3d Robinson & Son on Maple's Lass 71st.

Junior Heifer Calf (6 shown)—1st and 3d La Vernet Stock Farm on Vernet Princess 45th and Vernet Princess 46th; 2d Robinson & Son on Maple's Lass 82d.

Senior and Grand Champion Bull—Robinson & Son on Maple's Lad 56th.

Junior Champion Bull—La Vernet Stock Farm on Vernet Prince 31st.

Senior and Grand Champion Cow—Robinson & Son on Maple's Lass 38th.

Junior Champion Female—La Vernet Stock Farm on Vernet Princess 42d.

Aged Herd (2 shown)—1st La Vernet Stock Farm on herd headed by Vernet King 4th; 2d Robinson & Son on herd headed by Maple's Lad 56th.

Young Herd (2 shown)—1st La Vernet Stock Farm; 2d Robinson & Son.

Calf Herd (2 shown)—1st Robinson & Son; 2d La Vernet Stock Farm.

Get of Sire (2 shown)—1st Robinson & Son on get of Bonnie Brae 8th; 2d La Vernet Stock Farm on get of Point Comfort 14th.

Produce of Dam (2 shown)—1st Robinson & Son on produce of Lady Wilton Incomparable; 2d La Vernet Stock Farmson produce of Indirect C.

ABERDEEN ANGUS.

This year saw the best showing of Doddies ever at the Badger State Fair grounds. Fortunate for Wisconsin that the Illinois State Fair has been arranged to follow Wisconsin. It makes an excellent arrangement for exhibitors to route from Minnesota to Illinois and Missouri. One can safely say that from the quality standpoint, the Angus showing at Wisconsin was the best that has appeared at any State Fair thus far this fall. Only the tops of Iowa and Minnesota appeared, the herds of C. D. & E. Caldwell, of Burlington Junction, and Congdon & Battles, of North Yakima, Wash., furnishing the entire exhibit. These two herds offered a treat to visitors to the fair, and gave many their first correct impressions of what real Angus cattle are. Practically the same ratings of the past three weeks were made, the Missouri herd winning most of the blues, and in this case, all of the purple ribbons. Blackcap Bertram was once more made senior champion bull, but was defeated for the premier honors by the junior yearling bull, Epistos, who attracted so much attention at Des Moines where he received the grand championship. Pride Petite added two more purple ribbons to her already long string. Mr. Dryden found the junior calf, Queen of Rosemere 5th in class, but tied the junior purple on the senior yearling heifer, Blackbird Velvet from the Caldwell herd.

The exhibitors: C. D. & E. Caldwell, Burlington Junction, Mo.; Congdon & Battles, North Yakima, Wash.

Judge, W. A. Dryden.

The awards:

Aged Bull (2 shown)—1st Congdon & Battles, on Barbarian of Rosemere; 2d Caldwell on Blackcap Star.

Bull 2 Years and Under 3 (3 shown)—1st Caldwell on Blackcap Bertram; 2d and 3d Congdon & Battles on Knight of Rosemere and Laddie of Rosemere.

Senior Yearling Bull (3 shown)—1st Caldwell on Blatant; 2d and 3d Congdon & Battles on Prizemere and Blackright.

Junior Yearling Bull (3 shown)—1st Caldwell on Epistos; 2d and 3d Congdon & Battles on Ericmere 2d and Cherokeer.

Senior Bull Calf (1 shown)—1st Caldwell on Eidert.

Junior Bull Calf (3 shown)—1st and 3d Congdon & Battles on Quality Lad of Rosemere 3d and Blackburr of Rosemere; 2d Caldwell on Ericaman.

Aged Cow (4 shown)—1st and 3d Caldwell on Pride Petite and Esthonia 12th; 2d and 4th Congdon & Battles on Quissy of Meadow Brook and Pride of Rosemere 5th.

Heifer 2 Years and Under 3 (3 shown)—1st and 3d Congdon & Battles on Myra of Rosemere 2d and Black Lola of Rosemere 3d; 2d Caldwell on Pride of Autumn.

Senior Yearling Heifer (2 shown)—1st Caldwell on Blackbird Velvet; 2d Congdon & Battles on Erica I of Rosemere.

Junior Yearling Heifer (4 shown)—1st and 3d Caldwell on Eritus 2d and Blackcap 59th; 2d Congdon & Battles on Pride of Rosemere 8th.

Senior Heifer Calf (2 shown)—1st and 2d Caldwell on Erica Eudora and Esthonia 15th.

Junior Heifer Calf (4 shown)—1st and 2d Congdon & Battles on Queen of Rosemere 5th and Freda 4th of Meadow Brook; 3d Caldwell on Blackcap Echo 3d.

Senior Champion Bull—Caldwell on Blackcap Bertram.

Junior and Grand Champion Bull—Caldwell on Epistos.

Senior and Grand Champion Cow—Caldwell on Pride Petite.

Junior Champion Heifer—Caldwell on Blackbird Velvet.

Aged Herd (2 shown)—1st Caldwell on herd headed by Blackcap Bertram; 2d Congdon & Battles on herd headed by Barbarian of Rosemere.

Young Herd (2 shown)—1st Caldwell; 2d Congdon & Battles.

Calf Herd (2 shown)—1st Congdon & Battles; 2d Caldwell.

Get of Sire (2 shown)—1st Caldwell on Get of Undalata Blackcap Ito 2d; 2d

Hudson Now Holds World's Greatest Hill-Climbing Record

Makes Fastest Time Up Pike's Peak

No hill-climb or mountain test in the world equals that imposed on motor cars that race to the summit of Pike's Peak. A Hudson Super-Six Special made the best time of more than 20 contestants to the top of America's most famous mountain, over the longest, steepest, highest travelable road in the world.

The start, at a mile and three-quarters above the sea, is higher by far than is the altitude of the finishing line in most hill-climbs.

The finishing point of Pike's Peak is almost two and three-quarters miles above sea level. In the twelve and a fraction miles of the course there are 60 turns, and the rise is almost one mile high. There is no place where the car is not climbing.

The high altitude affects the power efficiency of the motor and water boils at such low temperature that motors cannot be cooled as they are in lower levels.

Hudson Fastest Time

The Hudson climbed up this winding steep road to the "Top of the World" in 18 minutes, 24 seconds. Its time was 2½ minutes faster than the next fastest car.

This feat now gives to Hudson practically every worth-while record. In speed—when 102.3 miles an hour was attained at Daytona; in endurance—when 1819 miles were covered in 24 hours, with a stock Super-Six chassis we established marks not likely soon to be equalled.

Now we have added to these the greatest of all hill-climbing feats. In it we have shown the endurance of the Super-Six.

Others Failed

Motors of some of the most famous racing cars in the world were unable to withstand the strain of that climb and so did not get to the summit.

It is constant hard pulling all the way and more than three-quarters of the distance must be made in second speed, even with specially geared cars.

In addition to mere climbing, as is required in all hill-climbs, here is added the difficulties of carburetion and cooling.

The altitude that affects one's breathing so much that even the strongest man can stand only the least amount of physical exertion, has a similar effect in reducing the power of the motor.

We made that record in a contest in which were entered, as described by a Denver newspaper, ***"Fours—Sixes—Eights—Twelves and Super-Sixes."***

And, as in all tests in which they have been entered, the best performance was shown by the Super-Six.

Phaeton, 7-passenger	$1475	Touring Sedan	$2000	Town Car	$2750
Roadster, 2-passenger	1475	Limousine	2750	Town Car Landaulet	2850

RED POLLS.

The Red Polled show lacked the numbers and competition that marked the shows at Des Moines and Hamline. J. B. Ahlers, of Wisconsin, and Jean Duluth Farm, of Minnesota, had the boards to themselves with the division of the money largely in favor of the Minnesota herd,. Ahlers taking only two blues in the entire showing. The stock was all well fitted and was a fine demonstration of what good showings of Red Polls should be. This was probably Teddy's Best last appearance in a show ring—something to be regretted in Red Polled cattle circles. He added two more purples to his long list of conquests and his work for the breed lives after him. The junior yearling bull, Proctor Knott IV, received the junior purple. J. D. Brunhilde again defeated her two-year-old stable mate, J. D. Purity, for senior champion honors, and the junior champion calf, J. D. Bamby, for grand champion honors.

The exhibitors: J. B. Ahlers, West Bend, Wis.; Jean Duluth Farm, Duluth, Minn.

Judge, Andrew Boss, St. Paul, Minn.

The awards:

Bull 3 Years or Over (1 shown)—1st Jean Duluth Farm on Teddy's Best.

Bull 2 Years and Under 3 (1 shown)—1st Jean Duluth Farm on Earl.

Senior Yearling Bull (2 shown)—1st Ahlers on Norland; 2d Jean Duluth Farm on Proctor Knott II.

Junior Yearling Bull (3 shown)—1st Jean Duluth Farm on Proctor Knott IV; 2d and 3d Ahlers on Pine Grove Lad and Pine Grove Perfection.

Senior Bull Calf (3 shown)—1st Jean Duluth Farm on Teddy's Panama; 2d and 3d Ahlers on Pine Grove Major and Pine Grove Record.

Junior Bull Calf (2 shown)—1st Ahlers on unnamed; 2d Jean Duluth Farm on Pilot Lee.

Cow 3 Years or Over (4 shown)—1st and 2d Jean Duluth Farm on J. D. Brunhilde and Lady Watts; 3d and 4th Ahlers on Cora and Jane.

Heifer 2 Years and Under 3 (4 shown)—1st and 2d Jean Duluth Farm on J. D. Purity and Ringlet; 3d and 4th Ahlers on Joy and Norma.

Senior Yearling Heifer (3 shown)—1st Jean Duluth Farm on Liza Again; 2d and 3d Ahlers on Negress and Maggie.

Junior Yearling Heifer (2 shown)—1st and 2d Jean Duluth Farm on J. D. Winona and J. D. Dimple.

Senior Heifer Calf (3 shown)—1st and 3d Jean Duluth Farm on Teddy's Dorothy and Teddy's Patricia; 2d Ahlers on Pine Grove Jubilee.

Junior Heifer Calf (3 shown)—1st and 3d Jean Duluth Farm on J. D. Bamby and Bonny [illegible] 2d Ahlers on unnamed.

Senior and Grand Champion Bull—Jean Duluth Farm on Teddy's Best.

Junior Champion Bull—Jean Duluth Farm on Proctor Knott IV.

Senior and Grand Champion Female—Jean Duluth Farm on J. D. Brunhilde.

Junior Champion Female—Jean Duluth Farm on J. D. Bamby.

Aged Herd (1 shown)—1st Jean Duluth Farm on herd headed by Teddy's Best.

Young Herd (2 shown)—1st Jean Duluth Farm; 2d Ahlers.

Get of Sire (2 shown)—1st Jean Duluth Farm on get of Proctor Knott; 2d Ahlers on get of Norman.

Produce of Cow (2 shown)—1st Jean Duluth Farm on produce of Betty; 2d Ahlers on produce of Jane.

POLLED DURHAMS.

Boynton Bros., of Janesville, Wis., had the only Polled Durham exhibit at West Allis, leading eighteen head before Mr. Andrew Boss, who judged these classes. The entire showing might have been brought out in better shape—some of them being in especially thin condition for state fair cattle.

FAT CATTLE—PURE BREDS.

Steer 2 Years and Under 3 (2 shown)—1st Congdon & Battles on Loyal of Meadow Brook; 2d Caldwells on Berg.

Yearling Steer (3 shown)—1st Caldwells on unnamed; 2d and 3d Herr Bros. & Reynolds on Silver Velvet and Silver Lady.

Steer Calf (2 shown)—1st Caldwells on Luckaly; 2d N. M. Jewell & Son on unnamed.

Champion Steer—Congdon & Battles on Loyal of Meadow Brook.

Steer Herd (1 shown)—1st Caldwells.

FAT CATTLE—GRADE OR CROSS BRED.

Steer 2 Years and Under 3 (1 shown)—1st E. W. Graber, Mineral Point, Wis.

Yearling Steer (2 shown)—1st Herr Bros. & Reynolds on Pudge; 2d Graber.

Steer Calf (2 shown)—1st Graber; 2d Roland Donovan.

Champion Steer—Graber.

Herd of Steers—Graber.

WINNERS IN BOYS' BABY BEEF CONTEST.

1st—Lee Jewell, 7 years old.
2d—Robert Gray, 17 years old.
3d—A. C. Callin, 19 years old.
4th—Roland Donovan, 15 years old.
5th—Roland Donovan, 15 years old.
6th—Leslie Hatch, 15 years old.

HORSES SWINE, AND SHEEP

These Departments of Badger Stock Show Well Filled and Many Individuals of Great Merit Were Shown in Pens.

Horses.

SOME years ago automobile manufacturers thought there would be no buyers of automobiles among Wisconsin farmers. The Wisconsin farmer today is talking and buying automobiles and talking and buying tractors. Nevertheless, the horse business goes on and prospers better than ever. Motor-driven machinery simply renders it possible to do more on the farm and allows the horse to go into new fields and develop heretofore neglected possibilities. Mr. W. K. Caldwell, the superintendent of the horse department at West Allis, was well pleased with the show of horses made. While not large, the show was well balanced, and in the main was largely a Badger state show. Percherons, Shires and Clydesdales were practically all owned in Wisconsin, and all three shows were good. One of the principal Clydesdale exhibitors in Wisconsin failed to get his entries made in time and thus reduced the size of that show. The Belgian show was good, made up largely of outside of the state horses.

The management is looking forward to a new horse barn, which is badly needed. When the Wisconsin State Fair has a horse barn on a par with the cattle, swine and sheep barns it will have as good live stock equipment as any state fair on the circuit, and the men who make the horse show deserve good quarters for the horses. A covered roadway from the barn to the pavilion, as protection against inclement weather would be an innovation and easily a possibility on the Wisconsin grounds.

PERCHERONS.

The showing of Percherons at Milwaukee was practically a Badger State show—only two exhibitors from outside the state appearing with a few scattering exhibits. The show was indeed a credit to Wisconsin breeders. Better Percherons are out this year, we know; so are many by far worse ones than appeared at the Wisconsin State Fair. Harvest Farms and Lewellin & Sons furnished the bulk of the entries. Practically no high fitting was in evidence—most of the animals appearing in thrifty breeding condition. Competition from outside exhibitors would have added much interest and some of the good ones from Minnesota would undoubtedly have raised the standard. However, the 1916 showing speaks well for the energy and progressiveness of Wisconsin's Percheron breeders. The aged stallion class brought out Harvest Farms' Calculator, last year's champion. He was shown in good breeding form and will be fitted for Chicago. As he was, he had no great trouble in capturing the blue in class and the purple for champion stallion. The next strongest candidate for champion honors was the two-year-old Koko, a thick, blocky, black shown by Shekleton & Sons. The champion mare, Gravette, took the blue in the aged mare class and came from the Mitchell stables. She is a toppy, drafty gray—well fitted—and showing lots of style and quality. Pearl, a well-fitted, good going mare, shown by Lewellin & Sons, was champion mare bred and owned in Wisconsin. Harvest Farms won the blues in the get of sire and produce of dam classes and showed good, young stuff in most of the classes.

The exhibitors: N. Dickinson & Son, Lake Geneva, Wis.; Edgewater Stock Farm, Ft. Atkinson, Wis.; Finch Bros., Joliet, Ill.; Harvest Farms Co., Mayville, Wis.; Lewis Lewellin & Sons, Waterloo, Wis.; J. J. Mitchell, Lake Geneva, Wis.; Mont-Joy Stock Farm, Dane, Wis.; Murphy Bros., Waukesha, Wis.; Pabst Stock Farm, Oconomowoc, Wis.; Frank P. Shekleton & Sons, Lawler, Iowa.

Judge, Arthur Stericker, Manitowoc, Wis.

OPEN CLASS.

The awards:

Stallion 4 Years or Over (6 shown)—1st Harvest Farms Co. on Calculator; 2d Dickinson & Son on Melati Imp. Percheron; 3d Lewellin & Sons on Bonus; 4th Murphy Bros. on Richmond; 5th Edgewater Stock Farm on Francois of Edgewater.

Stallion 3 Years and Under 4 (1 shown)—1st Harvest Farms on Aramis.

Stallion 2 Years and Under 3 (6 shown)—1st Shekleton & Sons on Koko; 2d Harvest Farms on Martial; 3d Edgewater Stock Farm on Rexal of Edgewater; 4th and 5th Lewellin & Sons on Glen and Mocus.

Yearling Stallion (8 shown)—1st and 5th Harvest Farms Co. on Voltigieur and D'Artagnan; 2d Pabst Stock Farm on Faust; 3d Finch Bros. on Finch's Choice; 4th Lamb on Jess Willard.

Stallion Foal (4 shown)—1st and 2d Lewellin & Sons on Phillip and Hugo; 3d Harvest Farm on Unnamed; 4th Mont-Joy Stock Farm on Gabon I.

Brood Mare and Foal (5 shown)—1st, 4th and 5th Lewellin & Sons on Helen, Phillis and Gertrude; 2d and 3d Harvest Farm on Gypsy Maid and Davis.

Mare 4 Years or Over (5 shown)—1st Mitchell on Gravette; 2d, 3d, 4th and 5th Lewellin & Sons on Pearl, Helen, Gertrude and Phillis.

Two-year-old Filly (6 shown)—1st, 4th and 5th Harvest Farms on Grace, Winifred and Marion; 2d and 3d Edgewater Stock Farm and Rose II of Edgewater and Pansy of Edgewater.

Yearling Filly (5 shown)—1st and 3d Harvest Farms on Docile and Jeanette; 2d Mitchell on Conchrea; 4th Lewellin & Sons on Valentine.

Filly Foal (3 shown)—1st and 2d Harvest Farms on Eleanor and Eunice; 3d Lewellin & Sons on Unnamed.

Get of Sire (3 shown)—1st Harvest Farms on get of Brazilian; 2d Edgewater Stock Farm on get of Mattis; 3d Lewellin & Sons on get of Bonus.

Produce of Dam (2 shown)—1st Harvest Farms on produce of Pride; 2d Lewellin & Sons on produce of Gertrude.

PERCHERONS BRED AND OWNED IN WISCONSIN.

Aged Stallion (3 shown)—1st Harvest Farms on Calculator; 2d Lewellin & Sons on Mark; 3d Edgewater Stock Farm on Francois of Edgewater.

Stallion 3 Years and Under 4—(1 shown)—1st Harvest Farms on Aramis.

Stallion 2 Years and Under 3 (5 shown)—1st Harvest Farms on Martial; 2d Edgewater Stock Farm on Rexal of Edgewater; 3d, 4th and 5th Lewellin & Sons on Glen, Mocus and Kent.

Yearling Stallion (3 shown)—1st and 3d Harvest Farms on Voltigieur and D'Artagnan; 2d Lamb on Jess Willard.

Stallion Foal (4 shown)—1st and 2d Lewellin & Sons on Phillip and Hugo; 3d Harvest Farms on Unnamed; 4th Mont-Joy Stock Farm on Gabon I.

Brood Mare and Foal (4 shown)—1st and 2d Harvest Farms on Gypsy Maid and Doris and foals; 3d and 4th Lewellin & Sons on Phillis and Gertrude and foals.

Aged Mare (3 shown)—1st, 2d and 3d Lewellin & Sons on Pearl, Gertrude and Phillis.

Filly 2 Years and Under 3 (6 shown)—1st, 4th and 5th Harvest Farms on Grace, Winifred and Marion; 2d and 3d Edgewater Stock Farm on Rose II of Edgewater and Pansy of Edgewater.

Yearling Filly (7 shown)—1st Edgewater Stock Farm on Mene Carr; 2d and 4th Harvest Farms on Docile and Jeanette; 3d Mitchell on Conchrea; 5th Lewellin on Valentine.

Filly Foal (3 shown)—1st and 2d Harvest Farms on Eleanor and Eunice; 3d Lewellin & Sons on Unnamed.

Get of Sire (3 shown)—1st Harvest Farms on get of Brazilian; 2d Edgewater Stock Farm on get of Mattis; 3d Lewellin on get of Bonus.

Produce of Dam (2 shown)—1st Harvest Farms on produce of Pride; 2d Lewellin & Sons on produce of Gertrude.

Champion Stallion (Open Class)—Harvest Farms on Calculator.

Champion Mare (Open Class)—Mitchell on Gravette.

Champion Stallion (Wisconsin Bred and Owned)—Harvest Farms on Calculator.

Champion Mare (Wisconsin Bred and Owned)—Lewellin & Sons on Pearl.

PERCHERON FUTURITY.

Percheron Colt (8 shown)—1st and 4th Harvest Farms on Voltigrem and D'Artignan; 2d, 5th, 7th and 8th Pabst Stock Farm on Faustulus, Dan Dandy, Royal and Baccarat II; 3d Lamb on Jess Willard; 6th Lewellin & Sons on Grandee.

Percheron Filly (5 shown)—1st and 2d Harvest Farms on Docile and Jeanette; 3d Mitchell on Conchrea; 4th and 5th Lewellin & Sons on Valentine and Gertie.

BELGIANS.

A small but good show of Belgians appeared in the ring at West Allis, Finch Bros., of Joliet, Ill., bringing out the longest string and taking most of the best part of the prizes. Two Wisconsin exhibitors and one Iowa exhibitor also brought forward creditable exhibits. Belgians are popular in Wisconsin and larger showings would be appreciated, and would add much to the character of the horse show. The aged stallion class brought out the roan horse, Buffalo, a good mover, and a well-furnished horse. He was made the champion stallion of the Belgian show. Finch Bros. also had the champion mare, Gamine, a drafty, good moving mare, with lots of quality, that appeared at the head of the aged mare class, taking the purple. One or two rather plain animals appeared in the mare and foal class, but as a whole the quality of the show was up to state fair standard.

Judge—Arthur Stericker.

The exhibitors: Finch Bros., Joliet, Ill.; Mont-Joy Stock Farm, Dane, Wis.; J. J. Mitchell, Lake Geneva, Wis.; Frank P. Shekleton & Sons, Lawler, Iowa. The awards:

Stallion 4 Years or Over (4 shown)—1st and 4th Finch Bros. on Buffalo and Finch's Buster; 2d Mont-Joy Stock Farm on Forton; 3d Shekleton & Sons on Bizaire.

Stallion 3 Years and Under 4 (1 shown)—1st Finch Bros. on Mon Premier.

Stallion 2 Years and Under 3 (4 shown)—1st, 3d and 4th Finch Bros. on Jupiter, Martin and Robert; 2d Shekleton & Sons on Reavevore.

Yearling Stallion (3 shown)—1st, 2d and 3d Finch Bros. on Prince Ben, Royal Ben and His Majesty.

Stallion Foal (3 shown)—1st and 2d Mitchell on unnamed; 3d Mont-Joy Stock Farm on Bruce.

Brood Mare and Foal (4 shown)—1st and 2d Mitchell on Florette De Saint and Julia; 3d Mont-Joy Stock Farm on Dora.

Mare 4 Years or Over (6 shown)—1st and 2d Finch Bros. on Gamine and Nicotine; 3d and 4th Mitchell on Florette De Saint and Julia.

Mare 3 Years and Under 4 (3 shown)—1st Finch Bros. on Beatrice; 2d and 3d Mont-Joy Stock Farm on Sybil and Kathlyn.

Filly 2 Years and Under 3 (1 shown)—1st Finch Bros. on Izetta.

Yearling Filly (2 shown)—1st Mitchell on Lois; 2d Finch Bros. on Beauty.

Clean Sweep.

Filly Foal (1 shown)—1st Mont-Joy Stock Farm on Cosett.

Get of Sire (1 shown)—1st Finch Bros. on Get of Romeo.

Produce of Dam (2 shown)—1st Finch Bros. on Flora; 2d Mont-Joy Stock Farm on Brunette.

Champion Stallion—Finch Bros. on Buffalo.

Champion Mare—Finch Bros. on Gamine.

CLYDESDALES.

Three Wisconsin exhibitors led the entire Clydesdale showing before Geo. Hutton, of University Farm, Madison, Wis., for judgment. The show was small but classy, and brought out some of the best Clydes that have been led into a state fair show ring this fall. McLay Bros. brought out the best string and, as usual, picked off most of the blues and both championships. The Clydesdale show would have been the best out to date had not there been some difficulty about the entries of Mr. Van Natta, whose string would have added much to the show. Mr. Hutton stood for substance along with quality, but would have none of the rough ones or poor movers. The two-year-old stallion, King's Marshall, was made champion, and the aged mare, Buckleyvie Lady, a large, good going mare with lots of quality and style, was made champion mare. Sweet Marie, the two-year-old filly from the Jones string, that has been winning first thus far, went to second place in class when she met King's Baroness from McLay Bros.' string. Wisconsin is a state for good Clydesdales.

The exhibitors: Eben A. Jones, Ban-

The light for study

Soft white light of 400 candle power enables the children to study without eye-strain—adds to the comfort, cheerfulness and hospitality of your home. You can read or sew for hours at a time in comfort, by using the

AMERICAN PORTABLE LAMPS

Gives ten times more light than a kerosene lamp. Easy to operate. Lights with a match. Very attractive looking, nickle plate finish, highly polished with beautiful Alba shade.

Carry it anywhere. Costs ½c per hour to run. Tip it over—no danger. Absolutely safe.

American "Dark Chaser" Lantern

operates on the same principles as the American Portable Lamps. Gives twenty times more light than kerosene lantern. Enables you to do the chores quicker—easier—better. Write for circular and name of nearest dealer.

Read How Fortunes Are Made Quick by Pulling Stumps

HERCULES
Hand-Power
Stump Puller
LOW PRICE
120,000 lbs. Pull
ASK US ABOUT IT

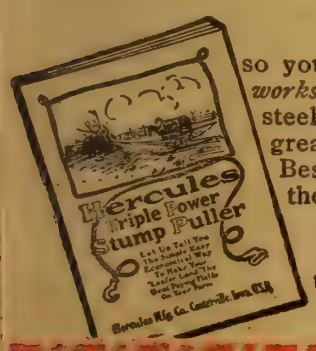
LET me send you my new, fine free book at once. I want to show you *proof* of how you can turn each acre of stump land into a double profit the first year, in extra crops and added value of land—by pulling stumps with the Hercules All-Steel Triple-Power Stump Puller—and how you can make *big money* in *your spare time* by pulling stumps for *your neighbors* or *by renting* your machine at a *nice fat profit.*

My book shows *actual photographs* and prints *actual letters* from many *owners*, telling of the remarkable feats of the Hercules—how it pulls *any size stump, green tree* or *hedge* in less than five minutes—how it easily pulls *an acre a day.* Read how one man increased his land value from $25.00 an acre to $125.00. Read why the Hercules is the *best investment* you can make now. The

Hercules Triple-Power Portable Stump Puller

is the puller that has the single, double and triple power features, giving you three machines in one. One man with a team can handle it and move it from place to place. No heavy lifting. The new portable is equipped with a solid steel bedplate and broad steel wheels. There isn't a stump, green tree or hedge grown that the Hercules won't pull out without straining or breaking any castings. It's the low-down constructed puller that has self-anchoring and stump-anchoring features —the one with double safety ratchets that insure the absolute safety of men and team. I want to send you a Hercules on

30 Days' Free Trial



so you can *see* how *powerful* it is and how *easy it works.* I want you to *know* for yourself that the all-steel construction means 60% less weight and 400% greater strength than cast-iron or "semi-steel." Besides that, I want to save you big money on the cost. I'm making a

Special Price Proposition

to the first buyer in 5000 different parts of the country. If I get *one* Hercules in each locality *more will surely follow* because of Hercules quality and efficiency. So I can easily afford to sacrifice my profit on the *first* machine in each locality. Take advantage of this big profit and big saving opportunity *now.* Besides my 30 days' free trial offer and money-saving price I give you a

3-Year Guaranty

that *means* something. The *all-steel construction, the triple-power* feature that saves your team and gives a tremendous increase of power, the *double safety ratchets* and the careful *turning and grinding of every part*—all these things make it *safe* for us to *guarantee the replacement of any casting of a Hercules that breaks any time within three years, whether it is the fault of the machine or your fault.*

This Free Book Tells All

Just simply send your name and address on the coupon or on a postal so I can send you the convincing facts about the superiority and efficiency and value of the Hercules Stump Puller. Only 5000 of these machines will be sold at this remarkable introductory price, so get your name in now. My new book is a beauty. See the real pictures of big stumps it has pulled out like you would pull weeds. Read the many interesting letters from farmers, lumbermen and land promoters. Stumps, stumps, stumps, pulled out quick, making fortunes for owners of Hercules Stump Pullers. I want you to know the facts. Just mail coupon or postal *now.* I'll send the book and price by return mail. I'll tell you the best crops to raise on virgin land where stumps were before. I simply want to get my free book to you at once, so that you can read the remarkable facts about the Hercules All-Steel Triple-Power Stump Puller and how it does such a splendid work making big profits for owners everywhere.

Filly (3 shown)—1st McLay Bros. on Jasmine; 2d Jones on Silver Bell; 3d McLean on Lady Sunshine.

SHIRES.

The showing of English cart horses at Milwaukee was not large, but was worthy of attention because of the real good ones that were brought out and the absence of the coarse, gummy ones sometimes seen in state fair Shire shows. The principal part of the show was made up by Mitchell, of Lake Geneva, and the Connor Co., of Auburndale. Royal Patch from the Connor stables was defeated in class by the clean-limbed, straight going Ceylon's Patcheon. Ceylon's Patcheon was defeated for championship honors by his three-year-old stable mate, Dan Patch's Herald, a toppy, strong-backed, big-boned, good-moving horse. In female classes, Fuchsia, the big, roomy, gray mare shown last week by Crownover, was first-prize aged mare and later bore away the purple ribbon for female honors. Connor's two-year-old filly, Dray Queen Star, the champion female at Hamline last week was placed third in class here.
The exhibitors: R. Connor Co., Auburndale, Wis.; Finch Bros., Joliet, Ill.; Robert Hardy, Waukesha, Wis.; J. J. Mitchell, Lake Geneva, Wis.
Judge, George Hutton.
The awards:
Aged Stallion (4 shown)—1st Mitchell on Ceylon's Patcheon; 2d Connor Co. on Royal Patch; 3d and 4th Hardy on West Mill Conquering Duke and Scipio.
Stallion 3 Years and Under 4 (1 shown)—1st Mitchell on Dan Patch's Herald.
Stallion 2 Years and Under 3 (2 shown)—1st and 2d Finch Bros. on Springdale Regent and Mona's Spark Jr.
Yearling Stallion (2 shown)—1st Connor Co. on Lumberman's Dray King; 2d Finch Bros. on Springdale Defender.
Brood Mare and Foal (1 shown)—1st Mitchell on Dan Patch's Queen.
Aged Mare (3 shown)—1st Connor on Fuchsia; 2d and 3d Mitchell on Billingsborough Belle and Bollam Lady.
Mare 3 Years and Under 4 (2 shown)—1st Mitchell on Dan Patch's Queen; 2d Connor Co. on Wigtoft Violet III.
Filly 2 Years and Under 3 (3 shown)—1st Finch Bros. on Prospect Gloaming II; 2d and 3d Connor Co. on Dray King Fashion and Dray Queen Star.
Yearling Filly (1 shown)—1st Connor Co. on Queen of Fashion.
Filly Foal (1 shown)—Mitchell on Unnamed.
Get of Sire (3 shown)—1st Connor on get of Saltfleet Dray King; 2d Finch Bros. on get of Fear Not.
Produce of Dam (3 shown)—1st Mitchell on produce of Widercroft's Janet; 2d Connor Co. on produce of Wigtoft Violet.
Champion Stallion—Mitchell on Dan Patch's Herald.
Champion Mare—Connor Co. on Fuchsia.

HACKNEY, ENGLISH, GERMAN AND FRENCH COACH HORSES.

The exhibitors: Chas. E. Bunn, Peoria, Ill.; Robert Hardy, Waukesha, Wis.; Pabst Stock Farm, Oconomowoc, Wis.
Judge, Walter Palmer, Ottawa, Ill.
The awards:
Aged Stallion (3 shown)—1st Pabst Stock Farm on Baythorpe Sultan; 2d and 3d Hardy on Scanton Electricity and Emery Rosador.
Stallion 2 Years and Under 3 (1 shown)—1st Pabst Stock Farm on Pasha.
Aged Mare (1 shown)—1st Pabst Stock Farm on Bellflower.
Mare 3 Years and Under 4 (1 shown)—1st Bunn on Florence.
Filly 2 Years and Under 3 (2 shown)—1st Bunn on Mermaid; 2d Pabst Stock Farm on Quaker Lady.
Yearling Filly (1 shown)—1st Bunn on Moon Beam.
Produce of Mare (1 shown)—1st Bunn on produce of Florence.
Champion Stallion—Baythorpe Sultan.
Champion Mare—Florence.

GRADE DRAFT.

Breed Mare and Foal (3 shown)—1st and 2d McLean on Letty and Rosey; 3d Hardy on unnamed.
Mare or Gelding 3 Years or Over (3 shown)—1st McLean on Flora; 2d Lewellin on Tommy; 3d Hardy on unnamed.
Mare or Gelding 2 Years and Under 3 (2 shown)—1st Lewellin & Sons on Mary; 2d Hardy on unnamed.
Yearling Mare or Gelding (1 shown)—1st Hardy on unnamed.
Foal (3 shown)—1st and 2d McLean; 3d Hardy.
Grade Draft Team, not less than 3,200 lbs. (1 shown)—McLean.
Team of Chunks, between 2,500 and 3,200 lbs. (1 shown)—Hardy.

HEAVY DRAFT TEAMS—PURE BRED.

Best Two Horse Team (1 shown)—1st Finch Bros. on Gamine and Nicotine; 2d McLean on Pride and Nettie; 3d Lewellin & Sons on Helen and Tom.

SHETLAND PONIES.

The exhibitors: Chas. E. Bunn, Peoria, Ill.; F. H. Divan & Sons, Browntown, Wis.; Geo. A. Heyl, Washington, Ill.; Adam Seitz, Waukesha, Wis.
The judge, Walter Palmer.
The awards:
Aged Stallion (3 shown)—1st and 3d Heyl on King Larigo and King Lear; 2d Bunn on Prince Patton.
Stallion 3 Years and Under 4 (4 shown)—1st and 3d Bunn on Lord Go Bang and St. Valentine; 2d Heyl on Trinket Larigo.
Stallion 2 Years and Under 3 (1 shown)—1st Bunn on Best of All.
Yearling Stallion (2 shown)—1st Heyl on Larigo's Prince; 2d Bunn on Unexcelled.
Stallion Under 1 Year (2 shown)—1st Heyl on Larigo's Lookout; 2d Bunn on Vesuvius.
Aged Mare (4 shown)—1st and 2d Bunn on Ovilta and Revelation; 3d Heyl on Phoebe.
Mare 3 Years and Under 4 (4 shown)—1st and 3d Heyl on Marigold Silver Tips and Phyllis Larigo; 2d Bunn on Lady Isabel.
Filly 2 Years and Under 3 (3 shown)—1st and 3d Heyl on Maple Leaf Larigo and Ola Larigo; 2d Bunn on Theoleta.
Yearling Filly (3 shown)—1st Heyl on Larigo's Primrose; 2d Divan & Sons on Doris; 3d Bunn on Undine.
Filly Foal (3 shown)—1st Divan & Sons on Iris; 2d Heyl on Queen Larigo; 3d Bunn on Vesta.
Champion Stallion—Heyl on King Larigo.
Champion Mare—Bunn on Ovilta.

WELSH AND HACKNEY PONIES.

The exhibitors: Chas. E. Bunn, Peoria, Ill.; Geo. A. Heyl, Washington, Ill.
The judge, Walter Palmer.
The awards:
Aged Stallion (5 shown)—1st and 3d Bunn on Fire Lad and John Brown; 2d Heyl on Gwindy Duke.
Stallion 3 Years and Under 4 (1 shown)—1st Heyl on Royal Gwindy.
Stallion 2 Years and Under 3 (1 shown)—1st Bunn on Ten Pins.
Stallion Foal (1 shown)—1st Heyl on unnamed.
Aged Mare (5 shown)—1st and 2d Heyl on Dinarth Gem and Dinarth Dot; 3d Bunn on Bess.
Mare 3 Years and Under 4 (4 shown)—1st Bunn on Florence; 2d and 3d Heyl on Dinarth Fancy and Trillo Magic.

Yearling Filly (1 shown)—1st Bunn on Moon Beam.
Filly Foal (2 shown)—1st Bunn on Velvet; 2d Heyl on unnamed.
Champion Stallion—Bunn on Fire Lad.
Champion Mare—Bunn on Florence.

Swine.

Hog breeders were well pleased with the new pavilion and sheds occupied for the first time this year. It was a surprise to everyone to find the new quarters outgrown the first year. Wisconsin is rapidly forging to the front as a hog state and the show this year would be a credit to any state. The Poland China show has been well organized for several years and the Duroc Jersey show is also now attracting the attention of the leading breeders. The Hampshire breeders of the state have recently organized and plan to enter the state fair classes with larger and better exhibits and the Chester Whites of Wisconsin make a splendid showing. Under the separate breeds will be found the complete list of awards at the 1916 fair.

POLAND CHINAS.

Without a doubt there was the greatest showing of Poland China swine ever seen at the Wisconsin State Fair. Two hundred and twenty-three hogs of this breed were exhibited, and with the exception of the Iowa State Fair, no show of the year has offered better or stronger classes. In the "under year" and "under six months" boar classes the individuals were better straight through than those shown at the Iowa State Fair. Some great boars were brought out. Nine sows faced the judge in the "aged sow" class and it was a great lot of big, smooth sows. Miss Big Knox, the first-prize sow and which was later made grand champion, is no doubt the best champion sow ever seen at this fair. The grand champion boar, Mac's Chief, weighed over 1,000 pounds and is a fine example of a big-type boar. There was a great showing of big-type hogs and these were the favorites of the judge. The junior yearling sow class was great and many sows that were out of the money would have headed the class in many shows. Fifteen were shown in this class. There were fifteen boars in the fall futurity and twenty-two in the futurity for spring boars. Some great prospects were shown in these classes. J. D. McDonald, North Bend, Wis., won the silver trophy offered by The Wisconsin Farmer to the man winning the most points in the futurity classes. He won forty-six points, winning over Dobson & Eastman, Lancaster, Wis., by one point, the latter making a total of forty-five points. In all, this was the most satisfactory showing of this breed ever held at Milwaukee. Mr. Jas. Kemp, Kenney, Ill., tied the ribbons and gave excellent satisfaction. The Poland men certainly did their part toward the "grand opening" of the new swine barns and the great improvement over the old barns was greatly appreciated by exhibitors and visitors alike. We follow with a complete list of awards.
Exhibitors: Dobson & Eastman, Lancaster, Wis.; Chas. F. Flesch, Mt. Ida, Wis.; J. D. McDonald, North Bend, Wis.; E. J. Cowles & Sons, West Concord, Minn.; Madson & Son, Madison, Wis.; W. H. Esterly, Whitewater, Wis.; Wm. Smiley & Son, Albany, Wis.; Heck Bros., Lyons, Wis.; L. P. Martiny, Chippewa Falls, Wis.; J. F. Dilley, Rush Lake, Wis.; Mr. Kintz, Rush Lake, Wis.
Judge, Jas. Kemp, Kenney, Ill.
The awards:
Aged Boar (6 shown)—1st McDonald on Mac's Chief; 2d Smiley & Son on Monarch; 3d Madson & Son on Correct I Am; 4th Dobson & Eastman on Jumbo Hadley; 5th Flesch on Jumbo's Equal 2d.
Senior Yearling Boar (5 shown)—1st Martiny on Chief Price; 2d McDonald on King James; 3d Madson & Son on Triumph; 4th Dobson & Eastman on D. & E.'s Hadley; 5th Kintz on Prince I Know.
Junior Yearling Boar (6 shown)—1st Martiny on Select Major 2d; 2d Dobson & Eastman on D. & E.'s Jumbo; 3d Cowles & Sons on C.'s Choice; 4th Smiley & Son on Model King; 5th Martiny.
Boar Under 12 Months (15 shown)—1st McDonald on Mac's King; 2d Dobson & Eastman on Giant Wonder; 3d Madson & Son on Smooth Victor 2d; 4th McDonald on Crow's Giant 3d; 5th Dobson & Eastman on Giant Wonder 2d.
Boar Under 6 Months (22 shown)—1st Madson & Son; 2d and 3d McDonald; 4th Dobson & Eastman; 5th Esterly.
Aged Sow (9 shown)—1st and 2d McDonald on Miss Big Knox and Miss Price 4th; 3d and 4th Smiley & Son on Hadley Girl 16th and Hadley Girl 13th; 5th Madson & Son on Model Giantess.
Senior Yearling Sow (7 shown)—1st Cowles & Sons on C.'s Wonder; 2d McDonald on King's Lady 4th; 3d Dobson & Eastman on Giantess; 4th Martiny; 5th Kintz on Model N.
Junior Yearling Sow (15 shown)—1st and 3d McDonald on Mc's Princess Lady 2d and Mc's Choice; 2d Cowles & Sons on Peerless Wonder; 4th Madson & Son on Isabel; 5th Dobson & Eastman.
Sow Under 12 Months (19 shown)—1st Madson & Son on Victor Maid; 2d and 3d Dobson & Eastman on Miss Winsome 3d and Miss Winsome 2d; 4th Heck Bros. on Black Giantess 1st; 5th Dilley.
Sow Under 6 Months (21 shown)—1st McDonald on Big Bess; 2d Dobson & Eastman on Keep Me; 3d Madson & Son on Royal Gem; 4th Esterly on Jumbo Giantess; 5th McDonald on Big Bess 2d.
Senior Champion Boar—McDonald on Mac's Chief.
Junior Champion Boar—McDonald on Mac's King.
Senior Champion Sow—McDonald on Miss Big Knox.
Junior Champion Sow—Madson & Son on Victor Maid.
Grand Champion Boar—McDonald on Mac's Chief.
Grand Champion Sow—McDonald on Miss Big Knox.
Aged Herd (6 shown)—1st McDonald on herd headed by Mac's Chief; 2d Cowles & Sons on herd headed by C.'s Wonder; 3d Martiny on herd headed by Chief Price; 4th Madson & Son on herd headed by Triumph; 5th Smiley & Son on herd headed by Monarch.
Breeder's Aged Herd (6 shown)—1st McDonald on herd headed by Mac's Chief; 2d Cowles & Sons on herd headed by C.'s Wonder; 3d Martiny on herd headed by Chief Price; 4th Madson & Son on herd headed by Triumph; 5th Smiley & Son on herd headed by Monarch.
Young Herd (6 shown)—1st McDonald; 2d Madson & Son; 3d Dobson & Eastman; 4th Esterly; 5th Dilley.
Breeder's Young Herd (5 shown)—1st Madson & Son; 2d McDonald; 3d Dobson & Eastman; 4th Esterly; 5th Dilley.
Get of Sire (7 shown)—1st Madson & Son on get of Correct I Am; 2d McDonald on get of Jim Crow; 3d Dobson & Eastman on get of D. & E.'s Hadley; 4th Cowles & Sons on get of C.'s Wonder; 5th Esterly on get of D. & E.'s Jumbo.
Produce of Sow (10 shown)—1st McDonald; 2d Madson & Son; 3d Smiley & Son; 4th Cowles & Sons; 5th Dobson & Eastman.

FUTURITIES.

Fall Boar (14 shown)—1st and 4th Dobson & Eastman; 2d Madson & Son; 3d McDonald; 5th Martiny.
Fall Sow (19 shown)—1st Madson & Son; 2d and 3d Dobson & Eastman; 4th Heck Bros.; 5th Dilley; 6th Smiley & Son.
Spring Boar (22 shown)—1st and 6th Madson & Son; 2d and 3d McDonald; 4th Dobson & Eastman; 5th Esterly; 7th Heck Bros.; 8th Dilley.
Spring Sow (21 shown)—1st and 5th McDonald; 2d and 6th Dobson & Eastman; 3d Madson & Son; 4th and 7th Esterly; 8th Dilley.
Litter of Four Pigs (12 shown)—1st McDonald; 2d Madson & Son; 3d Dobson & Eastman; 4th Esterly; 5th Dilley; 6th Heck Bros.; 7th Martiny; 8th Smiley & Son.

DUROC JERSEYS.

Mr. James Dillon, superintendent of swine at the Wisconsin State Fair for the past fourteen years, made the statement that the Duroc Jersey show this year was the best he had ever seen at this fair. In numbers, this breed led by six head, having a total of 229. The feature of the showing of this breed was the great number of outstanding sows that entered the ring. In the aged sow class, ten head were shown. Any one of the first four sows could have headed the list, and there would have been no serious objections. The seniors, nine in number, were equally strong and each of the first three sows had favorites for first place. Nine boars made up the aged class, but King Defender was an easy winner in class and was later made grand champion boar. He is a boar of great scale, a good top line, deep, and stands on the best of feet and bone. There were three other good aged boars, but two of them lacked finish, though excellent individuals. The first Duroc Jersey futurity show was a success beyond all expectations. Fourteen of the twenty herds nominated, were represented, which shows the interest that was manifested in this futurity. In the boar futurity, thirty-five pigs faced the judge, and there was a great deal of sifting done before the awards were given. This was the only class where there was any disagreement with the judge, but it looked to some ringsiders as though there were better pigs in the money than the first prize boar. Of the gilts thirty-two were driven in the ring and a class that any state fair could feel proud of. Nearly all of the pigs were nicely fitted, and some great show prospects were seen in this class. Big Durocs with stretch consistent with quality, were the favorites of the judge. Many nice pigs were turned down because they didn't show that growthiness that is so desirable in young stuff. The big ones won throughout the show. The Silver Trophy given by The Wisconsin Farmer, for the best "litter of four pigs" owned in Wisconsin, was

won by J. W. Thomas, North Bend. The Duroc Jersey Bulletin Trophy to be given to the breeder winning the most points in the futurity, was won by L. F. Atwater, Bangor, he having to his credit thirty-six points, winning over Brookwater Farm, Ann Arbor, Michigan, by only one point. It was a grand show in every respect. We follow with a complete list of awards:

Judge, Wm. Harris, Morganfield, Ky.

Exhibitors: W. C. Jenkins, Bangor, Wis.; Geo. D. Sprain & Sons, West Salem, Wis.; Albert Hyzer, West Salem, Wis.; L. F. Atwater, Bangor, Wis.; J. W. Thomas, North Bend, Wis.; John L. Fisher, Janesville, Wis.; E. H. Parker & Son, Janesville, Wis.; Ceylon Court Farm, Lake Geneva, Wis.; Brookwater Farm, Ann Arbor, Mich.; W. G. Bartholf, Burlington, Wis.; F. S. Vanderhyde, West Concord, Minn.

The awards:

Aged Boar (9 shown)—1st Fisher on King Defender; 2d Vanderhyde on Van's Crimson; 3d and 4th Brookwater Farm on Model Col. and Cherry King's Rival.

Senior Yearling Boar (3 shown)—1st Brookwater Farm on Panama Special; 2d Ceylon Court Farm on Ceylon Court Defender; 3d Vaughn.

Junior Yearling Boar (7 shown)—1st and 2d Brookwater Farm on Brookwater Much Col. and Brookwater Fashion; 3d Bartholf on Model Wonder; 4th Vanderhyde on Crimson Model.

Boar Under Year (10 shown)—1st Atwater on Proud Chief; 2d Parker; 3d Brookwater Farm on Brookwater Crimson Wonder; 4th Brookwater Farm.

Boar Under Six Months (35 shown)—1st Brookwater Farm; 2d Thomas; 3d and 4th Atwater.

Aged Sow (10 shown)—1st and 3d Atwater on Marion's Beauty and Miss Lucky; 2d Vanderhyde on Crimson Rose; 4th Brookwater Farm on Pal's Queen Daisy.

Senior Yearling Sow (9 shown)—1st Atwater on Defender's Queen; 2d Brookwater Farm on Brookwater Joann; 3d Vanderhyde on Salome; 4th Atwater.

Junior Yearling Sow (8 shown)—1st and 3d Brookwater Farm on Brookwater Jane 2d and Brookwater Jane 3d; 2d and 4th Atwater on Marion 4th and Corrector 3d.

Sow Under Year (8 shown)—1st Atwater; 2d and 3d Brookwater Farm; 4th Vanderhyde.

Sow Under Six Months (32 shown)—1st Vanderhyde; 2d Brookwater Farm; 3d Atwater; 4th Thomas.

Senior Champion Boar—Fisher on King Defender.

Junior Champion Boar—Atwater on Proud Chief.

Senior Champion Sow—Atwater on Defender Queen.

Junior Champion Sow—Atwater on Proud Helen 2d.

Grand Champion Boar—Fisher on King Defender.

Grand Champion Sow—Atwater on Defender's Queen.

Aged Herd (7 shown)—1st Atwater; 2d Brookwater Farm; 3d Vanderhyde; 4th Bartholf.

Breeder's Aged Herd (3 shown)—1st Brookwater Farm; 2d Vanderhyde; 3d Bartholf.

Young Herd (14 shown)—1st and 4th Atwater; 2d Brookwater Farm; 3d Thomas.

Breeder's Young Herd (8 shown)—1st Brookwater Farm; 2d Atwater; 3d Thomas; 4th Parker.

American Record Association Special—1st Thomas; 2d Atwater; 3d Bartholf; 4th Parker; 5th Jenkins.

Get of Sire (7 shown)—1st Atwater; 2d Vanderhyde; 3d Brookwater Farm; 4th Thomas.

Produce of Sow (7 shown)—1st Atwater; 2d Vanderhyde; 3d Brookwater Farm; 4th Thomas.

FUTURITY.

Spring Boar (35 shown)—1st and 5th Brookwater Farm; 2d and 6th Thomas; 3d, 4th and 7th Atwater; 8th Fisher.

Spring Sow (30 shown)—1st, 4th and 7th Brookwater Farm; 2d, 5th and 8th Atwater; 3d and 6th Thomas.

Best Litter Four Pigs (13 shown)—1st Brookwater; 2d and 6th Thomas; 3d and 4th Atwater; 5th and 7th Bartholf; 8th Jenkins.

Wisconsin Farmer Trophy given for the best litter owned in Wisconsin, won by J. W. Thomas.

Duroc Bulletin Trophy given to the premier winner, won by L. F. Atwater.

Explanation: In case a breeder lives in a state that does not have a futurity, he is allowed to show in the adjoining state that has one, consequently Brookwater Farm was eligible in Wisconsin, inasmuch as there was no futurity held in Michigan.

THE HAMPSHIRES.

The showing of Hampshires was not large this year, but what was lacking in numbers was made up in quality. The strong competition was between Iowa and Wisconsin breeders, and Wisconsin held her own in most of the classes. Both grand championships went to the Wisconsin herd. Never before was there the interest taken in the Hampshire that there was this year. In a measure, the Hampshire is a curiosity to many of the visitors that attended this fair. This breed has never had the publicity in the northwest that it deserves, and it is about due, and if the breeders of the state will show their goods, they can stimulate a demand in Wisconsin as has been done in the other states. No breed of swine has gained in popularity as fast as the Hampshires. It's up to the breeders of the state of Wisconsin to get busy. We follow with a complete list of awards:

Judge, Jas. Kemp, Kenney, Ill.

Exhibitors: W. W. Vaughn & Son, Lyons, Wis.; Clayton Messenger, Keswick, Iowa; J. F. Diley & Son, Rush Lake, Wis.; J. F. Wixen, Janesville, Wis.; Jas. Clemons, Kansasville, Wis.

The awards:

Aged Boar (3 shown)—1st Vaughn on Good Enough; 2d and 3d Messenger.

Senior Yearling Boar (5 shown)—1st and 3d Messenger; 2d Vaughn on Honest Boy.

Junior Yearling Boar (5 shown)—1st and 3d Messenger; 2d Vaughn Moloy Hoo Do.

Boar Under Year (3 shown)—1st and 2d Messenger; 3d Clemons.

Boar Under Six Months (7 shown)—1st Diley; 2d Vaughn; 3d Messenger.

Aged Sow (5 shown)—1st Vaughn; 2d Messenger; 3d Clemons.

Senior Yearling Sow (5 shown)—1st and 2d Messenger; 3d Vaughn.

Junior Yearling Sow (5 shown)—1st and 2d Messenger; 3d Vaughn.

Sow Under Year (4 shown)—1st and 2d Messenger; 3d Clemons.

Sow Under Six Months (8 shown)—1st Diley; 2d Messenger; 3d Vaughn.

Grand Champion Boar—Vaughn on Honest Boy.

Grand Champion Sow—Vaughn.

Aged Herd (3 shown)—1st Messenger; 2d Vaughn; 3d Clemons.

Breeders' Aged Herd (3 shown)—Same as above.

Young Herd (3 shown)—1st Messenger; 2d Vaughn; 3d Clemons.

Breeders' Young Herd (3 shown)—Same as above.

Get of Sire (3 shown)—1st Messenger; 2d Vaughn; 3d Clemons.

Produce of Sow (3 shown)—1st Messenger; 2d Vaughn; 3d Clemons.

Silver Trophy given for best litter owned in Wisconsin, won by W. W. Vaughn & Son.

CHESTER WHITES.

The showing of Chester Whites was good this year. Nearly all of the classes were well filled and there were no real plain animals in any of them. All exhibitors had their herds in show condition and several of the classes were as good as one would wish to see. The junior yearling boar class was very strong; every animal in the ring being a good one. Some outstanding "under year" sows were shown and this was the best of the sow classes. There were 140 head of Chester Whites in the swine barn and it was indeed a creditable showing. The exhibitors made some very satisfactory sales. We follow with the complete list of awards.

Judge, Wm. Harris, Morgansfield, Ky.

Exhibitors: Harry Crandell, Cass City, Mich.; W. W. Vaughn & Son, Lyons, Wis.; W. F. Barr, Ames, Iowa; B. P. Wescott, Barton, Wis.; T. Bartleson & Son, Springfield, Wis.; Wm. Schiebe, Burlington, Wis.; Ceylon Court Farm, Lake Geneva, Wis.; Wm. Butts, Evansville, Wis.

Aged Boar (5 shown)—1st Barr on Wm. A.; 2d Wescott on Col. Keokuk; 3d Vaughn on Onward; 4th Vaughn.

Senior Yearling Boar (5 shown)—1st and 3d Crandell; 2d Barr; 4th Ceylon Court Farm.

Junior Yearling Boar (6 shown)—1st Schiebe; 2d Butts; 3d and 4th Barr.

Under Year Boar (7 shown)—1st and 3d Barr; 2d Schiebe; 4th Crandell.

Under 6 Months Boar (2 shown)—1st and 2d Crandell; 3d Wescott; 4th Vaughn.

Aged Sow (7 shown)—1st Barr on Highland Princess; 2d and 3d Vaughn on Miss A. and Fancy 2d; 4th Crandell on Grace B.

Senior Yearling Sow (4 shown)—1st Barr; 2d and 3d Crandell; 4th Vaughn.

Junior Yearling Sow (8 shown)—1st Crandell ; 2d Barr; 3d Westcott; 4th Schiebe.

Under Year Sow (11 shown)—1st Barr; 2d and 3d Crandell; 4th Wescott.

Under 6 Months Sow (12 shown)—1st Barr; 2d Wescott; 3d and 4th Crandell.

Aged Herd (4 shown)—1st Barr; 2d Crandell; 3d Schiebe; 4th Wescott.

Aged Herd Bred by Exhibitor—1st Crandell; 2d Barr.

Young Herd (6 shown)—1st Barr; 2d Schiebe; 3d Crandell; 4th Vaughn.

Young Herd Bred by Exhibitor—1st Barr; 2d Schiebe; 3d Crandell; 4th Wescott.

Get of Sire (5 shown)—1st Barr; 2d Crandell; 3d Schiebe; 4th Wescott.

Produce of Sow (5 shown)—1st Barr; 2d Crandell; 3d Schiebe; 4th Wescott.

Senior Champion Boar—Barr on Wm. A.

Junior Champion Boar—Crandell on son of Schoolmaster.

Senior Champion Sow—Barr on Highland Bell.

Junior Champion Sow—Barr on Lenore 2d.

Grand Champion Boar—Barr on Wm. A.

Grand Champion Sow—Barr on Highland Bell.

BERKSHIRES.

The showing of Berkshires was up to the usual standard in numbers, but in quality it was better than last year. Some classes did not show as much finish as they should, but they did show that they had been working. The grand champion boar was an autstanding individual of the show. All the exhibitors were pleased with the placing of the awards and they were fairly well divided. We follow with a complete list of the awards:

The exhibitors: Brae Burn Farm, Lake Forest, Ill.; Wm. Kelley, Mineral Point, Wis.; Grant Clausing, Thiensville, Wis.; A. J. Lovejoy & Son, Roscoe, Ill.; Whitemore Bros., Lyons, Wis.; W. A. Freehoff, Waukesha, Wis.; H. P. West, Ripon, Wis.

Judge, Jas. Kemp, Kenney, Ill.

The awards:

Aged Boar—1st Lovejoy; 2d Whitemore; 3d Kelley; 4th Freehoff.

Senior Yearling Boar—1st Brae Burn Farm; 2d Whitemore.

Junior Yearling Boar—1st and 3d Whitemore; 2d and 4th Kelley.

Under Year Boar—1st and 3d Brae Burn Farm; 2d and 4th Whitemore.

Under 6 Months Boar—1st Brae Burn Farm; 2d Whitemore.

Under 6 Months Boar, Wisconsin Special—1st and 2d Whitemore; 3d and 4th Kelley.

Aged Sow—1st and 2d Kelley; 3d Whitemore; 4th Brae Burn Farm.

Senior Yearling Sow—1st and 2d Brae Burn Farm; 3d Whitemore; 4th West.

Junior Yearling Sow—1st and 2d Brae Burn Farm; 3d Kelley; 4th Whitemore.

Under Year Sow—1st and 2d Brae Burn Farm; 3d Whitemore; 4th Freehoff.

Under 6 Months Sow—1st and 2d Brae Burn Farm; 3d Kelley; 4th Whitemore.

Under 6 Months Sow, Wisconsin Special—1st and 3d Kelley; 2d and 4th Whitemore.

Aged Herd—1st Brae Burn Farm; 2d Kelley; 3d Whitemore.

Aged Herd Bred by Exhibitor—1st Brae Burn Farm; 2d Kelley.

Young Herd—1st Brae Burn Farm; 2d Whitemore; 3d Freehoff; 4th Kelley.

Young Herd Bred by Exhibitor—

PAIGE
The Standard of Value and Quality

A Real Champion

In every type of contest—on road, track and hill—Paige cars have consistently demonstrated their "stamina," speed and stability.

To be sure, there are cars that can travel **faster** than the Paige, but there is no car on the American market that will travel **farther** at sustained speed—and that is the real test of automobile efficiency.

We have never attempted to build a car that will go faster than 60 miles an hour. But we have **always** taken the pains to build a car that will go twenty-four hours in the day—seven days in the week.

You see, we are old fashioned enough to believe that rugged strength—staying power—is the best thing that a manufacturer can put into his car. And, so do you.

Are you interested in proof—the kind of proof that is based on actual performance? Then, consider the recent mountain-climbing record established by a Paige "Fairfield Six-46" at Mount Hood, Oregon, on July tenth.

Starting with a large field of competitors, the "Fairfield" was the first car of the year to reach Government Camp, where it was awarded the Pridemore Silver Trophy. This is a gruelling climb in itself—the classic event of the northwest.

But that is not all of the story by any means.

Despite the earnest warnings of everyone at the Camp, that same Paige then turned its nose toward the clouds and battered its way to an elevation of 9,500 feet above the sea level—more than a quarter of a mile beyond the timber line—**three miles further** up Mount Hood than any motor car had ever climbed before.

There never was a more terrific battle in the annals of mountain climbing. At times, the "Fairfield" was completely sheathed in ice, and, when it finally came to a halt, that stout-hearted champion was resting on a **sixty per cent grade.**

Impossible, you say. Then, please consult the official records as published in every newspaper on the coast. And a little bit later, perhaps, you may have an opportunity to actually witness this thrilling climb on the screen at your favorite moving picture theatre.

But, best of all, make it a point to see this New Series Paige "Fairfield" at the sales room of the local dealer. One glance will convince you that it is a thoroughbred. A single demonstration will settle your particular automobile problem for all time.

For Paige owners are **satisfied** owners. They have "arrived."

NEW SERIES FAIRFIELD "SIX-46" SEVEN-PASSENGER $1375 f. o. b. Detroit
NEW SERIES FLEETWOOD "SIX-38" FIVE-PASSENGER $1090 f. o. b. Detroit

Paige-Detroit Motor Car Company

Produce of Sow—1st Hill; 2d West.
Champion Boar—West.
Champion Sow—Hill.

Sheep.

It is conceded that there are more flocks of registered sheep in Wisconsin than in any other state and many of these good flocks graced the pens in the new sheep barns. Shropshires led in number and we hardly know how it would be possible to have a better showing of this popular breed. Mr. Alex Arnold, a well-known showman, said that they were the best lot of Shropshires he ever saw on exhibition. The strong competitors in the various classes came from the Broughton and McKerrow flocks. The Broughton sheep were American bred and defeated in several classes the best that could be imported. Such an honor is worth a great deal to an American breeder. Taking the entire sheep show into consideration there were not as many sheep in the barns as we have seen in previous years, but it was the opinion of all interested in the sheep exhibit that it was the best showing of sheep ever seen at the Wisconsin State Fair. There were very few but what would bear close inspection. We follow with a complete list of awards:

SHROPSHIRES.

Noel Gibson, Dundee, Ill., judged all breeds of sheep.
Exhibitors: Arthur Broughton & Sons, Albany, Wis.; Geo. McKerrow Sons Co., Pewaukee, Wis.; Wm. F. Renk, Sun Prairie, Wis.; W. G. Miles, Evansville, Wis.; W. Woodard, Bloomer, Wis.
The awards:
Aged Ram—1st Broughton; 2d and 4th McKerrow; 3d Renk; 5th Miles.
Yearling Ram—1st and 2d Broughton; 3d and 4th McKerrow.
Ram Lamb—1st and 3d McKerrow; 2d and 4th Broughton; 5th Woodard.
Aged Ewe—1st and 4th McKerrow; 2d Miles; 3d Woodard; 5th Renk.
Yearling Ewe—1st and 4th Broughton; 2d and 3d McKerrow; 5th Miles.
Ewe Lamb—1st and 4th McKerrow; 2d and 3d Broughton; 5th Miles.
Graded Flock—1st Broughton; 2d McKerrow; 3d Renk; 4th Miles; 5th Woodard.
Get of Ram—1st McKerrow; 2d Broughton; 3d Miles; 4th Woodard; 5th Renk.
Pair of Lambs—1st McKerrow 2d Broughton.
Champion Ram—Broughton.
Champion Ewe—Broughton.

OXFORDS.

Exhibitors: Geo. McKerrow Sons Co., Pewaukee, Wis.; A. J. Mohr, Bloomer, Wis.; Richards & Richards, Lodi, Wis.
The awards:
Aged Ram—1st and 2d McKerrow; 3d Mohr; 4th Richards.
Yearling Ram—1st and 2d McKerrow; 3d Richards; 4th Mohr.
Ram Lamb—1st and 2d McKerrow; 3d and 4th Mohr.
Aged Ewe—1st and 2d McKerrow; 3d Mohr; 4th Richards.
Yearling Ewe—1st and 2d McKerrow; 3d Richards; 4th Mohr.
Ewe Lamb—1st Richards; 2d Mohr; 3d and 4th McKerrow.
Graded Flock—1st McKerrow; 2d Mohr; 3d Richards.
Pair of Ram Lambs—1st McKerrow; 2d Mohr; 3d Richards.
Pair of Ewe Lambs—1st McKerrow; 2d Mohr.
Champion Ram—McKerrow.
Champion Ewe—McKerrow.

SOUTHDOWNS.

Exhibitors: W. Woodard, Bloomer, Wis.; Harry Crandell, Cass City, Mich.; G. A. Phillippi, Bear Creek, Wis.; Alex Arnold, Galesville, Wis.; W. G. Miles, Evansville, Wis.
The awards:
Aged Ram—1st Woodard; 2d Arnold; 3d Crandell; 4th Phillippi.
Yearling Ram—1st Arnold; 2d and 4th Woodard; 3d Crandell.
Ram Lambs—1st Woodard; 2d Miles; 3d Phillippi; 4th Arnold.
Aged Ewe—1st Arnold; 2d Woodard; 3d Miles; 4th Phillippi.
Yearling Ewe—1st and 2d Miles; 3d Woodard; 4th Crandell.
Ewe Lamb—1st and 3d Woodard; 2d and 4th Miles.
Graded Flock—1st Woodard; 2d Arnold; 3d Miles; 4th Crandell.
Get of Ram—1st Miles; 2d Arnold; 3d Phillippi.
Pair of Lambs—1st Woodard; 2d Miles.
Champion Ram—Woodard.
Champion Ewe—Arnold.

COTSWOLD.

Exhibitors: Alex Arnold, Galesville, Wis.; M. Jewell, Mineral Point, Wis.; Harry Crandell, Cass City, Mich.; M. F. Hogan, Waunekee, Wis.; Richards & Richards, Lodi, Wis.
Aged Ram—1st Arnold; 2d and 3d Jewell; 4th Crandell.
Yearling Ram—1st Arnold; 2d Richards; 3d Hogan; 4th Crandell.

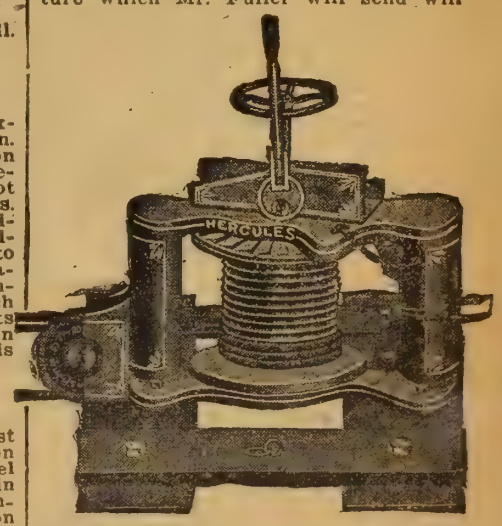
Get of Ram—1st Jewell; 2d Hogan.
Pair of Lambs—1st Hogan; 2d Jewell.
Champion Ram—Arnold.
Champion Ewe—Arnold.

Cow Comfort Important.

ON THE cow's comfort, to a great extent, depends her milk production. The Louden Tubular Steel Stanchion allows the cow an abundance of freedom and comfort, which she could not have in cramped, rigid, wooden stocks. These stanchions are strong and sanitary and inexpensive. Read the advertisement on page 18 and write to the manufacturers, The Louden Machinery Co., Fairfield, Iowa, for a complete barn equipment catalog, which tells about the Steel Stanchion and its relation to your milk profits. Mention that you read the advertisement in this paper.—Adv.

Interest in Stump Pulling.

IN connection with the great interest in land clearing which has been aroused in the state this fall we feel sure our readers will be interested in an advertisement of the Hercules Manufacturing Company, which appears on page 9. The Hercules machine was demonstrated in a number of Wisconsin counties when the land clearing special train visited towns on the Northwestern line in May and June. This same stump puller will be demonstrated this fall at the towns on the Soo line which are visited by the land-clearing special. A great many of our readers have already had an opportunity to witness the operation of Herculs in practical field tests and it is unnecessary to make any statement to them regarding the efficiency of the machine. Mr. B. A. Fuller, president of the Hercules Manufacturing Company, 841 24th street, Centerville, Iowa, is ambitious to place about 5,000 of his triple-power portable stump pullers in different parts of the country. To accomplish this end he is offering for a short period of time a special proposition which may be obtained by filling out the coupon which appears in his advertisement on page 9. The literature which Mr. Fuller will send will



also be of interest to anyone who has land to clear. The answering of this advertisement does not incur any obligation to purchase. There will doubtless be hundreds of new Hercules stump pullers in Wisconsin during the next two years. Those who take advantage of the offer made this week will get in on the new low price. Please mention The Wisconsin Farmer when you write answering this advertisement.—Adv.

Marathon County Is Winner.

County Exhibit Section of the Wisconsin State Fair Had Twenty-seven Entries and Keen Competition For the Prizes.

TWENTY-SEVEN of the seventy-one counties in Wisconsin, the largest number which ever sent exhibits to the state fair, competed this year for first honors in what was recognized as the best county exhibit display ever seen at the fair. This was one more county than exhibited last year and had Chippewa county, which entered, shown every booth in the county exhibits building would have been taken and it is already apparent that with interest in this department increasing each year that an addition to the building will soon be necessary.

The exhibits, as a whole, were much better this year than ever before, and the fact that the six ribbon counties were less than 200 points apart indicates that competition was keen and that it was not a walk away for the winning county. There were more top-notch booths, those in the front rank in the race for first honors, than ever before and visitors who have watched the county exhibit displays during the last few years could easily note the improvement that has been made. The displays this year were more varied and well balanced, on the whole, than heretofore, which shows the study the men in charge are putting into this work with the result that the county exhibits are bringing out the best agricultural products that are to be obtained in the competing counties. The county exhibits probably afford a better conception of the agricultural resources of the state than any other department of the fair, as each county gets together the best products obtainable and, when more than a third of those in the state show, there is brought together a display of field and garden crops that could hardly be obtained in any other way. Several southern counties which in the past have not exhibited were entered this year. Upper counties won the chief prizes, but the new exhibitors made good displays and only lacked the experience secured by the upper counties through more consistent work of this nature.

Grasses and grains featured all the booths this year. The hay crop throughout the state was probably the greatest, in every section, in the history of Wisconsin and this was reflected in the many sheafs of clover, alfalfa and timothy which were shown. Ripe corn was to be found in every booth, proving that every section of Wisconsin will this wall gather mature corn, and it was generally agreed the corn showing was the best in many years. The quality of grains was high, though the yields not so heavy, and it was only in potatoes that the exhibits did not come up to the standard of other years. Fruit and vegetable displays were exceptionally good, considering the weather.

Marathon county, which last year took first, stepped into first honors again this year with Wood county second. Langlade, St. Croix, Sauk and Ozaukee were the other ribbon counties in the order named and the scores of all the counties entered were as follows:

Marathon	2,317	Clark	1,801
Wood	2,265	Milwaukee	1,767
Langlade	2,234	Kenosha	1,721
St. Croix	2,224	Lincoln	1,674
Sauk	2,133	Iowa	1,615
Ozaukee	2,127	Walworth	1,550
Polk	2,090	Dodge	1,457
La Crosse	2,086	Washburn	1,372
Oneida	2,048	Vilas	1,307
Fond du Lac	2,003	Forest	1,238
Waupaca	1,908	Outagamie	1,227
Dane	1,876	Columbia	1,205
Taylor	1,857	Sawyer	1,177
Ashland	1,821		

The total number of possible points this year was 2,500, which, considering the score of the first half dozen counties, indicates the high quality of the exhibits. Mr. E. J. Delwiche, of Green Bay, placed the grains; Mr. J. G. Milward, of Madison, the vegetables and potatoes, and Sen. L. G. Kellogg, of Ripon, the fruits. Mr. E. L. Luther, superintendent of this department, was highly pleased with the showing made by the counties and, with the judges, pronounced the showing as a whole the best ever held.

The following details the exhibits by counties:

Marathon County.

Marathon, which county took first last year, can always be depended upon to present an exhibit which is not only representative of the crops grown in that county but which is also artistic to the eye. The booth this year was under the direction of J. D. Christie, of Wausau; George Cook, of Unity; Ardon Peronto, of Mosinee; Reno Zahn, L. H. Cook and Prof. A. S. Berg, all of Wausau. The apple display was regarded as one of the best in the county exhibits building and the showing of clovers and corn was especially good.

Wood County.

Wood, which county captured second honors, had its usual well-balanced display and the quality of its products and the artistic booth went a long way in the awarding of the prizes. Corn and threshed grain samples indicated a splendid crop and one bundle of silage corn, fourteen feet high and well-eared, was on display. The potatoes were good and the fruit display ranked with the best. The committee in charge consisted of O. J. Leu, of Grand Rapids; Christ Witt, of Marshfield; W. W. Clark, of Grand Rapids; G. W. Brown, of Pittsville, and J. A. Chapman, of Marshfield.

Langlade County.

Clover, grains, corn and potatoes were the big displays in the Langlade county booth, which was in charge of Leonard Freiburger, of Antigo; William Wagner, of Deerbrook; George Marshall, of Morley, and F. G. Swoboda, county agricultural representative. The quality of grain was fine this year and the yield good, and with good rains lately the fall potatoes promise to yield well. The display of both sheaf and threshed grain was very large and the vegetable and fruit showing very creditable.

St. Croix County.

St. Croix county, for the second year in succession, won fourth honors with an exhibit arranged by William Schwandt, of Deer Park; H. A. Aune, of Baldwin, county superintendent of schools, and George Rummele, of Hudson. The corn and hay crops were splendid and the small grains very good for 1916.

Sauk County.

Fruit, as usual, featured the Sauk county exhibit, which was in charge of Albert Wicher and Ernest Wicher, of Baraboo; Samuel Borch and Henry Eischenback, of North Freedom. The display of fruits was very strong as well as the showing of corn and this year's display in every way ranked with the one which won for this county the second prize last year.

Ozaukee County.

Ozaukee county was well represented with an exhibit in charge of William Nero, of Cedarburg. A pumpkin weighing 106 pounds occupied a very conspicuous position with a well-balanced display of grasses, potatoes and grains. The bundles of clover indicated the heavy crop that was harvested.

Polk County.

Polk county, in which dairying has made great progress during the last few years, featured a splendid crop of Golden Glow corn in its exhibit, which was in charge of A. J. McLennan, of Clear Lake; N. P. Swanson, of Balsam Lake; E. E. Playman, of St. Croix Falls; John Klinka, county agricultural representative, and E. J. Day, of St. Croix Falls. Polk county is in the Golden Glow belt and the crop there promises to be exceptionally good this year. The showing of grains and grasses was up to standard and attention was called to the fact that Polk county has more state graded schools than any other county in Wisconsin.

La Crosse County.

La Crosse county, with its exhibit in charge of T. H. Campion and William Moos, of Onalaska, featured corn and small grain. The showing of wheat and oats was especially fine, both in the threshed and sheaf displays, and particular emphasis was laid on the standard varieties of corn. An interesting feature was a map of Wisconsin showing La Crosse county by the use of an electric light, while above the booth was the name of the county in an electric sign that flashed on and off, attracting much attention.

Oneida County.

Oneida county had a splendid display in charge of W. D. Juday, county agricultural representative; Fred Coon, of Rhinelander, president of the county fair; Arthur Taylor, E. S. Sheperd and Will Gilligan, all of Rhinelander. The showing of grains and grasses as well as corn was an eye-opener to those from southern sections and Mr. Juday says that there are countless fields of corn of fifteen to twenty acres that will ripen despite the late spring. Alsike and timothy samples from fields that went four tons were shown and some clover samples measured more than five feet. The hay crop was the biggest in the history of the county and potatoes, in which this county excelled all last year, are yielding well, everything considered. Quality is good and Mr. Juday expects to have a good showing at the state show at Eau Claire.

Fond du Lac County.

Fond du Lac county was represented for the first time with an exhibit and for artistic arrangement many predicted this county would be among the first six in the awards. The showing of threshed and sheaf grains was especially strong, probably as good as any shown, and some splendid bundles of clover and alfalfa were shown.

Waupaca County.

Waupaca county can feel especially proud of its exhibit which was under the supervision of Fred Schoenick, of Weyauwega; William Anton, of Embarass, and Ed Glocke, of New London. The display of grains and grasses was large and representative of the crop harvested in that county, and the fruit display, considering the summer, was exceptional.

Dane County.

The Dane county exhibit, sponsored by the county order of the experiment association, was arranged by J. J. Garland, of Madison, and featured potatoes, threshed grains and tobacco. The potatoes ranked with any shown by southern counties and the threshed grains were especially good. There was also a showing of apples that attracted much attention and the samples of tobacco indicated the heavy yield and quality of this important crop in Dane county this year.

Taylor County.

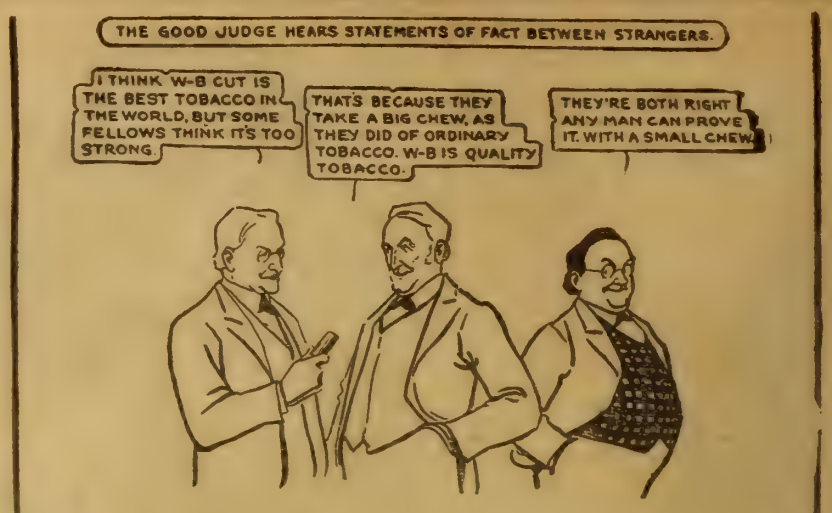
Emphasis was laid on timothy, clover and corn in the Taylor county booth, as these crops were especially good this year. The exhibit was arranged by Louis Ramm, Jacob Ackret, Antone Prost, all of Medford, and William Kohn, of Milwaukee, who owns a farm in that county, assisted by R. A. Kolb, county agricultural representative. This county also had a strong showing of fruits, although in the upper half of the state, as well as vegetables. A new era pumpkin attracted much attention, as it had the color of a watermelon.

Ashland County.

This was the first exhibit Ashland county has sent to the state fair and it was under the direction of C. P. Post, county agricultural representative; Alex Gingles, of Ashland; Eugene Pierellee, of Mellen, and Henry Hagstrom, of Ashland. Grasses and small grains were given prominence, while there was a splendid showing of fruits from Madeline Islands. The hay crop was a bumper and sheafs of alsike measuring five feet three inches were shown with corn that had begun to dent. Ashland county expects about an 80 per cent potato crop and the display of standard varieties was very good.

Clark County.

Clark county featured grains, grasses and fruits and with thirty-six varieties of sheaf and threshed grains had one of the largest showings in the



YOU'LL find some things out about *real* tobacco when you get to using W-B CUT Chewing. A little bit hides away in your cheek unnoticed and gives two-for-one more satisfaction than a wad of ordinary stuff. Men get to calling it the gentleman's chew because it don't disfigure the face and cuts down grinding and spitting.

A 10c pouch lasts twice as long as a dime's worth of ordinary chewing. Give W-B CUT the quality test.

KENTUCKY New country sorghum molasses, 6 one-gallon pails to case, $3.25 per case. Sample mailed for 5c. S. Rosenblatt, Hawesville, Ky.

contest. The quality was very fine and attention was called to the dairying resources of Clark county, which in the year ending last June turned out 8,000,000 pounds of cheese and 2,000,000 pounds of butter. John Beruilen, of Thorp, chairman of the county board, and M. W. Wilding, of Neillsville, county clerk, were in charge.

Milwaukee county.

Vegetables, as usual, were the big feature of the Milwaukee county exhibit, this being one of the principal crops of the county. Most of the grains were from the county agricultural school farm and the fruit shown was especially good. H. F. Schroeder, C. D. Adams and F. J. Seevers, all of Milwaukee, were in charge.

Kenosha County.

Vegetables and grains occupied the most prominent places in the exhibit of Kenosha county, in charge of William Luke, of the Town of Wheatland, and P. H. Tobin, of Kenosha. Some splendid cabbage was shown, although this crop is short this year. One grower recently sold the cabbage in the field on sixteen acres for $2,200 and during fair week growers were getting $30 to $32 a ton for this crop. The small grain crop is also good, oats yielding very high.

Lincoln County.

With the greatest hay crop in history, Lincoln county had an exceptionally fine showing of timothy, clover and alfalfa. Some samples of timothy measured five and a half feet and some of alsike five feet three inches and these were taken from large fields. The committee in charge was Hall L. Brooks, of Tomahawk; A. H. Kolb, county agricultural representative; Gustav Kraft and Robert Kleinschmidt, both of Merrill.

Iowa County.

Iowa county had its usual well-arranged, artistic booth in charge of J. A. Van Natta, county superintendent of schools; J. A. Brunker, of Ridgeway, and Otto Oimoen, of Barnaveld. Particular attention was called to the fact that the dairy products in this county bring the farmers $1,500,000 annually, and the display of grasses, grains and corn was especially strong. A lantern display showing Iowa county farm views, as well as several samples of minerals mined in that county, were of added interest to visitors.

Walworth County.

Walworth county was represented with a county exhibit for the first time. It was in charge of L. L. Oldham, county agricultural representative; Howard Peck and Will Foster, all of Elkhorn. The booth was very artistically arranged and one side was devoted to a list of the pure-bred cattle breeders and grain growers of the county. The corn shown was of splendid quality and the samples of grains and grasses indicated excellent crops.

Dodge County.

Grains, grasses and corn featured the Dodge county exhibit, which was in charge of H. E. Krueger, of Beaver Dam. No effort was made to show vegetables and fruits, Mr. Krueger preferring to place all emphasis on the grains in that county and the feeds that go to make dairying the big thing in the county.

Washburn County.

The Washburn county exhibit was in charge of Peter Brown and William Busch, of Spooner. Corn samples spoke for the good crop which will be gathered there this year or which is now going into the silos, and the grasses were the best ever brought from that county. Small grain samples were good, but potatoes were not up to the usual standard because of the dry weather this year. But as Mr. Brown said, "what hurt the potatoes made the corn."

Vilas County.

Grasses and potatoes were the principal exhibits in the Vilas county booth, in charge of Stanley F. Korpall, Hans Hanson, Roy Beebe, all of Eagle River; Dr. White, of Flambeau, and Oscar Gunderson, county agricultural representative. The potato crop this year is good and the hay crop the greatest in history. Corn is doing nicely and silos will be filled this year.

Forest County.

An especially well-balanced exhibit represented Forest county this year, the booth being in charge of John Swenehart, county agricultural representative; Joe Sherman, Grant Faulkner and Francis Shoemaker, all of Crandon; William Hubbard, of Wabena, and A. M. Rogers, of Newald. Crops have been good, Mr. Swenehart reported, and enough ripe corn has already been picked to insure good seed for several years. Late potatoes are doing well and the showing of grasses indicated the heavy hay crop. Many fields of medium red clover went as high as four tons to the acre and three cuttings of alfalfa was general.

Outagamie County.

Outagamie was represented for the first time by an exhibit and P. W. Silverwood and W. F. Wolf, of Appleton, who were in charge, are to be congratulated on the exhibit they got together without previous experience. Attention was drawn to the road work in that county which this year voted $700,000 for concrete roads. Twenty miles of these roads will be completed this year. A feature exhibit was a sample of hemp fourteen feet high.

Columbia County.

Columbia county for the first time sent an exhibit to the fair this year and its display was very creditable. The showing of Silver King, Murdock, Golden Glow and Clark's Yellow Dent corn was very strong and the grains were of splendid quality with the best barley crop in years. Cleve Tomlinson, of Poynette, and A. C. Ellickson, of Arlington, were in the committee in charge.

Sawyer County.

C. P. West, county agricultural representative, and Jens Jorgensen, chairman of the Town of Round Lake, were in charge of the Sawyer county booth. Potatoes were the feature exhibit, although the showing of grasses was splendid, Sawyer county having harvested the largest hay crop in history. The corn on exhibition showed that this upper county will have ripe corn and Mr. West says that many silos have already been filled. The potato crop is splendid and pasture has been excellent all summer. There was also a large display of root crops which Mr. West is encouraging settlers to raise for their feeding value on land not quite ready for corn and the vegetable display was very worthy.

Shawano County Association.

To the Editor:—I am sending you a brief summary of the report of the Shawano County Cow-Testing Association for the month of August and up to September 9th. There were only eleven cows in the forty-pound list this month, owing to the hot weather and short pastures. The highest cow in the association belongs to Mr. William Hansen. She is known as Little Cow and is a grade Durham thirteen years old. She produced 880 pounds of milk and 44.9 pounds of butter fat, with an average test of 5.1 per cent.

Feeding of green corn was started early in September and this has helped to keep up the flow of milk in some herds. There has been little grain fed during the dry period and this, doubtless, accounts for the decrease in flow of some of the herds where the pastures were short.

C. M. Rydberg, Official Tester.
Shawano Co., Wisconsin.

Improved Farms

AND cut over lands in the dairy belt of northern Wisconsin at bargain prices. If you intend to buy do not fail to write us asking for our list.
Hamilton & McClure, Westboro, Wisconsin

OWNERS HAVE OPENED

A TRACT of 25,000 acres of land, cut over by themselves, all near Ladysmith, in Wisconsin's best dairy district, and will 've buyers their choice at low prices and on easies terms. Send for literature. Flambeau River Lumber Company, Station D, Ladysmith, Wisconsin.

Kuehne & Fiedler **Seymour, Wis.**

LANDS AND HOMES

Did You Follow Our Advice In Last Week's Paper?

Then you have read the editor's story and our page announcement of the Hillsdale ranch in the issue of August 10th. And, anyway, we are pleased to have you read the following articles quoted from the August 31st issue of the Herald of Burns, Wyoming:

Conard Buys Four Section Farm.

Mr. E. C. Conard, of Rockwell City, Iowa, who purchased a farm from the Federal Land Co., last fall, which he expected to move onto with his family next spring, was in Burns Tuesday and Wednesday. His object here was to look over the Hillsdale ranch, now being colonized by the Federal people.

That he was pleased with it is shown by the fact that before starting for Iowa last night he closed a contract of purchase for Sec. 3-15-64 and Sec. 33-16-64, which corners Sec. 3 on the northwest. With the purchase Mr. Conard secures the state land leases on Secs. 34 and 4. This makes him a square farm of 2,560 acres.

Mr. Conard was more than pleased with crop conditions here. He says that having seen the grains grown in 1915 with normal rainfall, and this season of unprecedented drouth, he is satisfied that this is just as sure a crop country as in Calhoun county, Iowa, besides being much superior for cattle raising.

Mr. Conard will break and put into crop 640 acres next spring, and will stock his new ranch with several hundred head of cattle. He will move out with his family as soon as he has a public sale in December. Mrs. Conard was here with him last fall, and those who met her are delighted that this splendid family will soon be residents of the Golden Prairie District.

Increases Holdings by Additional Quarter.

G. W. Price, of Osceola, Neb., who came out to Burns last year and bought a quarter section of the Federal Land Co., returned this week and was so well pleased with the conditions, regardless of our dry-crop season, that he purchased another quarter section, which makes him a fine half section of property. He expects to move onto his place in the early spring and make his home on the Golden Prairie. Mr. Price subscribed to the Herald while here, as the best medium by which to keep track of the conditions in this vicinity. What the Golden Prairie needs more than anything else, is good farmers, and Mr. Price and his family will be a valuable addition to the community.

Also let us suggest that if you have not yet filled out and mailed us the coupon below, now is a splendid time to do so.

FEDERAL LAND COMPANY, Burns, Wyoming

Field of winter wheat in shock and binder at work on farm of Richard Spatz, adjoining the Hillsdale ranch. Photo taken July 20, 1916. This same field produced 50 bushels of oats per acre in 1915, the wheat shown being drilled into the oats stubble in September.

FEDERAL LAND COMPANY, BURNS, WYO.

Gentlemen: Please mail me at once full descriptive literature of your Hillsdale ranch and the Golden Prairie District of Wyoming.

Name.....

Address.....

Remember this: That we are protected from hot winds and extreme heat by the snowcapped Rockies, always on clear days in plain view to the southwest. This is fully explained on page 3 of the booklet entitled "Wheat Growing and General Farming Without Irrigation in the Golden Prairie District" which will be sent to all who fill out and mail us the above coupon.

PROSPERITY IN CANADA

$90,000,000 in new wealth added in 1915. Enormous crops and low taxation make farmers rich. Wheat average, 36.16 bushels per acre in Alberta, 28.75 bushels per acre in Saskatchewan, 28.50 bushels per acre in Manitoba. Taxes average $24 and will not exceed $35 per quarter section, includes all taxes; no taxes on improvements. Free schools and full religious liberty, good climate. Get your farm home from the Canadian Pacific Railway. 20 years to pay. Good land from $11 to $30 per acre; irrigated lands from $35, and the government guarantees your land and water titles. Balance, after first payment, extended over nineteen years, with interest at 6%; privileges of paying in full any time. Before final payment becomes due your farm should have paid for itself. We will lend you up to $2,000 in improvements in certain districts, with no security other than the land itself. Particulars on request. Ready-made farms for sale. Special easy terms. Loans for live stock. In defined districts, after one year's occupation, under certain conditions, we advance cattle, sheep and hogs to farmers up to a value of $1,000. We want you; we can afford to help you. We own the land; we want the land cultivated. Our interests are mutual. Buy direct and get your farm home from the CANADIAN PACIFIC RAILWAY. Send for free book. J. S. Dennis, Assistant to the President, Canadian Pacific Railway, 82 Ninth Ave., Calgary, Alberta, Canada.

ARE YOU GOING TO BUY LAND?

IF so, get a copy of our journal first. It has lands, city property and stocks of goods advertised in its columns from nearly every state, so that you can find just what you're looking for in its columns. Established 19 years and reaches 76,200 readers. Send 25c for one year's subscription or $1.00 for five years. Department F, Farm and Real Estate Journal, Traer, Iowa.

The Real Estate Educator

By F. M. PAYNE---New Edition

A book for hustling Real Estate boosters, promoters, town builders and every man who owns, sells, rents or leases real estate of any kind. "Dont's" in Real Estate, "Pointers," *Specific Legal Forms,* &c., &c.

THE NEW 1916 EDITION CONTAINS THE TORREN'S SYSTEM OF REGISTRATION, AVAILABLE U. S. LANDS FOR HOMESTEADS. THE A. B. C.'S OF REALTY.

WORKMEN'S COMPENSATION ACT, INCOME TAX LAW, EMPLOYER'S LIABILITY ACT, STATUTE OF FRAUDS, HOW TO SELL REAL ESTATE, HOW TO BECOME A NOTARY PUBLIC, OR COM. OF DEEDS, AND OTHER USEFUL INFORMATION.

This book is an inspiration to the indifferent and a stimulus to the ambitious. Apart from the agent, operator or contractor, there is much to be found in its contents that will prove of great value to all who wish to be posted on Valuation, Contracts, Mortgages, Leases, Evictions, etc. The cost might be saved many times over in one transaction. *256 pages, cloth, postpaid, $1.00.* Remit by P. O. Money Order or Registered Letter.

The Reading Club, 30 Irving Place, New York.

Another Great Show of Dairy Cattle.

Wisconsin 1916 Fair Brought Out a Large Number of Exhibitors and Splendid Individuals in Keen Competition For Honors in the Ring—List of the Awards.

THE showing of dairy cattle at the Wisconsin State Fair was away above the average and many judges spoke of it as the best that Wisconsin had ever seen. The classes were open to competition from inside and outside the state this year, while last year only Wisconsin exhibitors were eligible to any of the prizes. The show of dairy cattle was ahead of any at the other fairs in the western circuit this season, establishing more firmly Wisconsin's position as the greatest dairy state. Supt. H. W. Claflin expressed himself well pleased with both the quantity and quality shown. Judges Kiddee and Humphrey both pronounced the Wisconsin dairy cattle show as an outstanding exhibit. Nearly all the classes in all breeds but the Brown Swiss were well filled, one class of Holsteins having twenty-seven entries. The Holsteins lead in number exhibited, being 142 head. There were eighty-four Jerseys exhibited, seventy-eight Guernseys, seventy-two Ayrshires and sixteen Brown Swiss. While the show was open to the world, there were only three herds from outside the state exhibited.

HOLSTEINS.

The Holstein exhibit at the 1916 Wisconsin State Fair was probably the largest in the history of the fair. It is of added interest also that with one exception all of the exhibitors are Wisconsin breeders. The showing in all classes was very large, especially the female classes, and the male class under a year. Many new faces were seen among the exhibitors of Holstein cattle and it is an interesting fact to know that many of these who are showing for the first time this year have come away with a goodly number of creditable prizes. The herd of Rust Bros., West Allis, Wis., was awarded many of the leading prizes, Baird Bros., Waukesha, Wis., were heavy winners. M. W. Downing, Waukesha, Wis., were heavy winners in most of the classes shown and were awarded senior champion and grand champion on their noted sire, Downing Pontiac Butterman. N. Dickinson & Son, Lake Geneva, Wis., were heavy winners, and captured junior, senior and grand championship honors in the female classes. The showing was declared by many competent judges to be superior to that at the Minnesota or Iowa State Fairs this year, and the majority of the animals exhibited would be creditable candidates for the Waterloo Dairy Congress or the National Dairy Show.

The exhibitors: Baird Bros., Waukesha, Wis.; Charles Chapman, Waukesha, Wis.; C. M. Corcoran, Fond du Lac, Wis.; M. Dickinson & Son, Lake Geneva, Wis.; M. W. Downing & Brother, Waukesha, Wis.; John L. Fisher, Janesville, Wis.; Heck Bros., Lyons, Wis.; C. G. Keys, Richland Center, Wis.; Reuben Klofanda, Racine, Wis.; S. M. Randall, Waupun, Wis.; Dr. David Roberts, Waukesha, Wis.; Rust Bros., West Allis, Wis.; Vasas Bros., Cudahy, Wis.; V. S. Culver, Stillwater, Minn.; Harry D. Dunbar, Elkhorn, Wis.

The awards:

Bull 3 Years and Over (12 shown)—1st Downing & Brother on Downing Pontiac Butterman; 2d Culver on Sir Ormsby Korndyke Mechthilde; 3d Baird Bros. on Bairdland Segis Sir Prize; 4th Randall on Sir Alban Pontiac Korndyke; 5th Klofanda on North Star Parthenea Sir Beets.

Bull 2 Years and Under 3 (6 shown)—1st Chapman on Downing Pontiac Butterman Jr.; 2d Randall on Town View Pontiac; 3d Baird Bros. on North Star Beets King; 4th Vasas Bros. on Sir Aaggie De Kol Pontiac; 5th Keys on Sir Johanna Bonheur Ormsby.

Bull 1 Year and Under 2 (7 shown)—1st Klofanda on Racine Bessie Johanna Piebe; 2d Klofanda on Racine Walker Johanna; 3d Baird Bros. on Nockdair King Segis Perfection; 4th Downing & Brother on Downing Pontiac Dairy Show II; 5th Corcoran on Woodmont Butterboy Paladim.

Bull Under 1 Year (27 shown)—1st Roberts on Roberts' Abbekerk Pontiac; 2d Baird Bros. on Farsee Sir Segis Hengerveld; 3d Dickinson & Son on Sir Ollie Pontiac Inka; 4th Dunbar on Colantha Hamilton Pietertje II; 5th Baird Bros on Nockdair Segis George; 6th Baird Bros. on Nockdair Segis Foges Boy; 7th Rust Bros. on Sir Johanna Pontiac Beets.

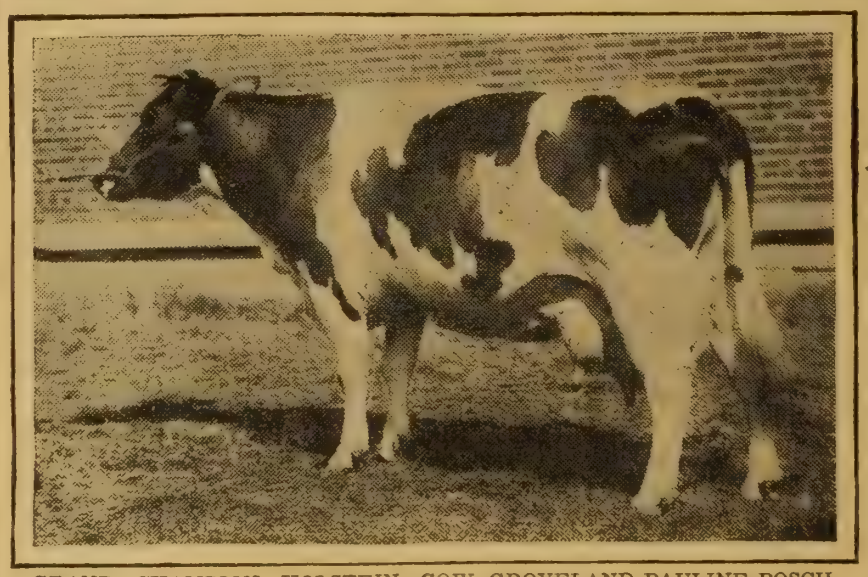
Cow 3 Years or Over (16 shown)—1st Dickinson & Son on Groveland Pontiac Hylaard; 2d Rust Bros. on Ida Lotta VI; 3d Klofanda on Racine Johanna Colantha Piebe; 4th Dickinson & Son on Groveland Pauline Posch; 5th Klofanda on Colantha Piebe of Elmcourt; 6th Culver on Buffalo Parthenea Skylark.

Heifer 2 Year and Under 3 (13 shown)—1st Dunbar on Oak Lodge Walker Lady; 2d Dickinson & Son on Groveland Pontiac De Kol Cheka; 3d Baird Bros. on Nockdair Segis Netherland Prize; 4th Fisher on Johanna Rue Duchess Fisher; 5th Culver on Pride Merrell of Hollanden.

Senior Yearling Heifer (13 shown)—1st Dickinson & Son on Groveland Ora Pontiac Hylaard; 2d Culver on Miss Clissy Ormsby Rue; 3d Baird Bros. on Nockdair Segis Longfield Rose; 4th Klofanda on Racine Johanna Colantha Aaggie; 5th and 6th Randall on Aaggie Pontiac Movie and Hazel Pontiac.

Junior Yearling Heifer (11 shown)—1st Dickinson & Son on Groveland Pontiac Netherland; 2d Culver on Far Oaks Violet Ormsby; 3d Baird Bros. on Nockdair Segis Valentine; 4th Fisher on Rue Sarcastic Fisher; 5th Baird Bros. on Nockdair Segis Korndyke Lottie; 6th Dickinson & Son on Groveland Pontiac Inka; 7th Downing & Brother on Downing Pontiac Combination.

Senior Heifer Calf (23 shown)—1st



GRAND CHAMPION HOLSTEIN COW, GROVELAND PAULINE POSCH, OWNED BY NATHAN DICKINSON & SON, LAKE GENEVA, WIS.

Dickinson & Son on Miss Walcovis Pontiac Netherland; 2d Dickinson & Son on Mercedes Jessie Anoca; 3d Baird Bros. on Nockdair Segis De Kol Blossom II; 4th Culver on Far Oaks Skylark Ormsby; 5th Baird Bros. on Nockdair Segis Goldbron; 6th Downing & Brother on Downing Pontiac Abbekerk Polly.

Junior Heifer Calf (12 shown)—1st Baird Bros. on Nockdair Segis Cornucopia; 2d Dickinson & Son on Princess Calamo Korndyke; 3d Baird Bros. on Nockdair Segis Gelsche; 4th Klofanda on Racine Bessie Piebe; 5th Dunbar on Unnamed; 6th Klofanda on Racine Piebe Johanna; 7th Culver on Far Oaks Jennie Ormsby.

Junior Champion Bull—Klofanda on Racine Bessie Johanna Piebe.

Senior and Grand Champion Bull—Downing & Brother on Downing Pontiac Butterman.

Junior Champion Female—Dickinson & Son on Groveland Ora Pontiac Hylaard.

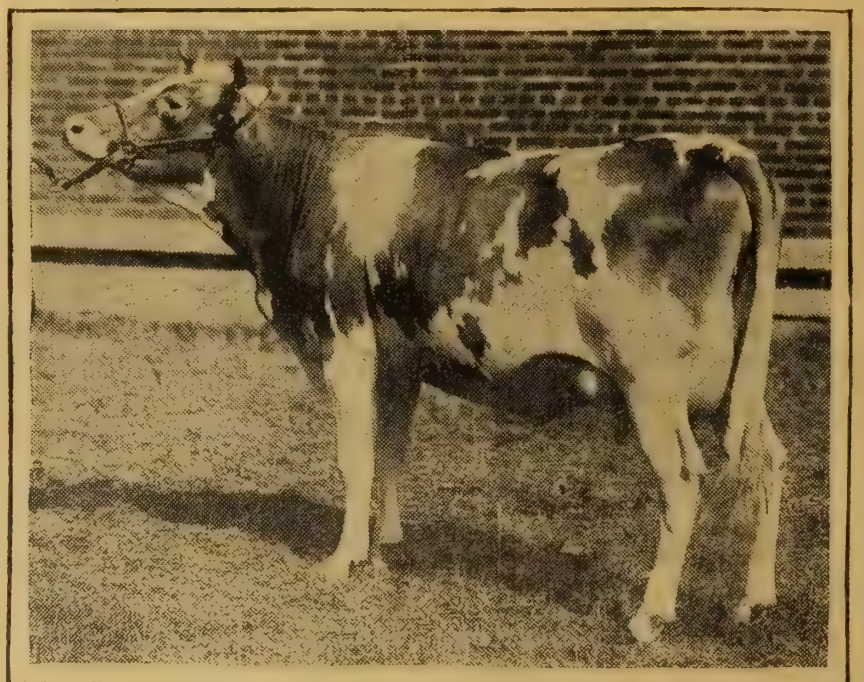
Senior and Grand Champion Female—Dickinson & Son on Groveland Ora Pontiac Hylaard.

Get of Sire (11 shown)—1st Dickinson & Son on get of Cornucopia Pontiac Johanna Lad; 2d Baird Bros. on get of Bairdland Segis Sir Prize; 3d Culver on get of Sir Ormsby Korndyke Mechthilde; 4th Klofanda on get of Johanna Sarcastic Lad 2d; 5th Dunbar on get of Beauty Walker Pietertje King.

Produce of Cow (10 shown)—1st Dickinson on produce of Lady Ora Hylaard; 3d Culver on produce of Fidigty Clissy 2d Rue; 3d Downing & Brother on produce of Downing Pontiac Butter Maid; 4th Klofanda on produce of Colantha Piebe of Elm Court; 5th Dunbar on produce of Errant Queen.

Aged Herd (7 shown)—1st Baird Bros. on herd headed by Bairdland Segis Sir Prize; 2d Culver on herd headed by Sir Ormsby Korndyke Metchthilde; 3d Baird Bros. on herd headed by Bairdland Segis Sir Prize; 4th Dickinson & Son on herd headed by Iowana Sir Ollie.

Young Herd (6 shown)—1st Baird Bros. on herd headed by Nockdair King Segis Perfection; 2d Culver on herd headed by Far Oaks Sir Ormsby Paul-



FIRST-PRIZE SENIOR YEARLING GUERNSEY COW, HERO'S RAMONA, OWNED BY J. R. LOVE & SON, WAUKESHA, WIS.

—Dickinson & Son on Groveland Pontiac Hylaard.

Junior Champion Bull—Klofanda on Racine Bessie Johanna Piebe; 2d Dickinson & Son on Groveland Pontiac Abbekerk Polly; 3d Downing & Brother on herd headed by Downing Pontiac Dairy Show II; 4th Klafanda on herd headed by Racine Bessie Johanna Piebe.

JERSEYS.

Wisconsin Jersey breeders well may feel proud of the showing of Jersey cattle at the 1916 Wisconsin State Fair. Both in number and in quality they exceeded anything in recent years. W. S. Dixon, Brandon, was out with his good cattle, as usual, and captured a goodly number of firsts and five out of the six championships. However, there were a number of new state fair exhibitors that were heavy winners. Among these were F. D. Underwood and The Hall Estate. Most of the classes were well filled and competition was keen and close. It is gratifying to see the beginners in the showing game take so many high honors, as it encourages others to start in.

Exhibitors: W. S. Dixon, Brandon, Wis.; W. O. Douglas, Janesville, Wis.; The Hall Estate, Knapp, Wis.; Charles A. Peterson, Rosendale, Wis.; Charles W. Peterson, Darlington, Wis.; F. D. Underwood, Wauwatosa, Wis.; P. G. Warmington, Honey Creek, Wis.

Bull 3 Years or Over (8 shown)—1st Dixon on Noble Ruler; 2d Charles A. Peterson on Ibsen's Glory; 3d Underwood on Noble's Fawn Prince; 4th Underwood on Brookhill Financial Count; 5th The Hall Estate on Fern's Eminent Reminder.

Bull 2 Years and Under 3 (4 shown)—1st Warmington on Pennithorpe's Knight; 2d Douglass on Merry Lad's You'll Do; 3d Underwood on Frederick's Pogis; 4th Charles W. Peterson on May Dooley's Emminent.

Bull 1 Year and Under 2 (8 shown)—1st Charles A. Peterson on Ibsen's Chief; Underwood on Frederick's Knight; 3d Dixon on Oxford Clxia Gamgory; 4th Dixon on Cupid Oxford Majesty; 5th Warmington on unnamed.

Bull Under 1 Year (7 shown)—1st Dixon on Gauntlett Oxford Majesty; 2d Underwood on Frederick Jim Connors; 3d Underwood on Frederick's Lord of Fewacres; 4th Douglas on unnamed; 5th Warmington on unnamed.

Cow 3 Years or Over (9 shown)—1st Dixon on Oxford Una's Lass; 2d Underwood on Sultan's Emily; 3d Underwood on Distinction's Ox Belle; 4th Warmington on Combination Countess 3d; 5th Charles W. Peterson on Raleigh's Avon Ruby; 6th Douglas on Betsy K.; 7th Charles A. Peterson on Silver's Lady J.

Heifer 2 Years and Under 3 (8 shown)—1st Underwood on Noble's Lady Helena; 2d Dixon on Jolly Oxford Buttermilk; 3d Warmington on Noble Lord's Pet; 4th Underwood on Iceland's Lady Elinor; 5th Douglas on Angeline May.

Senior Yearling Heifer (12 shown)—1st Underwood on Lady Bashua; 2d Dixon on Majesty Oxford Queenie; 3d Charles A. Peterson on Burn Brae's Coulisse; 4th Underwood on Lady Dunlop; 5th Charles A. Peterson on Burn Brae's Sultana; 6th Warmington on Noble Lord's Elda.

Junior Yearling Heifer (2 shown)—1st and 2d Dixon on Oxford Queenie's Princess and Oxford Majesty Mabel.

Senior Heifer Calf (13 shown)—1st Dixon on Oxford Majesty Maid; 2d Dixon on Double Oxford Queenie; 3d Warmington on unnamed; 4th Underwood on Frederick's Lady Margaret; 5th Underwood Frederick's Lady Sarah; 6th The Hall Estate on Superma's Noble Queen.

Junior Heifer Calf (9 shown)—1st Dixon on Toga's Oxford Mirandia; 2d Underwood on Frederick's Lady Marjorie; 3d Dixon on Majesty Oxford May; 4th Warmington on unnamed; 5th Underwood on Frederick's Lady Denny; 6th The Hall Estate on Edith's Best of Brookside 2d.

GUERNSEYS.

The Guernsey cattle exhibit was exceptionally good, both in quantity and quality. It is an interesting fact to note that the young animals bred by the exhibitor in many cases won over the older animals, proof that it is possible to improve the quality of animals by careful breeding. Competition was very strong in most of the classes. The McKerrow & Sons herd and Jean Duluth Farm herd fought hard for honors in all classes. L. P. Martiny's herd made a first-class showing and, considering the fact that they were right out of pasture and not fitted highly, surely came out well. The female classes were exceptionally good, showing good dairy type and refinement and very good udder development. The bull classes, though not as large as in some of the other breeds, were of superior quality as a whole.

The exhibitors: C. J. & W. A. Connell, Menomonee Falls, Wis.; Jean Duluth Farm, Duluth, Minn.; J. R. Love & Son, Waukesha, Wis.; L. P. Martiny, Chippewa Falls, Wis.; Geo. McKerrow & Sons, Pewaukee, Wis.; Goodhand Kingston, Waukesha, Wis.; J. Gilbert Hickcox, Whitefish Bay, Wis.; J. H. Harvey, Waukesha, Wis.; Geo. S. Love & Son, Waukesha, Wis.

The awards:

Bull 3 Years or Over—1st McKerrow & Sons on Imp. Gov. Winsome; 2d J. R. Love & Son on Dumont's Hero; 3d Martiny on Prince Romeo; 4th Connell on Cora's Sequel.

Bull 2 Years and Under 3 (6 shown)—1st Jean Duluth Farm on Starlight's Excelsior of J. D.; 2d Martiny on Dasher of Sarnia; 3d Geo. S. Love & Son on Noble Gov. of Walnut Ridge; 4th Kinkston on Moss Raider of Mushego; 5th Hickcox on May King of Starlight.

Bull 1 Year and Under 2 (5 shown)—1st Martiny on Dairydette; 2d Martiny on Romeo's Glenwood of Chippewa Falls; 3d Jean Duluth Farm on May Rose N. S.; 4th J. R. Love & Son on Sir June of Hewdale; 5th J. R. Love & Son on unnamed.

Bull Under 1 Year (11 shown)—1st Jean Duluth Farm on Marathon Rose King; 2d Kingston on Moss Maider's Gov. of Mushego; 3d McKerrow & Sons on McKerrow's Gov. Dearie; 4th J. R. Love & Son on College Hero; 5th Connell on Cora's Sequel of Sunny Slope.

Cow 3 Years or Over (10 shown)—of the Coartil Bree; 2d J. R. Love & Son on Raymond's Cora of Hawthorne; 3d Jean Duluth Farm on J. D. Phyllis; 4th Martiny on Robbie's Queen; 5th Kingston on Imp. Princess Du Braye II.

Heifer 2 Years and Under 3 (6 shown)—1st Jean Duluth Farm on J. D. Coronet; 2d McKerrow & Sons on McKerrow's Gov. Mythop; 3d McKerrow & Sons on Imp. May Rose of Urangue III; 4th Martiny on Jeanie of Cherry Hill Farm; 5th Hickcox on Imp. Dulce of Sarnia; 6th J. R. Love & Son on Alathusia.

Senior Yearling Heifer (6 shown)—1st J. R. Love & Sno on Hero's Ramona; 2d Jean Duluth Farm on Wm.'s May Rose; 3d Connell on Beauty of Sunny Slope; 4th Hickcox on Imp. Winnie of Bangor; 5th Martiny on Glenwood's Butter Queen of Chippewa; 6th Connell on Raymond's Beauty of Menomonie.

Senior Heifer Calf (10 shown)—1st Jean Duluth Farm on Gree's May Rose; 2d McKerrow & Sons on McKer-

row's Sunrise Governess; 3d J. R. Love & Son on Cora's Beauty of Hawthorne; 4th McKerrow & Sons on Julia Ann's Pride 2d; 5th Jean Duluth Farm on Julia's May Rose; 6th Jean Duluth Farm on Chene's May Rose.

Junior Heifer Calf (6 shown)—1st McKerrow & Sons on Imp. Governor's Ella of McKerrow Farms II; 2d Martiny on Stranford's Butter Queen of Chippewa; 3d Hickcox on May Rose of Clovernook; 4th Connell on Kate of Sunny Slope; 5th Hickcox on May Rose Louisetee of Clovernook.

Get of Sire (5 shown)—1st Jean Duluth Farm on get of May King of Linda Vista; 2d McKerrow & Sons on get of Gov. Winsome; 3d J. R. Love & Son on get of Dumont's Hero; 4th Martiny on get of Stanford Glenwood of Pinehurst 6th.

Produce of Cow (6 shown)—1st Jean Duluth Farm on produce of Coquette of Haddon; 2d J. R. Love & Son on produce of Raymond's Cora of Hawthorne; 3d Martiny on produce of Milens' Butter Queen; 4th Connell on produce of Leggs.

Aged Herd (5 shown)—1st McKerrow & Sons on herd headed by Gov. Winsome; 2d Jean Duluth Farm on herd headed by Starlight's Excelsior; 3d J. R. Love & Son on herd headed by Dumont's Hero; 4th Martiny on herd headed by Dasher of Sarnia.

Young Herd (2 shown)—1st Jean Duluth Farm on herd headed by Marathon Rose King; 2d J. R. Love & Son on herd headed by Sir Jesse of Hewdale.

Senior Champion Female—McKerrow & Sons on Imp. Bordeaux of the Coartil Bree.

Junior and Grand Champion Female—McKerrow & Sons on Imp. Governor's Ella of McKerrow Farms II.

Senior Champion Bull—McKerrow & Sons on Imp. Gov. Winsome.

Junior and Grand Champion Bull—Jean Duluth Farm on Marathon Rose King.

AYRSHIRES.

The Ayrshire show was not large, except the aged cow class, in which was shown ten animals. However, it made up in quality what it lacked in quantity. The exhibitors were Adam Seitz, Waukesha, Wis.; Dr. David Roberts, Waukesha, Wis.; The Ferndell Farms, Ladysmith, Wis.; Stephen Bull, Racine, Wis. The herd of Adam Seitz was up to its usual high standard and won four out of the six champion ribbons. Dr. Roberts' herd was particularly strong in the female classes. He also had the junior champion bull. The Ferndell Farms herd was well up in the money in every class.

Bull 3 Years or Over (3 shown)—1st Seitz on Bargenock Rising Star; 2d Roberts on Roberts' Cavalier; 3d Ferndell Farms on Victor of Ladysmith.

Bull 2 Years and Under 3—1st Bull on Aldebaran Findlayston; 2d Ferndell Farms on Ferndell Victor; 3d Seitz on Cavalier Kilnford Ringmaster; 4th Roberts on Roberts' Fairy Duke.

Bull 1 Year and Under 2—1st Seitz on Cavalier's Lord Roseberry; 2d Ferndell Farms on Ferndell's Lessnessock; 3d Roberts on Roberts of Waukesha.

Bull Under 1 Year (10 shown)—1st Roberts on Roberts' Pride Cavalier; 2d Seitz on Cavalier's Lord Stewart; 3d Ferndell Farms on Ferndell Arrogance; 4th Bull on Johnnie Reid of Aldebran; 5th Seitz on Tower Rising Star.

Cow 3 Years or Over (10 shown)—1st Seitz on Imp. Kilnford Bell IV.; 2d Ferndell Farms on May of Hillcroft; 3d Seitz on Imp. Hillhouse Maud II.; 4th Roberts on Value's Pride of Oak Valley; 5th Seitz on Bargenock Carnation.

Heifer 2 Years and Under 3 (8 shown)—1st Roberts on Roberta of Scotland; 2d Ferndell Farms on Silver Pet of Ferndell; 3d Seitz on Cavalier's Pet; 4th Ferndell Farms on Stately Lessnessock of Ferndell; 5th Roberts on Roberta Dahlia.

Senior Yearling Heifer (7 shown)—1st Roberts on Roberta Value's Pride Cavalier; 2d Ferndell Farms on Snowflake of Ferndell; 3d Seitz on Cavalier's Lack Spur; 4th Seitz on Cavalier's Rosewood; 5th Roberts on Roberta of Hartland.

Junior Yearling Heifer (5 shown)—1st Ferndell Farms on Ferndell's Felicity; 2d Seitz on Cavalier's Roseleaf; 3d Roberts on Roberta Cavalier Belle; 4th Bull on Annie Maky of Aldebaran; 5th Ferndell Farms on Ferndell's Innocence.

Senior Heifer Calf (8 shown)—1st Roberts on Roberta Southwick Cavalier; 2d Seitz on Cavalier Lavender; 3d Ferndell Farms on Ferndell's Fashion; 4th Seitz on Cavalier's May Flower.

Junior Heifer Calf (5 shown)—1st Seitz on Cavalier's Lady Bountiful; 2d Ferndell Farms on Ferndell's Mode; 3d Ferndell Farms on Ferndell's Fidelity; 4th Seitz on Cavalier's Twimble.

Get of Sire (4 shown)—1st Seitz on get of Bargenock Gay Cavalier; 2d Roberts on get of Roberts' Cavalier; 3d Ferndell Farms on get of Victor of Ladysmith; 4th Bull on get of Aldebaran Findlayston.

Produce of Cow (4 shown)—1st Roberts on produce of Southwich Heathflower 6th; 2d Seitz on produce of Vilo Pender; 3d Bull on produce of Chappelhill Lillian; 4th Ferndell Farms on produce of Rose Lotus.

Aged Herd (4 shown)—1st Seitz on herd headed by Bargenock Rising Star; 2d Roberts on herd headed by Roberta Cavalier; 3d Ferndell Farms on herd headed by Ferndell's Victor; 4th Bull on herd headed by Aldebaran Findlayston.

Young Herd (4 shown)—1st Ferndell Farms on herd headed by Ferndell Lessnessock; 2d Seitz on herd headed by Cavalier Lord Roseberry; 3d Roberts on herd headed by Roberts' Pride Cavalier; 4th Bull on herd headed by Golden Glow of Aldenbaran.

Junior Champion Bull—Roberts on Roberts' Pride Cavalier.

Senior and Grand Champion Bull—Seitz on Bargenock Gay Cavalier.

Junior Champion Female—Ferndell Farms on Ferndell's Felicity.

Senior and Grand Champion Female—Seitz on Imp. Kilnford Belle IV.

BROWN SWISS.

The Brown Swiss show included only one herd, that belonging to H. W. Ayers, of Honey Creek, Wis. Naturally, Mr. Ayers had smooth sailing. However, the individuals were good enough to stand keen competition and they would make a creditable showing in any company. Mr. Ayers' bull, Mermey's 2d son, was awarded the senior and grand championship, and the bull, Mermey's Nephew, junior championship. Brownie B. was awarded senior and grand championship in the aged cow class, and Columbus Mermey was awarded junior championship.

Can You Wash Your Separator In 4 Minutes?

THAT'S just the time it takes to thoroly wash up the *Sanitary Milwaukee*. If you are spending more time, you are doing needless work, 365 days a year.

SANITARY Milwaukee CREAM SEPARATOR

Means lighter work for the housewife. It's worth thinking about when you invest in a cream separator. And with one-third the discs the *Sanitary Milwaukee* skims *closer* and *quicker*. We'll prove that to you.

Sanitary Milwaukee aluminum discs are light, rust-proof and smooth as glass They are interchangeable—no bothersome wire holder to fuss with. Take them off—wash them in the dish pan, thoroly, as easily as the coffee cups—slip them on the bowl core in any order.

Write today for your copy of the catalog which tells all about the Sanitary Milwaukee.

Milwaukee Separator Mfg. Co., 245 Madison St., Milwaukee, Wis.

High Quality Dairy Products.

While the Number of Exhibits Was Not so Large as Last Year at State Fair, There Was a Noticeable Improvement in the Quality.

QUALITY was the outstanding feature of the dairy products display at the Wisconsin State Fair this year. The entries, in numbers, did not come up to the record established last year, but what was lost in numbers was more than made up in quality with the result that the display of butter and cheese proved to be the best ever seen at the state fair. There were 102 tubs of creamery butter and five exhibits of dairy butter with about 9,000 pounds of cheese, valued at $2,500, competing for honors, including the foreign types.

EXHIBITS OF BUTTER AT WISCONSIN FAIR.

Mr. Fred Marty, superintendent of the dairy department, was more than pleased with the showing made by the cheese and buttermakers, especially considering the hot summer which cut down the flow of milk fully 50 per cent in many sections. The cheese exhibit ranked in size next to the exhibit of last year, which was regarded as the largest ever brought together in this country and with the quality higher than ever before the scoring competition was very keen. The cheese display was better because more varieties were shown and, considering the dry weather, the judges pronounced the quality to be splendid. There was a good showing of foreign types and it was pointed out that never in the history of cheesemaking in the United States did a pound of cheese, so far as the foreign types were concerned, bring as much as a pound of butter fat was worth. This condition is due to the war and market conditions with the result that the makers of the foreign type cheeses have been realizing more for their product than ever before in the history of the industry.

Dairying being the big farming operation in Wisconsin, a visit to the state fair is not complete without a visit to the dairy building where the fair has provided great refrigerators for displaying cheese and butter. This state now produces 55 per cent of the nation's cheese and a sixth of the butter and no department of the fair is more worthy of support and attention than the dairy products display.

The butter showing this year was regarded by the judges as the best indication of the influence the buttermakers and cheesemakers are exercising over the farmers in providing them with a good, sweet milk or cream. The factorymen who have exhibited for years have learned that good raw materials are necessary if they are to turn out a product that will score high and that it is, therefore, to their interests to work with the patrons to this end. The factory

A CORNER OF THE CHEESE EXHIBIT.

ever gotten together at a state fair from a quality standpoint. The average scoring was about 93. One outstanding thing was that the winners were those who have been at the top in all state contests of recent years, realizing the demand for good butter and that only good butter can win. Mr. C. E. Lee, assistant dairy and food commissioner, who has scored butter at the state fair for eight years, told the writer that the quality was the best that he had ever seen and that the improvement made in the past few years was very striking. The hot weather had its effect on the butter exhibit just as it did on the cheese showing and many buttermakers who have shown in past years failed to turn up this year.

The improvement in butter was greatest, Mr. Lee said, in the flavor, thus indicating a better raw material for the buttermakers to work with. Good, well-flavored prize-winning butter cannot be churned from any but pure, sweet cream and this improvement in flavor speaks well for the work which is going on in Wisconsin among the farmers and creamerymen to get the cream from the farm to the buttermaker in first-class condition. The same held true with the cheese shown, Mr. Marty pointing out that the improvement in quality came largely from a better raw material and that this was especially noteworthy when the hot weather of the past summer was taken into consideration.

The fact that better raw materials were assigned as the reasons for the higher quality of both butter and cheese was taken by the judges as an that can turn out prize-winning products is the one that gets the best prices in the market and, therefore, it is essential to have good raw material.

Mr. Lee pronounced the butter as the equal of any he had scored and called attention to the necessity of Wisconsin creameries that are turning out high-grade butter to demand the best prices in the market. In this respect he says certain other creameries with a product no better than many Wisconsin creameries are getting a cent a pound for butter on the eastern markets than Wisconsin, merely because they demand it. "Wisconsin must be on the watch and demand the price," he said. "Our creameries are giving many of the dealers their biggest profits because they are selling a butter that equals that of any other state at a lower price while the retailer charges the consumer the same."

Mr. Lee, with N. W. Hepburn, of Urbana, Illinois; J. J. Ross, of New York, and G. H. Beckendorf, of Madison, scored the butter, while E. L. Aderhold, of Neenah; A. T. Bruhn, of Spring Green, and J. D. Cannon, of New London, scored the American cheese. G. Marty, of Madison, and J. Lehnherr, of Monroe, scored the foreign types of cheese. A feature of the cheese exhibit was an American mammoth, weighing 1,199 pounds. The scores above ninety as announced follow:

$50,000.00
Profit Sharing Offer

I want every Wisconsin Farmer reader to take anvantage of this great profit-sharing offer.

Free Book Saves $20 **FREE** Ten-day Try-on

The Amazing success of my Steel Shoes—the tremendous growth of my big shoe business—makes this profit-sharing offer possible.

Because my steels go direct to you from my big factories, I am able to share profits with you. Because ordinary shoe dealers can make only one profit a year on Steels, they will not sell them. That's why I want you to share profits with me.

THIS OFFER IS LIMITED

Good only until I have added 100,000 new customers. I want all workers to enjoy the same comfort, satisfaction, protection and economy as my million satisfied customers. I make this profit-sharing offer knowing that once you wear Steels you will buy no other work shoes. Every male member of every family—no matter what his work—no matter where he lives—needs Steels. Steels are indespensable, practically indestructible, flight, comfortable, healthy, waterproof—the World's Greatest Workshoe for farmers, mechanics, drovers, dairy and creamery workers, miners, truck and fruit growers, railroad men, gardeners, etc.

STEELS SAVE FEET, HEALTH AND MONEY

No more tired, blistered, chafed, swoll n, calloused, aching feet. No more corns or bunions. No more hard, cracked, warped, twisted, worn, leaky shoes. No more big shoe repair bills. No more rheumatism, lumbago, sciatica, neuralgia, bronchitis, colds, coughs and other "wet-foot" troubles. No more big doctor bills. No more heavy, clumsy, sweaty rubber boots, overshoes or "artics." **One pair of Steels outlasts 3 to 6 pairs best all-leather shoes.**

1917 SHOE BOOK FREE

Don't think of buying any shoes until you get my 1917 shoe book. Let me tell you all about my great money-saving, profit-sharing offer Send no money—Just sign the profit-sharing coupon. All information booklet, etc., absolutely **FREE.**

PROFIT-SHARING COUPON

N. M. RUTHSTEIN, The Steel Shoe Man,
Dept. 344, Racine, Wisconsin.
Dear Sir:—
Please send me without obligation, your free 1917 shoe book and full details of your great $50,000 profit-sharing offer.

[Editor's Note.—Owing to the length of the list of awards in the dairy products department the cheese scores are held over and will be published next week.]

Fine Fruits and Flowers.

Horticultural Exhibit at Wisconsin State Fair Taxed the Capacity of the Space Which Has Been Allotted This Department.

THE horticulture and floral display at the Wisconsin State Fair this year was a treat to both the eye and the nose. The casual visitor, in passing through the building banked with fruits and flowers of all kinds, would hardly realize that this has been an off year for fruits in Wisconsin, as the growers had gotten together for the fair an exhibit that ranked with the best ever held. The entire building was turned over to horticulture and floriculture this year and with added floor space the exhibit did not have that cramped appearance of other years and it was clearly evident that within a few years larger quarters will have to be provided for these departments. Heretofore several other departments have had to be taken care of in the building and when these were transferred to other quarters it was thought it would be a difficult task to fill all the space, considering that the fruit crop was below the standard in quality and yield. But such was not the case, as the exhibit of flowers by amateurs turned out to be the largest in history and with a fruit showing up to normal, so far as quantity was concerned, the entire building was put to use. The growth of this department has been steady and the building which, when built a few years ago was considered large enough for years to come, will soon have to be enlarged or other quarters provided.

Mr. N. A. Rasmussen, superintendent of horticulture, was well pleased with the exhibit. There were about 600 plates of apples shown by individuals in addition to some ninety-six individual pecks and twenty barrels. The display of pears and plums was small, but the grape display was the largest ever held, more than 150 plates being shown. The grape yield was good and this was reflected in the interest shown in this department of the fair. The Wisconsin State Horticultural Society had its usual exhibit of apples, which took up about half the east wall, and it is doubtful if for arrangement the state society ever had so interesting an exhibit. Fifty barrels and thirty boxes of apples were used in getting up this exhibit and the first impression that would come over the fair visitor was that Wisconsin is a great apple state and that the crop must be great. No doubt it required considerable effort to get together so large an exhibit in a year when the crop was not at its best and Mr. Frederic Cranefield, secretary, and his coworkers are entitled to much credit.

The most disappointing feature of the fruit show was the lack of color, due to the lateness of the season. It was in this off-color that the show failed to come up to the shows of other years and Mr. Rasmussen predicted that had the fair come two weeks later the fruits would have colored and the display would compare in all respects with other years. Of course, it required more work to get together the exhibits, as the yields were light and scab was frequent. The unfavorable weather in early spring during the spraying season showed up in the displays, as during the spring it was so rainy in many sections that spraying could not be done effectively if at all when it was necessary and in other sections it was almost impossible, because of the war and market conditions, to secure the necessary materials for spraying. Then the season was cold and wet, which held back the fruit, and two weeks makes a great amount of difference at this season in the ripening. Door county and several other principal fruit-growing counties were not represented, as the fruit crop was so late that it was not in condition for showing.

All in all, the horticulture and floriculture display was considered the best held, as the floral display was especially good and great interest was shown by amateurs, their displays banking the west wall for the entire length of the building. Superintendent Rasmussen is to be congratulated.

The counties of Sauk, Richland and the Kickapoo valley fruit regions were represented by separate exhibits and the Wisconsin Cranberry Sales Company had a splendid exhibit of cranberries and how they are grown. Wisconsin is now third in cranberry production and the crop is normal this year with prices good. This booth was well arranged and attracted considerable attention:

The exhibitors of fruits were:

Arpin Cranberry Co., Grand Rapids.
Baer, J. E., Baraboo.
Bennett, A. E., Grand Rapids.
Belle Lake Cranberry Co., Mather.
Bassett, A. K., Baraboo.
Brown, S. L. & Son, Gays Mills.
Barnes, A. D., Waupaca.
Gaynor Cranberry Co., Grand Rapids.
Blodhett, S., R. R. 6, Waukesha.
Bamford, L., R. F. D. 24, Plymouth.
Butter, Arthur C., 603 Mitchell St., Milwaukee.
Hays, J. A., Gays Mills.
Coolier, J. H., R. 14, Wauwatosa.
Fitch, J. W., Cranmoor.
Goelzer, Miss E. M., Oakwood.
Hauser, J. F., Bayfield.
Hauser, John E., La Crosse.
Hearding, J. H., Delafield.
Irish, L. B., Baraboo.
Kickapoo Development Co,. Gays Mills.
Lowe, E. C., R. F. D. 8, Box 363, Milwaukee.
Lewis Cranberry Co., Minong.
Meyer, A., Cascade.
Palmer, J. S., Route 2, Baraboo.
Platt, H. R., Route 3, Baraboo.
Richland County Com. Fruit Co., by John Reis, Twin Bluffs.
Reis, John, Twin Bluffs.
Rintelman, Wm., Cedarburg.
Learned, S. F., R. F. D. 2, Sturgeon Bay.
Severson, Elmer, R. F. D. 5, Oshkosh.
Secher, C. M., Mather.
Searles, A. & Son, Grand Rapids.
Townsend, G. H., 114 E. Mifflin St., Madison.
Toole, Wm. & Son, Baraboo.
Tans, Mrs. John, Mukwanago.
White, A. F., Brookfield.
Zillmer, H. J., Pewaukee.

Cow-Testing Exhibit.

The great interest which is now manifest in Wisconsin in the value of testing cows to determine their value to their owners was reflected in the interest taken in the cow-testing exhibit at the Wisconsin State Fair. This exhibit was arranged and held under the auspices of the Wisconsin Dairymen's Association, and the farmer who saw this exhibit of good and poor producing cows must have gone home with the determination to find out immediately what his cows are doing for him in the way of returning a profit for the labor and feed he is expending. Mr. H. C. Searles, state supervisor of cow-testing associations, and Mr. N. G. Negley, his assistant, were in charge. There are now fifty-three local testing associations in the state with 1,644 members and 25,131 cows on test.

Prizes were offered for the best producing cows in the local associations, and this brought to the fair some of the best in the state. Among these were Vickery Vale Beechwood, from the Sheboygan county association, a Holstein with a record in official test of 21,777 pounds of milk and 8,875 pounds of butter fat. She is owned by Emil Titel, of Plymouth, and in the judging contest she was awarded first place, although the judges did not know her production record. The awards were placed by Mr. S. E. Jones and Mr. A. W. Fox with Prof. G. C. Hunphrey, of Madison, as referee, according to strictly dairy type, and it was quite a coincident that they should pick the cow with the highest record, unaware of her record. She has many outstanding features as a great producer and another noteworthy result of the judging was that one high-producing pure bred was placed lower than a scrub cow, which puts emphasis on the motto of the dairymen's association that "beauty is only skin deep and that handsome is as handsome does." This scrub, to the eye, looked better to the judges than one of the high-producing Holsteins, but when records were kept, the scrub was found to be sadly lacking in the qualities desired by the successful dairyman. As the crowds filed through the barn where the cows were exhibited, it was interesting to hear them say they should like to have one like Vickery Vale Beechwood, whose gross returns for the year were $300.93, cost of feed $125.80 and net profit $175.33. She returned her owner $2.40 for every dollar feed cost.

Three scrub cows, two of which were pure bred, were bought by the association for the purpose of affording a contrast between good and poor producers. These three were taken from members in testing associations, and when a stock buyer, at the close of the fair, was sent for to see what he would pay for them for beef, he replied that the buyers had used very poor judgment and that for beefing they were of almost as little value as for dairying. Emphasis was drawn to the fact that many consider that because a cow is pure bred, she is a good producer. It was shown that such is not the case and that the scales and the test are the only known ways to know exactly what a cow is doing. This was the reason that the exhibit contained two pure-bred "scrubs" out of three and one of these pure breds, a Jersey, during the entire year gave only 1,802 pounds of milk and eighty-seven pounds of fat.

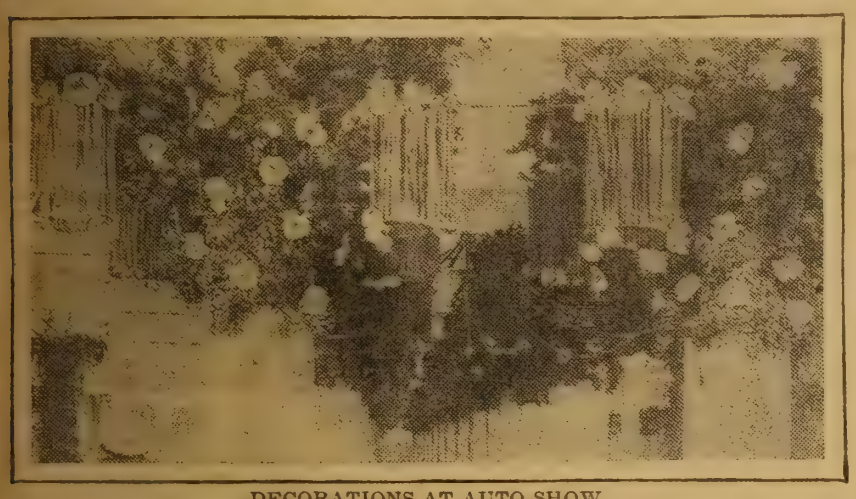
Among the good producing cows shown were a grade Jersey, Susie, owned by C. Shotte, of Anitgo, with a fat record of 463.8; a grade Guernsey, Blossom, owned by Theo. Voight, of Kiel—fat record, 517.3; a grade Guernsey, Trimmer, owned by Mart Molly of Ontario—fat record, 457.1; a Jersey-Holstein cross, Brinnie, owned by Henry Carr, of Waukesha—fat record 583.1; a native, Brownie, owned by Ira Farley of Weyauwega—fat record 549.4; a pure-bred Holstein, Rosetta Johanna DeKol, owned by Frank Smalle, of Stanley—fat record, 487.8; a native, Jessie, owned by Charles Peterson, of Kewaunee—fat record 557.8; a pure-bred Holstein, Knight Errant Queen, owned by H. D. Dunbar of Elkhorn—fat record, 758.5 (1 months); and a pure-bred Holstein Johanna Piebe Mercedes De Ko owned by Christenson Bros., of Royalton—fat record, 663.4.

Farmers See the Automobile Show

Interest Taken in New Cars, Tires, Fuels, Oils and Accessories. The Best Automobile Show at any State Fair.

AUTOMOBILE makers and dealers in Wisconsin seem to have a keen appreciation of the business they get from the farmer. This was reflected in the splendid exhibit of automobiles and accessories at the Wisconsin State Fair. The writer has seen several automobile shows at state fairs this year, but nothing compared with the Wisconsin show from the standpoint of number or character of exhibits. Milwaukee interests decided a year ago that the auto show was one way in which Milwaukee could help build up the fair. The show last year was a winner, but the show this year was much better in every way. There was a charge of 10 cents for the show—a most reasonable fee for such a splendid show. Winter shows which have no better exhibits have admission fees of 50 cents or $1.

The automobile show was put on especially for the farmers of the state who visit the fair. Farmers buy about 50 per cent of the automobiles sold in the state and the business in the counties where there are no large cities has increased in the past five years much more rapidly than it has in counties where a large part of the population is centered in some city.



DECORATIONS AT AUTO SHOW.
A sample of beautiful decorative effect at top of columns in show hall.

The enjoyable part of the show was its completeness. The visitors had an opportunity to see the cars which they drive and to see others with which they have become familiar through the columns of their farm paper. There were many new bodies displayed, but the change in cars from last year is not so much as might have been expected. The farmer is not especially attracted by freakishness in any sort of machinery or vehicle. His automobile is a utility chiefly, and, while it is used a great deal for pleasure driving, this is not always the thought uppermost in the minds of the farmer who is in the market for a car. The show gave farmers out over the state an opportunity to become acquainted with the distributors and factory representatives. It impressed the farmers that the automobile business has steadied down to a substantial basis where cars are sold strictly on their merits and the service which they will give. When new machines come on the market the farmer is not always the first to bite. When a machine becomes standardized so that it is not shifting in principle or policy with each season the farmer feels more like making an investment. The show brought out prominently the fact that automobiles for the coming year are not changed to any great extent from those on the market last year. There will always be slight changes and these are for the better, but cars in the main are now so good that the farmer may buy without fear of such radical changes as might make him regretful when he sees next season's models.

Fuels, oils, tires, repairs, construction materials and accessories of all kinds provide subjects in which the farmers show great interest. Manufacturers are making a careful study of operation costs on cars and many of these things enter directly into this cost. It is a well-known fact that two men may take care of the same model and run them for the same number of miles with a considerable difference in the cost of operation. One man will be able to get more miles out of a gallon of gasoline than another with the same kind of a car. One driver will be able to get greater mileage out of a tire than another who uses the same kind of tires. Inasmuch as the farmer must travel almost entirely on country roads under conditions which cannot be as favorable as car operation in the city on paved streets, it is interesting to make a study of the conditions which cause this variance of costs. It is often more important to get low operation cost after one owns a car, low mileage cost on tires and low repair costs, than it is to get low cost on the original purchase. All these ideas are brought out in the automobile shows and on this account it is worth while for the farmers to attend such shows. Among the new things shown at Milwaukee were the new dimmer lenses, which reflect light rays so as to avoid a glaring light and still give the driver plenty of protection, and the new gasoline tanks for use on farms. On account of our narrow country roads good lights are a necessity. But the farmer who drives a car well knows that the glaring light has caused many accidents. Cities have passed ordinances against its use and it is only a question of time until the state will investigate the glaring headlight. The storage of gasoline is another important problem. The farmer desires, as a rule, to buy gasoline in 100-gallon lots. It has been shown that gasoline will lose strength if placed in outside tanks and exposed to weather. A high-test gasoline may soon become a low-test gasoline if there is not some adequate method provided for taking care of it. The sunken tank with the pump attachment is regarded as a desirable method of taking care of gasoline, and such outfits may be bought at from $40 up, depending upon the capacity in gallons and the convenience of the pumping device.

Repair work on tires affords a subject of great interest to the farmer who by reason of his extended country travel must often do a good deal of his own repairing. There is not nearly so much of this work done by the farmer as formerly, as the spare tire usually makes it possible to get to the garage. Tire repairing is one of the cheapest charges at most garages.

That danger from fire may be minimized was shown at the auto show. An extinguisher on every car would cut the cost of insurance and almost eliminate danger to occupants of the car and serious loss on the vehicle.

Though there are to be few radical changes in the mechanism of motor cars for the coming years, there are some interesting changes in car bodies and car comforts. Makers are getting away from the "conventional black" and a few have dared to present rather gay colors. The shades of blue, green and gray, with maroon and an occasional red are most popular. For city use there are a number of gayer colors offered, but there seems to be little demand from the farm trade for anything sensational. The clover-leaf design promises to be popular. Good, substantial upholstery is demanded for the farm car which must stand up under the most trying road conditions.

The auto show at the state fair doubtless will help rather than hinder the Milwaukee automobile show which comes early in the year 1917. State fair visitors will have their interest in cars whetted up to the point that they will want to see the winter show and will be looking out for announcements concerning it.

Mr. Bart J. Ruddle, of the Milwaukee Automobile Dealers, Inc., was manager of the state fair auto show and is entitled to great credit. Others who aided in this work were N. E. Osmond, chairman; L. D. Frint and A. W. L. Gilpin, members of the committee in charge.

A feature of the show which was of great interest was the truck division While trucks are not in general use on farms, they are being given attention, especially the smaller vehicle. Several counties are investigating the use of trucks for oil sprinklers to be used in road work. An exhibit of armored trucks was seen at the show.

The following is a list of exhibitors at the state fair automobile show:

AUTOMOBILES.

Edwards Motor Co.
KisselKar Co.
Harry Newman, Inc.
Curtis Automobile Co.
Frint Motor Car Co.
Jesse A. Smith Auto Co.

Greatest Poultry Show in West.

Wisconsin Poultry Exhibit This Year Comprised 4,000 Birds and Is Second Only to New York Show in Number in the Coops

THE 1916 Wisconsin State Fair established a new record in the poultry section with 4,000 birds on display. The largest exhibits were in the White Rock, Rhode Island Red, Leghorn and Barred Rock classes. Mr. H. W. Halbach, of Waterford, had a fine display of White Rocks and won a number of premiums. The Pabst Stock Farm, Oconomowoc, Wisconsin, won most of the ribbons in the Single Comb Rhode Island Red and Single Comb White Leghorn classes. In the Barred Rock Mr. E. G. Roberts, of Fort Atkinson, was the chief winner. Others who had fine displays were Geo. Stirdevant, of Sheboygan, and F. D. Tindall, of Waterford. In the Rose Comb Reds the main exhibitors and winners were C. A. Brown, of Lake Beulah; Mrs. J. H. Pierce, of Wauwatosa, and Kissel Bros., of Hartford. The chief exhibitor and heavy winner in Golden Wyandottes was Charles D. Love, of Waukesha. There was a fine exhibit of White Wyandottes, John Sleer, of La Crosse, and Charles Prei, of Waukesha, getting most of the premiums. The waterfowl classes afforded an exceptional exhibit and awards were about equally divided between W. A. Hoyt, of Whitewater; E. G. Roberts, of Fort Atkinson; Carl Dare, representing the Crescent Poultry Farms, of Des Moines, Iowa, and John Conrad, of Hale's Corners. The judge in this division was Charles McClave, of New London, Ohio. The show of fancy fowls, including pheasants and wild geese, was a good one. The pigeon show included about 1,500 birds.

The Wisconsin poultry show at the state fair of 1916 was second only to the New York show in the number and quality of birds shown. Last year the Wisconsin show had 2,500 birds. The Minnesota State Fair this year had about the same number. This is the last year that the poultry exhibit will be housed in the old dilapidated structure. A new $25,000 poultry building will be ready for occupancy in 1917. Supt. Geo. W. Hackett and the judges were put to a great deal of trouble this year to handle the show, and exhibitors were obliged to suffer considerable inconvenience.

The following is a list of poultry exhibitors:

Atchinson, Elwood, Milwaukee.
Bachman, William, Milwaukee.
Buth, A. V., Sullivan.
Bathel, Mac, Rockton, Ill.
Benedict, Mrs. R. E., Bristol.
Benedict, Roland, Bristol.
Belle, William, Arlington.
Blott, Ray, Mukwanago.
Brown, C. A., Lake Beulah.
Beckman, O. H., Cedarburg.
Boots, S. G., Sussex.
Clemmens, James, Kansasville.
Cook, George, Racine.
Conrad, John & Son, Hales Corners.
Cooper, A. R., Wauwatosa.
Cain, Robert, Wauwatosa.
Crescent Poultry Farm, Des Moines, Iowa.
Coman, Dan, Wauwatosa, Wis.
Dachs Bros., Milwaukee.
Dachs & Son, Milwaukee.
Bivan, F. H. & Son, Browntown.
Dance, Benj. D., Brookfield.
Evans, Charles S., De Pere.
Friese, William, La Crosse.
Fritschell, Roland, Milwaukee.
Flint, L. J., Stoughton.
Flad, John J., Madison.
Genrich, Walter A., Milwaukee.
Giese, Emil, Milwaukee.
Greifenhagen, Milwaukee.
Greenwald, J. E., Cedarburg.
Garbutt, Cora B., Darien, Wis.
Helinski, Frank, Milwaukee.
Halbach, H. W., Waterford.
Hoyt, Olive M., Whitewater.
Hoyt, W. A., Whitewater.
Heinlaben Bros., La Crosse.
Jevson, C. V., Wauwatosa.
Kissell Bros., Hartford.
Kuhtz, H. A., Milwaukee.
Kruse, A. F., Milwaukee.
Kinney, S. W., Wauwatosa.
Love, J. R. & Son, Waukesha.
Laux, Richard, Milwaukee.
Love, Charles D., Waukesha.
Livingston, James, Milwaukee.
Lang, C. F., La Crosse.
Love, J. R., Waukesha.
Mitchell, John J., Lake Geneva.
Marvin, John F., Milwaukee.
Murray, Mrs. J. M., Albany.
Mehl, Rudolph, Milwaukee.
MacKenzie, H. A., Sheboygan Falls.
Novak Poultry Yards, Racine.
Osborne, Gilmer A., Stoughton.
Pabst Stock Farm, Oconomowoc.
Pierce, Mrs. J. H., Wauwatosa.
Palmer, S. A., Brodhead.
Pasbrig, Tony, Wauwatosa.
Prei, Chas. W., Waukesha.
Prest, Geo. H., Wauwatosa.
Potter, Joseph V., Green Bay.
Philipp, Robert, West Allis.
Peer, W. R., Milwaukee.
Rex Bantam Yards, Milwaukee.
Roberts, E. G., Fort Atkinson.
Rogers, Mrs. H. C., Oshkosh.
Ricks Bros. & Hunt, Boscobel.
Schaeffer, William, Milwaukee.
Snyder, John F., Oshkosh.
Schwister, Walter, Milwaukee.
Sleer, John Alden, La Crosse.
Streng, Richard, Wauwatosa.
Stirdevant ,Geo., Sheboygan.
Steingrader, O. C., Jefferson.
Sussex Poultry Yards Co., Waterford.
Tindall, F. D., Waterford.
Thiele, Fred H., North Milwaukee.
Torslt, Al, Milwaukee.
Vanselow, Erwin and Martha, South Milwaukee.
Von Berg, W. A., Mosinee.
Wranch, J. H., West Allis.
Winnebago Bantam Yards, Omro.
Zacher, L. C., Wauwatosa.

EXHIBITS OF FIELD CROPS.

Good Showing of 1916 Corn at Wisconsin State Fair—List of Awards and Exhibitors in Agricultural Department.

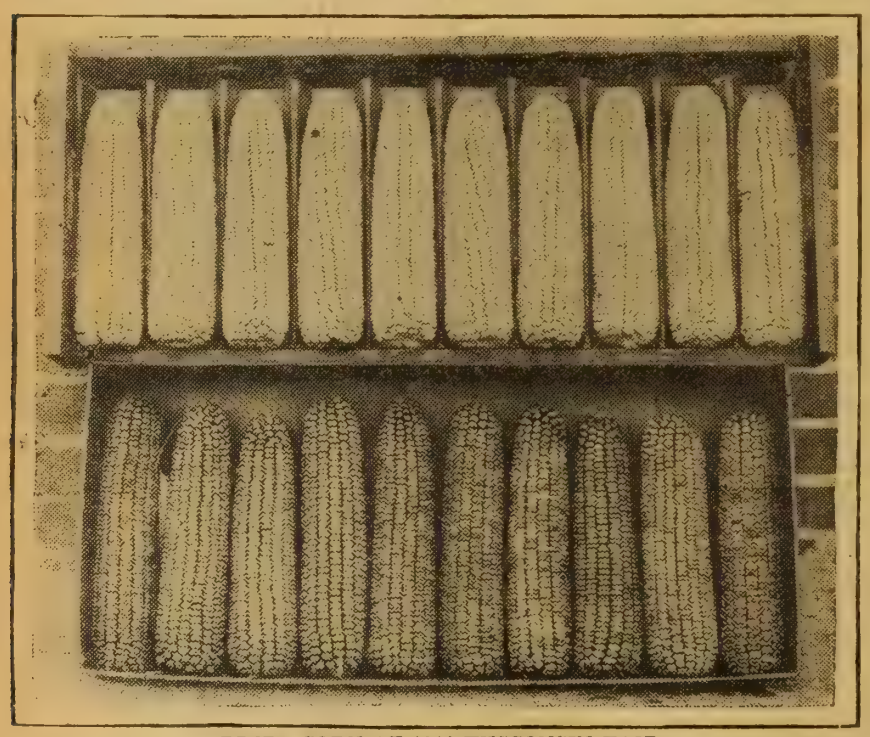
QUALTY stood out especially strong in the exhibits this year in the agricultural department of the Wisconsin State Fair. The display of sheaf and threshed grains, corn and vegetables was not only the largest ever held in connection with the fair but Mr. E. L. Luther, superintendent, and Mr. E. J. Delwiche, of Green Bay, who judged grains, and Mr. J. G. Milward, of Madison, who judged vegetables, are authority for the statement that the entries, taken as a whole, were of splendid quality.

The entire center of the county exhibits building was given over to this department this year and all of the available space was occupied by the products of the sixty-nine exhibitors. Last year this department was forced to share this space with the Indian exhibit and the bees and honey exhibit, which were transferred to the grand stand this year, and many growers would not exhibit under cramped conditions. With a growth of this department and the increasing interest in county exhibits those vitally interested in this work of the fair have already begun a campaign for an addition to the present building.

The corn show by individuals this year was exceptionally good and most of that shown was the 1916 crop, although old corn, was eligible. Some pronounced this showing 50 per cent portance. "Instead of a few samples of barley we should have a table running through this building loaded down with barley," he said. "We have the stuff and it is only a matter of getting the growers to exhibit and with better co-operation and increased premiums from the fair we can get them."

Interest was very keen in the corn exhibits and in Silver King S. P. Markle, of La Crosse county, won first both in ten and fifty ears. In Golden Glow Jippa Wielinga, of Midway, took first in both ten and fifty ears. Sweepstake awards for the best display of ripe vegetables went to Miss Rose Mayer, of Wauwatosa; second to N. A. Rasmussen, of Oshkosh; third to Henry J. Schulte, of Wauwatosa, and fourth to William E. Prish, of Mineral Point. Sweepstake awards for the best display of green vegetables went to N. A. Rasmussen, of Oshkosh; second to Charles Parsons, of Antigo; third to Herman Schoenck, of Enterprise, and fourth to Anton Follstad, of Elcho.

The Wisconsin Experiment Association and the Wisconsin Potato Growers' Association both had interesting exhibits in connection with this department and in this way grains and potatoes were both represented. Noyes Raessler, of Beloit, was in charge of the experiment association exhibit, and J. W. Hicks, president, and J. G.



PRIZE CORN AT 1916 WISCONSIN FAIR.

Upper Picture—Best ten ears white dent corn, Silver King variety grown by S. P. Markle, La Crosse. Lower Picture—Best ten ears yellow dent corn, Golden Glow variety, grown by Jippa Weilinga, Midway.

better than a year ago and the threshed and sheaf grains were of exceptional quality with competition among the growers very strong. The show was off only in potatoes, although those shown in this division were very good and much better than the selections seen in the county booths. The barley show, while not as large as it might be, was very good and the quality splendid and the display of vegetables and garden produce as well as grass seed was above the average.

One thing stood out prominently, especially in potatoes, and that was that the best products came from those sections where the farmers are working along educational lines in improving their grains and potatoes. The counties where the potato growers are using the most advanced methods sent, in almost every case, the best potatoes and the individual winning exhibitors came from such counties. The same held true in the grains and Mr. Luther believes that no better commendation of the educational work being done along these lines is necessary than this fact brought out by the fair exhibits.

Mr. Luther believes that this department can be made one of the largest of the fair and that the showing this year is a good start for an agricultural show that will be state-wide in im- Milward, secretary, of the potato growers' association exhibit.

The principal awards on corn, potatoes and small grains follow:

CORN—10 EARS HUSKED.

Silver King, No. 7—1st S. P. Markle, LaCrosse; 2d R. J. Brunker & Sons, Ridgeway; 3d H. P. West, Ripon; 4th W. E. Colladay, McFarland.

Golden Glow, No. 12—1st Jippa Wielinga, Midway; 2d E. J. Liebenthal, West Allis; 3d R. J. Brunker & Sons, Ridgway; 4th Roy McDonald, Menominee.

Clarke's Yellow Dent No. 1—1st John Hans, Jefferson; 2d Noyes Raessler, Beloit; 3d Frank J. Lindley, Fox Lake; 4th H. P. West, Ripon.

Murdock's Yellow Dent—1st W. E. Colladay, McFarland; 2d Chas. Fountaine, Elkhorn; 3d Frank J. Lindley, Fox Lake; 4th H. C. Bruechner, Jefferson.

Reid's Yellow Dent—1st H. E. Krueger, Beaver Dam; 2d Noyes Raessler, Beloit; 3d A. Austin, Janesville; 4th H. P. West, Ripon.

White Cap Yellow Dent—1st Charles Parsons, Antigo; 2d Frank J. Lindley, Fox Lake; 3d H. J. Schulte, Wauwatosa.

North Star Yellow Dent—1st Frank J. Lindley, Fox Lake; 2d Wm. Toole & Sons, Baraboo; 3d Noyes Raessler, Beloit; 4th J. S. Palmer, Baraboo.

Wisconsin No. 8—1st Frank J. Lindley, Fox Lake; 2d A. C. Ellickson, Arlington; 3d Noyes Raessler, Beloit; 4th W. E. Colladay, McFarland.

Yellow Flint—1st J. S. Palmer, Baraboo; 2d H. J. Schulte, Wauwatosa; 3d Arthur O. Popp, Jefferson; 4th J. E. Bennett, Waterford.

White Flint—1st J. H. Pilgrim, Milwaukee; 2d R. E. Pilgrim, Milwaukee; 3d J. E. Hasuer, La Crosse; 4th H. P. West, Ripon.

CORN—50 EARS HUSKED.

Silver King No. 7—1st S. P. Markle, Onalaska; 2d Frank J. Lindley, Fox Lake.

Golden Glow No. 12—1st Jippa Wielinga, Midway; 2d John VanLoon, LaCrosse; 3d Frank J. Lindley, Fox Lake.

Any Other Variety—1st A. Austin, Janesville; 2d H. C. Brueckner, Jefferson; 3d W. E. Colladay, McFarland; 4th Frank J. Lindley, Fox Lake.

POTATOES—PECK LOTS.

The awards in potatoes, peck lots, were as follows:

Rural New Yorker—1st John F. Hauser, Bayfield; 2d Charles Parsons, Antigo; 3d Herman Schoenck, Enterprise; 4th Anton Follstad, Elcho.

Green Mountains—1st Herman Schoenck, Enterprise; 2d John F. Hasuer, Bayfield.

Burbanks—1st Charles Parsons, Antigo; 2d John F. Hasuer, Bayfield.

Early Ohios—1st John F. Hasuer, Bayfield; 2d Herman Schoenck, Enterprise; 3d N. A. Rasmussen, Oshkosh.

Early Rose—1st Herman Schoenck, Enterprise.

Triumphs—1st Miss Florence Campbell, Three Lakes; 2d Herman Schoeneck, Enterprise; 3d Charles Parsons, Antigo; 4th John F. Hasuer, Bayfield.

Irish Cobblers—1st F. S. Campbell & Sons, Three Lakes; 2d Herman Schoeneck, Enterprise; 3d Oscar Nelson, Antigo.

Any Other Standard Variety—1st John F. Hasuer, Bayfield; 2d Herman Schoeneck, Enterprise; 3d Charles Parsons, Antigo.

SMALL GRAINS—PECK LOTS.

The awards in the generally grown small grains, in pecks, follow:

White Winter Wheat—1st A. Selle, Thiensville; 2d H. R. Krueger, Beaver Dam; 3d H. P. West, Ripon; 4th Charles Parsons, Antigo.

Red Winter Wheat—1st H. P. West, Ripon; 2d Noyes Raessler, Beloit; 3d William Moos, Onalaska.

Spring Wheat—1st H. E. Krueger, Beaver Dam; 2d H. P. West, Ripon; 3d H. J. Block, Burlington; 4th William Moos, Onalaska.

Wisconsin Pedigree No. 1 Oats—1st H. P. West, Ripon; 2d H. E. Krueger, Beaver Dam; 3d William Moos, Onalaska; 4th A. Ellickson, Arlington.

Pedigree No. 5 Oats—1st H. P. West, Ripon; 2d Clinton Skewes, Union Grove; 3d William Moos, Onalaska; 4th Noyes Raessler, Beloit.

Swedish Select Oats—1st Noyes Raessler, Beloit; 2d H. P. West, Ripon; 3d Herman Schoeneck, Enterprise; 4th A. Austin, Janesville.

60-Day or Kherson Oats—1st H. E. Krueger, Beaver Dam; 2d Noyes Raessler, Beloit; 3d J. L. Krause, Beaver Dam; 4th H. P. West, Ripon.

Silver Mine Oats—1st H. P. West, Ripon; 2d Noyes Raessler, Beloit.

Any Other Variety Oats—1st Herman Schoeneck, Enterprise; 2d H. P. West, Ripon; 3d A. Selle, Thiensville; 4th J. L. Krause, Beaver Dam.

BARLEY.

Wisconsin Pedigree Barley—1st A. C. Ellickson, Arlington; 2d A. Austin, Janesville; 3d Clinton Skewes, Union Grove; 4th William Moos, Onalaska.

Manchurian Barley—1st John Hans, Jefferson; 2d H. P. West, Ripon; 3d H. E. Krueger, Beaver Dam.

Oderbrucker Barley—1st John Hans, Jefferson; 2d William Clemmens, Kansasville; 3d H. E. Krueger, Beaver Dam; 4th H. P. West, Ripon.

Any Other Variety Barley—1st John Hans, Jefferson; 2d H. E. Krueger, Beaver Dam; 3d William Moos, Onalaska; 4th A. Selle, Thiensville.

RYE.

Spring Rye—1st H. E. Krueger, Beaver Dam; 2d H. P. West, Ripon; 3d Herman Schoeneck, Enterprise.

Pedigree Winter Rye—1st Noyes Raessler, Beloit; 2d Ernst Eberhardt, Cedarburg; 3d Jens Uhrenholdt, Hayward; 4th H. E. Krueger, Beaver Dam.

Any Other Variety of Rye—1st Noyes Raessler, Beloit; 2d H. P. West, Ripon; 3d H. E. Krueger, Beaver Dam; 4th Herman Schoeneck, Enterprise.

DU PONT
RED CROSS FARM POWDER
The Original and Largest Selling Farm Explosive
Why use expensive high power dynamites when this slower, safer farm powder will save you from $3 to $5 per hundred pounds and in most farm uses do better work?
BIG BOOK FREE
As pioneers and leaders in developing farming with explosives our booklet gives the latest, most reliable and best illustrated instructions. Write for HAND BOOK OF EXPLOSIVES No. 35F
DEALERS WANTED
We want live dealers in towns still open. Get the orders resulting from our advertising. You need not carry nor handle stock. State jobber's name or bank reference when writing.
E. I. du Pont de Nemours & Company
Established 1802
World's largest makers of farm explosives
Wilmington, Delaware

COLORADO NEEDS HOG RAISERS
You can raise hogs cheaper, and produce better meat, in Colorado than in the "Corn-belt States." Why raise hogs where drouth or flood may ruin your corn crop. On Colorado Irrigated land you can raise a big crop of feed **every year**, (cheaper feed than corn) drouth or no drouth. Market unsurpassed. Colorado shipped in $5,000,000 worth of hogs last year to supply home markets. Mild dry climate summer and winter; no cholera. Pure water; good neighbors; best of schools; telephones; rural mail routes, etc. Write for Literature proving what we say about hog raising in Colorado. **State Board of Immigration**, Room 44, State House, Denver, Colo.

Have Capewell Nails Used
in shoeing your horse---it pays. Saves expense because The Capewell nail holds best.
THIS CHECKED HEAD OUR TRADE MARK
Saves time of horses and drivers---time often wasted when cheap, inferior nails are used.
In the leading shops of the country Capewell nails are used. They are considered the best--not the cheapest regardless of quality, but the best at a fair price.

An Explosive Without Danger.

MODERN farming methods require the use of an explosive for removing stumps and boulders, tree planting, ditch digging and other common operations. The Atlas Powder Company, Wilmington, Del., have manufactured an explosive, Atlas farm powder, which can he handled out on the farm easily by persons without experience and no risk is involved. Many women farmers use it. Read the advertisement on page 21 and write to the company for information about this safe farm powder. Tell them that you saw the advertisement in this paper.—Adv.

Engines for Hard Work.

A SERVICEABLE kerosene engine is a valuable addition to the farm equipment. The Ottawa engines, built by the Ottawa Manufacturing Co., 1191 King St., Ottawa, Kan., are built to last and to meet all sorts of hard requirements they may be put to on the farm. The Ottawa engines are easy to operate, and are exceedingly practical. See the advertisement on page 18 and write the company for their free engine book. Mention that you read the advertisement in this paper.—Adv.

Crop Conditions Are Satisfactory.

Pastures Are Improving---Prospects Good For Mature Corn and Plenty of Silage---New Seeding Doing Well.

WISCONSIN.

Brown County.—Threshing is over and the returns are rather poor. Oats and barley averaged from twenty-five to thirty bushels per acre each. Rye made from fifteen to twenty-five bushels. The yields were cut down by dry weather during July and August. Pastures are poor and recent rains have been very light, except one on September 12th. The potato crop has not improved much and some farmers are buying potatoes for their own use at $1.50 and $2 a bushel. Silo filling has commenced and several silos are already filled.—J. D. McAllister.

Buffalo County.—Most of the shock threshing is done, and returns show the grain crops to be below last year's average. Corn on heavy soil is good, while that on light, sandy soil is dry and backward. Silo filling has begun and some farmers have cut corn fodder. Continued drouth dried up the pastures and cut down the milk supply. Potatoes are not doing as well as they should, because the ground is too hard and dry. Pastures are very short and cattle are being shipped to market. Plowing has not commenced, because the ground is too hard and dry.—John Wald.

Burnett County.—Threshing is well under way and the yields are light. Wheat is making from six to eight bushels per acre, oats from twenty-six to forty bushels, rye from eighteen to twenty-five bushels, and barley about twenty-five bushels. The heavy rains of late have revived the pastures, assured us of a fair corn crop and gave the potatoes a better chance. Fall plowing is progressing, and some wheat and rye will soon be seeded. Many hogs and cattle are being shipped to the South St. Paul stockyards each week, as the prices are very good. On the whole, this year has been favorable to farmers.—E. H. Johnson.

Clark County.—Threshing is nearly finished. All grains are somewhat below the average of last year in yield and quality. The long dry spell was broken by gentle rains which are proving a great help to pastures, corn and potatoes. Frost has held off, so that few fields have been injured, and as a result, the outlook is splendid for an abundant ripe corn crop. Some farmers are filling silos. In general, the potato crop is poor, and potatoes are selling at $1.50 a bushel. The Neillsville condensery started September 1st and, although the milk supply has fallen off some on account of poor pastures, the condensery has a good patronage, as well as the butter and cheese factories.—Louis Buddengahen.

Door County.—On account of the long dry spell the oat yield is light. Potatoes will make about 50 per cent of a normal crop; there are plenty of vines, but the tubers have not set, as the ground has been too dry and ashy. The new seeding looks well. Corn is the best that has ever been known here; the silos will not take more than one-half of it. Apples are scaly and not nearly as good as usual. Cattle are selling at from $4.50 to $6 per 100 live weight.—John Aznoe.

Dunn County.—A much needed rain fell last week, which will help immature corn. It came too late to benefit the potatoes. Pastures revived quickly, almost like they do in the spring. Silo filling is in full swing. Hog cholera broke out in this county a few weeks ago and is causing much trouble.—J. D. Miller.

Fond du Lac County.—Because of frequent rains during the last few weeks, crops are in fine shape. Corn is maturing well and silo filling has begun. Prospects are fine for ripe corn and good seed. Potatoes are late, but may make an average crop yet. The new clover seeding is very promising. Pastures are exceptionally good, considering the dry summer.—C. A. Williams.

Jackson County.—Recent rains have helped the pastures somewhat, but more rain is needed. Silo filling is on in full blast and the silage seems to be of very good quality. The proportion of good ears of corn for seed is large and the quality is fine. Threshing returns are favorable, although the yields are not quite equal to last year's.—P. W. J.

Juneau County.—Drouth has affected the pastures so that the milk supply has fallen off about 50 per cent. Corn is coming on fairly well and if frost holds off will make a good crop. Some of it is ready to cut now. Apples will make one-half a crop and vegetables are fair. Cattle are in thin condition and number about as usual. A good acreage of buckwheat was sown and indications are for a good crop of this cereal.—C. E. Haskins.

Langlade County.—Threshing is nearly done. Rye yielded about fourteen bushels per acre, oats twenty-two bushels, barley twenty-six bushels, and peas fifteen bushels. Corn is good in some parts of the county, but in other parts it has been killed by frost. Long continued drouth has dried up the pastures and clover fields and damaged the grain crops. Potatoes are small and few in a hill. Apples are about one-half a crop. A good shower has fallen recently, which may help the fall pastures.—Chas. Lade.

Lincoln County.—Most of the grain has been threshed and the yields have turned out poor. Oats and barley were damaged by the hot weather, and in addition, the oats suffered from rust. The oats yield runs from twenty to forty bushels per acre. Potatoes will be about half a crop, with a small yield on the late vines. A killing frost visited this locality on August 25th. Pastures have been very good, considering the dry weather, and cattle look fine.—G. A. Patterson.

Marquette County.—On account of the drouth, all crops are about one-half normal. Two big rains have fallen lately. Some of the high pastures were all burnt out on account of the drouth. Fruit is about 75 per cent normal this year, but vegetables are very good. Early potatoes were good, but it is hard to tell yet what the late ones will make.—Emil Hein.

Oneida County.—Threshing of small grain has begun. The yield is good, but the grain is light and the straw short. A fair second crop of clover is being cut. Potatoes will make a fair yield. They were late in setting, and only a few fields set as well as they should. Corn looks well, and if frost holds off another week, there will be a good yield. Slight frosts recently damaged the corn to some extent in some parts of the county. Vegetables and garden truck are doing fine. Pastures are good and cows are holding up well in milk production.—Chas. H. Jewell.

Outagamie County.—The small amount of winter wheat that did not winterkill, made about eighteen bushels per acre, and rye which was of fair quality, made twenty bushels. The oats crop is between 75 and 80 per cent normal, and barley is about 70 per cent normal. We have had no frost yet. The drouth is partly broken by light showers, but pastures are still dry. The corn crop will be about 80 per cent normal if frost keeps away long enough. Early potatoes are almost a total failure, but late potatoes look fairly well. With favorable weather conditions, the outlook for late potatoes will improve. About the same number of cattle are on feed as usual, but this is mostly a dairy section. Live stock in good health.—Harry Lepplu.

Polk County.—Threshing is in full blast and the yields are variable. Wheat is making from ten to twenty-five bushels per acre and oats from twenty-five to fifty bushels. Wheat graded poor, but most of the oats is fair in weight. Corn is in good shape for silo filling and this work is progressing nicely. The second crop of clover is being cut for hay and seed. A good yield of seed is expected. Potatoes are poor because the hot, dry weather in July damaged them very much. Pastures are getting short.—Wallace Fountain.

Rusk County.—Corn is maturing rapidly. Potatoes are making about one-half a crop. Pastures are good. Frost is holding off well and only two weeks more is needed for the corn. The small grains made fair yields. Alsike clover seed averaged about two bushels per acre. Red clover seed is going as high as six bushels per acre.—V. V. Miller.

St. Croix County.—Weather has been hot and dry for the last two months and crops have suffered on this account. The grain crops have been harvested and a considerable part of them has been threshed. Wheat is practically a failure; some of the fields of Velvet Chaff are good, but Blue Stem is not making more than from two to ten bushels per acre. The oats yield is near the average, although the quality is uneven, the early sown being heavy and the late light. Corn is maturing rapidly and will be almost a normal crop. The ears are not so well filled on the sandy soils as on the richer, heavier soils. Barley averaged well, but is thin and lacking in weight. The potato crop will make about the smallest yield ever known here. The rains during the last week may benefit the late planting, but the early planting will not amount to much. Pastures are poor, and cattle thin.—Stephen Everson.

Sawyer County.—Weather continues fair and the corn is fast approaching maturity; many fields are ripe and the majority of them will be so in a week. Corn is very good, considering the conditions last spring. Silo filling is beginning. Late planted potatoes are doing fairly well now, and promise a fair crop, but early ones are not good. The light frosts on the 1st and 2d did very little damage. Threshing is well along. Oats were light, about 60 per cent of a crop, and rye was about 75 per cent normal. Considerable clover will be cut for seed, and indications are for a good seed crop. Since the recent abundant rainfall, pastures are doing well. Cattle are in good condition.—Jens Uhrenholdt.

Wood County.—Recent rains have improved the pastures, late potatoes and corn. On heavy land corn is getting in fine condition for ensilage, but on the lighter soils it has suffered from drouth. Threshing is nearly done and the yield is lighter than was expected. Oats on heavy land are making from ten to forty bushels per acre and on light soil from five to thirty bushels per acre. Barley was of very good quality and threshed out from fifteen to thirty-five bushels per acre. Rye made from five to thirty bushels on good land and on light soil from three to eighteen bushels. Very early planted potatoes are good, but the medium early planted were caught by the drouth and bugs. The late planting has a good appearance and should yield well if frost holds off for a while. Cattle buyers are shipping carloads of cattle nearly every week. Stock of all kinds are in fine condition.—Peter Brown.

Last year we remodeled our home and installed a Caloric Pipeless Furnace. Our house is large and in the coldest weather we enjoy comfort. We were able to use our bathroom with comfort in coldest weather. We did not have a single frozen pipe. We used less fuel than we would with any other make. In remodeling a house there is no better furnace.—E. L. Sindel, Delta, Ohio.

This is One of Thousands

of letters from satisfied users of the Caloric Pipeless Furnace from all over the country. City convenience and comfort are yours with very little expense. You do not have to cut your house up for pipes because the Caloric heats thoroughly with just one register. The

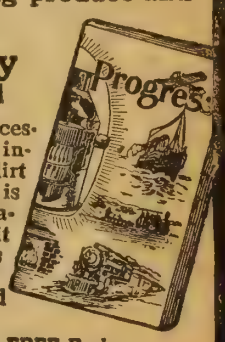
PIPELESS TRADE MARK CALORIC TRADE MARK FURNACE

The Original Patented Pipeless Furnace

burns coal, coke and wood and is guaranteed to save 35% of your fuel. In a short time it pays for itself. There are no pipes to waste heat or cause a fire and the air in the house is kept in constant circulation which is an aid to your health. The triple casing on the Caloric prevents the cellar from becoming heated, thus saving produce and canned goods.

Installed In One Day
In Any House New or Old

Because there is only one hole necessary to be cut, this furnace can be installed in quick time, without dirt trouble or inconvenience. It is guaranteed against defective material or workmanship. If it does not prove satisfactory let us know and we shall make it right. The firepot is guaranteed for five years.



Ask Your Dealer or Write for FREE Book

If your dealer cannot show you the Caloric Pipeless Furnace, send your name and address and we will immediately send you our free book. Don't delay. Write now.

The Monitor Stove & Range Co.

ATLAS EXPLOSIVES

Anyone Can Use Atlas Farm Powder

No experience or skill is required, because Atlas Farm Powder is made especially for you. You can do your own blasting without trouble or risk by following a few simple instructions that even children can understand. Many women farmers use

Atlas Farm Powder
THE SAFEST EXPLOSIVE
The Original Farm Powder

Improve the fertility of your soil, get out stumps and shatter boulders quickly, safely and cheaply with Atlas. Blast holes for tree-planting, dig ditches and do other kinds of farm work in the most economical, up-to-date way.

Atlas Farm Powder costs little compared with the cost of labor that it replaces. You can buy it from a dealer near you. If you don't know him, ask us. We will also tell you exactly what you need for any kind of work.

Get Our Free Book—"Better Farming"

It tells you how to save labor on your farm by using The Safest Explosive for stump blasting, ditch digging, tree-planting, subsoiling, etc. Fill out the coupon *now* and mail it *today*.

Letters intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Editor Home Dept., Wisconsin Farmer, Madison, Wis.

Information From Headquarters.

More advice on how to keep the boys and girls on the farm has bobbed up and we are not so sure but what it comes from just about the right source—the farm boy himself. Who, after all, knows so well what they miss on the farm and what they go to town to seek as the boy and girl themselves? A certain farm lad who has had an opportunity both at home and at school to see ways of bettering country living gives the following advice to his elders, and there is no small amount of helpful common sense in his ideas. He says:

Get good books, magazines and farm papers for the young people to read.
Have some kind of a club for them to attend.
Arrange matters so they can have a party or entertainment once in a while.
Go with them to church every Sunday.
Arrange it so they can have one or more picnics every year.
Teach them to do all kinds of farm work by giving them a small tract of land for themselves and showing them how to raise their crops, and have them help you with your work.
Give them a horse which they can ride or drive when they haven't anything to do or when they want to go anywhere.
Teach them to love and be kind to animals.
After they finish their school send them to the state agricultural schools.
Take time to teach them the "hows" and "whys" of farm work.

There isn't anything difficult or expensive about the plan outlined by this boy and we rather fancy the old folks would enjoy the carrying out of this program just about as much as the young folks and thereby bring about an ideal condition in rural social life.

The Matter of Shoes.

Why do we endure aching, tired feet when a little care and properly fitted shoes will put those poor members into normal condition again and add so much to our bodily comfort? Needless to say the care of the feet should begin early in life and many feet have been ruined by being improperly clad in childhood. But even if this be true the adult need not continue his suffering if he is willing to give a little time and attention to the care of his feet and the selection of his shoes.

Being closely covered so many hours of the day, careful bathing, rubbing and dressing of the feet are necessary. If the feet are aching and inflamed a bath in water at body temperature will relieve them. A good cocoa butter or olive oil rub promotes circulation, causes the muscles to relax and the skin to be firm and well nourished. Keep the feet refreshed with many baths and an occasional massage and then turn your attention to the shoes.

The heel of the shoe should be low enough to throw the weight of the body upon the ball of the foot. This height will vary with different people. See, also, that the shoe fits snugly around the heel and instep. A shoe that slips up and down at the heel with every step is the most annoying thing one can imagine. It protects neither the heel nor the instep, and the instep particularly needs protection because of the weight it has to carry and because of the number of small bones which are bound together by ligaments.

The shoe, to insure freedom of motion, good circulation and proper nourishment of the foot, must be wide enough at the toes to allow the toes to move freely, and the widest part of the shoe should exactly coincide with the widest part of the foot, which is across the foot at the great toe joint. Many shoes are so shaped that the great toe lies in an oblique position, whereas it should lie in a vertical position.

The shoe should be made of firm, but porous leather. The porous condition allows the moisture to evaporate and prevents the feet from becoming tender. A stiff leather retards the free action of the joints and muscles and, therefore, weakens and tires the feet.

The sole of the street shoe should be thick enough to protect the foot from cold and dampness. The low shoe should not be worn except in warm weather. Too much attention cannot be given to this matter, for severe colds, weak throats and weak lungs are directly traceable to low shoes and to thin soles. Not long ago a successful banker, in winding up a bit of advice to a young man, said, "Live simply, don't stay up nights—and keep your feet dry."

Cooking Eggs Without Boiling.

Eggs cooked below the boiling point of water are more easily and quickly digested than are boiled eggs. Compared with other foods, eggs are easily and quickly digested. Eggs are a tissue-building food, being rich in protein and mineral matter. They, therefore, serve as a meat substitute and require the addition of carbohydrate material to form a balanced diet. Sweet potatoes, Irish potatoes or macaroni combined with hard-cooked eggs and a white sauce also form an excellent meat substitute.

Carbon Tetrachloride For Cleaning.

While gasoline is, as most of us know, a cheap and effective cleaning agent, it has one great disadvantage. It is extremely volatile, and its vapors form, with air, an explosive mixture. On no account, then, must it be used in a room containing a flame of any kind. There is, however, another cleaning agent, more expensive than gasoline, it is true, which is absolutely non-inflammable. This is carbon tetrachloride, a substance but little known as such, but often sold under such trade names as Aolval, Eradeline, Antiflammen, etc. This substance is, like gasoline, a fat solvent, and cleans by dissolving out the grease which mechanically holds dirt in the fabric. Carbon tetrachloride has another advantage over gasoline; it spreads less readily and for that reason is less liable to form a ring when grease spots are removed by sponging.

Provide Medicine Chest For Emergencies.

Every home needs a medicine closet, as there is likely to be many minor accidents and ailments in even a well-conducted home, says Miss L. E. Kennedy, assistant in domestic science in the Kansas State Agricultural College. In this chest Miss Kennedy recommends only the keeping of medicines that are needed in the common ills.

If the medicine is not kept in a definite place it is often hard to locate in case of an emergency. Then, if there are children, the desire to know what is inside a bottle will sometimes cause illness or even death.

A box measuring 10½x4½ inches will hold the necessary medicine and will keep the medicine away from childish hands. It is safe and wise to label every bottle.

Miss Kennedy believes that the following medicines should be found in every home medicine chest: Alcohol, used externally for strains, sprains and bruises; aromatic spirits of ammonia, a stimulant used in fainting when added to water; castor oil, a mild purge; powdered mustard, one teaspoonful in a glass of lukewarm water to cause vomiting, and in a plaster as a counter irritant; sirup of ginger, for cramps in the stomach; sirup of ipecac, used to cause vomiting and especially useful in cases of croup; carbolated vaseline; talcum powder, white castile soap; absorbent cotton (one-half pound); six gauze roller bandages; one roll adhesive plaster; collodion, for slight injuries of the skin; pair of scissors; teaspoon; two bent glass drinking tubes; fountain syringe with glass points; cold cream or hand lotion for chapped hands; lip salve, equal parts of lanolin and vaseline.

Easy Way to Mend Grain Sacks.

To the Editor:—As I have received so many good pointers from your paper and think each reader should send something to help make this paper one of the best I will add my little mite. As fall is here and we all have to get at that dreadful job, mending the grain sacks, I will tell the farmers' wives how I do it.

I choose a cool day, build up a good fire and put my flatirons on. Then I make a good paste with cold water and flour, cut my patches, spread the paste on them and lay them in place. Then I put the hot irons on the patches until they are as dry as can be made. Then I lay the sacks near the stove where they will dry still more. I have done this many times and find it much faster and more lasting than by sewing the patches on.

I will also send a recipe for cake—some call it Prince of Wales cake. One cupful of sugar, one-half cupful of shortening, two eggs, two teaspoonfuls of molasses, one cupful of sour milk with one level teaspoonful of soda, two cupfuls of flour with one-half teaspoonful of baking powder sifted in it, one cup of raisins, one-half teaspoonful each ginger and cinnamon, a pinch of salt. This can be made in layers with filling, or in a sheet. A Farmer's Wife.

Recipe For Canning Okra.

To the Editor:—I am sending my recipe for canning okra for the lady who wanted to know how to use this vegetable.

Wash, pare and chop two gallons of nice, tender okra. Put on to cook in a little water and let cook until tender. Then add one gallon of ripe tomatoes that have been peeled and chopped fine. Let boil for thirty minutes, add salt to taste and bottle for use. When opened, take a little shortening of any kind, put in stewer, add black pepper, pour the okra into this, cook for thirty minutes and serve.

Mrs. W. J. A.

Recipes.

Corn Fritters.—Stew one can of corn, strain off the juice and press the kernels through a colander. To this meat add one-half pint of milk, one level teaspoonful of salt and a saltspoonful of pepper. Add the yolks of three eggs and one pint of pastry flour sifted with a rounding teaspoonful of baking powder. Mix thoroughly and fold in the beaten whites of the eggs. Drop by spoonfuls into extremely hot fat and when sufficiently drained serve with maple sirup.

Stuffed Onions.—Use large onions, peel and parboil for ten minutes. Drain, cool and with a pointed knife remove the center of each onion. Fill the cavity with a mixture of chopped meat, using either beef, chicken or veal, buttered breadcrumbs, salt, paprika and a little finely-minced parsley. Put onions close together in baking dish and add just enough water to keep them from burning. Bake for twenty minutes and serve with hot corn bread.

Eggs a la Goldenrod.—Three hard-cooked eggs, three level tablespoonfuls butter, three level tablespoonfuls flour, one and one-half cupfuls milk, one-half level teaspoonful salt, one-eighth level teaspoonful pepper, six slices toast, a little parsley. Melt the butter, add the flour, salt and pepper. Mix well. Add the milk gradually. Cook until a white sauce consistency. Add chopped egg whites. Pour this mixture over slices of toast arranged on a platter. Force the yolks through a strainer on top of the sauce on the toast. Garnish with parsley and serve hot.

Jam Cake.—One cupful sugar, one-half cupful butter, three eggs, two-thirds cupful sour milk, one teaspoonful soda, two cupfuls flour, one teaspoonful baking powder, one teaspoonful cinnamon, one-half teaspoonful cloves, one teaspoonful allspice, one cupful jam, any kind preferred. Cream butter, add sugar and continue beating while adding beaten yolks of eggs, jam and sour milk. Mix and sift dry ingredients and add to mixture. Lastly fold in the stiffly beaten whites of eggs. Pour into a buttered pan and bake in a moderate oven until it shrinks from sides of pan.

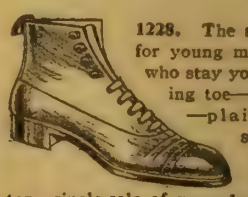
Jam Puffs.—Roll plain paste one-eighth of an inch thick and cut in pieces three by four inches in size. Put one-half tablespoonful of jam on lower half of each. Moisten edges with water, press together and bake twenty minutes in hot oven. Mince meat may be used instead of jam.

Fudge.—One cupful of sugar, one-half cupful of cream, one square of chocolate, one teaspoonful of vanilla, one-half cupful of chopped nuts. Boil until it spins, take from the fire and beat until quite stiff.—Minda.

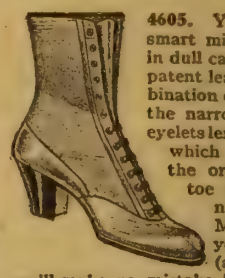
THREE Big Factories —Men's, Women's, Children's—but only one buying and one selling organization. No jobber's profit to consider. These are some of the reasons why we can put so much better material and workmanship into Foot-Schulze Footwear. Try it—That's the best proof. See a Foot-Schulze dealer —they're everywhere.

This Mark On the Sole Denotes Quality.

Foot-Schulze & Co. Saint Paul



1228. The stylish shoe for young men—and men who stay young. Receding toe—straight lines—plain effects—small perforations—dull finish calf top—single sole of very durable, flexible stock. Lace or button styles in a variety of numbers at various prices.



4605. Young woman's smart military lace boot in dull calf, or (No. 4213) patent leather. The combination of cloth top with the narrow strip at the eyelets lends that "touch" which takes it out of the ordinary. Plain toe with medium narrow effect. Military heel. If you want style, (and wear, too) you'll make no mistake in selecting this shoe.

PART III. "Prince Charlie"

CHAPTER III.

At Cross-Purposes.

"Their tricks and craft ha' put me daft,
They've taen me in, and a' that."

AND so you got back unharmed from the midst of the hostiles?" asked Rachel in mock surprise, when, a week later, Hardy, Stuart and MacDougall returned, bringing with them specimens of deer they had sighted on their return.

"Hostiles is about the last name to apply to them, I should imagine," remarked Stuart; "they are as peaceable as sheep."

"But they can fight, too," said MacDougall, "an' used to be reckoned hard customers to meet; but the Blackfeet ha' well nigh been the finish o' them. The last o' their war chiefs is an old, old man now, an' there's small chance that any other will ever walk in his moccasins."

"I've been told something of the man's character," said Rachel, "but have forgotten his name—Bald Eagle?"

"Grey Eagle. An' ther 's more character in him worth the tellin' of than you'll find in any Siwash in these parts. I doubt na Genesee told you tales o' him. He took a rare, strange liking to Genesee from the first—made him some presents, an' went through a bit o' ceremony by which they adopt a warrior."

"Was this Genesee of another tribe?" asked Stuart, who was always attentive to any information of the natives.

"Yes," said Rachel quickly, anticipating the others, "of a totally different tribe—one of the most extensive in America at present."

"A youth? A half-breed?"

"No," she replied; "an older man than you, and of pure blood. Hen, there is Miss Margaret pummeling the window for you to notice her. Davy MacDougall, did you bring me nothing at all as a relic of your trip? Well, I must say times are changing when you forget me for an entire week."

Both the men looked a little amused at Rachel's truthful yet misleading replies, and thinking it just one of her freaks, did not interfere, though it was curious to them both that Stuart, living among them so many days, had not heard Genesee mentioned before. But no late news, coming from the southern posts, had made the conversations of their troops flag somewhat; while Stuart, coming into their circle, brought new interests, new topics, that had for the while superseded the old, and Genesee's absence of a year had made them count him no longer as a neighbor. Then it may be that, ere this, Rachel had warded off attention from the subject. She scarcely could explain to herself why she did it—it was an instinctive impulse in the beginning; and sometimes she laughed at herself for the folly of it.

"Never mind," she would reassure herself by saying, "even if I am wrong, I harm no one with the fancy; and I have just enough curiosity to make me wonder what that man's real business is in these wilds, for he is not nearly so careless as his manner, and not nearly so light-hearted as his laugh."

"Well, did you find any white men among the Kootenais?" she asked him abruptly, the day of his return.

His head, bent that Miss Margaret could amuse herself with it, as a toy of immense interest, raised suddenly. Much in the girl's tone and manner to him was at times suggestive; this was one of the times. His usually pale face was flushed from his position, and his rumpled hair gave him a totally different appearance as he turned on her a look half compelling in its direct regard.

"What made you ask that?" he demanded, in a tone that matched the eyes.

She laughed; to see him throw off his guard of gracious suavity was victory enough for one day.

"My feminine curiosity prompted the question," she replied easily. "Did you?"

"No," he returned, after a rather steady look at her; "none that you could call men."

"A specimen, then?"

"Heaven help the race, if the one I saw was accepted as a specimen," he answered fervently; "a filthy, unkempt individual, living on the outskirts of the village, and much more degraded than any Indian I met; but he had a squaw wife."

"Yes, the most of them have—wives or slaves."

"Slaves?" he asked incredulously.

"Actually slaves, though they do not bring the high prices we used to ask for those of darker skin in the South. Emancipation has not made much progress up here. It is too much an unknown corner as yet."

"Is it those of inferior tribes that are bartered, or prisoners taken in battle?"

"No, I believe not, necessarily," she replied, "though I suppose such a windfall would be welcomed; but if there happens to be any superfluous members in a family, it is a profitable way to dispose of them, among some of the Columbia Basin Indians, anyway. Davy MacDougall can give you more information than I, as most of my knowledge is second hand. But I believe this tribe of the Kootenais is a grade above that sort of traffic—I mean bartering their own kindred."

"How long have you been out here, Miss Rachel?" he asked, as abruptly as she had questioned him of the white men.

"About a year—a little over."

"And you like it?"

"Yes; I like it."

In response to several demands, he had enthroned Miss Margaret on his lap by this time; and even there she was not contented. His head seemed to have a special fascination for her babyship; and she had such an insinuating way of snuggling upward that she was soon close in his arms, her hands in easy reach of his hair, which she did not pull in infantile fashion, but dallied with, and patted caressingly. There was no mistaking the fact that Stuart was prime favorite here at all events; and the affection was not one-sided by any means—unless the man was a thorough actor. His touch, his voice even, acquired a caressing way when Miss Margaret was to be pleased or appeased. Rachel, speaking to Tillie of it, wondered if his attraction was to children in general or to this one in particular; and holding the baby so that her soft, pink cheek was against his own, he seemed ruminating over the girl's replies, and after a little—

"Yes, you must, of course," he said thoughtfully; "else you could never make yourself seem so much a part of it as you do."

During the interval of silence, the girl's thoughts had been wandering. She had lost the slight thread of their former topic, and looked a little at sea.

"A part of what?" she asked.

"Why, the life here. You seem as if you had always belonged to it—a bit of local color in harmony with the scenes about us."

"How flattering!—charmingly expressed!" murmered Miss Hardy derisively. "A bit of local color? Then, according to Mr. Stuart's impressions I may look forward to finding myself catalogued among greasy squaws and picturesque squaw men."

"You seem to take a great deal of delight in turning all I say or do into ridicule," he observed. "You do it on the principle of the country that guys a 'tenderfoot'; and that is just one of the things that stamp you as belonging to the life here. I try to think of you as a Kentucky girl transplanted, but even the fancy eludes me. You impress one as belonging to this soil, and more than that, showing a disposition to freeze out newcomers."

"I haven't frozen you out."

"No—thanks to my temperament that refuses to congeal. I did not leave all my warmth in the South."

"Meaning that I did?"

"Meaning that you, for some reason, appear to have done so."

"Dear me, what a subtle personage you make of me! Come here, Margaret; this analyst is likely to prejudice you against your only auntie."

"Let her be with me," he said softly, as the baby's big blue eyes turned toward Rachel, and then were screened by heavy, white lids; "she is almost asleep—little darling. Is she not a picture? See how she clings to my finger—so tightly;" and then he dropped his face until his lips touched the soft cheek. "It is a child to thank God for," he said lovingly.

The girl looked at him, surprised at the thrill of feeling in his tones.

"You spoke like a woman just then," she said, her own voice changed slightly; "like a—a mother—a parent."

"Did I?" he asked, and arose with the child in his arms to deliver it to Aunty Luce. "Perhaps I felt so; is that weakness an added cause for trying to bar me out from the Kootenai hills?"

But he walked away without giving her a chance to reply.

(To be continued.)

WON HIGHEST AWARD PANAMA-PACIFIC EXPOSITION SAN FRANCISCO 1915

Are You One of the Losers?

Low Corn King
Low Cloverleaf

SOMETIMES Americans wonder why they get only about half the crop yields from an acre that are produced in other countries. Well, here's one reason—a large majority of the farmers in this country own no manure spreader. One corn belt state lost $20,000,000 last year by the wasting and poor handling of manure. Are you one of the farmers who shared in this loss? If you are, you need an I H C manure spreader.

International Harvester spreaders, **Low Corn King** and **Low Cloverleaf**—besides being low, strong, durable, simple in beater and apron mechanism, with good traction, light draft, and plenty of clearance—have a really successful wide-spreading device.

Low Corn King and **Low Cloverleaf** spreaders are low for easy loading and narrow for easy handling in yard, stable or field. From a box 45 inches wide either of these spreaders covers an even strip of ground 8 feet wide, or better. It saves time and labor, and keeps wheels and horses well away from the slippery manure already spread.

See the I H C dealer about a **Low Corn King** or **Low Cloverleaf** made to stand by you for years. Write us for catalogue.

WORK OF BOYS AND GIRLS

Young People of Wisconsin Have Prominent Place in the 1916 State Fair---Winners in Some of the Departments.

A FEATURE of the 1916 Wisconsin State Fair was the efforts to interest young people. Greater interest was shown in educational work than ever before, and in addition to premiums offered in this department, a total of $7,500 was offered in premiums in the boys' and girls' department, covering contest work, agricultural school exhibits, club work, etc. Herewith are shown group pictures taken at the boys' and girls' camp which occupied grounds east of the mile track. Three large tents, one for the boys and one for the girls, and another for dining room and assembly, were provided for the boys and girls from many counties of the state who camped at the fair. Thomas L. Bewick, of Madison, is state leader of the boys' and girls' department. The contest directors were as follows:

G. C. Humphrey, University of Wisconsin, in charge of calf club contest; Raymond Baker, Madison in charge of pig club contest; J. G. Moore, University of Wisconsin, in charge of horticultural contest; J. G. Fuller and J. A. James, University of Wisconsin, in charge of stock judging contests; Miss Elisabeth Amery, University of Wisconsin, in charge of girls' baking clubs; Miss Emma Conley, State Department of Public Instruction, in charge of girls' sewing contest; Miss Agnes Boeing, University of Wisconsin, in charge of girls' canning contest; J. A. James, University of Wisconsin, in charge of corn judging contest.

The camps were in charge of Y. M. and Y. W. C. A. workers. Exceptionally fine exhibits were shown at the fair by the Bayfield High School, West High School Farm, Green Bay, Sun Prairie High School and Sun Prairie Corn and Potato Clubs, Linn, Jr., Farmers' Club, Walworth, and the Irving High School, Milwaukee. Mr. Fred Pabst, of the Pabst Stock Farm, Oconomowoc, Wisconsin, offered a $125 bull calf from his Holstein herd for the school which made the best showing in agricultural products and display, and this fine prize was awarded to the Sun Prairie High School, Dane county. This is a pure-bred animal from one of the best herds of the West and the Sun Prairie school will have every reason to be very proud of it.

The Broad Ripple Farms, George W. Browne, Waukesha county, Wisconsin, offered three Guernsey calves for the best teams in the stock-judging contests. These bull calves were given as follows: Onalaska school, La Crosse county, first prize; Pewaukee school, Waukesha county, second; and Mukwanago school, Waukesha county, third.

Other contests conducted under the direction of Mr. Bewick and his helpers were spirited and interesting.

Upper Picture—Miss Norma Fewings, of Portage county, winner of 1916 spelling contest. Lower Picture—Miss Eleanor Kessler, winner of gold medal for best average in penmanship, spelling and arithmetic at state fair.

Boys and girls judged apples, corn, poultry, etc.

The girls' sewing and cooking contests were of great interest. These were conducted by Miss Elizabeth Amery and Miss Agnes Boeing. Eight model kitchens were used for the contests in baking and canning. It was an interesting sight to see the girls employed in sewing, and at the same time keeping an eagle eye on the oven where their bread was baking.

A number of persons and interests aided to make the boys' and girls' department at the fair a success. The Wisconsin Bankers' Association presented $100 in gold and the Machinists' and Manufacturers' Association, of Milwaukee, contributed six $15 agricultural short courses. Mr. Fred Underwood presented $100, with the stipulation that the money be used for educational purposes.

While the educational department was separate from the boys' and girls' work, and under the supervision of Mr. George W. Davies, of Sauk county, as usual, it helped to swell the interest of young people in the fair. Professor Davies had arranged a splendid exhibit. In the rural competition, Waukesha county won first with the best county school exhibit. All lines of domestic science work, manual training and school room work were exhibited. The Waukesha county exhibit was made up almost entirely from material furnished by the Sussex school, of which Miss Maude Mitchell is the teacher. Professor Rhodes is superintendent of schools in the county. Sauk county, of which Professor Davis is superintendent, won second in this competition between country schools of Wisconsin. Sauk county has had a high place in this contest for several years. In the contest for the best exhibit from any rural school, there were seven entries, with Miss Hanson, Iowa county, winning first; Ruth Peck, Sauk county, second; and Miss Convey, Iowa county, third. The teachers arranged exhibits of work done by the children under their direction.

The spelling contest, conducted under the educational department, had thirty entries this year and Miss Norma Fewings, aged sixteen, of Portage county, was the winner. The former plan of "spelling down" was done away with this year and 100 words were read to the entire class, the spelling being written. Out of 100 words, Miss Fewings misspelled the following, niece, hemorrhage and proficiency.

Eleanor Kessler, of Baraboo, Sauk county, won first in the general average on spelling, arithmetic and writing combined. She had an average of 85 per cent and was awarded a gold medal. Miss Dorothy Stangel, of Manitowoc county, won the writing contest. Miss Kessler, in all three contests averaged better than either Miss Fewings or Miss Stagel, and won the medal. There were thirty-four taking part in all the contests, of which four were boys, and the boys failed to win any of the contests.

BOYS' AND GIRLS' CAMP AT 1916 FAIR.

GROUP OF BOYS TAKEN AT CAMP.

Interest in Bees and Honey.

A great deal of interest was shown by Wisconsin State Fair visitors in the bee and honey section, in charge of N. E. France, of Platteville. The exhibitors were E. D. Ochsner, of Prairie du Chien; W. E. Prisk, of Mineral Point; A. E. Kleeber, of Reedsburg; Frank Kittinger, of Franksville; John Kneser, of Hale's Corners; H. H. Moe, Woodford and Monroe; A. Ericson, Rockton; B. J. Thompson, Spring Valley; E. Howard, Darlington, and George Shafer, of Menominie. The awards were distributed by the judges as follows:

Most attractive display of comb honey: Kleeber, first; Kittinger, second; Ochsner, third; Prisk, fourth.

Twelve-pound case white comb honey: Thompson, first; Howard, second; Ochsner, third; Shafer, fourth.

Case of amber comb honey, 12 pounds: Kleeber, first; Prisk, second; Ochsner, third; Moe, fourth.

Display extracted honey: Prisk, first; Moe, second; Howard, third; Kittinger, fourth.

Display, six extracting frames: Prisk, first; Kleeber, second; Ochsner, third; Kittinger, fourth.

Case extracted clover honey, 12 pounds: Howard, first; Kneser, second; Prisk, third; Thompson, fourth.

Case extracted basswood honey, 12 pounds: Ochsner, first; Howard, second; Kleeber, third; Prisk, fourth.

Case extracted amber honey, 12 pounds: Howard, first; Prisk, second; Kleeber, third; Ochsner, fourth.

Best display extracted granulated: Kleeber, first; Prisk, second; Ochsner, third.

Best beeswax, 10 pounds: Prisk, first; Howard, second; Kleeber, third; Ochsner, fourth.

Honey vinegar, one gallon: Kittinger, first; Ochsner, second; Kleeber, third; Kneser, fourth.

Design in comb honey: Ochsner, first; Moe, second; Kleeber, third.

Design in wax: Kittinger, first; Ochsner, second; Prisk, third; Kleeber, fourth.

Demonstration of honey in cooking: Kittinger.

Golden Italian bees: Kittinger, first; Ochsner, second; Kleeber, third; Prisk, fourth.

Leather-colored bees: Prisk, first; Ochsner, second; Howard, third; Kneser, fourth.

In demonstration Moe, Kittinger, Kleeber, Prisk and Ochsner were equal.

American foul brood, the most prevalent of bee diseases, was strikingly illustrated by exhibits. A determined effort is being made by the bee men of Wisconsin to advance their interests and to increase the sale of their products. They announced that one pound of honey equals in food value twenty-four ounces of beefsteak, thirty ounces of codfish, eleven ounces of cheese, two quarts of milk, sixteen oranges, nine bananas or twenty eggs.

The bee and honey exhibit was much more attractively displayed than ever before at the Wisconsin State Fair.

Trapping Time Draws Near

To the Editor:—With the first few cool days in October the men and boys on the farm begin to plan for that greatest of all fall and winter sport, the hunting and trapping of fur-bearing animals.

Guns must be carefully cleaned and oiled and the many traps must be gone over so that everything may be in readiness when the calendar shows the beginning of the game laws open season. Some states do not protect their game and fur-bearing animals and in these they may be hunted and trapped at any time, but it is a short-sighted sportsman, indeed, who will take an animal before its coat of fur becomes good.

It is really a crime to set out a trap before October 15th and in most sections it is best to wait until November 1st. The big fur houses report that trappers and hunters are realizing more and more the many advantages of waiting until the furs become prime and are doubling their profits by so doing. Early caught skins are worth very little, whereas the same skins taken after they become prime will command excellent prices.

Trapping is also extremely profitable and the farmer who has had an "off" season with his crops will find the skins of the fur bearers producing a source of revenue that will help materially toward the winter's expense. Fur prices are on a high basis and every man or boy who is willing to combine work with pleasure can make many extra dollars this winter by trapping the coon, mink, opossum, skunk, muskrat and other animals that abound on most farms.

Preparedness at this season of the year is the professional trapper's motto and the amateur will do well to follow his example. Time spent now in getting traps in shape and in replacing any that are broken will be paid for many times over when the active trapping season begins.

The trapper who has to buy traps, baits and other trapping supplies should be sure to get the best that can be had, for, while the first cost may seem higher, the best goods are much cheaper in the end.

Using cheap trapping equipment to save money is like stopping a watch to save time. N. R. Darrah.

15 NEW BULBS, 10c.

1 Marvel Tulip, giant, fragrant, 1 Pink, 1 Scarlet, and 3 Purity white Freesias, 1 blue Babiana, 3 Double Rosebud, 2 Buttercup and 3 Grand Duchess Oxalis. Also treatise on Bulb Culture for garden and house, and catalogue.

VETERINARY

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. Thoroughly good and reliable veterinary remedies are advertised from time to time on these pages. If they were not good and reliable they could not appear in our paper. Our readers are requested to look them over. You may find here some remedy which will exactly fit your case. All veterinary inquiries should be addressed to this office.

Ailing Animals.

Indigestion in Pigs.

I have some pigs that are on full feed, but are still sucking. They seem to get poor and get the thumps.

These pigs are troubled with indigestion, which is probably brought about through feeding. You had better cut down the feed and better yet gradually change the feed and also give half a teaspoonful of baking soda to each pig in slop once daily for a few days.

Milk Fever.

We have a cow that had milk fever. We secured a veterinarian and he helped her some but her legs are swollen and she is unable to use them. She will not eat nor drink but just a little now. We would be glad to have your advice on this case.

Your cow as well as having had the milk fever may be bothered with paralysis of some kind. You had better just keep on with the treatment the veterinarian prescribed and, if necessary, have him see her again.

Navel Ill.

I had a mare a short time ago which had a fine, large colt. It was weak when born and had to be helped up for a few days. but seemed all right otherwise. The fifth day it began to be stiff in the fore parts, refused to help itself at all, and died the next day. It seemed in no pain whatever. A week later another mare had a colt. This one was quite streng and after the first day could get up alone and walked to pasture. The third day it was well when I left the barn at night, but the next morning it lay dead. Could you tell me what could have been the trouble?

Your description of the cases does not give one much to judge from. However, the first mentioned case may have been a case of navel ill which was of very acute nature, thereby causing death of the animal on short notice. We would be unable to say what caused the death of the colt in the second mentioned case.

Severed Tendons.

A short time ago my horse was cut with a mower. The neckyoke came down and the mower ran onto his hind leg, cutting him on the inside of the right leg about three or four inches above the ankle. The cords were cut, but I do not know whether or not they were cut entirely off. He puts some weight on that leg, but the foot from the ankle lies forward, so that he walks on his ankle. The cut is about two inches long. What can be done for this horse? Will he get better? Should he be tied up or left loose? Can these cords be held together in any way so they will knit? Should the leg be put in splints to hold it in shape?

This animal should have been treated intelligently immediately after injury. It being an old wound and somewhat infected now the treatment will have to be somewhat different. You should first know what structures are injured before treatment is begun. It may be this animal will need a shoe with a leg brace attached, but we would not advise treatment further without knowing the exact nature of the wound. Would it not be possible for you to have a competent veterinarian look this animal over?

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning disease, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Eggs From Pullets.

To the Editor:—I have found by actual experience that it pays to select the pullets which you want for winter layers early, and provide them with the best of care from now on until fully matured, which should be about the 1st of November. The better feed and care they receive the sooner they will begin to lay. Eggs are going to be worth more this winter than any time in the past.

In a large flock of pullets I always find some that are not desirable to be kept as layers through the winter season. These I fatten and send to market, selecting only those with strong constitutions, which are well matured and developed. There is no reason why a flock of healthy, early-matured pullets should not produce an abundance of eggs during the winter season, especially when grown upon the farm where the grower has everything "coming his way." Without doubt, a flock of pullets that have free range where they may glean an endless variety of seeds, bugs, worms and grain, with plenty of sunshine and shade, fresh air and pure water will make very rapid development and mature much earlier than pullets kept in confinement where these natural surroundings are not to be had. But when surrounded with all these natural advantages, the flock should be fed a balanced ration to help them along to early maturity.

On most farms grains for poultry feeding are raised in abundance, wheat, corn, oats, millet, etc., being raised by nearly every farmer. I feed these grains in the proper proportion to my flock of selected pullets, but do not gorge them at any time on any one kind of grain. A mistake in this way sometimes may cause the loss of considerable profit. I separate the pullets to be kept for winter layers from the young roosters as soon as their sex can be distinguished, as I think they thrive and mature much faster than when allowed to run together. Select your pullets now which you want to keep for winter layers, and provide them with the best conditions obtainable. Remember there are no surroundings too good for them, and have a care that their winter quarters are clean and sanitary.

When the young fowls have been raised in several different coops and I wish to get them accustomed to their winter quarters, I go about the work quietly so as not to excite them. I take them at evening to their new place, and never undertake moving them during the daytime. I always have quiet fowls. I keep the pullets shut up in their new quarters, feed and water them well, and in a short time they get used to the place and will go in to roost of their own accord at evening.

When cold weather arrives I feed my flock plenty of green food such as the farm produces—cabbage, small potatoes, turnips and apples cut up, in fact, anything I happen to have of a green nature I give to them to make a variety. It is greatly relished and in winter is absolutely necessary for the flock besides their grain feed. I feed them milk in any form—sweet milk preferred—as this, when fed liberally, helps to suppl[y] the meat ration, which is also necessary for egg production in winter.

I owe much of my success in getting eggs from my pullets in autumn and winter to keeping the flock in a healthy, thriving condition from start to finish and by housing and keeping them warm during cold weather. With a variety of food fed three times daily, with warm water to drink when everything is frozen outside, with plenty of grit provided at all times, I get pay for all my attention by securing a full egg basket weekly.

Illinois. S. E. M.

Get Rid of Worms!

Many animals, especially hogs, are troubled with worms. When your hogs are unthrifty, you hear a little cough now and then, suspect worms.

Dr. Hess Stock Tonic

Keeps Hogs Healthy **Expels Worms**

So sure am I that Dr. Hess Stock Tonic will keep your hogs healthy and expel the worms, that I have authorized my dealer in your town to supply you with enough Tonic for your hogs and, if it does not do all I claim, just return the empty packages and get your money back.

My Stock Tonic is not a feed, but a true conditioner and tonic, highly concentrated, which contains blood purifiers, laxatives and drugs which are powerful worm expellers. Feed in small quantities, watch your hogs improve.

NEVER PEDDLED. SOLD ONLY BY DEALERS.
28,000 reliable dealers in U. S. handle it. Why pay the peddler twice my price?

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

C. C. Fries & Son Offer Some Great Heifers.

C. C. FRIES & SON, Richland Center, Wis., are one of the state's most constructive Holstein breeders. It is needless for us to give the records of the cows and heifers that this firm has developed. We only need mention Aaggie Texal Wayne 2d and followers of this breed think of her yearly record, 1,078 pounds of butter, and a seven-day record of 30.60 pounds of butter. This is not the only high-producing female brought out by the Fries. Their herd is made up of A. R. O. cows, with records up to twenty-seven pounds. In King Pontiac Portia, Messrs. Fries have what is considered one of the very best sons of the great King of the Pontiacs. Besides being a sire of high-producing

THE 28.71-pound bull, Calumet Johanna Abberkerk Champion, advertised for sale on page 29 by A. G. Pingel, Chilton, Wis.

females, he is a wonderful individual. One of his two-year-old daughters recently made a twenty-three-pound record in this herd. The owners wish to get the daughters of this bull in some of the good herds of the state, realizing that this is the best way to advertise their good herd, for that reason they are offering a limited number of heifers and heifer calves sired by King Pontiac Portia and all out of A. R. O. dams. Some heifer calves sired by Richland Sir Ormsby Korndyke, are also being offered for sale. This bull is out of Aaggie Texal Wayne 2d, and the dams of the heifers are sired by King Pontiac Portia, a very acceptable cross. If you want something just a little better than the other fellow has, buy the heifer being offered that is out of the same dam as Minnesota's first thirty-six-pound cow, owned by the state. They also have a few heifer calves by a son of King Johanna Korndyke Segis, he by Johanna McKinley Segis. The dam is Aaggie Texal Wayne 2d. To make a long story short, you will get the very best if you buy from Fries. Their Holsteins have made good and you get the blood of the greatest animals of the breed when you buy from this herd. Investigate these heifers at once for it isn't every day that you have an opportunity to buy females backed up as these are. Write these gentlemen for a description of some of these heifers, it will pay you. Kindly mention The Wisconsin Farmer when writing. See page 29.—Adv.

A Furnace at Stove Cost.

THE cost of living isn't all going up. There's furnaces. You can get a Kalamazoo pipeless furnace, suitable for the average farm home, for the usual price of a good stove. The furnace can be installed in a few hours' time, and without the bother and expense of tearing up floors and walls. Furnace comfort makes a big difference in the farm home. It insures even, healthful circulation of heat, and it is cleaner than stoves, and just as economical and easy to care for. The Kalamazoo furnace is shipped direct from the manufacturers, the Kalamazoo Stove Co., Kalamazoo, Mich., to the consumer. Read their advertisement on page 32 and send for one of the free catalogs. When writing mention that you saw the advertisement in this paper.—Adv.

Last Call for Hendricks' Boar Sale.

THIS is the last chance we will have to call your attention to the great sale of Poland China boars that E. W. Hendricks makes at his farm near Hazel Green, Wis., September 28th. If you will attend this sale you will not be disappointed with the offering. They are well grown, but not fat and there is no reason why they should not do their buyers a great deal of good. The breeding is the very best. If you haven't received your catalog write for one at once and try and attend the sale. If you can't attend send your buying instructions to T. P. Shreve, Wisconsin Farmer representative, in care of Mr. Hendricks and they will be properly handled. See page 31.—Adv.

Special Duroc Attractions.

EMMETT COOK & SON, Richland Center, Wis., have some boar pigs that should head some good herds, for they are bred in the purple and are good individuals. They are sired by Cherry Chief's Wonder (Van Meter), he by Cherry Chief out of Chief's Model by Wonder Model. The dam of the pigs is Dorothy, she by the champion Illustrator, out of a daughter of Dominant Col. As stated above, here is a good litter of pigs and any breeder in the state can use this breeding, and if you want something to make a noise about, get one from this litter. Get busy at once for they will not last long. They also have some good boars by Cook's Defender. Mention this paper when writing. See page 31. —Adv.

A Grand Assortment of Short-horns.

WE know that there are many farmers and small breeders that wish to buy a few Short-horn females, others are going to need a Short-horn bull in the near future and for the benefit of these prospective buyers we wish to call your attention to the cattle of this breed being offered for sale by William Ley, Jonesdale, Wis. Jonesdale is in Iowa county, the first station south of Dodgeville on the Illinois Central railroad. Mr. Ley has more cattle than he can conveniently handle and for that reason he will sell twenty females. The cows and heifers are sired by a grandson of Whitehall Sultan. Several of the cows have calves at foot and are bred again—here is a good investment for someone. The yearlings and calves are sired by a grandson of old Ceremonious Archer, namely, Proud Gift 389315. The families represented in this herd are Village Girl, Duchess of Gloster, Arabella, Favorite, Young Mary and others. Besides the twenty females Mr. Ley has ten bulls for sale nearly all of which are of serviceable age—red and roans. Buyers need not be afraid that they will not find suitable cattle if they call on Mr. Ley. You will have a large number to select from and the prices asked are certainly reasonable. It is to your own interest to investigate. Ten Duroc Jersey boars and gilts of spring farrow are offered at very low figures. Write the owner for particulars, you will get a prompt reply. When writing kindly mention The Wisconsin Farmer. See advertisement on page 30.—Adv.

Freehoff Bros.' Guernseys.

THOSE of our readers who are in the market for some pure-bred Guernsey heifers should write to W. A. & R. E. Freehoff, Waukesha, Wis. Freehoff Bros., are offering four very nice heifers that are nicely bred and of very fine dairy conformation. Two of them are not quite so well grown and will be sold for $160 each. The other two are $200 each. None are bred, but may be bred any time now. Freehoff Bros. are also offering four grade Guernsey heifers of about the same age which are bargains at $55 each. In case of the crates customers will be required to furnish their own crates or return those supplied them. The only reason these eight heifers are for sale is that Freehoff Bros. have about that many head too many for their barn accommodations. They are in no sense cully. See page 30.—Adv.

First Aid for Lame Horses.

EVERY farmer knows the annoyance, and oftentimes loss of time and money, that comes when a good horse is injured or goes lame. Prompt treatment with Absorbine, manufactured by W. F. Young, P. D. F., 101 Temple St., Sprinfield, Mass., will help very much by reducing the swelling and healing bruises and cuts. It is a safe germicide and is easy to apply. Read the advertisement on page 25 and send for free book and special instructions as to treatment. Mention that you saw the advertisement in The Wisconsin Farmer.—Adv.

Jerseys and Fred Stubley.

WHEN you see a Jersey, think of Fred Stubley, Black Earth, Wis., for he sure has the goods. With his good herd of over 100 head of imported and American bred Jerseys it stands to reason that a prospective buyer could certainly find something to his liking among this good lot. Bulls of the best breeding known have been used in this herd and at this time the Stubley herd compares with the best in the country. We have seen many Stubley bulls heading herds over the country and we have yet to meet a man that was not satisfied with his purchase and the treatment given him by Mr. Stubley. We are glad to recommend this herd to all men interested in Jerseys. Write for pictures and further description and in so doing kindly say you saw the advertisement in this publication. See page 30. —Adv.

An Angus Sale November 1st.

LOVERS of the Aberdeen Angus cattle should not overlook November 1st, for on that date there will be a combination sale held at Canton, Minn., the consignors being M. C. Willford, Canton, and Roy Miller, Prosper, Minn. To make a long story short the best cattle from these two good herds will go to make up this sale. One of the attractions of the sale will be a daughter of Earl Eric of Ballindalloch. She has been a champion at several of the better county fairs and is an outstanding individual. She is a Trojan Erica. There will also be two granddaughters of the above bull of the Pride family. The writer has recently seen these two herds and when the tops are picked for this sale it will be one of the best offerings ever listed for a sale in the Northwest. Keep this date in mind and in due time we will give you a detailed description of the sale cattle. It might be well to write one of the above men and have your name placed on their catalog mailing list. Do this while you think about it. Please mention The Wisconsin Farmer.—Adv.

Knudson's Guernseys and Durocs.

IF you are in need of a Guernsey bull you will be pleased with the two-year old being offered by Allic S. Knudson, Brodhead, Wis. His dam has three A. R. records made in succession, first year 363.46 fat, second year 561.22 fat, third year 585.45 fat all made standing in the stanchion with the rest of the herd. A full sister to the bull offered made 415 pounds fat as a two year old. This bull is right in every way, but in view of the fact that Mr. Knudson owned his sire he can not keep this bull to advantage. It will pay you to get the price and particulars about this bull. Mr. Knudson also maintains a herd of registered Duroc Jersey swine and if you are in need of a spring or fall boar of the most fashionable breeding you can find him in this herd. They represent the Illustrator, Chief's Col. and Defender line of breeding and the prices asked are very reasonable. Write him about the Guernseys or Durocs, he can please you with animals from either breed. Mention The Wisconsin Farmer when writing. See advertisement on page 31.—Adv.

Economical Automobile Supplies.

THE farmer wants safety, comfort and economy in his automobile tires and supplies. He can get them from the Firestone dealer. Firestone tires are built for durability, for long, hard service over country roads in all sorts of weather, making them especially practical for the farmer. They are economical, as it is claimed that they can be used for many more miles than ordinary tires. Read the advertisement on page 13 and send to the Firestone Tire and Rubber Co., Akron, Ohio, for one of the cementless tube patches and book, "Mileage Talks." Tell them you saw the advertisement in this paper.—Adv.

Laird's Hampshires.

NOTHING succeeds like success" and when it comes to the Hampshire swine business, A. M. Laird, of Prairie du Chien, Wis., is there. We recently saw a list of the sales made and Laird's Hampshires have been shipped into seven states during the past four months, and the letters that we read from his satisfied customers shows that the Hampshires which he sends out have made good. Mr. Baird sells more stock to Iowa buyers than to buyers from any other state. This no doubt is because Iowa appreciates Hampshires more than some of the other states. Prairie du Chien being located just across the Mississippi river from North McGregor, Iowa, makes it easy for northeastern Iowa men to visit the Laird farm. He has an ideal location for Iowa, Minnesota and Wisconsin buyers. At this time Mr. Laird has for sale spring boars and gilts. These are some that he has held back expecting to take them to the fairs, but he has decided that he will not make the

CHESTER WHITE sow and litter owned by Cook Bros., Burlington, Wis., whose advertisement appears on page 29.

fairs this year, consequently these show pigs are now offered for sale. The boars and gilts are in nice condition, have been well grown and should you order a pair or a trio from Mr. Laird we can assure you that you will be pleased with the Hampshires. Write him for his free booklet, telling about the Hampshires and also let him price you some of his pigs—they'll do. Don't forget to mention this publication when writing. See page 31.—Adv.

Manure Spreaders Increase Yields.

CROP yields can be very greatly increased by the use of a manure spreader in preparing your ground. A great deal of money is wasted every year because of poor handling of manure. This can be avoided by using a good spreader such as the Low Corn King or the Low Cloverleaf, manufactured by the International Harvester Co., Chicago. Read in the advertisement on page 24 how these spreaders save time and labor in handling manure and mean dollars to the farmer in increased crop yields. Write for a catalog and tell the company that you saw the advertisement in The Wisconsin Farmer.—Adv.

To Learn the Auto Business.

THE young man tired of the farm may be interested in machinery and would like to learn the automobile business. If so a splendid opportunity awaits him in the Michigan State Auto School, 1409 Auto Building, No. 11-19 Selden Ave., Detroit, Mich. Detroit, the automobile center, is the ideal place to learn this business and the Michigan auto school is well known to the leading western automobile manufacturers, so that the graduates have an exceptional opportunity to get good positions. Read the advertisement on page 2 and write for information. Be sure to say that you saw the advertisement in The Wisconsin Farmer.—Adv.

An Explosive Without Danger.

MODERN farming methods require the use of an explosive for removing stumps and boulders, tree planting, ditch digging and other common operations. The Atlas Powder Company, Wilmington, Del., have manufactured an explosive, Atlas farm powder, which can be handled out on the farm easily by persons without experience and no risk is involved. Many women farmers use it. Read the advertisement on page 21 and write to the company for information about this safe farm powder. Tell them that you saw the advertisement in this paper.—Adv.

Light Houses For Hogs.

HOGS cannot remain healthy and grow as they should if they do not have suitable quarters. They need sunshine. Chief Sunshine hog house windows, manufactured by Shrauger & Johnson Co., 300 Walnut St., Atlantic Iowa, can be put in your hog house roofs, letting the sun shine in direct on the pen floors. They are sanitary and durable. Read the advertisement on page 25 and write for information and blue prints of up-to-date hog houses Mention that you saw the advertisement in The Wisconsin Farmer.—Adv

Separator On Easy Terms.

A SEPARATOR the durability of which is guaranteed is the New Butterfly Jr. No. 2, made by the Al

WE MAY DO THE SAME FOR YOU.

J. LeROY LARSON, Iola, Wisconsin, proprietor of Fair View Stock Farm and breeder of Poland Chinas, advertised his hogs in The Wisconsin Farmer this summer. This is what he says about results:

> I am very much pleased with the results obtained from my advertisement of Poland Chinas through The Wisconsin Farmer. I will continue my advertisement, as it is a paying investment for me.

Advertisements in The Wisconsin Farmer are paying investments for other breeders and farmers. It is the Wisconsin live stock man's favorite advertising medium.

If you have surplus stock to sell, try an advertisement in The Wisconsin Farmer, the guaranteed weekly circulation of which is 90,000. Wisconsin Farmer field men are at your service.

THE WISCONSIN FARMER, Madison, Wis.

baugh-Dover Co., 2158 Marshall Boulevard, Chicago, Ill. It is light running, skims close and is easy to wash. It is offered on easy installment terms for the benefit of the farmer who prefers not to make the whole payment at once. See the advertisement on page 6 and write for free catalog today. Say that you saw the advertisement in this paper.—Adv.

Karlen's Holstein Dispersion.

ONE of the best Holstein herds in the middle West will be dispersed at public auction. This is the herd of Fred Karlen, Winslow, Ill. Breeders who have followed Superintendent Gardner's reports for the past five years realize what a wonderful producing herd this is. A number of records from thirty to thirty-seven pounds have been made by cows in this herd. The herd consists of 175 head, eleven of which have records above twenty pounds of butter in seven days, more than twenty of these are two and three-year-old heifers. There are four cows with records from 30.87 to 33.19 pounds, three twenty-nine-pounds cows, two twenty-eight-pound cows, three twenty-six-pounds cows, five over twenty-five pounds, five over twenty-four pounds. There will be many animals in the sale with the fifteen nearest dams in advanced registry. These are bred to King Alcartra De Kol Pontiac, the 36.59-pound son of the $50,000 bull, King Segis Pontiac Alcartra. There will be twenty-two daughters of this great young bull in the sale, and he himself will also be sold. Take special notice of their growth, quality and dairy conformation. He and his daughters would make a wonderful addition to any herd. There will also be fifty-eight daughters of King Pieter, that is from a thirty-three-pound dam and has thirty-two A. R. O. daughters, twenty over twenty pounds, seven at two years, eight at three years. Seventeen daughters of King Lyons Nudine, that is by King Lyons from a thirty-pound daughter of the great thirty-three-pound cow, Blanche Lyons De Kol. Thirteen daughters of Master Aaggie Pearl, that has sixteen out of eighteen A. R. O. daughters over twenty pounds, thirteen over twenty-four pounds. Eight daughters of King Lyon's Snowball, whose dam is a thirty-three-pound three year old that won first prize last year's association butter tests. A herd of uniform production, no better anywhere, go where you may. Tuberculin tested by Illinois and Wisconsin state approved veterinarians ready to be shipped anywhere in the United States. All certificates furnished tuberculin test, registry certificates and signed transfer applications will be on the settling desk and can be taken by the purchaser if desired. Among the fifteen young bulls to be sold are several from dams with records from 31.90 to thirty-three pounds butter in seven days. Others from good record heifers, daughters of thirty-pound cows. Send for catalog to the Holstein Sales Co., Elgin, Ill., or F. J. Karlen, Winslow, Ill. See this page.—Adv.

Is Best Hill Climber.

WHEN a Hudson Super-Six Special climbed to the top of Pike's Peak in eighteen minutes and twenty-four seconds, in contest with more than twenty other cars, it achieved the world's best hill-climbing record. Such records have become a habit with the Hudson cars. They are equal to the emergency, whatever it may be. That's why farm folks, who like the best there is, whether its automobiles or live stock, are so fond of the Super-Six. The Super-Six is manufactured by the Hudson Motor Car Co., Detroit, Mich. See the advertisement on page 7 and write the company for more information or see the dealer in your town. When writing, mention that you read the advertisement in this paper.—Adv.

Farm Wagons to Fit Any Need.

GOOD wagons are an essential part of the farm equipment. But for some purposes and some roads a low wheel is best, and for some a high, sometimes a wide and sometimes a narrow tire is best. The Electric Wheel Co., 65 Elm St., Quincy, Ill., manufacture wagons to meet all these different needs. Steel or wood wheels are made to fit any running gear. The farmer may select his wagon to meet his requirements, whatever they may be. A catalog, illustrated in colors, will be sent free on request. Read the advertisement on page 10. When writing for your catalog, say that you saw the advertisement in the Wisconsin Farmer.—Adv.

A Car With Wearing Qualities.

RUGGED strength and stamina is what the Paige-Detroit Motor Car Co., 205 McKinstry Ave., Detroit, Mich., manufacturers of the Paige automobile, have striven for. That they have achieved it is proved by the remarkable endurance tests the car has repeatedly undergone. It is the car with the staying power that the farmer needs, and that is why the Paige appeals to him. Read about the Paige cars in the advertisement on page 11, and write the company for further information. Tell them you read the advertisement in this paper.—Adv.

This Separator Easy to Wash.

THE cream separator should be easy to operate and easy to wash, as well as sanitary. The Sanitary Milwaukee cream separator, made by the Milwaukee Separator Manufacturing Co., 245 Madison St., Milwaukee, Wis., has only one-third the number of disks as the ordinary separator, hence is much easier to care for. It is simple to operate and light, saving work for the busy farm women. See the advertisement on page 17. Then write for catalog telling all about the Sanitary Milwaukee Separator. When writing mention that you saw the advertisement in this paper.—Adv.

Many Investigating Golden Prairie Farms.

MANY farmers of the grain belt states are investigating the farms offered in the Golden Prairie district of Wyoming by the Federal Land Company, Burns, Wyo. Their advertisement will be found on page 15 of this issue. This company has been selling land for a number of years. In the passed decade they have located a large number of farmers in the Golden Prairie district and scores of these farmers have made good and now have good homes and profitable acres. The passed season was dry in the Golden Prairie district the same as it was generally through the grain-belt states, but some good crops of wheat and oats were raised and cattle have fared well on the range through the summer. Many cattle shipped from Wyoming the present year have brought good prices and there are thousands of head ready for the winter markets which will bring good profits to their owners. Those who desire to have further particulars concerning this Golden Prairie farming land should address Federal Land Company, Burns, Wyoming. Please be kind enough to mention this paper in your letter.—Adv.

An Economical Furnace.

A FURNACE that is reasonable in price, easy to install, and heats the farm home comfortably and at the same time saves 35 per cent of the fuel is a combination which should appeal to every farm home owner. He will find this combination in the Caloric pipeless furnace, manufactured by The Monitor Stove and Range Co., Cincinnati, Ohio. The Caloric heats the house with one register, so that it is not necessary to tear up floors to put in pipes. It burns wood, coal or coke. Read about this furnace in the advertisement on page 21 and write for the free furnace book. Mention that you saw the advertisement in this paper.—Adv.

Keeping Hogs Healthy.

HEALTHY hogs are the only profitable kind for the farmer and live stock man. In order to keep them in this condition it is necessary to watch them closely to prevent worms and other disorders. Dr. Hess stock tonic is a blood purifier and if used sensibly will quickly bring hogs into condition. It is manufactured by Dr. Hess & Clark, Ashland, Ohio. It is guaranteed by the manufacturers. Read the advertisement on page 25 and write for information and for any advice you may wish about ailing live stock. When writing be sure to state that you saw the advertisement in this paper.—Adv.

Neat, Serviceable Shoes.

FARM folks want service as well as style in their foot wear, and for that reason they particularly like the Foot-Schulze shoes, manufactured by the Foot, Schulze Co., St. Paul, Minn., and sold by a Foot-Schulze dealer in every town. These shoes are made of extra good material, on good lines that are neat and pretty, but do not sacrifice durability to style. They're just the sort that are needed for serviceable, sensible wear. Read the advertisement on page 23 and hunt up the Foot-Schulze dealer the next time you go to town.—Adv.

A Handy Calculator.

LANDOWNERS will find Ropp's New Calculator, published by the Keystone Steel & Wire Co., 635 Industrial St., Peoria, Ill., who manufacture Square Deal fence, a very valuable help in solving their mathematical problems. The book is given free to all landowners who request it, in order to advertise their superior quality woven wire fence. See the advertisement on page 24 and write for the Calculator. Tell them you read the advertisement in The Wisconsin Farmer.—Adv.

Makes Housework Easier.

THE farm wife will find that a vacuum cleaner will lighten her work more than she ever dreamed. Here's a chance to get one that is guaranteed for five years, free. It is a new model, manufactured by the Warner Co., Muncie, Ind. See the advertisement on page 23 and write to Dept. D of the Warner Co. for information concerning their proposition and information about their vacuum cleaners. Mention that you saw the advertisement in this paper.—Adv.

Offers Overland Free.

HERE'S a chance for enterprising young men with a few weeks' spare time to get an Overland car, 1917 model, free. C. F. Aldrich, St. Paul, Minn., will explain his proposition to you. Read his advertisement on page 23 and write for particulars. Tell him that you saw the advertisement in this paper.—Adv.

Free Book for Trappers.

TRAPPERS can find a lot of valuable information in Hill Bros. Trappers' Guide, published by Hill Bros. Fur Co., 330 N. Main St., St. Louis, Mo. The book is free to trapners who write for it. Send in your requests today. Mention this paper when writing. See advertisement on page 23.—Adv.

WINSLOW, ILLINOIS

Holstein Sales Co., Catalog Compilers, Elgin, Ill.

Takes Place of Extra Hand.

DIFFICULTIES with hired huskers can be avoided by purchasing a corn husker and shredder such as the Rosenthal corn husker and shredder, manufactured by the Rosenthal Corn Husker Co., Box 15, Milwaukee, Wis. With this machine the farmer can handle his own corn crop in his spare time. The machine is made in two sizes suitable for the average farm, and is sold on trial. See the advertisement on page 25. When you write for the free illustrated catalog, mention that you saw the advertisement in this paper.—Adv.

Buggies of Style and Quality.

FARMERS will be interested in the fine line of new split hickory buggies manufactured by the Ohio Carriage Manufacturing Co., Station 185, Columbus, Ohio. These buggies are popular for their style, comfort and quality. Read the announcement of price reduction in the advertisement on page 8 and write to the company for their handsome new vehicle catalog. Tell them that you read the advertisement in this paper.—Adv.

Wagons and Buggies of Quality.

WAGONS, buggies and harness are still needed on the farm and their selection is a matter deserving of careful consideration. Studebaker vehicles and harness, adapted to every possible farm need, are manufactured by the Studebaker Company and can be seen at the Studebaker dealer's in your town. Studebaker has been making them since 1852. See the advertisement on page 24. Tell the dealer you saw the advertisement in this paper.—Adv.

Machinery Row at the Fair.

Machinery Exhibit at Wisconsin Fair Had About 100 Exhibitors Despite the Fact That Larger Implement Houses Took no Part.

WHILE some of the larger implement and vehicle houses which usually made up the machinery exhibits of fairs in Wisconsin in years past were not in evidence at Milwaukee this year, the show was an interesting one. There were about 100 exhibits and they followed pretty closely the line of machinery and labor-saving devices best calculated to improve conditions in the dairy and home. A majority of the exhibits were of such devices as will aid the dairyman. The milking machine, which is getting much more attention in Wisconsin this year than formerly owing to the improvement in the machines and the scarcity of labor, was represented by a number of the most reliable companies and these exhibits were the center of attention from visiting farmer-dairymen.

One fact which has increased interest in milking machines this year is that labor has been scarce. The writer talked with one man from Sheboygan county who says that the milking machine has been a blessing on his

SCENE ON MACHINERY ROW.

place the past summer. With thirty cows to milk and no labor obtainable he has found it possible to run through with one man and done very little of the work himself. Without the milking machine he says he never could have made it. Labor is not only scarce but high-priced, and there does not seem to be any chance for any immediate relief.

Visitors at the fair grounds demonstrated the fact that they are keenly interested in barn equipment, and the displays in this line were larger and better than ever. The demand for a clean milk means that dairy barns must have equipment which will make proper handling of cows a possibility. The old system of standing in a dirty stall and mussing food out of a manger is obsolete on the best dairy farms in Wisconsin. Dairymen are demanding a system of manure removal which makes a clean barn possible and gives largest opportunity for proper use of manure as a fertilizer on the farm. It has been proved in the cow-testing associations that the cows which are well housed in clean and sanitary surroundings have given the most milk and milk of the best test.

The silo is ever an important factor in farm and dairy and, while the number of silos exhibited was not so large as in former years, the interest taken in them was great. Barn ventilation is a matter which is being studied with much interest by the dairyman-farmer.

It was apparent that the farmer of Wisconsin is interested in farm power. The big tractor show at Madison brought this fact out very prominently. One tractor was exhibited at the state fair. Several gas and oil engine concerns had exhibits.

Machinery for making the home more comfortable and for saving the housewife steps are getting a prominent place on machinery row at the fair grounds. Lighting systems, both gas and electric, are studied by the farmers. The writer has known of a number of Wisconsin farmers who have put in electric plants this summer, one man at a total expense of $1,500. It is not necessary, however, to pay more than a fifth to a quarter of this sum to get a modern electric lighting plant; a plant which will also do considerable duty about the home, such as running the washing machine, the vacuum cleaner, the sewing machine and furnishing heat for the irons. Water supply apparatus is being studied by the farmer and the members of his family.

Silo fillers, grain elevators, farm fences and gates, automobile trailers, concrete mixers and a host of other equally important machines for helping the farmer with his work were on exhibition. The complete list of exhibitors was as follows:

Alcazar Range & Heater Co., Milwaukee.
Allis-Chalmers Mfg. Co., Milwaukee.
Apex Gate Co., Racine.
Appleton Mfg. Co., Batavia, Ill.
Austin-Western Road Machinery Co., Milwaukee.
Barrell Concrete Mixer Co., Madison.

HOLSTEIN

BULL calves, sired by Johanna Bonhuer Pieter 113138, whose 14 nearest dams average over 27 pounds butter in 7 days, out of dams with 7 day and yearly records. C. Tochterman Jr., Monroe, Wisconsin.

HOLSTEIN-FRIESIAN CATTLE.

Purebred Registered

HOLSTEIN CATTLE

The wonderful vitality which is characteristic of the purebred Holstein-Friesian breed is strikingly shown in the career of Jetske Roe's Aaggie's Artis, owned by F. M. Nichols of Lyndonville, Vt. She is nearly twenty years old and in April was carrying her sixteenth calf. For fifteen gestation periods she totaled 232,500 pounds of milk which, at 4 cents a quart, would be $4,620, at a cost for feed for fifteen years amounting to $1,980. She thus shows a profit of $2,640, in addition to which must be reckoned $6,000 worth of fine healthy calves. She has won many ribbons and prizes at fairs and has seven daughters with A. R. O. records. There's big money in the big "Black and White" Holsteins.

Send for FREE Illustrated Descriptive Booklet.

The Holstein-Friesian Association of America
F. HOUGHTON, Sec'y, Box 143, Brattleboro, Vt.

Here's Furnace Comfort at the usual Stove Cost

WRITE TODAY—Get the Wholesale Price on This Kalamazoo Pipeless One Register Furnace

HERE'S the answer to your heating problem. No longer need you shiver on one side or roast on the other. Here's the warm air—good, healthful circulation to every room—and it costs no more than you would pay at retail for a good stove.

Easy to install—one man should do it in a couple of hours' time. Economical of fuel—takes no more than you would burn in stoves to heat the same house. And low in price because of the big output of the Kalamazoo factory and because you deal direct with manufacturers and get the wholesale price. Write us at once—and let us tell you how little it costs to get this big comfort-creating furnace delivered complete, freight prepaid to your station.

Two Books Free Tell Us Which To Send

One is our furnace catalog. Tells about this popular, one register furnace. The other book is our new stove and range catalog just received from the printers. Crowded from cover to cover with the latest and most beautiful stoves and ranges ever presented in one book. By all means get it. See beautiful illustrations of stoves of all kinds—newest designs—every one built up to the unbeatable Kalamazoo high standard of quality—and every one at a surprisingly low, wholesale price. Here you

Deal Direct with Manufacturers—Get Wholesale Prices—30 Days' Trial—One Year Approval Test—$100,000 Bank Bond Guarantee—Cash or Easy Payments

Send today for either or both of these books. Ask for our furnace book if you want to know about this money-saving plan of installation—or for our stove catalog if it's a new stove or range that's needed. Don't miss the Kalamazoo offer. There are now about 300,000 Kalamazoo owners. Every one satisfied. Had to be because that's our guarantee.

Increased Returns From Your Farm

DO you know that game birds—grouse, quail, pheasants, wild turkeys and wild ducks—can be raised with little more trouble and expense than domestic birds and that they bring a much greater return? For some time the demand for birds has far exceeded the supply. As a result prices have been good. For instance, pheasant eggs have been selling at from $25. to $30. a hundred while the birds themselves bring from $5. to $7. a pair.

If you wish to raise game birds in connection with your poultry it is not necessary to buy birds though it is preferable to do so. You can buy eggs and hatch them with hens.

Game birds do not require the use of great tracts of well cleared or tillable lands but flourish on brush land, which you may have considered useless. They will make even your poorest land pay.

If you have land enough the birds you raise will afford you and your friends good sport in hunting or they will prove a certain source of revenue from sportsmen who will pay you to raise birds for them to shoot.

The booklet, "Game Farming for Profit and Pleasure", will give you valuable information on the raising of game birds. It is sent free to those who ask for it. Write for your copy today. Please use the coupon below.

Questions and Answers.

Pumping Water.

Please give me some information as to pumping water. I want to place my pump at my house, and draw the water a distance of 1,100 feet. I want to draw the water out of the bottom of a river. It is only about a ten-foot rise from the river to the place where I want to place my windmill, or engine. Then I want to build a tank about twenty feet high, and pump the water direct into the tank. I intend to put a sand point in the river, as the bottom of the river is quicksand. What is the right size pipe to use?

Answer.—Use inch and a quarter galvanized pipe. Your outfit would work all right if you can keep the suction line absolutely air tight. This would be rather hard to do if the line is 1,100 feet long. You should use the style pump known as a force pump. Place the pump cylinder as low as convenient.

It would be well for you to try a drive well near your engine before going to the expense of piping to the river. If your land is underlaid by sand you probably could place the point on the pipe and drive it down to water, using a cap on the end of the pipe to protect the threads. If the river has considerable fall you might use a hydraulic ram to raise the water.

A Homemade Forge.

I would like to know how to make a forge of material picked up about the farm.

Answer.—Figure 1 shows a side view of the forge and Figure 2 shows the top view of the blower. The blower, or bellows, is made of wood and leather, with a tin nozzle, N. The top plate is wood with a leather hinge at H. The lower plate is also wood, with a valve at V. The valve is made from a soft piece of leather with a

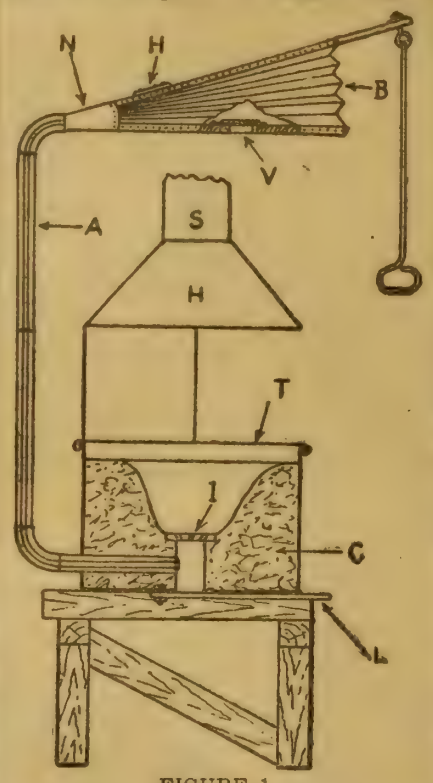

FIGURE 1.

wood block somewhat larger than the hole on top of the leather. A is ordinary eve trough piping. The joints should be soldered to make them air tight. An old wash tub will be all

FIGURE 2.

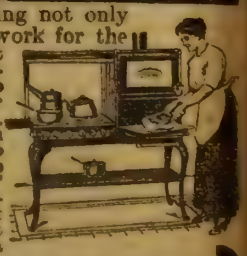
right for the body of the forge. A hole about four inches in diameter should be cut in the bottom. This hole is opened to clean out the forge. C is the lining of the forge. Ordinary yellow clay makes a fair lining. Fire clay is more durable. The forge may be mounted on a wooden frame. S is the smoke pipe and H the hood, which should extend down to the forge at the back.

Motor Heats.

I have a Moon six-passenger car. It ran all right for one year. The radiator does not get hot, but the engine gets so hot after running a few miles that it sticks and the water boils. The engine has become so hot that it has scorched the paint off the engine hood. Local garagemen are unable to locate the trouble. I am hoping that you can give me some information regarding the same.

Answer.—Trouble of this kind is generally due to carbon accumulations in the cylinders. As you have had your car to a garage the carbon has probably been removed. The fact that your radiator does not become hot indicates that some of the water passages are stopped up. It would be well to remove the radiator and remove as much of the scale as possible. It may be that the water jacket of the cylinders are "limed up." Other causes of a motor heating are: Running with the spark too much retarded, too rich a mixture and tight bearings.

Cook With Gas



Gas for cooking not only means easier work for the housewife, but it means quicker meals, no coal, wood or ashes to carry, no getting up an hour earlier to start the fire, no "boiling hot" kitchen in summer time. Not only that, but when you have a

SEVERANCE GAS MACHINE

you can light your home from cellar to attic with clear white gas light. No smoky, dangerous oil lamps to bother with. The Severance Gas Machine makes perfect gas for cooking and lighting—gives you all the conveniences of city gas no matter where you live. Thousands in use—have been for 10 to 15 years—every one giving perfect satisfaction. Absolutely safe—easy to install in any new or old home—backed by the strongest kind of a guarantee. Adapted for churches, schools, stores, public buildings, etc. No installation too large for us to handle.

WRITE TODAY for illustrated folder and full details. When you learn what the Severance will do for you, you won't think of getting along without one.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

LOCATING THE LAND BANKS.

IN MY two former articles dealing with the new rural credit system, I endeavored to make plain how the federal farm mortgages never come due at any one specified time, but are paid off in installments over a period of years, and how farmers should set about to organize local associations in order to borrow money under the new system. There remains little more to be said, except as I am kept busy answering personal letters from my readers who want additional information on some point or other.

We are all of us interested, however, in the location of the twelve federal land banks provided for by the act. The farm-loan board passed through the grain belt a few weeks ago, en route west, and last week returned through our section, holding a public hearing at Topeka and another at Omaha. They are due back in Washington in a fortnight or so, and will then deliberate over the great mass of boosting facts given them by the various cities where meetings were held. I am advised that it will be several weeks before any official announcement is made of the location of the twelve banks, and the first of the year, at least, before they are ready for business. In the meantime, it might be interesting to conjecture just where the banks, which we of the grain belt will patronize, will be located.

I am firmly of the opinion that at least three of the twelve banks should be located here in the ten states of the grain belt. We should have four, but we must have three. The grain belt should be divided into districts which conform in the matter of production, interest rate, farm needs and farm conditions generally. Thus, we should not make a district so large and so varied that it includes cotton states with corn states, or cover a territory wherein part of the farmers, because of their prosperity, get their loans today for 5 or 5½ per cent and others, because of their shiftlessness and poor production generally, are obliged to pay 8, and even 10, per cent. If the banks are to reach the highest point of usefulness, they must cater to local associations formed of farmers whose interests, tastes and work are in common. This is a very important point, in my opinion.

If the task of dividing the grain belt into land bank districts were left to me, and I could have the placing of only three banks, I think I would make some such division as this: I would place Wisconsin, Minnesota, North Dakota and South Dakota in one district and locate the land bank at Madison. I would place Iowa, Illinois and Nebraska in another district and locate the bank either at Des Moines or Omaha. I would place Missouri, Kansas and Oklahoma in another district and locate the bank at Kansas City, Kansas. If I could have four banks in the grain belt altogether, instead of three, I would put Wisconsin and Illinois together, locating the bank at Madison; Minnesota, North Dakota and South Dakota together, locating the bank at St. Paul; Iowa and Nebraska together, locating the bank either at Des Moines or Omaha; and Missouri, Kansas and Oklahoma together, locating the bank at Kansas City, Kansas. I believe the farmers of the grain belt generally will approve either one of these divisions; we must have three of the land banks—we hope to have four. And why should we not have four, seeing that in the ten states which comprise the grain belt are to be found 50 per cent of the improved acreage of the entire United States, nearly 40 per cent of the cattle, nearly 50 per cent of the horses, nearly 50 per cent of the hogs and over 50 per cent of all the corn, wheat, oats and other field crops which, in 1915, plus the value of live stock sold and slaughtered, reached the immense and record-breaking total of $10,500,000,000? In view of such supremacy, we are entitled to every consideration at the hands of the federal land board.

While it may be argued—and with some reason—that the new rural credit system is not needed here in the grain belt as much as elsewhere—the south and the far west, for instance—there is no doubt in my mind that our farmers are going to patronize the new federal land banks quite extensively, particularly if they are able to get money at a lower rate of interest and without paying the commissions or bonuses now so generally demanded. Here, for example, is a letter in line with the scores which are coming to my desk these days. It is from a Wisconsin farmer:

> I have a place of twenty acres, which I think is too small for farming and keeping stock. There are forty acres which join me, which can be bought for $1,000, that I would like to buy and if I can get the money through this new farm loan law I will do so, as it would make me a farm of sixty acres; then I could keep stock and farm generally. Please let me know more about this, how and when I can borrow the money, and so on.

The law covers this case, as it plainly states that loans shall be made to those who are "the owners, or about to become the owners, of farm land qualified as security for a mortgage loan." This enables farmers to buy land in addition to that they already own and will assist this Wisconsin farmer, for instance, to get the farm which he really needs if he is to forge ahead in the world as he should.

MEN WHO ARE MAKING AMERICA.

ONE OF THE best of our national weeklies is publishing a series of articles on "Men Who Are Making America." It includes the fifty most prominent business and professional men of the country, men who are doing such big things in such a notable way as to set them apart from the crowd. Now, the thing that impresses me most of all in this series, so far as it has progressed, is the fact that four out of the first five men written up are products of the farm.

I want to pass on to you some of the facts which I learned from these articles, for they prove most convincingly that the farm is furnishing the really great men of America today. The first man to be written up in the series is Judge Elbert H. Gary, who occupies what is said to be "the biggest job in America," next to the presidency of the United States: the head of the United States Steel Corporation, greater in income, resources and property area than the average European nation. The income of this immense concern promises to reach $900,000,000 this year, almost equal to the revenue of the United States government or the Kingdom of Great Britain. It has an industrial army of 275,000 men, or more than the American army and navy combined, more than the entire regular and volunteer force engaged in the Spanish-American war. Yet the absolute head and front of this immense corporation was born on his father's farm here in the grain belt and began his career by teaching a country school.

But we must not stop here. What of the next man in the series? It is Theodore N. Vail, who has developed the telephone toy of forty years ago into a billion-dollar corporation, the president of the American Telegraph and Telephone Company, who was born in the country and spent his early manhood on farms here in the grain belt. Thanks to his genius the farmers of America today have more telephones in their farm homes than are to be found throughout all of England, France or Germany—cities, towns and country combined. Mr. Vail has put all Americans—north, south, east and west—on speaking terms and he is a product of the grain-belt farm.

The third man in the series is Minor C. Keith, who could have had a crown for the asking, "the uncrowned king of the tropics, the Cecil Rhodes of Central America, a demi-god in the eyes of half a dozen republics." He is president of the United Fruit Co., the biggest farmer and almost the biggest grocer on earth, owning upwards of 1,100,000 acres (equal to half the state of Delaware) with over 250,000 acres in actual cultivation, its live stock including 20,000 cattle and 6,000 horses and mules. I learn that Mr. Keith started his wonderful career as a live stock farmer. Let me quote from his biography:

> Before old enough to vote he was raising cattle and hogs on a bleak, uninhabited island called Padre Island (as long as Long Island) near the mouth of the Rio Grande. He had looked over the country after the civil war and decided to settle on this forsaken territory. Only one other family lived on the island.
>
> Here young Keith trained for the battle of life, under rough, nerve-trying circumstances, with two revolvers never unhitched from his belt and with cattle thieves and other care-free gentlemen all about him when he crossed to Texas and the Mexican border to buy cattle. He rose at four every morning, roughed it for sixteen hours daily, often slept outside—and prospered.
>
> He reared and bought cattle all over the surrounding territory to kill for their hides and tallow. The beef, not worth anything in Texas in those days, was fed to swine! He amassed a herd of 4,000 stock cattle and 2,000 pigs. Stock cattle were then worth $2.50 to $3.00 and steers brought $1.00 for each year of their age.

The fifth man in the series—and the fourth to be born on a farm—is Frank A. Vanderlip, president of the National City Bank of New York, where more financial business is transacted, it is said, than under any other roof in the world. The start of Mr. Vanderlip's career is so interesting I am going to quote somewhat at length from his biography:

> Of pioneer stock, he was born on a large farm not far from Aurora, Ill., fifty-two years ago. His father died when Frank, the eldest of three children, was only twelve. Duties and responsibilities early became his lot, for the farm yielded but a scanty livelihood. He had an intense thirst for knowledge and read every one of the few books he could lay his hands on. These included a complete edition of Shakespeare, the Arabian Nights and a few old-fashioned magazines.
>
> Since incidents illumine careers, it was significant how he spent the first money he earned.
>
> For faithfully acting as nursemaid to thirty-seven calves during a whole summer he was allowed to choose one of them, and he sold it for $12.00. In a near-by hamlet hung a poster announcing that $10.00 would bring the New York Weekly Tribune for five years and, as a premium, a "Webster's Unabridged Dictionary." The $10.00 bill was promptly dispatched, and for five years the country lad devoured every line appearing in the Tribune.
>
> At school he was a leader in mathematics, but a duffer at spelling. When he was sixteen the farm, heavily mortgaged, was sold and the family moved to Aurora. On Frank the duty of supporting the household mainly devolved, for the life insurance of his father was not touched by his prudent mother, not even to send him to college.
>
> He took a job in a machine shop, and for running a lathe ten hours he received seventy-five cents a day. "I took this job, not because it was the kind of work I wanted, but because it was the only job I could get," he has since said.

I do not know what other men are to be included in this series, but those already written up show that it is the farm, rather than the city, which is dominating the business and professional world today; that Champ Clark was right when he said recently: "Most of the prominent men in our history have come from the farm." We may not all be uncrowned kings of tropical countries, or heads of billion-dollar corporations, but we are engaged in the work which widens thought, cultivates character, creates initiative and brings greater results than any other work. Is there not consolation and comfort in that for us all?

A CHEERY EXAMPLE.

I HAVE frequently spoken, in these columns, of the pleasure I derive from the hundreds of letters which come to me, every week, from my readers. They are constantly giving me inspiration and encouragement and make many an otherwise hard day bright and easy. Here, for example, is a letter from my very good friend, Mr. J. H. Tedford, editor of the Mt. Ayr (Iowa) Record-News, a patriarch whom to know is an honor, indeed. Among all the letters received by me after telling of the unsuccessful quest of an eastern man for the genuine, old, yellow-corn hominy of former years (and I received hundreds of letters on this subject) none was more interesting than the one from Mr. Tedford, accompanied by a note in the course of which he said:

> When preaching I drew a large share of my illustrations from agricultural life. I caught the idea from Henry Ward Beecher. Sitting now in the pew I wish the habit was more common. The Bible is full of it. To be an editorial preacher, a good one, is now my ideal of the highest usefulness. It has been my habit when I see a very fine editorial or any interesting matter in a paper to write the editor a letter of encouragement. I am a firm believer in saying the good things of others as we pass along in life and not wait for the funeral exercises and obituary. So this is why I wrote you on the "hominy problem," one of the most interesting now on the stage of life. I am hopeful and even anxious that there will be a "renaissance" of the hominy habit. I wish good speed to all such "reformers."

Mr. Tedford has the right theory of life, indeed; to scatter sunshine while he may; to say the encouraging word while ears may yet hear it; and to smile while eyes may still see it. If we could all preserve our cheerful optimism as long as Mr. Tedford has (he is now past eighty years old) it would be a bright and happy world, to be sure. Let me urge upon all my readers that they give the closest attention to what Mr. Tedford has to say; there is a moral in it which even the most obtuse should plainly see. After all, age is not so much a matter of years as it is a matter of principles and habits. At a time when all too many men are simply doddering around the house, awaiting the end, Mr. Tedford is still in the journalistic harness and encouraging us young folks (I am almost fifteen years his junior, you see) to do still better work. He sets us all a splendid example.

Wisconsin's Best Farm Paper.

THIS has been a busy summer for the editors of The Wisconsin Farmer. It has been a case of traveling most of the time, the policy of The Wisconsin Farmer being to mingle with the various agricultural and live stock men of the state in the several sections which they represent. An editor may start out with a very good fund of information, but unless he will take the time to get out among the farmers and breeders of the state, it is not possible to keep pace with the development of a great state like Wisconsin. Some member of the staff of The Wisconsin Farmer may be found present at all of the important meetings of farmers and breeders of this state, and the policy of The Wisconsin Farmer is to devote enough space to important matters so that they may be fully told and not merely skimmed over.

The reports of the potato show at Marinette last fall, of the Farmers' Week programs at Madison in February, of the first land-clearing demonstrations, of the big summer meetings of breeders, of the first Wisconsin tractor show, of the Wisconsin live stock shows at Iowa and Minnesota fairs, and lastly of the great 1916 Wisconsin State Fair, all demonstrate the superiority of The Wisconsin Farmer. This paper has trained men for the various lines of work which are of greatest interest to Wisconsin farmers. This paper has a photographer whose work on out-of-door pictures of stock and farm scenes is not excelled in the country. The Wisconsin Farmer's printing plant and facilities for engravings and color work cannot be duplicated by any other Wisconsin farm paper. These facts all serve to assist our editors in presenting each week what we confidently believe the farmers of the state look upon as their favorite farm paper.

The Wisconsin Farmer is one of the few farm papers of the country which does not let up on its editorial work—summer or winter. The Wisconsin Farmer enjoys a liberal advertising patronage both from Wisconsin people and from the leading manufacturing concerns of the nation, and the revenues of the paper are sufficient to warrant increasing its size and the service which we are giving readers.

The popularity of the Wisconsin Farmer in its home state is shown by the preponderance of Wisconsin advertisers as well as Wisconsin readers. Many of our regular readers are regular advertisers, and this proves beyond a doubt that they have confidence in the fact that the paper is preferred by a majority of the farmers of the state. With a circulation of 90,000 and over, more than 70,000 of which is in the state of Wisconsin, The Wisconsin Farmer maintains a leadership from which it will not be dislodged.

Free Passes at Wisconsin Fair.

THE Wisconsin State Fair, we believe, is one of the most unfortunate fairs, year in and year out, in the way of weather that there is on the western circuit. It seems that every fair must have a few days spoiled by rain or cold, and this year was no exception, and, undoubtedly, had the weather been good, the 1916 fair would have shown a profit which would be something out of the ordinary. It is encouraging to note that the indebtedness is decreasing each year despite adverse weather conditions, and surely those who attended this year will agree that all that was needed this year to make the Wisconsin fair a success in every way was the crowd. The live stock show, the display of agricultural products, etc., was the best ever seen at Milwaukee and weather can be blamed for keeping the crowd away.

Great progress has been made during the last two years in building up this fair, but there seems one evil which has not been overcome yet as it should be overcome. That is the free-ticket evil. Too many persons are attending the Wisconsin State Fair on passes or complimentaries, many of whom should pay their 50 cents to support such an institution. This year a few more than 175,000 persons attended the fair. The total gate receipts were $58,726. In other words, at 50 cents per person, only 117,452 persons paid their way into the fair. This means that the turnstiles registered 58,000 visitors who did not pay. Of course, many of these were exhibitors, special officers, etc., and about 25,000 were children, who were admitted free on the opening day. Deducting these free admissions, some 20,000 persons passed the turnstiles without buying tickets.

We do not wish to be understood as scolding the fair officials for this condition. In fact, we know that Commissioner Norgord and Secretary Remey have done much towards eliminating the pass evil, and they would like to cut down the free list even further. But they must have support in such a movement, and, as it has been the custom of the Wisconsin fair for years and years to issue a large number of passes, a precedent has been set up which is hard to break down. The free list now does not compare with what it was a few years ago, and the day is dawning when it must be cut still closer to the bone if the fair is to succeed financially. As one of the officials from a neighboring fair, on a visit to Milwaukee, remarked to the writer: One of the big problems to be worked out is that of more money at the gates. This can be secured in only two ways—by a larger paid attendance and by requiring many of those who pass in free now to pay their admission. We realize it will take time to bring about such a condition, but eventually Wisconsin must take the steps taken by Minnesota and Iowa and not issue free tickets except to those who perform some specific service for the fair. Just because this man or that happens to be a friend of an official is not reason for giving him a free ticket. Exhibitors must be cared for, or they would not exhibit; the working newspaper men and others who perform a service of value to the fair must be taken into consideration. But this should be the only condition for issuing free tickets, and we know of nothing which might help the officials so much in their work to eliminate this evil, established by long precedent, than some action by the coming legislature. The legislature could well follow the example of the Iowa law, limiting the free pass to those who perform an actual service.

The state fair is a state institution and should receive the support of every citizen. By the same reasoning it seems that no citizen, who is not giving the fair some special service, should expect free admission. Certainly the fair is worth a half dollar to any citizen, and if the public will give the officials support in their efforts to cut down the number of free tickets, it will prove an easy matter. It is a problem too firmly established by precedent to be worked out single handed, and we can appreciate the difficulties confronting the officials in their effort to build up the fair. But all will agree that tighter reins on the free ticket will do much to increase receipts and place the fair on a firmer basis financially.

Wisconsin Land-Clearing Demonstration.

FOR many years the problem of disposing of the stumps, which are the only barrier to the cultivation of 7,500,000 acres in Wisconsin, has had little attention from organized bodies. Occasionally railroads or big land companies would, with high-priced machinery, clear a few hundred acres for their own purposes, and settlers have been working gradually to get their farms cleared with the machinery at hand, but nothing has been done that would serve as a concrete working basis for placing this immense area under the plow.

Realization of this situation brought about the first land-clearing demonstrations last spring and which are being further carried out by the "land-clearing special," mention of which is to be found in another column. Mr. Carl Livingston, who, previously to joining the college of agriculture, at Madison, had had experience on the Pacific coast, has proven himself a good leader, and the demonstrations have awakened more interest in clearing than has been aroused in many months prior to this summer. The demonstrations are meeting with great success, the farmers are showing intense interest, and so far as it all goes, it is well done. But with the demonstration over, something else must be done.

As land-clearing problems must be met as they arise, Mr. Livingston believes the state should be charted as to soil, character of stumps, etc. Stumps are more easily removed on one kind of soil than on another. The problem of the farmer with soft pine stumps is entirely different from that of the farmer with hard wood. The farmer with stumps on sand or red clay has a different proposition to deal with than the man with stumps on loams, and Mr. Livingston believes that the most effective work can be carried on only through charting of the state as to character of soil and stumps. Today there is no money for carrying out such work. The expenses of the demonstrations is being carried on by the railroads and the manufacturers who cannot pay for other extension work. As it is a state matter, the state should finance it, and Mr. Livingston believes $25,000 would be sufficient to inaugurate a comprehensive study of this problem that will mean something to the settlers and the owners of this 7,500,000 acres of land. The minute the stumps are disposed of, the land increases in value; its taxable value is greater and the state would be benefited to the extent of increased taxes. So it would seem that this is a matter for the next legislature to consider and provide some funds for carrying out the work so auspicously started by the land-clearing demonstrations. These demonstrations cannot reach everyone, but, with the right kind of follow-up work and bulletins showing how the stumps in each section can be disposed of, a permanent good will be accomplished. We can only urge every farmer who can possibly attend one to be present at his nearest demonstration, as they are very educative and certainly worth the little time and expense of attending.

Treatment of Wood For Silos.

THE Federal Forest Products Laboratory began experiments in 1910 in co-operation with the University of Wisconsin to determine the effect which preservative treatment has upon wood used in silos; also the effect of such treatment on the silage which is next to the wood. A report of this investigation shows that there is considerable danger of decay with silos built of untreated wood. While there are some woods that last much longer than others without decay, the forest products investigation shows very plainly that decay is only a matter of time. Deterioration occurs near the foundation of the silo, or in sappy wood at any portion of the structure. In 1913, 100,000,000 board feet of high-grade lumber were used in silo construction. While there are many other forms of silo construction competing with wood, a careful compilation of silo statistics shows that the consumption of wood for silo construction is steadily increasing. Manufacturers of wood stave silos are investigating the subject of preservative treatment. Coal tar creosote is one of the most satisfactory preservatives. The Federal laboratory report insists that applying with a brush, dipping or spraying, are not sufficient, but that a better method is to treat the wood staves under pressure. Silos built of wood so treated have the added advantage of reduction of swelling and shrinking of the staves. This means that they can be kept tight more easily. Furthermore, such silos do not need to be painted. Investigation has been made of silos erected in 1910, and after five years the treated wood had not commenced to decay. A test to determine the effect of the treated wood upon the silage was made by burying a piece of the wood in the silage. This gave the silage a strong odor. An effect to determine the quantity of creosote in the feed by analysis was unsuccessful, as there was not enough creosote to show in the analysis. Concerning this test the laboratory report reads as follows:

This silage when fed to cows was not relished and two of the animals were affected slightly by it. This was a very severe test, however, for the wood was given a heavier treatment than is now considered necessary. Moreover, had the contaminated portion been thoroughly mixed with the rest of the silage it is doubtful whether the effect would have been noticeable. This conclusion is borne out by the results obtained in practice.

During the several years in which it has been the practice to treat wood for silos, the Federal Dairy Division has not heard of a single case in which the health of the ainmals has been impaired by feeding silage from silos made of wood treated with creosote.

Interest in Better Seed.

THE showing made in the agricultural department at the state fair this year by those who are growing pure-bred grains and are following out the improved methods with potatoes served to illustrate, more than ever, the great value of this educational work being carried on along these lines in Wisconsin. Apparently the day is passing when barley is just barley or oats just oats and corn just corn. With an adverse season for potatoes and the small grains, it developed that in most every case the prize-winning samples were shown by the farmers who are studying improved methods and are growing the better and standard varieties.

Too much cannot be said in favor of growing only the best, of using only the best seed and in following the best cultural methods. Unfortunately there are still many who will sow just any kind of seed, so it is the variety they wish to grow. There are too many potato growers who are content to grow a lot of nondescript varieties and use, year after year, seed that was good enough for John and is good enough for them. The result was that in the showing of grains and potatoes the prizes went to the men who were using discretion in the selection of their seed and with whom the best is none too good.

This was especially true in potatoes. The Wisconsin crop is below normal because of the dry weather and late blight in some sections, but the display for show purposes was better than anticipated. These potatoes came from fields where certified seed has been used; where the best cultural methods have been employed, and it is these potato growers who this year will reap the big profits. The yield in many cases was light, but where the quality was kept up, the net profit per acre will be maintained. As one exhibitor said: He would rather have 100 bushels to the acre, worth $1, than 200 bushels worth 50 cents. Quality is what counts and quality comes only through careful selection and study. In grains the quality was pronounced splendid, although dry weather reduced the yields and the growers of the pedigree grains made splendid showings, all of which tends to show the great value of the educational work being carried on by the experiment association, and this work certainly bore good fruit this year.

Farm Trip in Racine and Kenosha Counties.

The results of another season's work with the disease-resistant variety of cabbage developed by representatives of the agricultural experiment station of the University of Wisconsin will be noted on September 30th in a farm to farm trip through the truck-growing districts of Racine and Kenosha counties.

Besides the large delegation of farmers from this district who are vitally interested in the success of this new variety (the Wisconsin Holander), which has once more placed the cabbage industry of this section on a sound basis, there will be visitors in the party from other parts of Wisconsin and adjoining states.

Acting as pilots will be W. J. Hansche, chairman of the growers' committee; Dr. L. R. Jones and R. E. Vaughan, plant disease specialists of the college of agriculture, who are directly responsible for the development of the new variety, and J. C. Walker, in charge of the field station of the college of agriculture located at Racine.

During the tour at least a dozen leading cabbage farms will be visited. The list includes those of William Braid, John Lichter and Henry Broesch, Kenosha, and A. J. Piper and W. J. Hansche, Racine. Fields where the new variety of cabbage have been used with good results will be seen.

The officials in charge of the distribution of this resistant cabbage seed state that about 400 pounds will be ready for planting next year. The seed is sent, where possible, to growers who will co-operate in the work to the fullest extent. A committee composed of W. J. Hansche, A. J. Piper, S. B. Swingle and S. B. Walker, Racine; Henry Broesch, Kenosha, and William Miller, Sommers, have charge of the seed distribution.

Some Autumnal Reflections.

To the Editor:—By the time The Wisconsin Farmer has placed this article in its columns the season of autumn for 1916 will have begun. Thus, at the final clearing of the land from the summer's crops, at the last gala excursions of the year, we are apt to sum up the results of our farming operations for the period which has just passed.

When we read the varied crop reports of Wisconsin we become convinced that this is truly a state great in area. If we reside in southern Wisconsin we have probably been centering our minds pretty closely on our own particular county. Then we read in a friendly agricultural paper such as The Wisconsin Farmer that the potato crop is going to be fairly good, and we are surprised, for in our locality this crop has been anything but promising. We are again surprised when a northern county sends word that its corn is far from being up to standard, for we, here in southern Wisconsin, have such universally good corn this year that it seems hard to believe that there is any poor corn in the entire state.

In other words, if we have not traveled much we become self-centered and narrow-minded. These two qualities, which few wish to possess, have in a certain measure been removed by the automobile. People are able to get around to their distant neighbors with the gasoline buggy; become acquainted, discover other's hopes and plans, and they themselves are thus taught to think in bigger circles. The man who owns an auto sees the world from a viewpoint different from that of his neighbor who does not own one. This is one of the desirable results which the motor car has brought alike to the farmer and his city brother. However, there are, despite all this talk about the desirability of owning a machine, some evil effects due to such possession which are detrimental to a degree.

In the first place, the pleasure, direct or indirect, derived from riding in a car is almost purely physical. It matters not how illiterate or gross he is, anyone feels an exhilaration from an auto ride, just as any healthy person derives pleasure from partaking of a hearty meal. In itself there is nothing wrong about this. So much for the direct pleasure from the auto. The indirect pleasure is derived when, while taking a ride after the chores are done, we stop at a drug store and eat ice cream or perhaps at a saloon where we drink beer. You will note that these jogs are also purely physical and it is my contention that if a person spends all his spare moments during the summer in such car riding and refreshments he is not building himself up into the kind of man or the kind of farmer that America needs. We must be careful that we do not become a highty-flighty sort of people without those much-to-be-desired deeper qualities of mind and thought.

Perhaps the Lord himself had this idea when He created the season of winter when we must put away our cars for a spell and find recreation through other means. And what better means can we find than good reading? Now, as the evenings grow longer and indoors becomes more attractive. let us unearth the books which we laid aside in the spring. Let us especially encourage the young people to take up this pursuit of good literature. The car has probably taken them to dances and places of amusement this summer where their associates cared little for mental refinements and this effect should be nullified at such times as the present by well-chosen reading.

The classics of Shakespeare, Burns, Bacon and Goldsmith are always worthy of our time, but we farmers want to balance up this sort of literature with writings which treat directly of our business. These we will find in our trade journals or agricultural papers. I like to think of a farmer as a student who studies hard all winter concerning his business and then in the spring goes out and puts into practice that which he has learned.

There is scarcely anyone in agriculture today who can truthfully say that he is unable to obtain good reading on farming because of the vast amount of such matter which is printed in the United States. With over a thousand farm papers whose subscription prices range from 25 cents to $1.50 few need be without at least one. In choosing such a paper it seems reasonable to select one which covers all phases of farming and one's own locality or state in particular, for we want the writers to understand our particular crop and weather conditions. We want a paper with experienced, not theoretical, writers and with a genuine respect for the truth so that we may be guided by actual farmers' knowledge and not by trumped up day dreams.

In conclusion, then, let us resolve first to read good literature this fall and winter; next to read up thoroughly on agricultural problems, and, finally, to assure ourselves that as medium for the latter information we are using a thoroughly reliable farm paper.

Joseph E. Ryan.

Waukesha Co., Wisconsin.

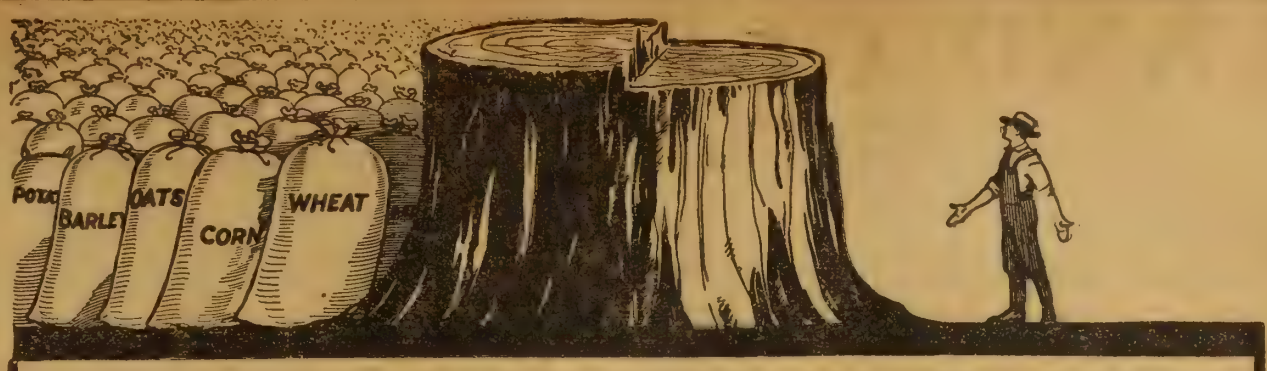
Good Stock For Rusk County.

To the Editor:—One hundred and fifty admirers of the Guernsey cow enjoyed the Rusk County Guernsey Breeders' Picnic held at the fair grounds last Saturday afternoon. Although the morning was rainy and the weather threatening until afternoon, a large number of people brought their picnic dinners. Mr. L. E. Scott, of Stanley, gave a very practical talk telling of the development of his Guernsey herd and pointing out the superiority of the Guernsey breed over other dairy breeds as economical butter fat producers. Mr. Scott quoted figures to prove that no other breed excels the Guernsey in cheapness and production. Mr. A. A. Hadden read an inspiring story entitled "When the Cows Come Home." The Guernsey heifers that had been purchased through the co-operation of the Rusk County Bank and the Rusk County Guernsey Breeders' Association were then sold at auction. As the old saying goes, "They went like hot cakes." The highest price was $105 for a two-year-old heifer to freshen next month. The average for the two year olds was $80. They were taken to several parts of the county. These heifers were bought in Portage county from some of the best herds there. Several farmers have expressed their desire to have another carload of these good heifers brought into Rusk county and sold at cost. If enough orders are received to justify the trip and the expense of selecting this carload they will be brought in soon. Those interested are asked to speak to Mr. Streater, of the Rusk County Bank, or to L. E. McGill.

A cow-judging contest for men and a cow-judging contest for boys was conducted by County Representative Householder. William Sorrels, of Sheldon, won first in the men's contest. W. Hein, of Tony, won first prize in the boys' contest. The association plans to hold several Guernsey meetings during the winter months.

L. E. McGill.

Secretary of the Rusk County Guernsey Breeders' Association.



Between You and Bigger Crops

stand the stumps. Clear them out. Change your profitless, tax-eating stump fields into cultivated farm land. Clear your land the quickest, cheapest and best way. Rip out your stumps with a

Kirstin One Man Stump Puller

It gives you a giant's power. A little push of a few pounds on the handle gives a pull of tons on the stump.

It does not take many such pushes to land Mr. Stump and all his roots completely out of the ground. It will clear an acre from a single setting. One man can carry it, set it, and work it with ease—horses are unnecessary.

Your money back unless it pulls the stumps from your land. Try it ten days. No strings to this promise.

Send for Big, Free Catalogue Today

Learn of our Easy Payment Plan. See the photographs of the stumps it has pulled. Read the letters from farmers who have bought Kirstins and are glad that they did. Learn how a Kirstin has often paid for itself in a single day. Read about the Kirstin Service, which gives, Free, information about Land Clearing. Don't buy a puller until you see this book.

LAND CLEARING METHODS.

Use of the Stump Puller and Dynamite Shown in Practical Demonstrations Held Near Cities and Towns on the Main Line of the Soo Railroad.

THE land-clearing problem in Wisconsin, which was given its first organized recognition last spring when demonstrations of clearing land by explosives and mechanical power were given at various cities in the northern part of the state, is being given added impetus by the "land-clearing special" which is now being run over the lines of the Soo railroad, touching points not visited on the first trip. The tour opened on Monday, September 18th, at Birchwood, Washburn county, followed by successful demonstrations last week at Weyerhauser, Rusk county, and Patzua, Douglas county, and the attendance at these places served to indicate that the interest in this trip of the special will be even greater than that on the first trip which surpassed early anticipations.

When the demonstrations were first inaugurated last spring many were skeptical as to their success. Some were heard to remark that the stumps could not be removed to the satisfaction of the crowds and that the work would be long and tedious as well as tiresome. But all of this prejudice has been overcome. Farmers who have this problem to contend with have heard of the first demonstrations which they missed, and, knowing of their success, are now anxious to attend and learn first hand how the barriers to cultivation on their farms may be efficiently and economically disposed of. This is the aim of the "land-clearing demonstration" and the close attention given by visitors at the initial demonstrations showed that they came to learn and were anxious for information on how to meet this problem of the settler and the man with land that only needs stumping to make it productive. In this respect the present tour promises to be more successful than the first, as the knockers are absent and the manufacturers have demonstrated that the work can be done efficiently.

ROUTE OF LAND-CLEARING SPECIAL ON SOO LINE IN UPPER WISCONSIN.

The present tour is under the personal direction of Mr. Carl Livingston, of the agricultural engineering department of the Wisconsin College of Agriculture, and co-operating are the A. J. Kirstin Co., of Escanaba, Mich.; the Hercules Manufacturing Co., of Centerville, Iowa; the Soo Line, the Du Pont Powder Co., and the Wisconsin Advancement Association. Hand and horse stump pullers are being demonstrated together with the use of dynamite and the Conrad home-made piler, which the Wisconsin Advancement Association and the college of agriculture are urging. This was the only piler to be seen at the early demonstrations and its work attracted considerable attention, being the product of enterprising men of Rusk county. The pile used was made of native timbers taken from the woods a few days before the demonstration started and can be made by any farmer with a carpenter or blacksmith to supply the necessary bolts and braces.

THE ONE-MAN OUTFIT AT WORK ON DEMONSTRATION GROUNDS.

A HORSE-POWER PULLEY WHICH HAS PROVED ITS WORTH BY ACTUAL TEST.

DOING A CLEAN JOB WITH A HORSE-POWER STUMP PULLER.

GETTING READY TO RAISE STUMP WITH DYNAMITE.

The tour started off with a whoop at Birchwood where some 300 persons were present. This was considered especially good, considering the fact that the farmers were very busy putting an excellent crop of corn into their silos, following a heavy frost a few days previous, and also considering the condition of the roads following a big rain. At Weyerhauser the crowd numbered about 700 and Mr. Livingston told the writer that during the entire spring tour he had never seen a crowd more attentive or so bent on securing information. The farmers came to ask questions, and, as stumping is a very big problem in Rusk county, the demonstrators were where demonstrations have also been kept very busy giving out information. At Patzau, Exeland and Gilman, held, up to this time the attendance has been good and it will be well for our readers to keep in mind the dates for future demonstrations, which are, with the places, as follows:

September 29th at Owen.
October 2d at Medford.
October 4th at Phillips.
October 6th at Butternut.
October 9th at Marengo.
October 11th at Glen Flora.
October 13th at Rhinelander.
October 16th at North Crandon.
October 18th at Armstrong Creek.

Only one-day demonstrations are being given on this tour, as it was discovered in the spring trip that most of the crowd came on one day and the two-day plan was dropped. This permits a day between demonstrations, so that in case it rains or other causes prevent a demonstration on the day set it can be given on the day following. At each stop there will be a local chairman and much of the success, so far as the attendance is concerned, depends upon these local chairmen. Mr. C. P. West, county agricultural representative of Sawyer county, was in charge at Birchwood; Mr. Glenn Householder, county agricultural representative of Rusk county, Weyerhauser; Mr. J. M. Walz, county agricultural representative of Douglas county, at Patzau; Mr. West also at Exeland, and Mr. R. A. Kolb, county agricultural representative of Taylor county, at Gilman. Mr. Gunder Anderson will be in charge at Owen, Mr. Griffith Richards at Phillips, Mr. C. B. Post at Butternut and Marengo, Mr. Householder at Glen Flora, Mr. W. D. Juday, county agricultural representative, at Rhinelander; Mr. John Swenehart, county agricultural representative, at North Crandon and Armstrong Creek. These will complete the tour for this fall.

The interest which has been shown by the farmers in these demonstrations indicates that Wisconsin has been very backward in taking hold of this problem of clearing its 7,500,000 acres of tillable lands of stumps many years ago. Had something of this kind been undertaken ten years ago it is safe to say that Upper Wisconsin would today be farther advanced than now and that the results would have been startling. The purpose of these demonstrations is twofold. First, to convince the farmers that land can be cleared of stumps efficiently and at a comparatively small cost. Secondly, to arrive at some conclusions on the cost of clearing land. Many real estate promoters in past years have placed their estimates too low in order to sell their land, all to the discouragement of the settler. This has served to retard, rather than develop, and Mr. Livingston hopes to be able to arrive at some definite conclusions after this tour has been completed. The manufacturers are also keeping close figures and it will be a shame if something definite is not done to follow up the good work being done by the "land-clearing special." The next legislature should provide funds for carrying on this work so that it might be carried on effectively. It must be borne in mind that none of the expense of these tours is being borne by the state. The manufacturers are meeting the expense attendant to demonstrating their machines, the

DITCHING WITH EXPLOSIVES—THIRTY-TWO STICKS USED IN THIS DEMONSTRATION.

FACTS FOR MOTOR CAR BUYERS

When you buy your motor car today, the things that should concern you most are not mere claims or assertions, but absolute facts. Realizing this, we are pointing out to you in this advertisement absolute facts and figures which were obtained from a direct comparison of cars and specifications made by Motor, Motor Age and Automobile.

The following analysis of different cars, made in a purely unprejudiced way, from the data as published in the journals mentioned above, enables you to actually prove the relative merit of Studebaker cars in comparison with others; and for your own benefit, you should consider carefully the facts disclosed by this analysis before you decide on the car you will buy.

Price

Price is only one factor in making up the composite whole of "GREATEST VALUE." The average price, the standard with which to compare all automobile prices, is made up from 439 models of 1917 cars, and shows that the standard car would sell for $1600. This is just $515—47%—higher than the cost of a Series 17 Studebaker SIX. It is $315—almost 25%—above the average cost of the eight Studebaker models. Every Studebaker purchaser knows the benefit of the $300 to $500 saving.

But, understand us, a Studebaker owner does not get from $300 to $500 less value. Figures prove he gets greater value, point by point, not only in the average of all cars, but also in the average of all cars of the same and higher price classes.

Every important feature of Studebaker construction is used either by the largest number of makers—an endorsement in itself—or by those makers whose cars sell for a much higher price than Studebaker—a still higher endorsement.

Seating Capacity

Of the 109 models of all classes of Fours, Sixes and Eights selling for less than $1,000, the Studebaker FOUR is the only car which seats seven people. And there are only three models of all cars selling for less than $1100 which have a seven-passenger capacity.

The average price of all seven-passenger, four-cylinder models is $2738, three times the price of the Studebaker FOUR. The average price of all seven-passenger Sixes, Eights and Twelves is $3990, three and seven-tenths times the price of a Studebaker SIX.

Power

The farmer needs power in an automobile. The rough, heavy roads and steep hills of the country make power the basis on which most people living in the country are sold. From the very beginning Studebaker has demonstrated the superiority of the Series 17 in this respect. These figures clinch the argument.

The average price of all the 105 Six, Eight and Twelve cylinder cars manufactured is $1917, yet the Studebaker SIX at $1085 is 10.9% ahead of the average of these 105 cars in power. Of the few which equal or exceed the rating of the Studebaker SIX in power, the average price is $2900—almost three times as much as the Studebaker SIX. Why the additional $1800?

The average price of all of the 78 four-cylinder cars is $1278, yet the Studebaker FOUR at $875 is 7.8% ahead of the average of all of them in power. Out of the few 78 four-cylinder cars which exceed the horsepower rating of the Studebaker FOUR, the average price is $2022. Again nearly three times the price of the Studebaker. Why the additional $1147?

But not only in POWER, but in EVERY important feature of construction, regardless of cost, Studebaker uses design recognized by the majority as the BEST.

The styles in construction which have proven best in the opinion of the public and the automobile engineering profession, stand as the guide for Studebaker—and it has always been a Studebaker policy to continually improve its product and to merit the confidence and endorsement of the public.

And now, point by point, from the data as given by the motor car journals, we show you the proof that every important feature of Studebaker construction has been adopted by the majority of motor car builders.

Fours and Sixes

Popular demand has centered on cars of four and six cylinders, hence Studebaker confines itself to these two types. The wisdom of this policy is shown when the classification of all cars shows that Fours and Sixes together constitute 85.8% of all cars manufactured. The division is as follows:

Fours	44.7%
Sixes	41.1%
Eights	11.6%
Twelves	2.6%

L-Head Motor

Of the 439 models of 1917 cars, 71.1% use the L-Head type of motor exclusively. If the demand were for valve-in-head, T-head, or sleeve valve motors, the percentage of these types would be greater. The accompanying table shows the trend of public demand and it proves conclusively that Studebaker is building what the public wants:

L-Head	71.1%
Valve-in-Head	12.3%
T-Head	12.2%
Sleeve Valve	4.4%

Gasoline Feed System

In keeping with the demand for a better streamline design, horizontal body lines, greater gasoline capacity, and to insure a positive and even flow of fuel to the carburetor, 55% of manufacturers have adopted the vacuum feed. The division is as follows:

Vacuum Feed	55.0%
Gravity Feed	34.4%
Pressure Feed	10.6%

The average price of all Fours using Vacuum Feed system is $1570; of all Sixes using it, the average price is $1628—yet we find it in the Studebaker at much less money.

Ignition

The simplicity, the reliability, the durability and the freedom from all trouble of the generator-battery ignition system have proven that Studebaker was right in adopting it in preference to magneto ignition. Of the two types of ignition on the 439 models, the percentages are as follows:

Generator-Battery	56.4%
Magneto	43.6%

Cylinders En Bloc

Studebaker was the first to cast successfully six cylinders in one block. Advanced ideas in engineering and factory practice put Studebaker in the lead. Today 73.6% of all manufacturers are following Studebaker's example:

Block Cast Motors	73.6%
Cast in Pairs	10.4%
Cast Singly and in Threes	16.0%

Timing Gears

Smooth, quiet, positive-running timing gears are essential to the satisfaction of all car owners. Experience has shown that helical gears are the type best suited to accomplish this result. Studebaker, as usual, lines up with what is generally conceded to be the best type:

Helical Gear-Driven Timing Gears	70.0%
Silent Chain Drive	16.0%
Spur Gears	14.0%

Cooling System

To properly cool a motor the majority of engineers—and especially those who design the highest priced cars—have decided in favor of the pump system. This is the only system Studebaker ever used:

Circulating Pump	60.5%
Thermo-Syphon	38.8%
Air Cooled	.7%

Starting System

Studebaker was one of the first to use an electric starting and lighting system. Studebaker-Wagner two-unit system is now used instead of the less efficient single-unit system of the first year. And again Studebaker superiority is proved by the comparative percentages:

Two-Unit Systems	51.0%
Single-Unit Systems	49.0%

Still more convincing is the use in Studebaker cars of the six-volt system. There are other voltages used, but experience has shown that the six-volt is most efficient—and consequently it is used by Studebaker:

Six Volt System	69.2%
Twelve-Volt System	23.6%
Miscellaneous	7.2%

Springs

Studebaker has always held to the superiority of the three-quarter elliptic spring for rear suspension, and now, after three years' vigorous campaigning, the advantages of this type, in spite of its higher cost, make it the ruling favorite. And the three-quarter elliptic spring is used almost exclusively on all higher priced cars:

Three-Quarter Elliptic	46.5%
Cantilever	28.7%
Semi-Elliptic	10.9%
Platform	6.3%
Miscellaneous	7.6%

Rear Axle

Studebaker has from the beginning led the field in the simplicity, safety, lightness and efficiency of rear axle design, and in pursuance of this policy has adhered strictly to the full-floating rear axle. The preference is indicated as follows:

Full-Floating	51.1%
Three-Quarter Floating	27.1%
Semi-Floating	21.8%

Timken Bearings

Most manufacturers hesitate to equip their product completely with Timken bearings because of the cost, but Studebaker does not let this consideration stand in the way for a moment. And Studebaker is one of only fourteen manufacturers to offer full Timken equipment; the average price of the other manufacturers' cars is $1760.

This convincing evidence of Studebaker superiority has increased Studebaker production 100%. Studebaker has produced and sold 75,000 cars in the last fourteen months—more seven-passenger sixes and more seven-passenger fours than any other manufacturer ever produced in the same length of time.

In the Studebaker car the buyer finds the ONLY CAR which combines the consensus of the opinion of the engineering profession; which so completely satisfies the popular demands of the public who rule the fashions; which exceeds in power, comfort and size the "average" or standard car—at a price from $300 to $500 below the average. WHY? BECAUSE IT'S A STUDEBAKER!

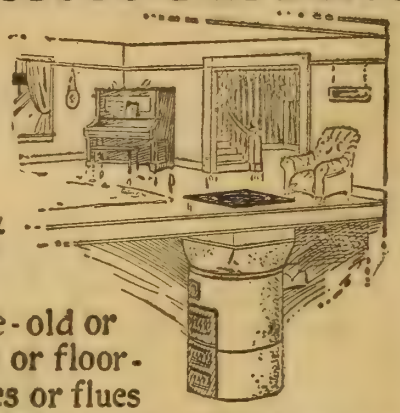
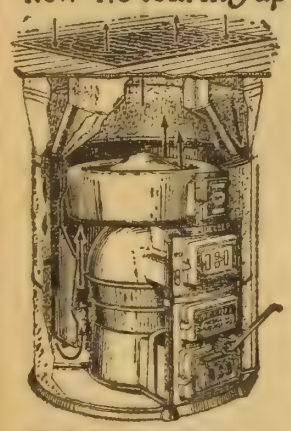
Replace Your Stoves With a Mueller Pipeless Furnace

Better Heat: Better Health Less Work.: Cheaper Fuel Cost



Easily installed in any home - old or new - No tearing up of walls or floor -



No pipes or flues
One register heats entire house - - -
Burns coal, wood or coke - - - -
Cuts fuel bills 25% - *No waste heat*

MUELLER PIPELESS FURNACE

Every home, no matter how long built or how small, can now enjoy the comfort of furnace heat without making expensive alterations for pipes and flues. The Mueller Pipeless Furnace will go into the smallest cellar easily. If you have no cellar, you can dig a pit under your house and place it there. You can install it yourself. Cut holes for the register in the floor and connect furnace with the chimney. That's all.

The Mueller Pipeless ventilates as well as heats by keeping air in constant circulation. Nearly 60 years of furnace making is back of the Mueller Pipeless. It is scientifically and substantially built of solid cast iron and will last a lifetime. Our free book explains why you should consider the Mueller above all others. Send for it.

Write for Free Booklet

Gives you all the facts about the Pipeless System of heating and the Mueller Pipeless Furnace. Gives full details of construction and shows pictures of installation. Tells how to apply it to your own home, old or new; how to tell the difference between good and poor furnaces — the things to look out for and to avoid. This Booklet sent free on request.

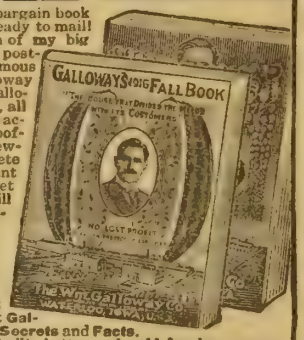
L. J. Mueller Furnace Co., 204 Reed Street **Milwaukee, Wis.**

As we are makers of heating systems of all kinds since 1857—regular hot air pipe furnaces, steam or hot water boilers and vapor heating systems — we are in a position to give you honest advice on your heating requirements.

GALLOWAY'S FREE FALL BOOKS

NOW READY

My new 100 page fall bargain book just off the press and ready to mail! Also the second edition of my big 250 page 1916 catalog. A postal gets your copies today. These books describe the famous Galloway line of Sanitary Cream Separators, the Galloway Gasoline and Kerosene Engines, the new 1917 models Galloway Manure Spreaders, our new 1917 12-20 h. p. Tractor, all kinds of farm machinery, ensilage cutters, power house accessories, grinders, buggies, wagons, harness, fencing, roofing, saddles, automobiles, stock tanks, auto accessories, sewing machines, household goods, carpets, furniture, complete line of clothing for every member of the family. I want you to have your copies! Drop a postal today. Let these two great books guide your fall buying and they will save you from $200 to $500. Remember Galloway is manufacturing headquarters for



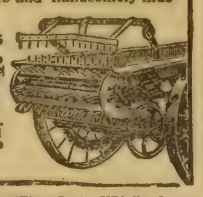
ENGINES---SEPARATORS
SPREADERS---TRACTORS

As well as many lines of general merchandise which are sold direct from factory to you at one small profit. These books tell truth about **Galloway Sanitary Cream Separators.** They give **Gasoline Engine Secrets** and **Facts.** They tell how and why the **Galloway Manure Spreaders** are built better and sold for less money. Fully describe my **new 12-20 h. p. tractor.** A copy of each book should be in your hands even if you are not now in the market for a single thing. Printed in four colors and handsomely illustrated. **Ask for your free copies today.**

Separators $34.50 up

WM. GALLOWAY, Pres., THE WM. GALLOWAY COMPANY
BOX 37 WATERLOO, IOWA, FARM IMPLEMENT MANUFACTURING SPECIALISTS

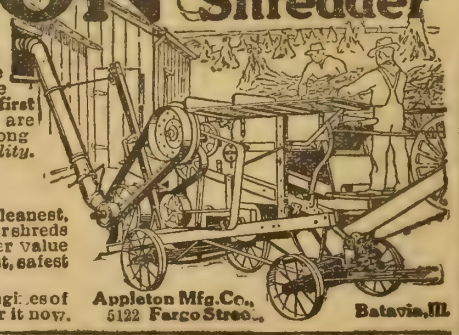
Engines of all sizes from 1 3-4 to 16 h. p. heavy duty moguls. Prices way down. Big engines lower than ever.



These two books fully describe the 1917 models of Galloway's famous spreaders. Don't buy a spreader of any kind until you have seen these books.

APPLETON Husker and Shredder

Every year hundreds more farmers buy huskers, as they find the most economical, efficient way to save all the *value* of a corn crop is to husk the ears and make fodder of leaves and stalks. Appleton was the first successful husker. Appletons made years ago are giving good service today. Few parts, extra strong mean long life, few repairs and sure *dependability.*



GUARANTEED TO DO MORE WORK WITH LESS POWER

than any husker of equal size. Appleton husks cleanest, shells least; has most efficient corn saver. Cuts or shreds leaves and stalks while husking ears. Fodder value saved from small acreage pays its cost. Easiest, safest to operate. Works in all conditions of corn.

Free Husker Book: describes 4 sizes for engines of 4 h.p and up. Write for it now.

Appleton Mfg. Co., 5122 Fargo Street, **Batavia, Ill.**

When writing to adverisers kindly mention The Wisconsin Farmer.

Soo Line is furnishing the train at its expense and the college is donating Mr. Livingston's time. So it is not a state proposition, but at the same time one of state-wide interest and should be encouraged by the state.

It is estimated, figuring fifty stumps to the acre, that there are 400,000,000 stumps in Wisconsin on land lying idle, but which is fertile and capable of producing splendid crops. It can be readily seen that this is a big problem for Wisconsin and if these demonstrations can result in reducing the cost of clearing 25 per cent it would mean a big item in dollars and cents to the state. Mr. Livingston places the cost of removing the average stump at conservatively 50 cents each. This means it will cost $200,000,000 to clear Wisconsin of stumps and a 25 per cent saving would be a saving of $50,000,000. This is the aim of every co-operator at these demonstrations—to show how economically this work can be done and the farmer with stumps who misses a demonstration is missing a great deal. We heard one man remark at Weyerhauser that he went by, but didn't see any reason to stop and watch the work. That is the wrong spirit and not the spirit being shown, as a whole, as a more attentive crowd we never saw anywhere than at Weyerhauser.

These demonstrations are conducted on the order of tractor shows. The fields are spaced off and each manufacturer allotted certain stumps and demonstrations on pulling; splitting and piling them continue all day. There is one handpower puller being shown, two horse power pullers and one piler in addition to the use of dynamite. Much interest is being shown in all and especially in the use of dynamite which is used in conjunction with pullers as well as separately. Competent men are on hand to explain everything in detail and as an indication of the efforts to bring about a saving in stumping the powder people are showing the great value of 20 per cent dynamite which is 3 cents a pound cheaper than 40 per cent, which has been generally used. The use of higher per cent explosives has come into northern Wisconsin because it was used and it was thought should be used on stumps. Of course, conditions vary and in sandy soil 40 per cent may be necessary, but at Weyerhauser it was shown that four pounds of 20 per cent lifted entirely a stump which farmers agreed should have four pounds of 40 per cent. The placing of charges was also demonstrated. Many farmers favor one charge under the center when it is desired to blast a stump completely. For cracking purposes in conjunction with a puller it is a different matter. But where the explosive was distributed about the roots it was shown that the hole was not so deep, not so much subsoil was brought up and the work just as effective. These were fired with electricity and we are calling attention to these particular demonstrations to show the reader what he may learn by attending one of these visits of the "land-clearing special." The manufacturers of mechanical pullers experiment on all kinds of stumps under all kind of conditions, from pulling them directly to splitting before pulling by using dynamite. It is a treat to anyone who has stumps to contend with to attend such a demonstration that is now to be seen in this state, and, as one onlooker remarked, it is a part of the evolution that is taking place in Upper Wisconsin. It is educative and of great value.

Demonstrations prove conclusively thus far that land can be cleared economically with either dynamite or stump pullers and that these two methods work well in combination. There are many stumps that can be taken out cheaper by the use of both than by either singly and some others can be disposed of cheaper without the use of pullers. Then there are many who wish to use dynamite exclusively and all of these problems are threshed out at the demonstrations. We are told that there was never so much interest in clearing as this fall and this campaign with the assistance of the manufacturers should eventually prove of great worth to them.

The Wisconsin Advancement Association is co-operating at this time to bring about more stumping. It has taken up a campaign in connection with the demonstrations to secure dynamite for the settlers or those who wish it in carload lots. In this way 20 per cent dynamite may be secured at 12 cents per pound. This would be a great saving to the farmers of the state and it is also proposed to organize co-operative land-clearing clubs, etc. All of this shows a tendency toward a greater development along these lines and the "land-clearing special," of which the college of agriculture was first sponsor, is certainly doing a splendid work in drawing these matters to public attention.

GET TRAPS IN ORDER.

Time to Prepare For Big Fur Season.

Dame Fashion has decreed that Milady shall wear furs this year despite the fact that prices will be high. For that is always the way—the higher prices go the more certain are furs to find favor with the careful dresser.

Last year was a heavy fur season. Styles demanded the use of fur on almost every kind of garment. From hats to boot tops, fur was the correct thing—proper practically everywhere. Yet, from present indications, this year threatens to excel it and already fur buyers are manifesting an active interest and making good demand for the raw furs which will soon be coming on the market.

The result should be most satisfactory to the tanner—for indications point to a year of steady demand at good prices. Every farmer should be able in the coming months to add several hundreds of dollars to his income through trapping.

All over the country farmers are getting their traps in order—overhauling them, scraping off the rust, oiling them up and adding a few new ones to their collections—laying supplies of animal bait and otherwise preparing to take advantage of the demand and make some extra money while the making is good.

How about your traps—have you gone over them? Better do it, don't you think?

Hog raisers know
the value of good tankage for quick growth, big frame and long profits. But do you know any other concern that makes a money-back guarantee on tankage? See page 1539, our General Catalog.
Sears, Roebuck and Co., Chicago.

In and Around Wisconsin

The Stevens' Point Fair Association gathered a fine exhibit of agricultural products and a good live stock show this year, but the weather man was unkind and the weather was either bad or threatening all week. The receipts for the fair were $3,029.31. The fair lost about $700.

Pickling stations in Dunn county are being well filled this year. There are reports from a few stations which say that the run will not be so great as in some previous years. The minimum rate paid farmers is $1 per 100 pounds, though many have received much more than that for their product. Some have an average minimum of near $1.50 and fancy stock has brought fairly good prices.

The annual Green county cheese day celebration will be held in the city of Monroe, Tuesday, October 10th. This is the greatest cheese celebration held in the country; in fact, it is the original "cheese day." Free lunch and entertainment are provided and also a splendid parade. There were about 20,000 at the cheese day celebration last year. Green county makes more foreign cheese than any other county in the United States.

A stock sale is to be held at Delavan, October 30th and 31st. Those in charge are F. S. Showers, Delavan, for the Jersey breed; Charles Turner, of Spring Prairie, for the Holstein breed; C. W. Thompson, of Lake Geneva, for the Hereford breed. The Citizens' League and Stock Breeders' Association are working hand in hand for the benefit of the sale and the live stock interests of Walworth county.

Wisconsin, according to the latest figures, had 55,592 silos and this is just about one-third of the total number of farms. It is also about one-third the number of silos we ought to have in the state. Experience has proved this year that the average Wisconsin farm where a good many stock are kept not only needs a silo but it needs both a winter and a summer silo if the best results are to be obtained at the milk pail in a dry season.

Within another week or two the schedule for farmers' institutes in Wisconsin for the winter of 1916-17 will be announced. The Wisconsin Farmer is advised that a number of application blanks sent out have not been returned. Inasmuch as appointments are made only on applications signed by farmers of the community and returned to the office of the superintendent of farmers' institutes at Madison, it will be necessary for those who wish to be included in the list to get their applications in at once.

Wisconsin was splendidly represented at the Illinois State Fair, Springfield, with a display of grains, grasses and seeds. Mr. C. P. Norgord, secretary of agriculture, was in charge of the exhibits and he made a good boost for Wisconsin. A large number of names of people who are interested in Wisconsin lands were secured at the booth which was situated in the fine arts building. Literature was distributed. Visitors were surprised to learn that Wisconsin leads in production per acre of so many farm crops. While Illinois raises some good corn, Illinois has never been able to get the average production per acre that Wisconsin can show.

Dairy farmers of Winnebago county, Wisconsin, made an automobile trip recently through Green county, Wisconsin. They inspected a number of herds, including the Holsteins at the Albert Babler & Son farm and the Brown Swiss cattle at the Voegeli farm. Mr. Jacob Voegeli was host at luncheon to almost 200 people. There were thirty-five automobiles which made the entire trip from Winnebago county and return. Our neighbors on the south learned a great deal about dairying, as well they might expect when traveling over one of the very best dairy counties in the United States. Conditions are not so different in the Illinois county across the line that they might not also make a record in dairying.

S. E. Foster, proprietor of the Golden Glow Farm near New Richmond, St. Croix county, owns a Holstein grade cow which has made a record of 1,891 pounds of milk in thirty-one days and at 4.4 per cent test this milk produced 83.2 pounds of fat. This record was made under supervision of the Stillwater Cow-Testing Association, of Stillwater, Minn. Mr. Foster recently bought the cow from a Stillwater man.

Wisconsin farmers who bought good seed corn last year, even though they paid very high prices for it, are now beginning to see that they made a good investment. One farmer who paid $10 a bushel says that he is more than pleased at the result and that he has much better corn than neighbors who took a good deal more chances on their corn. It does not pay to get poor seed corn. If it is necessary to pay high for good seed better pay it than take the chance.

Representative growers of ginseng in Wisconsin met recently at Wausau. They visited the ginseng gardens there and discussed the question of forming a national organization. J. H. Kohler and W. J. Zohl were selected delegates to attend a meeting of state organizations to be held in Chicago in November. The Wisconsin growers selected officers as follows:

President—J. H. Koehler, Wausau.
First Vice President—Geo. Maxwell, Antigo.
Second Vice President—H. Loehr, Johnsburg.
Secretary and Treasurer—C. S. Leykon, Antigo.
Executive Committee—J. W. Schwartz, Spring Green; C. N. Ray, Sparta and C. W. Guern.

Fruit and Garden

Fruit Awards at State Fair.

The competition in fruit displays, and especially apples, at the state fair this year was more interesting than might have been expected in a dry season. The Kickapoo Development Company, Gays Mills, won first prize on display of apples not to exceed twenty varieties. The other prize winners were as follows:

Second, G. H. Townsend; third, J. H. Coolier, Wauwatosa; fourth, Wm. Toole & Son, Baraboo; fifth J. S. Palmer, Baraboo, and sixth, J. E. Baer, Baraboo.

The Kickapoo Development Company also won first in the display of ten varieties, and other premiums were awarded as follows:

Second, Wm. Toole & Son; third, A. Meyer, Cascade; fourth, G. H. Townsend; fifth J. H. Coolier, and sixth, S. L. Brown & Son, Gays Mills.

An interesting competition was in the display of five varieties; Northwestern Greening, Gano, Windsor, Golden Russet and Tolman. The awards were as follows:

First, A. K. Bassett, Baraboo; second, G. H. Townsend; third, A. D. Barnes, Waupaca; fourth, J. E. Baer.

J. H. Coolier was awarded first prize for the best winter seedling and Elmer Severson, of Oshkosh, received first prize for largest apple. First prizes for the best peck of apples were awarded as follows:

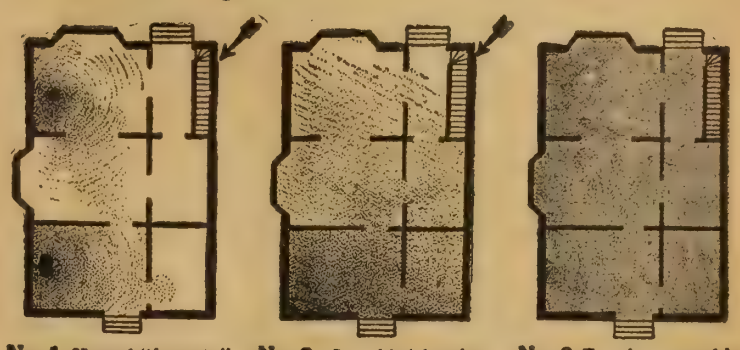
Fameuse—G. H. Townsend.
Golden Russet—J. E. Baer.
MacMahon—Kickapoo Development Company.
McIntosh—Kickapoo Development Company.
Newell—Kickapoo Development Company.
N. W. Greening—Kickapoo Development Company.
Patten Greening—S. L. Brown & Son.
Pewaukee—G. H. Townsend.
Plum Cider—Elmer Severson.
Salome—A. K. Bassett.
Westfield—A. Meyer.
Tolman—A. Meyer.
Utter—A. K. Bassett.
Wealthy—Wm. Toole & Son.
Windsor—A. K. Bassett.
Wolf River—J. E. Baer.

Miss E. M. Goelzer, of Oakwood, exhibited the best Hyslop crabs, the Kickapoo Development Company the best Transcendent crabs, and the Arpin Cranberry Company the best Whitney crabs. The best exhibit of pears was made by J. H. Coolier. The best collection of ten specimens, native varieties, of plums was exhibited by A. D. Barnes. In the exhibit of grapes, display not more than fifteen varieties, the awards were as follows:

First, John Reis, Twin Bluffs; second, H. R. Platt, Baraboo; third, A. K. Bassett, Baraboo.

The three $100 prizes awarded for the best commercial fruit exhibits were won by J. A. Hays, of Gays Mills, A. K. Bassett and John Reis.

Have this even, healthful *heat* in your home—



No. 1. Heated "in spots" by stoves
No. 2. One-sided heating by hot-air furnace
No. 3. Evenly warmed by an IDEAL Boiler

The shaded portions of the rooms above show how much a house is heated when a cold northeaster is blowing

Study the above diagram! It is one of the best explanations ever produced as to just what you can expect from different kinds of heating—and it tells you *why* Radiator Heating is the *best.*

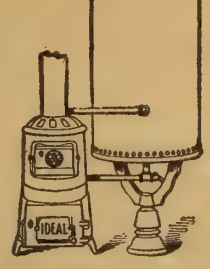
AMERICAN & IDEAL RADIATORS BOILERS

These diagrams show *results* and you will agree that the radiator warmed house (shown in No. 3) is the one way you want your house to be heated.

There is a direct rapid circulation of the heat from the fire to the Radiators—no matter how the wind blows! Then too, the IDEAL Boiler can be run with a *low* fire for chilly days or with a very bright, glowing fire for blizzard weather. Plenty of heat *all* over the house without coal-gas, ash-dust, lugging coal hods, or worry about the fire.

Basement or water pressure not necessary

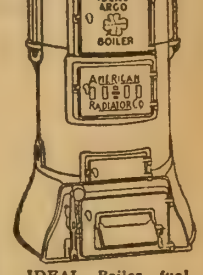
IDEAL Boiler is set in cellar, side-room or 'lean-to'; and same water is used for years. Put an IDEAL Boiler and AMERICAN Radiators in your house *this* year. Call up the nearest heating contractor and ask him to give you an estimate. Don't put off any longer, suffering the chills of old-fashioned heating methods during these severe winters.



Our IDEAL Hot Water Supply Boilers will supply plenty of warm water for home and stock at small cost of few dollars for fuel for season.

An IDEAL Heating outfit will protect and happify the whole family. It will keep away sickness due to chill spots and drafty floors. Less work than to run one stove. It will burn the cheapest fuel of your locality, screenings, lignite, wood, soft coal, etc.

A No. 5-19-W IDEAL Boiler and 450 ft. of 38-in. AMERICAN Radiators, costing the owner $200, were used to heat this farm house. At this price the goods can be bought of any reputable, competent Fitter. This did not include cost of labor, pipe, valves, freight, etc., which vary according to climatic and other conditions.



IDEAL Boiler fuel pots mix the air and coal gases as in a modern gas mantle, extracting ALL the heat from the fuel.

Write a postal now for "Ideal Heating" (free)

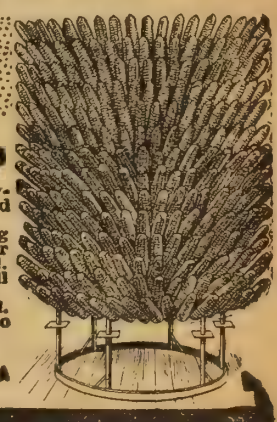
BAIN'S PEERLESS SEED CORN DRYER



PREPARE for NEXT YEAR'S CORN CROP

The thirty thousand farmers who used our mouse-proof Dryers and selected their seed corn carefully last fall had 100% good seed corn last spring.

Circular Dryer 3½ feet in diameter but has 300 feet drying space. Corn put on with double galvanized hooks. Each ear has complete circulation of air around it; thus curing every kernel. No moulding, heating or souring. Corn cured on the Dryer will increase the average farmer's corn crop from 10 to 25%.

The price of Dryers has not advanced, although built of steel. Dryers made in two styles and four sizes, ranging from 600 to 1500 ears.

Write now for particulars, prices, etc.

Why Let That Stump "Stump" You?

How often have you wished it was removed? How often have you considered the profits you are losing from the land on which it stands? Every day you neglect the removal of stumps, boulders or other obstructions, *you are losing just that much more in profits.*

BURTON

"Good Luck" Dynamite

is an easier and quicker method of removing obstructions. It is convenient—and far more economical than axes or stump-pullers, for it *saves time and money as well as labor.* With Burton "Good Luck" Dynamite you simply drill and fill the hole, light the fuse—and the obstruction is lifted out, broken into pieces convenient to handle.

"Good Luck" Dynamite is equally effective for ditching, tree-planting or subsoiling. It is uniform, positive and safer in its action. It is cheaper than most grades because a smaller charge is required.

Our distribution facilities enable us to guarantee prompt deliveries

Ask your dealer for "Good Luck" Dynamite. If there is no Burton dealer in your locality, write us at once. If you have any farm clearing problems to solve, write us and we will advise you what to do and what it will cost.

WATERLOO BOY KEROSENE TRACTOR

An 8-Horse Farm Worker at a 2-Horse Upkeep Cost

PLOWS EIGHT ACRES PER DAY

This tractor is one of the four Waterloo Boy farm machines which were awarded medals on superior merit at the Panama-Pacific Exposition.

Distinctively a cheap-fuel tractor, developing extraordinary power at a big saving in fuel cost. Its easy handling by one man or a boy, and its reliable, steady work at pulling or belt power, make it a favorite with careful farmer buyers.

$750

Pulls Three 14in. Plows. Only $250.00 per plow pulling capacity

BELT POWER FOR ALL NEEDS

Twenty Years of Engine Building Experience

is embodied in this tractor and it is guaranteed to the limit.

We can make prompt delivery. Write us for illustrated catalog and let us give you the name of our nearest agent.

Waterloo Gasoline Engine Company

3802 W. 3rd Avenue, Waterloo, Iowa

Heavy Frost Catches Late Potatoes

Corn, Mostly Matured, Not Much Damaged, and Promises Good Yield---Plowing and Silo Filling Rush Farmers.

WISCONSIN.

Burnett County.—Most of the threshing is done, with less than half a crop. Winter wheat is a good crop, yielding thirty bushels to an acre. Blue stem is poor and yielded three and four bushels. It can't be milled to flour. Marquis wheat yielded fifteen bushels to the acre, oats and barley twenty-five to thirty bushels. Corn is a good crop. Matured seed corn can be picked. A heavy frost between the 16th and 17th froze the potatoes and the corn somewhat, but has not done much damage. Silo filling is going on full blast. Cattle have had good pastures and have kept up the milk flow very well. There are no reports of disease. Potatoes will be a poor crop, but better than it looked three weeks ago.—Fred Larson.

Chippewa County.—Corn and potatoes are the main crops left in the fields. Potatoes are very poor and some people will not have enough for seed next spring. Corn is very good and lots of it is being put in silos now. The second crop of clover is being cut for seed and a lot of timothy was left and threshed for seed, too. The seed is good this year because it was dry a long time and filled out well. Vegetables and garden fruit are fairly good except cabbage, which is poor. Live stock is looking good this fall. Cows have dropped off in the flow of milk, because the pastures have not the nourishment for the cows that they had in the spring and summer.—Gustave E. Rheingans.

Clark County.—Threshing is all done in this locality, with a light crop. There has been sufficient rain for fall plowing and this will also help the late potatoes where the vines are green. Corn is nearly all cut. It will be a fair crop. There was a heavy frost on the 17th.—Fred Ackerman.

Grant County.—Threshing is finished and clover for seed has been cut. It will probably make from one to two bushels to the acre. Frost the 16th will make the corn on the lowlands soft and killed the potato vines so that there will be no late potatoes. The late rains have made the pastures look fine but the ground is still dry for fall plowing. Quite a few sheep and cattle have been shipped out on account of short feed.—P. R. Stoffel.

Iowa County.—Grain is almost all threshed and yielded good in spite of the dry weather. Some oats ran between fifty and sixty bushels to the acre. There has been enough frost to freeze the corn and there is a rush to get it into the silos. The corn crop is much better than last year and only that which was planted very late will be hurt much by the frost. Potatoes are very backward on account of the dry summer and will not amount to much now as the vines are frozen. The fruit crop is not of very good quality.—Will Dowling.

Iron County.—Small grain is about 90 per cent of a normal crop. Meadows and pastures are very good. Gardens are the best they have been for twenty-five years. No corn is raised except sweet corn. That crop was very good. There has been plenty of rain all through the season. Potatoes are good in quality but slightly below normal in yield. Live stock is in very fine condition.—H. P.

La Crosse County.—The corn crop is very good. Farmers are filling their silos. Threshing is finished in most parts, with grain a light crop. There is not much of a second crop of hay on high land, but a good harvest of wild hay. Owing to the dry weather potatoes will be a very light crop, recent rains being too late for much benefit. They were needed for fall plowing, which is just beginning. Stock of all kinds is doing well.—R. R. French.

La Fayette County.—The weather is somewhat cooler with plenty of moisture. Frost on the nights of September 15th, 16th and 17th killed the late potatoes and badly damaged late corn. Corn cutting and silo filling is in progress now. Quite a number of new silos have been built this fall. Some second crop clover is being cut for seed. Fall feed is getting a good start. Cows are milking some better lately and cheese prices are high, so the farmers are getting good returns from their cows. About the usual number of shoats are on feed and are looking well.—Lloyd Scott.

Marinette County.—Heavy frost on the 16th froze the potatoes, corn and garden vegetables. Since the rains commenced about two weeks ago potatoes have been growing nicely and will make perhaps one-third of a normal crop. Probably 75 per cent of the corn was matured before the frost. Silos are being filled now and in some instances soy beans are mixed with the corn. Threshing is about all done, with a fair yield of oats. There are more dairy cattle in the country now than for several years past. Some cows are dying from infection of the stomach. Pastures are better and probably will be good until snow flies. Several new silos are being built.—W. B. Sanderson.

Monroe County.—Threshing and silo filling were done in good weather and now the late rains will help the farmers to plow. The late potatoes look as if the rains will help them. Most of the corn that is not cut will be hurt by the hard frost of Sept. 17th. It will all be cut in a few days. Owing to the dry pastures the amount of cream for the last months has been short. The Sparta Co-operative Creamery has paid 36 cents for butter fat, so it is up to the farmers to take good care of their cows.—D. F. Jones.

Oconto County.—The oats crop was very light. It is nearly all threshed. Corn is about one-half cut. Some very good yields of corn, both fodder and grain, are reported. Potatoes are doing fine, although they will not be up to standard. There was a very heavy frost on the 16th, killing all small vines. Plowing is good, due to the heavy rain. Pastures are good and cattle are looking fine. There are plenty for sale. There are about 20 per cent more cattle than last year and 20 per cent less hogs.—William J. Hunter.

Ozaukee County.—Threshing is finished and silo filling is in full swing. A hard frost on September 15th froze the corn and some of the potatoes. Corn was mature on many farms and the frost did not damage that crop much as most of it will go into silos. Late potatoes were doing fine and promised a fair crop but the frost got the vines in many places. Pastures are green and most farmers have plenty of fall feed. The Ozaukee County Fair will be held at Cedarburg October 5th, 6th and 7th under the auspices of the Ozaukee County Agricultural Society—C. F. Dineen.

Pierce County.—Frost did considerable damage to corn and garden truck the night of the 16th. All except some late fields of corn are in the shock. Late potatoes were doing fine until frosted. Recent rains have revived the pastures to some extent and put the soil in fine shape for plowing. The second crop of clover is being saved for seed with promise of a good yield. The third cutting of alfalfa is light, owing to lack of rain. Apples are plentiful, but the high winds have probably taken half of them from the trees.—T. B. Eaton.

Racine County.—Threshing is finished in this locality and silo filling has begun. A frost on the night of the 16th damaged the corn quite badly, however, it is pretty well matured. The frost also killed all the melon and potato vines. Cabbage cutting has begun. The small crop is causing extremely high prices. Rains during the past few weeks have produced heavy pasturage both on old and new seeding. The number of cattle and the production of milk in this locality is increasing.—Charles Jeffery.

Rusk County.—The potato crop in general is light, but the potatoes are of good quality. Buyers are paying $1 a bushel for them delivered to the warehouse, and considerable quantities are being marketed. Many fields of corn were fully ripe before the frost on September 16th, and about half the farmers had their corn in the silo on that date, so that the frost did little damage. Threshing is practically done and clover hulling is now in progress with the seed yielding fairly well. Late rains have helped the field pastures and milk cows are doing well. Cheese factories report that for the month of September farmers will receive $2 per hundred for milk delivered. Fall plowing is about one-half finished and work in general is well advanced.—T. M. Thomas.

Taylor County.—The weather is cool with lots of rain. Most of the threshing is done and hay-baling has started. The hay crop is fairly good. Fall plowing is in full swing. Pastures are good and all live stock is in fine shape. The potato crop is poor. Corn is good. Most all garden truck is good except cabbage and peas, which are failures. The apple crop is good. Lots of stock is shipped every week. Pigs are scarce and sell from $5 to $6 a pair. A cold sleet and rain, followed by a frost the night of the 16th turned the leaves yellow in the northern Wisconsin woods.—E. H. Wehne.

Trempealeau County.—Threshing is well under way with the grain better than was expected. Silo filling is progressing nicely. There has been no serious frost yet and corn is mostly out of danger. It is generally a fair crop save on light soil, which for want of rain when the ears were setting, did not fill. Dry pastures have been helped by recent rains. Potatoes will be a light crop. There are apples and vegetables in abundance. Cattle and other stock are looking fine.—Carl G. Kremer.

Washburn County.—There was a very heavy frost the night of the 16th. Potatoes are a light crop. Corn is good, most of it being matured. Silos are being filled and threshing is in progress. Rye and wheat are fair, oats good. The abundant late rains have started the pastures and meadows and helped fall plowing.—John W. McCulloch.

MINNESOTA.

Mower County.—Threshing is about three-fourths done. Corn is a good crop; about 90 per cent is out of the way of frost. Potatoes will make less than one-half a crop. Fall feed has sprung up since the recent rains, which helps the pastures. Hogs are scarce and high, selling at sales for about 15 cents per pound. Cattle are doing well, but there will not be much cattle feeding in this county, as all kinds of feed are bound to be high. Hired help is scarce, some men getting $3 a day for common labor. There is a good stand of new seeding, timothy and clover.—Walter H. Martin.

OUR DAIRY DEPARTMENT

ALL communications relating to dairy matters should be addressed to this office. Inquiries of general interest regarding dairy management and production will be promptly answeced.

Few High Records Made.

Mr. George L. Moss, tester of the Waupaca and Butternut Ridge Co-operative Cow-Testing Association, of Waupaca county, Wisconsin, writes that of 386 cows under test for the past month only twenty-two made a record of forty pounds of butter fat or better. This is due in part to the fact that a large number of cows close their lactative period during the season to freshen late in the autumn. Mr. Moss regards this plan as about the best under present conditions. Such a plan insures a better income, as prices are higher in the fall and winter. Then where the dairyman has proper dairy barn equipment, which every man should have to make his dairy more successful, better care can be given the producers, whereas cows freshening in spring or summer are handicapped in many ways. They may do well until the heat and flies come, but if this period is long it interferes with production. Mr. Moss finds that calves from these spring and summer cows do poorly and it takes more time and feed to develop them fully. Calves from fall cows can be taken care of better and they will come through the winter strong and big enough to graze on the early pastures with the cows the following spring. During the months of August in Waupaca county many farmers were short of pasture and the forty-pound cows fell off in number. Mr. Moss suggests some good substitute for pastures to meet this emergency, such as silage, oats, peas or vetch. Cows will eat silage and do fairly well when they would not hold up on dry pasturage. The dairyman who fails to look out for just such seasons as the one we have just gone through with is not doing his utmost toward keeping up the profits. The cows in the association which made a record of forty pounds or better are as follows:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat

Cheese Awards at Fair.

The following awards were made on cheese in the dairy division at the 1916 Wisconsin State Fair:

CHEESE—CHEDDAR, FLAT OR DAISY.

Arvolz, Ed., Cecil....93.66
Anderson, George, Mondovi....92.50
Ast Bros., Dodgeville....91.00
Boeing, Emil, Woodstock....92.00
Bogucki, Jos. F., Green Bay....93.33
Burt, G. E., Neenah....95.66
Burish, F. J., Lena....94.50
Barrett, R. W., Merrill....87.50
Bachman, J. F., Fremont....89.16
Bauer, Robt. P., Eden....92.83
Buss, Chas., Campbellsport....94.83
Bennett, Andrew, Gratiot....90.83
Beck, Henry, Spring Green....92.00
Behm, J. D., Tustin....94.00
Delain, Theophile, Casco....92.33
Darling, Theo., Ridgeway....93.00
Derring, W. A., Seymour....91.66
Engelbretson, C. M., South Wayne....92.00
Engel, Robert, Fremont....97.66
Ebert, Lawrence, Green Bay....93.00
Fischer, John, Boaz....94.00
Frank, Wm. J., Manitowoc....92.83
Fisher, John G., Stratford....94.83
Fergusen, Albert, Hub City....94.00
Grimm, Arnold, Marion....94.66
Goss, George L., Stitzer....94.00
Grimm, Louis, Marion....93.16
Gerber, Rudolph, Soldiers Grove....89.33
Grossenbach, A. Co., Milwaukee....94.50
Gibbs, John, Muscoda....95.16
Huggler, Andy, Fennimore....95.16
Hessel, Louis, Barneveld....94.16
Hinz, Albert R., Hilbert....91.66
Heberer, Adolph, Kewaskum....93.33
Henderson, Lee, Stanley....91.00
Hanwood, Clyde, Bridgeport....91.83
Hrabik, Otto, Luxemburg....92.00
Hensler, Jos., Marshfield....94.16
Jeske, John, Antigo....92.00
Jansen, August, Mineral Point....94.00
Kempen, A. H., Stitzer....92.16
Kono, William C., Rice Lake....92.33
Kohlmann, Louis B., St. Cloud....91.00
Knudson, P. W., Barneveld....92.83
Kalk, H. A., Sheboygan Falls....92.50
Kasper, P. H., Bear Creek....97.33
Kuschel, H. J., Coleman....95.33
Kliment, Anton, Maribel....91.50
Kalk, Reuben W., Sheboygan Falls....95.83

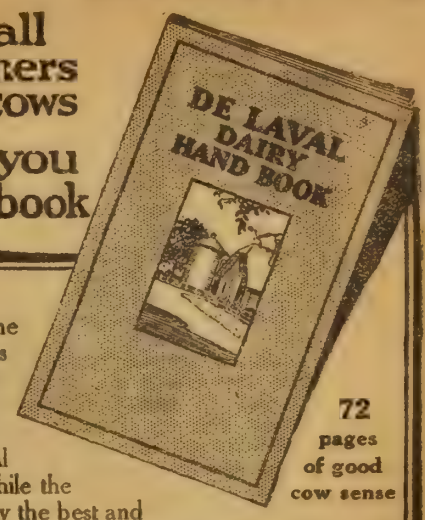
FREE to all owners of cows

If you keep cows you ought to write for this book



72 pages of good cow sense

THIS book was written for the man with only two cows just as much as for the man with twenty. In it has been gathered together a great fund of valuable information on subjects which are of vital interest to every cow owner. And while the various phases of dairying are treated by the best and highest authorities, it is not a technical treatise but is written in plain every-day language so that even the children can understand it.

Here are just a few topics that will give you an idea of the practical nature of its contents:

"How a Dairyman Made Good"—a real story of a real farmer, who starting with almost nothing, built up a fine dairy herd and made a big success.

"Year Around Feeding of Dairy Cows"—by an authority whose advice is well worth heeding. The importance of proper feeding deserves more attention from every cow owner.

"How to Judge a Dairy Cow."—shows by illustrations what points to look for in a dairy producer—explains the essential qualifications of a good dairy cow.

"Building Up a Dairy Herd"—a practical breeder gives some sound advice on this important subject.

"The Farm that Won't Wear Out"—shows that the farm where cows are kept, and the fertility returned to the soil, improves instead of deteriorates.

"The Care of Cream on the Farm"—quality is as important as quantity. It costs little and brings big returns.

"Silos and Silage"—one of the best chapters in the book. Full of silage facts that every farmer ought to know.

Then there are splendid articles on "Alfalfa," "Ventilation of Dairy Barns," "Breeds of Dairy Cattle," "Improving the Herd with a Good Bull," "Care of Freshening Cows," "How to Test Cows," etc. Numerous dairy rations, suitable for various sections of the country, are given, and various milk and dairy tables as well as tables of weights and measures, silo capacities, etc. that every farmer has occasion, at some time or other, to refer to.

Thousands of dollars have been spent in the preparation of this book, and if you keep cows you certainly ought to write for a copy and read it from cover to cover. The book is absolutely free. Just fill out the coupon or send the information requested on a post card, mentioning this paper.

The De Laval Separator Co., 165 Broadway, New York

Please mail me, postage free, a copy of your New Dairy Handbook. I keep_____cows I sell cream, make butter, sell milk (*cross out whichever you don't do*). The make of my Separator is_____, used_____years.

Only device made that will operate 2 to 50 swinging stanchions and cowstops with one movement of the lever. Stanchions also operate singly—line up cows with gutter and embody all other latest features. All West Bend Equipment guaranteed. Write for catalog—shows full line of stanchions, also litter and feed carriers with rod or rigid track.

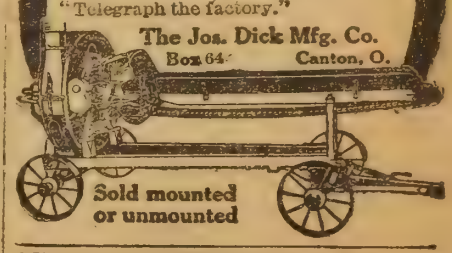
WEST BEND BARN EQUIPMENT CO.
232 South Water Street West Bend, Wis.

Get one quick!

Blizzard Ensilage Cutter

It will fill your Silo quick

Power-a-plenty in your regular farm engine to run it. It will cut as fast as you can supply—do even cutting—elevate any height. Swift, safe, durable. If your dealer is sold out, tell him "Telegraph the factory."



The Jos. Dick Mfg. Co.
Box 64 Canton, O.

Sold mounted or unmounted

SUITS $3.75, PANTS $1.00, made to measure. For evan a better offer than this write and ask for free samples and styles. Knickerbocker Tailoring Co., Dept. 530, Chicago, Illinois.

When writing to advertisers kindly mention The Wisconsin Farmer.

Wisconsin Stock at Illinois Fair.

The Illinois State Fair, held at Springfield last week, attracted large crowds. From an agricultural and live stock standpoint, the fair was thinner than in years past. The Illinois fair is splendidly equipped and well managed, but it is unfortunate that too much politics has entered into the Illinois State Board of Agriculture. On every hand there was considerable talk as to who would be elected member of the board, and whether some old-timer could be dethroned. Such a situation makes it very difficult for the men who are doing the actual work of the fair to accomplish all that they would like to accomplish. There were only seven counties represented in the county exhibits. The corn display was fine and the live stock show good, though not so large as it should have been. The light harness show was exceptionally good. Hon. Charles E. Hughes, candidate for president, and Governor Dunne, candidate for re-election in Illinois, were speakers at the fair Tuesday and Wednesday respectively.

Wisconsin was represented in a few of the live stock divisions, and stock from this state showed well. In the Ayrshire class Ferndall Farms, of Ladysmith, Wisconsin, and James Van Etta, of Lima Center, Wisconsin, were the exhibitors. William McKerrow, of St. Paul, was the judge. The awards were placed as follows:

The Scotch dairy breed was represented at Springfield by a small, but worthy turnout of cattle, brought forward by two exhibitors from the Badger state. All three of the state fairs in this circuit had stronger Ayrshire shows; and also contained stronger animals of the breed. Still the average quality was good and the animals were brought out in shape that did the breed justice. Ferndell Farms got just a shade the better of the argument. They captured both grand champion purples, leaving the senior champion bull and the junior champion heifer honors to Van Natta.

The exhibitors: Ferndell Farms, Ladysmith, Wis.; Jas. Van Natta, Lima Center, Wis.

Judge, Wm. McKerrow, St. Paul, Minn.

The awards:

Bull 3 Years or Over (2 shown)—1st Van Natta on Holehouse Wanderer; 2d Ferndell Farms on Victor of Ladysmith.

Bull 2 Years and Under 3 (2 shown)—1st Van Natta on Cavaliers' Rising Tide; 2d Ferndell Farms on Ferndell Victor.

Yearling Bull (2 shown)—1st and 2d Ferndell Farms on Ferdell's Lessnessock Gem and Ferndell's Anticipation.

Senior Bull Calf (4 shown)—1st & 3d Ferndell Farms on Ferndell's Credit and Ferndell's Trust; 2d and 4th Van Natta on Unus of Cloverdale and Majesty of Cloverdale.

Junior Bull Calf (5 shown)—1st and 2d Ferndell Farms on Ferndell's Loyalty and Ferndell's Arrogance; 3d and 4th Van Natta on Rising Pionet and Expectation of Cloverdale.

Cow 5 Years or Over (4 shown)—1st and 3d Van Natta on White Lily of Meadow Brook and Mayflower of Rock Ridge; 2d and 4th Ferndell Farms on May of Hillcroft and Silver Beauty of Bulrush Farm.

Cow 3 Years and Under 4 (1 shown)—1st Van Natta on Winny Scotland of South Farm.

Heifer 2 Years and Under 3 (4 shown)—1st and 4th Ferndell Farms on Silver Pet of Ferndell and Stately Lessnessock of Ferndell; 2d and 3d Van Natta on Cavalier's Snowstorm and Rose Winny.

Yearling Heifer, Not in Milk (6 shown)—1st and 3d Ferndell Farms on Ferndell's Felicity and Pearl of Ferndell; 2d & 4th Van Natta on Aldebrain Rose Mary and Cavalier's Fashion Maid.

Senior Heifer Calf (3 shown)—1st Van Natta on Cavalier's Flukie; 2d and 3d Ferndell Farms on Ferndell's Fashion and Ferndell's Style.

Junior Heifer Calf (5 shown)—1st and 2d Ferndell Farms on Ferndell's Fidelity and Ferndell's Mode; 3d and 4th Van Natta on Cloverdale Gem and Cloverdale's Heiress.

Dairy Herd of Four Cows in Milk (1 shown)—1st Ferndell Farms.

Senior Champion Bull—Van Natta on Holehouse Wanderer.

Junior and Grand Champion Bull—Ferndell Farms on Ferdell's Loyalty.

Senior and Grand Champion Cow—Ferndell Farms on Silver Pet of Ferndell.

Junior Champion Heifer—Van Natta on Cavalier's Flukie.

Aged Herd (2 shown)—1st Ferndell Farms on herd headed by Ferndell Victor; 2d Van Natta on herd headed by Holehouse Wanderer.

Young Herd (3 shown)—1st and 3d Ferndell Farms; 2d Van Etta.

Calf Herd (2 shown)—1st Ferndell Farms; 2d Van Etta.

Get of Sire (3 shown)—1st and 3d Ferndell Farms on the get of Victor of Ladysmith and Lessnessock's Genis Good Gift; 2d Van Etta on the get of Gay Cavalier.

Produce of Cow (3 shown)—1st and 2d Ferndell Farms on the produce of Rose Lotus and Silver Beauty of Bullrush Farm; 3d Van Etta on the produce of Flukie.

The Jean Duluth Farm, Duluth, Minnesota, made a good showing in Guernseys, capturing the following awards:

Starlight's Excelsior of Jean Duluth, was first bull two years and under three.

May Rose Yeksa Starlight, was second-prize yearling bull.

Marathon Rose King, was senior bull calf.

Lady Grees May King of Jean Duluth, was second junior bull calf.

Jean Duluth Phillis, was second on cow three years and under four.

Jean Duluth Coronet, was first heifer two years and under three.

May Rose of Jean Duluth and Lyzette's May Rose were first and second respectively in yearling heifer class.

Grees' May Rose was senior heifer calf.

Marathon May Rose was junior champion bull.

James Van Etta, of Lima Center, Wisconsin, fared well in a good show of Clydesdale horses. He won the following awards:

Stallion three years and under four, third with King's Emblem.

Stallion two years and under three, first with Baron's Prince.

Stallion one year and under two, first and fourth with Fairview's Majesty and Hesitation.

Mare four years old or over, second on Lady Caliph.

Filly two years and under three, third on Honora.

Filly two years and under three, first on The Queen.

Filly one year and under two, fifth on Majesty's Lass.

Other exhibits with whom Mr. Van Etta's Clydesdales are in competition at the Illinios fair were A. G. Soderberg, G. W. Merna, South Bros., Eben A. Jones and Harry E. Piercell.

George McKerrow & Sons Co., Pewaukee, Wisconsin, exhibited in the sheep show, capturing practically all the awards on Oxfords. They met some keen competition in the Shropshires, where A. W. Arnold, of Galesville, Wisconsin, was also an exhibitor and W. F. Renk, of Sun Prairie, judge. The McKerrows carried off the championships and had a big majority of the firsts and seconds in the several classes shown.

Wisconsin at Dairy Show.

Wisconsin breeders were conspicuous at the Southwestern Dairy Show, held at Kansas City, Missouri, last week. Not only were firsts won in many of the classes, but Wisconsin cattle also carried away many of the purple ribbons. The exhibit was of especial importance to Wisconsin breeders because of the large amount of stock which is now being purchased in Wisconsin for southwestern territory.

The Brown Swiss awards were almost cleaned up by H. W. Ayers, of Honey Creek, Wisconsin. Ayers' Merney's Second Son was senior and grand champion bull, and Brownie B. was senior and grand champion cow. Mr. Ayers' cattle won first on every class shown, and were far superior in every respect to others shown.

In the Ayrshires, Adam Seitz, of Waukesha, Wisconsin, and Dr. David Roberts, of the same place, were in competition with herds exhibited by William Galloway, Waterloo, Iowa, and Dr. F. S. Schoenleber, Manhattan, Kansas. The awards in Ayrshires were as follows:

Judge, L. S. Gillette, Ames, Iowa.

Exhibitors: William Galloway, Waterloo, Iowa; Adam Seitz, Waukesha, Wis.; Dr. David Roberts, Waukesha, Wis.; Dr. F. S. Schoenleber, Manhattan, Kan.

Aged Bull—1st Seitz on Bargenoch Rising Star; 2d Galloway on Auchenbrain Good Gift; 3d Roberts on Roberts' Cavalier.

Bull 2 Years and Under 3—1st Seitz on Cavalier's Kilnford Ringmaster; 2d Galloway on Willowmoor Peter Pan 26th; 3d Roberts on Roberts' Fairy Duke.

Yearling Bull—1st and 3d Seitz on Cavalier's Lord Rosebery and Cavalier's Fond Stamp; 2d and 4th Roberts on Roberts of Hamline and Roberts of Waukesha; 5th Galloway on Cavalier's Merry Lad.

Senior Bull Calf—1st Seitz on Cavalier's Lord Stuart; 2d Roberts on Roberts' Pride Cavalier; 3d and 4th Galloway on Dalpedder Good Gift and Lessnessock Spencer; 5th Schoenleber on Queen's Actor.

Junior Bull Calf—1st and 2d Seitz on Cavalier's Kilnford Marquis and Cavalier's Kilnford Gloster; 3d Roberts on Roberts of Dousman.

Aged Cow—1st and 4th Seitz on Imp. Kilnford Bell 3d and Imp. Kilnford Bell 4th; 2d, 3d and 5th Roberts on Value's Pride of Oak Valley; Dalpeddar Lady Taylor and Kirkhouse Eddie 6th.

Cow 4 Years or Over—1st Seitz on Bargenoch Carnation.

Cow 3 Years or Over—1st Seitz on Lady Margaret; 2d and 4th Roberts on Belle Roberta and Queen Roberta; 3d Galloway on Princess.

Cow 2 Years and Under 3—1st and 4th Roberts on Roberta of Scotland and Roberta Dahlia; 2d Galloway on Lessnessock Carlton; 2d Seitz on Cavalier's Pet; 5th Schoenleber on Zella's Tulip.

Senior Yearling Heifer—1st and 2d Galloway on Nona Spencer and Cavalier's Ruby; 3d and 4th Roberts on Roberta Value's Pride Cavalier and Roberta of Hartland; 5th Seitz on Cavalier's Rosewood.

Junior Yearling Heifer—1st Galloway on Rose Good Gift; 2d Roberts on Roberta Cavalier Belle; 3d Seitz on Cavalier's Roseleaf.

Senior Heifer Calf—1st Seitz on Cavalier's Lavender; 2d and 3d Galloway on Good Gift's Nona and Sylva Good Gift; 4th and 5th Roberts on Roberta Southwich Cavalier and Roberta Belle of Waukesha.

Senior and Grand Champion Bull—Seitz on Bargenoch Rising Star.

Junior Champion Bull—Seitz on Cavalier's Lord Stuart.

Senior and Grand Champion Cow—Seitz on Kilnford Bell 3d.

Junior Champion Cow—Galloway on Nona Spencer.

Cow Having Official Yearly Record Begun at 4 Years or Over—1st and 2d Seitz on Kilnford Bell 4th and Hillhouse Maud 2d; 3d Roberts.

Aged Herd—1st Seitz; 2d Galloway; 3d and 4th Roberts.

Young Herd—1st Seitz; 2d Galloway; 3d Roberts.

Calf Herd—1st Seitz; 2d Galloway; 3d Roberts.

Dairy Herd—1st Seitz; 2d Roberts.

Advanced Registry Cow—1st Seitz; 2d Roberts.

Get of Sire—1st and 4th Seitz; 2d Schoenleber; 2d Galloway; 3d and 5th Roberts.

Produce of Cow—1st and 2d Seitz; 3d Galloway; 4th and 5th Roberts.

Baird Bros., of Waukesha, Wisconsin, competed with their Holstein herd for the awards at Kansas City. They won the following:

Bull three years or over, second on Bairdland Segis Sir Prize.

Bull one year and under two, first on Nockdair King Segis Perfection.

Senior bull calf, second on Farsee Sir Hengeveld Segis.

Junior bull calf, first and third on Nockdair Segis Forbes boy and Nockdair Segis George.

Cow two years and under three, first on Nockdair Segis De Kol Violet.

Senior yearling heifer, second on Nockdair Segis Longfield Rose.

Junior heifer calf, second on Nockdair Segis Valentine.

Senior heifer calf, third, fourth and fifth.

Junior heifer calf, first and third on Nockdair Segis Cornucopia and Nockdair Segis Gaische.

Cow having best official record begun at five years or over, second.

Aged herd, second.

Young herd, first.

Get of sire, second and fifth.

Produce of cow, third.

Junior champion bull on Nockdair King Segis Perfection.

The Stratford Association.

The Stratford Co-operative Cow-Testing Association has successfully closed its first year which ended August 1st. Mr. Francis J. Woodward, who was tester for the past year, has resigned in favor of Harry A. Johnson, who files the following as his first report:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat

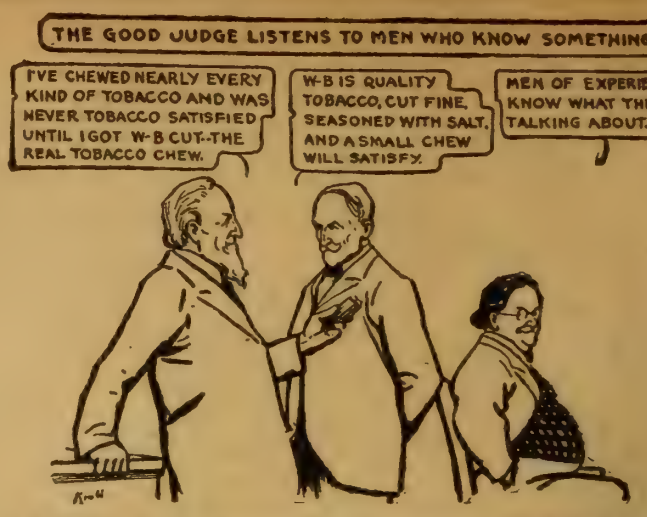
Hary A. Johnson, Official Tester.
James L. Chrowser, Secretary.



HERE is the common sense way a W-B CUT user put it up to one of his friends:—

"When it comes to tobacco satisfaction, that's got to be in the tobacco in the beginning. Molasses and licorice won't put it there. W-B CUT is *rich* tobacco and chock full of real tobacco satisfaction—excess sweetening has no charm for you once you know *quality* tobacco. And remember the other points—less grinding and spitting, and half-sized chews."

Made by WEYMAN-BRUTON COMPANY, 50 Union Square, New York City

It is natural for a hog to wallow. Provide a wallow close to the feeding grounds, to which add Dr. Hess Dip and Disinfectant occasionally. The hogs will constantly pass back and forth from the wallow to the feed trough; while the DIP will kill the lice and cleanse the skin, the DRIP will destroy the germs of disease and the worms that pollute the ground.

Dr. Hess Dip and Disinfectant

One gallon makes 70 to 100 gallons solution

is excellent for sheep dipping; it is a guaranteed remedy for sheep scab and ticks; it destroys germs and foul odors—in short, its use as a disinfectant around your farm will keep away disease. Invaluable for disinfecting sinks, drains, troughs, garbage cans, outhouses, etc. Good alike for home and stable. Sold in pint bottles, quart, half-gallon, gallon cans and barrels.

1 gallon can $1.00

Smaller pkgs. as low as 25c

Except in far West and Canada

Dr. Hess Fly Chaser

Does not gum, color or blister. Makes stock comfortable.

DR. HESS & CLARK
Ashland, Ohio

BIG 4

POULTRY JOURNAL

Practical, Snappy, Instructive—YOUR PAPER. For the breeders of Mich., Ind., Ill., Wis., only. You should read it. 50c a year, 3 mo. 10c. Agents wanted. Big 4 Poultry Journal, Desk 28, Chicago, Illinois.

POULTRY.

S. C. R. I. REDS

FOR SALE—Hatching eggs from prize pens, half price for balance of season. Won 9 ribbons on 15 birds at Wisconsin State Fair, 1915; 4th pullet and 3d young pen at Chicago Coliseum, 1915. Winnebago Poultry Yards, R. 23, Omro, Wis.

BEAGLE HOUNDS—I have some full-blooded Beagle pups for sale. One 7-months-old dog at $10. 6 that are 6 weeks old at $4 for females and $5 for males. Leonard Ess, Chaska, Minnesota.

HATCHING EGGS; prize-winning S.C. Reds, White Wyandottes, Buff Orpingtons, S. C. White and Brown Leghorns, $1.50 per 15. Ledge View Poultry Farms, Box W.F., Fond du Lac, Wis.

HATCHING EGGS; S. C. Reds, prize-winners all leading shows. Eggs $1.50, 15; $8, 100. Order from this ad. Address C. L. Pre-Fontaine, Box 600, Fond du Lac, Wisconsin.

EGGS for hatching from Barred Rocks, E. B. Thompson's Ringlets, $1.25 per 15, prepaid. D. S. Thorosen, Shell Lake, Wisconsin.

FULL BLOODED COLLIE PUPPIES FOR sale. Farmers' prices. J. V. Northrup, Waupun, Wis.

OUR LEGAL DEPARTMENT

THIS department is edited by a practicing lawyer, who has had years of experience at the bar. He will give accurate and reliable answers to all legal questions when they are of sufficient importance to be of practical interest to any considerable number of our readers. Subscribers who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail should remit $1.00, addressed as above.

Law Questions.

Cow Killed by Auto—No Damages.

A Subscriber, Minong, Wis.—A man in this vicinity picketed his cow in the public road, to graze. The cow crossed from the picket pin to the other side of the road stretching the rope about two feet above ground, and while in this position an auto car came along and caught the rope and killed the cow. Can the owner of the cow compel the driver of the auto car to pay for the cow by law?

Answer.—The owner of the cow cannot compel the driver of the auto to pay for the cow. The loss of the cow was caused, partly at least, by the owner's negligence.

Hogs at Large—Landlord and Tenant.

A Subscriber, Henry, S. Dak.—(1) Has a farmer in South Dakota a right to allow his hogs to run at large all over the neighborhood, in summer, and if not, what can persons who are damaged thereby do about it? (2) Has a landlord the right to compel his tenant to shut up his poultry or keep them from destroying the landlord's crops? (3) If I rent a piece of ground for cash rent, has the landlord a right to determine what I shall plant in the ground?

Answer.—(1) All persons damaged by hogs running at large may sue the owner of them and recover a judgment against him for the amount of such damages. (2) In such a case the owner of the poultry is liable to his landlord for damages which may be recovered by a suit before a justice of the peace, but there is no way by which the landlord can compel his renter to shut up his poultry. (3) The landlord has no such right.

Adverse Possession—Division Line.

A Subscriber, Brooten, Minn.—I own the southeast quarter of section thirty in a certain township in Minnesota. This land has been farmed for twenty-five years. I have had a fence on my west line for fifteen years. The quarter section adjoining my land on the west was sold, and the purchaser had a line surveyed between his land and mine which shows my fence to be six rods over his land and he has ordered me to move my fence and put up a new fence on said surveyed line. He took down my fence and came through and cut the hay on said six-rod strip without my knowledge or consent. (1) What can I do about it by law? (2) When said section was surveyed there was a fraction of seven rods over the usual measurement. Who is entitled to this extra land?

Answer.—(1) You have title by adverse possession for fifteen years, up to the line of your fence, even if said fence was not on the true line. You can bring suit against your neighbor for the land he has taken, and also for damages for taking down your fence, and for the hay he cut on the six rods of ground. (2) The surplus land should be equally divided between the two adjoining quarter sections.

Lawful Fence in Wisconsin.

A Subscriber, Arkansaw, Wis.—(1) What constitutes a lawful fence of posts and wire, in the state of Wisconsin. (2) How should a lawful fence be constructed across a creek or stream?

Answer.—(1) A lawful fence in Wisconsin may be all of woven wire or partly of woven wire and partly of barbed wire. The woven wire strands must be 12 wire and the cross wires or meshes of 16 wire; if cross wires they must be not more than twelve inches apart; if meshes not more than eight inches square. Posts must be not exceeding sixteen feet apart, distance of the bottom wire from the ground not exceeding four inches. Keeping in mind these facts and also that a lawful fence must be at least fifty inches high, twenty-six-inch woven wire, with three barbed wires on top is a lawful fence—or thirty-inch woven wire with two barbed wires on top—or forty-six-inch woven wire with one barbed wire on top—or fifty-inch woven wire alone. (2) In fencing across a creek if the parties cannot agree the question should be submitted to the fence viewers to determine what would be a sufficient fence.

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

Ailing Animals.

Grease Heel.

What can be done for a bull that has grease heel on the left foot right up to his hoof? Have tried different things, but they did not help at all.

Try the application of tincture of iodine once or twice daily for a while. Each time before applying dry clean the parts by using a soft brush. Do not use any watery solutions. This may bring about a cure.

Bronchitis.

Can you inform me of some remedy for my young pigs? They have a bad cough and get scabby, but they eat well. They get so weak and dizzy that they cannot walk. They are not bothered much with lice or worms for I examined some of them after they died. I have dipped some of them twice a day and it did not seem to help much. This trouble started when the pigs were about three or four weeks old. I have them on clover and timothy pasture and fed ear corn twice a day until about two weeks ago, when I started feeding soaked wheat and shelled corn mixed. I have been feeding some of the larger ones shorts and tankage and some stock food and plenty of fresh water.

Your pigs are probably troubled with bronchitis. What the cause of this trouble is would be hard to say. It may, however, be brought about from irritation set up by lung worms. You had better have your veterinarian kill and autopsy one of those badly affected and see if he can ascertain the exact cause of the trouble.

Poll Evil.

I have a four-year-old iron gray gelding which has poll evil. He showed signs of something being wrong with his head about the first of June. I began putting cold water packs on his head for about two weeks, then put liniment on for a week or two. Then it broke and in a few days formed a hole about the size of a lead pencil. The hole is about an inch below the mane on the right side and runs across toward the left side, slanting downward, and about an inch and a half deep. Since the hole formed, which is about three or four weeks, I have syringed it out twice a day with stock dip and liniment. For the last week I have been using salt. It does not discharge very much, but does not seem to get any better.

This should be examined by a veterinarian before treatment is begun, as he will be able to tell the extent of the trouble and advise intelligent treatment. However, if a veterinarian cannot be had you might try the injection of tincture of iodine in the opening once or twice a day for a few days. If this does no good try some caustic, such as chloride of zinc, one ounce to a half pint of water. Use two or three times in one week. The region below the opening should be greased or oiled when caustics are used. After caustic has acted use daily a solution of lysol 1 per cent.

Waupaca and Portage Holstein Breeders.

To the Editor:—The Waupaca and Portage County Holstein Breeders' Association held its third annual picnic at the A. L. Rowe farm, near Waupaca, August 31st. The forenoon was spent in visiting and getting in touch with fellow breeders and in a cattle judging contest for boys under eighteen years of age. Mr. Rowe had a goodly number of his pure-bred stock in his barns and these were used in the contest. A picnic dinner was served. Hon. E. E. Browne, of Waupaca, gave the first address in the afternoon and this was followed by short talks by members of the association. The program was concluded by an address by R. J. Shaefer, of Appleton. Music was furnished by the Agdersberg Orchestra and the Rowe sisters. A stand on the ground was liberally patronized and helped to pay the expenses of the day. The association now has 100 members and a rapidly increasing interest in pure-bred stock is manifested.

A. W. Ritchie.
Secretary of the Association.

Automobile for the Youngsters.

THE boys and girls would like "awful much" to have a Culver racer, a five-horse-power real automobile made in children's sizes for the children's use, and now that they have an opportunity to get one free the proposition is worth investigating. The Farmer's Wife Auto Club, 307 Webb Building, St. Paul, Minn., is offering the racer, and all the boys and girls who would like to own it are invited to write to the company and find out how they can get the car free. See the advertisement on page 24. It gives a picture of the Culver racer and a coupon which will give you a start in the contest for the racer. When writing mention that you saw the advertisement in this paper.—Adv.

ATLAS EXPLOSIVES

When You *Blast* Stumps You Improve the Soil

Burning stumps destroys fertility. Pulling them out is slow and expensive. When you *blast* them out, the work is done cheaply and quickly. And besides getting rid of the stump, you also liberate the plant food in the subsoil. The best way to do this work is with

Atlas Farm Powder

THE SAFEST EXPLOSIVE

The Original Farm Powder

Sold by dealers near you. Easy to buy, easy to use, and *always* satisfactory, because made especially for farm work. Quick and economical—bore a hole, load it, light the fuse and the work is *done!*

Use Atlas Farm Powder to break up hardpan, shale and clay subsoils, and get better crops. Use it to dig ditches—do a month's work in a day. Use it in planting trees—get stronger, deeper roots.

Mail Coupon for "Better Farming"

You will find our illustrated book "Better Farming" full of helpful, valuable information. It tells how to get better crops and save money on farm work by using Atlas Farm Powder, The Safest Explosive. Mail the coupon *now.*

THE HOME

Letters intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Editor Home Dept., Wisconsin Farmer, Madison, Wis.

Farm Home Should Have Wash Room.

The one thing that all farm women will agree upon is the desirability of having a wash room for the men and having it supplied with a concrete floor and a good drain so that it may easily be cleaned. If building a new home the plans should include this room and the home already built should yield up from somewhere the required space.

The expense of this improvement should not be large. A force pump can be purchased without too great an outlay; the cost of the remainder of the equipment, including tanks, sinks, pipes and drain tiles, depends, of course, on the distance of the water source from the house and the kind and amount of equipment which the owner wishes to install.

The University of Wisconsin is planning a model farm home to be built on the campus and the ideas of a number of farm women were sought by those in charge of the work in order that the practical suggestions of those most interested might be considered in making the plans. These housewives were unanimously of the opinion that a wash room was next to indispensable and they advised the building of such a room with a concrete floor so that it might be cleaned more easily and thoroughly. Since the wash room is to be used six days out of seven by men, it is plain that it should be substantial rather than dainty. The concrete floor may cost a little more than other material; still, the cost is reasonable when the advantages to be gained in the way of resistance to the ravages of water are considered.

The wash room should contain besides an ample supply of towels, soap, etc., rows of hooks where changes of garments, working coats and hats may be kept, shoe blacking outfits, clothes brushes and a suitable place for boots and shoes. The obvious usefulness of such a room cannot fail to recommend it to the men as well as the women.

Moreover, this may become a double-service room in that it may be used, also, as the laundry room. To fit it for such a purpose would necessitate very little additional expense, and the cost of an extra room, extra pipes and another tank and drain to make provision for a laundry room elsewhere would be obviated.

The location of the wash room, of course, would depend somewhat upon the arrangement of the rest of the house, good drainage facilities, etc. As a general proposition, however, the ground floor, rather than the basement, is the most practical location.

Potting Bulbs For Winter Blooming.

September is the month to pot bulbs for early indoor blooming. Hyacinths, tulips, narcissus and jonquils are best suited for this purpose. A good soil for potting bulbs is composed of one-half part well decomposed turfy loam, the remainder well-rotted stable manure, leaf mold and sand. These should be well mixed together.

The size of the pot depends on the size of the bulbs and upon the effects desired. As a general rule, for a single hyacinth a five-inch pot should be used. For tulips and narcissus a four-inch pot is large enough, the size increasing with the number of bulbs. In potting place a piece of broken pot or some coarse ashes over the hole in the bottom to secure drainage. Fill the pots half full of soil, set the bulbs so that the tops are at least one inch below the rim, cover them with soil and press it firmly around the bulbs, leaving at least one-half inch space at the top for water. After all have been potted and labeled they should be well watered and placed out of doors, with the pots close together. Nail a board frame around them and cover with six inches of ashes or sand. Leave them there for about six or eight weeks. Then make an examination to see if roots are well developed. If so, remove the pots to a cold frame, shed, attic or cool cellar in a temperature from 45 to 50 degrees and water them well.

The secret of success in bulb forcing is perfect root development. Therefore, be sure that the pots are full of roots before putting them into a higher temperature. By bringing in a few pots at from intervals of from eight to ten days and placing in a sunny window with a temperature from 60 degrees to 65 degrees a succession of flowers may be had for months.

Music of the Home.

Home is where character forms. Home is where we learn to live. Home individualizes, home is the center of all activity; the place from which we go forth to all our relationships. Then, let us form the habit of having music—good music in our homes, keeping it always before our children. Having acquired a knowledge and taste for good music in the school and church, they naturally bring its influence into the home. Parents who fail to cultivate the musical gifts of their children deprive them, and through them the coming generations, of that moral and intellectual legacy which is due them. And just as music is a power in the home, so it is in the world at large. So, whenever opportunity affords, give your children special instruction, not to fit them necessarily for the profession, unless they so desire, but as an accomplishment.

We are born with the power to acquire knowledge, not in possession of it. To learn we must toil—toil at the price we are in duty bound to pay for all we get, be it education, food, pleasure or material wealth. To toil for what is enobling to possess makes one love labor; it becomes sweet to spend the hours in well-directed activity, thereby we enjoy our gain.

Music is no El Dorado for the shiftless, unwilling worker, but to those who are not afraid of labor it offers an extensive field in which they may develop.

What music have we in the home? Are our pianos loaded down with the cheap music called "popular" music? Little, if any, of the so-called popular music survives and stands the test of years, but lives only for the particular period for which it was written. Much of it is as evanescent as thistle-down, wafted hither and yon by the gentle sephyr of sentiment, and then banished by the stronger undercurrent of popular opinion. As a rule, music involving home sentiments, domestic affections, emotions that play upon the heart-strings of the people, these are they which neither time nor constant repetition consign quickly to oblivion.

So let us make a stand for good, wholesome music in the school and home, because such music makes of us better men and women, and thus a better citizenship.—[Garnett Hedge, Dean of Music, South Dakota State College.

Crochet Rugs the Best.

To the Editor:—I noticed that one of our readers wanted to know how to make rugs from old material and I will tell her how I do it.

Sew your rags together either each color separately or as you would for hit-and-miss carpet. Wind them in balls, each color by itself. Buy a wooden crochet hook (which can be got for 5 or 10 cents) and start a chain the same as for crochet, any kind you wish; the oblong kind was what I made. After the chain is started just loop your rags and draw through your chain with the hook. You don't need to sew them and they wear better than the rugs that are braided and sewed together. I have made two and I like them fine.

You can use any sort of old material for these rugs. Tear the strips a little narrower than you would to make rag carpet, as it is easier to draw through with the hook. You can arrange the colors to suit yourself.

Mrs. G. E. M.

How to Repot a Plant.

In repotting a plant, slip the ball of earth out of the old pot without breaking it if possible. The aim should be to disturb the roots as little as possible. Scrape away as much of the old soil from the ball of earth as can be removed without interference with the roots in it. Then drop the plant into its new pot and fill in about it with fresh soil, making it firm by pressure of the fingers as you fill in. Of course, you will have seen that the pot is properly provided with drainage before this is done.

Pimentoes.

To the Editor:—I noticed a request in your paper for a recipe for canning pimentoes. Here is the way I have put them up for two years and they are fine.

Take pimentoes of equal size, remove the stem ends, seeds and inner white fibers. Cut in halves and pour boiling water over them. Let them stand three minutes, drain and drop in cold water and drain after three minutes. Repeat until they have been in cold water three times. Drain the last time and place in glass jars.

Take equal parts of good vinegar and water and to a pint of each add a cupful of sugar. Bring to a boil, then cool. When perfectly cold pour over the peppers and seal. Be sure the peppers are covered with vinegar.

Either green or ripe pimentoes may be used. Mrs. H. A. M.

Canned Pimento Peppers.

To the Editor:—In reply to Mrs. C. R. D.'s request for a recipe for canning pimentoes I am sending the following directions:

Use the peppers after they have turned red. Cut seeds out, wash thoroughly. Have ready some boiling water and drop the peppers into it. Let them become heated through, then carefully place in glass jars or cans that have been thoroughly scalded. Pour fresh boiling water over them to which has been added vinegar in the proportion of one tablespoonful to each quart of water. Let jars cool slowly. Keep in a dark place.

A Reader.

A Bleach For White Wool.

When you begin looking over the supply of winter clothing don't get discouraged if the white woolen garments have become yellow. A weak solution of hydrogen peroxide with borax added is a good bleaching agent for white wool. Make the solution as follows: Add one part hydrogen peroxide to ten parts water and use one tablespoonful of borax to each gallon of water.

Household Hints.

Homemade catsup, after the bottle has been opened, is apt to spoil very quickly. To prevent this, pour a little olive oil into the bottle immediately after use.

To save measuring each ingredient each time one wishes to make cocoa, sugar, cocoa and salt may be mixed together in the proportion desired for use and stored in a covered fruit jar.

Do not throw away the tops of celery. Wash them well, dry them thoroughly in an oven and keep them in a tightly closed jar or tin can, to be used as a flavoring for soups and stews.

White dresses, linens, etc., usually become yellow when put away for any length of time. To avoid this, rinse the clothes through water with enough bluing in it to give them a blue look when they are dry. When the articles are taken out to be used, wash in the usual way, and they will be snow white instead of yellow, as is often the case.

When light cream will not whip easily use viscogen in it, as viscogen is just limewater and sugar and is harmless. It may be made and bottled for use. Use one-fourth teaspoonful to three-fourths cupful of cream, and then cream may be whipped satisfactorily. To make the viscogen dissolve five ounces of sugar in ten ounces of water. Add six ounces of cold water to two ounces of quicklime. Let it slake and strain it. Combine the two liquids. Bottle and shake occasionally several times. Keep in a cool, dark place.

Recipes.

Chocolate Pie.—One cupful sugar, one tablespoonful butter, two tablespoonfuls chocolate (melted), two-thirds cupful sweet milk, two tablespoonfuls flour. Beat together the sugar, butter and yolks of eggs; add chocolate; heat the milk and add gradually except enough to mix the flour; add flour and milk paste and boil in double boiler. Bake crust and fill. Frost top with whites of eggs beaten to stiff froth and sweetened. Brown top in oven.—Rosa.

Egg Plant Fritters.—Add one tablespoonful of lemon juice or vinegar to salted boiling water, and put in the eggplant whole, boiling till tender. After draining, mash it and make the fritters in the following proportions: To every cup of eggplant use a quarter of a cupful of flour, one well-beaten egg, and salt and pepper to suit. Fry in small thin cakes, browning well.

Irish Toast.—Mix two cupfuls of flour with two teaspoonfuls of baking powder. Add one egg dropped into the flour. Use milk to wet. Roll out and fry as you would doughnuts. Serve with sauce made of two teaspoonfuls of flour and hot water enough to thicken. Flavor sauce with vanilla.

Delicious Apple Sauce.—Put in a shallow baking dish one cupful of water, four tablespoonfuls of sugar and a little grated orange peel. Set over fire on asbestos mat. Pare and quarter five apples. Cut quarters in half. When water is hot, put in the apples. Cover closely and cook until soft.

Stuffed Eggs.—Boil the eggs until hard, then cut in halves with a sharp knife, and remove the yolks. Mince these with some finely cut chicken, adding a little butter and a few grains of salt and pepper, with a grating of nutmeg. Refill the whites with this mixture, press the halves well together, using a little raw white of egg to make the joining smooth, and arrange on serving dish.

Sweet Pickle.—Take cucumbers too large to pickle whole, cut in slices about one-fourth inch thick, put in good, strong brine with a piece of alum the size of a hickory nut and let stand overnight. In the morning drain and put into boiling vinegar (I saved all the vinegar from my pickles the past winter and spring and use for this) and let stand on stove until they turn white. Then put in cans and fill with fresh, cold, well-sweetened white wine vinegar, spices to taste and seal tight. Use brown sugar for sweetening vinegar. —Mrs. Wm. S.

Many Birds Make Music.

Dear Young Folks:—I have been reading your letters and think them very interesting.

I am a little girl eleven years old and I live in the city. There are nice shade trees on our lawn. Robins, orioles, bluejays, song sparrows, mocking birds, flickers, wild canaries, blue birds and lots of sparrows nest here and sometimes a pair of blackbirds visit us. You will see we have lots of bird music even though we are in town. We have lots of other music, too, because there are pianos and phonographs in all neighborhoods.

We have nice automobile drives in our city which lead us past beautiful homes and beautiful parks. One is the electric park. There is a very nice playground in this park and it is a wonderful sight at night.

We have two cats and about a hundred chickens.

I have three sisters and one brother. I am learning to play the piano. We have an automobile and I see beautiful places every Sunday when we go for a ride.

I have a riddle for the Young Folks to guess. Round as an apple, black as a bear; tell me quick or I'll pull your hair. —Myrtie.

How to Made Doll Dishes.

Dear Young Folks:—My papa has taken this paper for some time and I always read the letters and I enjoy them ever so much. I have written several times before and this time I am going to tell the girls how to make doll's dishes. Take two tablespoonfuls of salt, one tablespoonful of flour and stir together; add two tablespoonfuls of water. Put on the stove until thoroughly heated. Then shape dishes as wanted.

I am eleven years old. My school has begun and I am in the sixth grade. —Myrtle.

Prettiest Calf His Pet.

Dear Young Folks:—I am eight years old and I am in the second grade at school. I live on a forty-acre farm and we have ten cows, two dogs, three cats and three calves. The prettiest calf of all I call mine. It is the oldest of the three. I feed it both night and morning. It runs to meet me when it sees me coming.

I think it is fun to give riddles. Can you tell me the answer to Eleanor's riddle—what goes up and down the hill and yet never moves—is a road. —Nels.

Great Fun Camping Out.

Dear Young Folks:—I have wanted for a long time to write to you to tell you how much pleasure I find in reading your most interesting letters. I always look forward to Thursdays, as they bring the Young Folks' page.

I am thirteen years old and in the ninth grade at school. We had three months' vacation this summer. I love to go to school. My favorite study is grammar.

Did any of the Young Folks ever go out camping? About a month ago three of my companions, my sister Janet and Dorothy, and I went camping. We had a splendid time, especially in the evenings when we would sit around the campfire and toast marshmallows. We went swimming in the mornings.

I like all kinds of housework, but above all I love to bake cakes. I wish some of the girls would send me a recipe for a good cake. —Emmeline.

A Magic String.

Procure a few pieces of cotton string, each about one and one-half feet long, and fill them well with soap. Prepare a brine by dissolving three tablespoonfuls of salt in a cup of water. Place the strings in the brine and allow them to soak for two hours or longer. It is necessary that they be thoroughly saturated with the brine.

When taken out of the brine and thoroughly dried suspend one of them from a nail on a ledge and hang a finger ring on its lower end. Apply a lighted match to the string and allow it to burn. The ring will not fall, but will hang by the ash.

Our Fashion Department.

All Patterns, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want, and inclose 10c for each number. We agree to fill all orders promptly and guarantee safe delivery.

Catalog of Fall and Winter Fashions

Send 10c in silver or stamps for our up-to-date 1916 large fall and winter catalog, containing over 400 designs of ladies', misses', and children's patterns, as well as the latest embroidery designs, also a concise and comprehensive article on dressmaking, giving valuable hints to the home dressmaker. Address all orders for patterns and catalogs to WISCONSIN FARMER, Madison, Wis.

1549—Girls' one-piece dress with or without yoke lacing and with sleeve in either of two lengths. The pattern is cut in 4 sizes: 4, 6, 8 and 10 years. It requires 3½ yards of 36-inch material for an 8-year size.

1586—Ladies' dressing or house sack. The pattern is cut in 6 sizes: 32, 34, 36, 38, 40 and 42 inches bust measure. Size 36 will require 3¼ yards of 44-inch material.

1864—Girls' dress, with sleeve in either of two lengths. The pattern is cut in 4 sizes; 8, 10, 12 and 14 years. It requires 3½ yards of 44-inch material for a 12-year size.

1863—Ladies' one-piece dress, with sleeve in either of two lengths. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 6¼ yards of 44-inch material for a 36-inch size.

1579—A unique and easily adjusted apron. The pattern is cut in 3 sizes: Small, medium and large. It requires for a medium size 5⅝ yards of 36-inch material.

1612—A charming gown for the matron. The pattern is cut in 6 sizes: 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 5⅞ yards of 44-inch material for a 36-inch size.

1872—Dress for misses and small women. The pattern is in 3 sizes: 16, 18 and 20 years. It requires 6¾ yards of 36-inch material for a 16-year size.

1650—Girls' dress with or without overblouse, and with two styles of sleeve. The pattern is cut in 4 sizes: 8, 10, 12 and 14 years. It requires 3⅝ yards of 44-inch material for a 10-year size for the dress, with 1½ yards for the overblouse.

1873-1877—A fashionable gown comprising ladies' waist 1873 and ladies' skirt pattern 1877. Ladies' waist pattern 1873 cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Ladies' skirt 1877 cut in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It will require 8⅛ yards of 36-inch material to make this costume for a medium size. Two separate patterns, 10 cents for each pattern.

1860—Girls' dress with yoke and sleeve in either of two lengths. The pattern is cut in 4 sizes: 2, 4, 6 and 8 years. It requires 2¾ yards of 44-inch material for a 6-year size.

1521—A trim and popular suit for mothers' boy. The pattern is cut in 4 sizes: 3, 4, 5 and 6 years. It requires 2⅜ yards of 36-inch material for a 4-year size.

1870—Ladies' coat for utility or general wear. The coat is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 6 yards of 54-inch material for a 36-inch size.

A quarter of a billion acres of public land remain in the United States to be taken over by homeseekers, Secretary Lane announced. In twenty-five states, from California to Michigan and Florida to Washington, public domains are scattered and ready to be opened. All but 2,290,000 acres lies in the far West. Nevada, with 55,375,077 acres, contains the largest area. A dozen of the western states contain more than 254,945,589 acres, Ninety-two million acres are unsurveyed. Of the twenty-five states containing public lands, Missouri has the least, 952 acres in sixteen counties. Kansas has 56,018 and Oklahoma 55,250 acres.

KENTUCKY New country sorghum molasses, 6 one-gallon pails to case, $3.25 per case. Sample mailed for 5c. S. Rosenblatt, Hawesville, Ky.

The Tractor You Can Afford to Buy

If you are supporting from four to six horses in idleness nine months of the year, giving up 20 to 30 acres of your land to raise horse feed instead of marketable crops, you know what this means.

Moline-Universal Tractor

Does all the field work, including the cultivating and harvesting. Belt power up to 12 h. p. It plows deep, at the right time—in half the time.

Has the pulling power of five horses, the working capacity of seven because of greater speed and endurance, and eats only when it works.

Strictly a one-man machine—drives easier than a team from the seat of the implement pulled.

A proven success. Backed by a $19,000,000 concern with 51 years satisfactory service to the farmers of America.

Write for free illustrated literature and name of nearest Moline Dealer.

THE MOLINE LINE INCLUDES
Corn Planters, Cotton Planters, Cultivators, Grain Binders, Grain Drills, Harrows, Hay Loaders, Hay Rakes, Lime Sowers, Listers, Manure Spreaders, Mowers, Plows (chilled and steel,) Reapers, Scales, Seeders, Stalk Cutters, Tractors, Farm Trucks, Wagons, Vehicles.

"The Blue Bird Brings Happiness"

International Sunday School Lesson.

Lesson for October 1, 1916.
(By E. O. SELLERS, Acting Director of Sunday School Course.)

PLOT THAT FAILED.

LESSON TEXT—Acts 23.

GOLDEN TEXT—They shall fight against thee; but they shall not prevail against thee; for I am with thee, saith Jehovah, to deliver thee.—Jer. 1:19.

The stirring events of this lesson occurred in the Castle Antonia and the Sanhedrin hall, near the temple court of Jerusalem; also in Caesarea, the Roman capital of Judea, on the Mediterranean coast, in the year A. D. 57, just at the close of Paul's third missionary journey. The lesson pictures two successive days of strange adventures in which Paul was concerned, a narrow escape and the unexpected providences used in his deliverance. The day was inaugurated by Paul's magic words "I am a Roman citizen," which caused the commander, Lysias, to release him from the threatened scourging, and made him more than ordinarily careful in his treatment of Paul.

I. Before the Elders (vv. 1-12). By referring back to chapter 21, v. 13, we find the charge which really underlay all of Paul's trouble, his preaching in the name of the Lord Jesus. Paul's defense is interesting. He gives us a rehearsal of his Christian life, laying emphasis upon its blamelessness and the fact that he is not an apostate Jew. The high priest speaks to silence him, but not gently. Although Paul for a moment seems to give way to his justifiable indignation, he quickly reveals his reverence for the rulers of the people. He then divides the sanhedrin. Read carefully chapter 22:6-7, and compare with verses 17 and 18. The sanhedrin could not explain this testimony of Paul, and were seeking to put aside the whole question. An interesting discussion would be to consider the insult to Paul. Was his indignation right and rightly expressed? Another question, the matter of Paul's apology. Just for what did he apologize? Is it ever wrong to speak evil of rulers? These were indeed days of stress and storm. Was Paul justified in dividing the sanhedrin in order to conquer their opposition to him? Again, how God used these incidents in the furtherance of the gospel is a suggestive lesson for us all. It has been hinted that Ananias was not in his priestly garments, and, therefore, perhaps not readily recognized by Paul. Paul may never have seen him, as he was elected high priest after Paul had left the council. It is interesting to note that it is not said that anyone struck Paul or that Paul did not apologize for his words or deny them to be true, but only for their being spoken to the high priest. Read in this connection what Christ said to the Pharisees (Matt. 23:27). Paul apologized because he had broken the law found in Exodus 22:28. In the trial of Christ one of the officers struck Jesus with the palm of his hand, whereupon Jesus answered him, saying: "If I have spoken evil, bear witness of the evil, but if well, why smitest thou me?" On the other hand, when Jesus was ill-treated by the common soldiers, he opened not his mouth.

II. The Plot and Deliverance (vv. 12-35). Paul's prospect was not a pleasant one. In the darkness God appeared to his faithful servant to cheer him (v. 11). Perhaps Paul was tempted to think he had made a mistake in coming to Jerusalem over the protests of his friends, but evidently the Lord heartily approved of his testimony there. A dangerous conspiracy was forming against him, but God was, as he always is, beforehand with his comfort and preparation for the crisis. We have often speculated as to what became of the forty men who entered into it (see v. 12)—whether they actually lived up to their oath. If they did, they must have died of starvation. They were determined men, willing to go any length, and fancied they were doing the will of God. There is no more dangerous man than he who fancies that he must be the judge as to wl are God's friends and who are his foes, and that he is the appointed executioner of God's judgment. The plot was well laid, and seemed certain of success, but it failed miserably. (See Psalm 2:1-4; 64:1-10; Isaiah 41:10). The wicked, who leave God out of their plans, no matter how cunningly they plot, are doomed to failure (Rom. 8:31). These plotters co-operated with the priest. Ecclesiastics have often descended to the lowest villainy. Men are not murdered today, though their reputations are often blasted by unprincipled and hellishly impelled professed followers of the lowly Nazarene. Paul had friends in this city. His nephew's discovery and revelation, and the Gentile soldier, a colonel, effered his deliverance. In the boy's heart there must have been great admiration for the uncle. It would be well for teachers of boys to have them repeat in their own language this boy's story. Paul was not safe in Jerusalem. The Roman governor recognized the nature of the conspiracy, and the desperate character of the Jewish fanatics, and, therefore, sent him under a strong guard to Caesarea, which was reached after a journey on horseback, lasting through the night and the following day.

Splendidly Bound BOOKS

by

Well-Known Authors

30c EACH

While They Last

Which Is Less Than Cost

THE LOVELY LADY

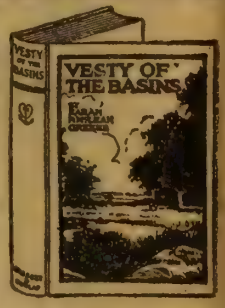
By **Mary Austin**

Mrs. Austin has infused into this story of modern work-a-day life a dream quality which makes it memorable. How Peter, as a lad, resolved to be rich, and how his Vision of a Lovely Lady became his watchful guardian till at last he found her, really and truly, is the theme Mrs. Austin develops with so much richness of truth and sentiment. Richly bound in dark green cloth and attractively stamped in gold. Former price $1.00.

VESTY OF THE BASINS

By **Sarah P. McLean Greene**

The readers who found the humor of "Cape Cod Folks" so thoroughly delightful will be glad to go with the author to the sea-washed villages of Maine and again meet the real New Englanders through her sparkling wit and humor. Vesty was a girl of surpassing beauty, with a power over the male population that would have won for her the marked disapproval of the ladies had she not possessed with her beauty a heart too kind to wound and a skill most astonishing in "doing" for others. Vesty and her love affairs, "Capt. Pharo," the city folks who summered on the Coast, and the wide range of characters found in a New England village—all help to make up a story that keeps one as interested as a humorous play. Former price 60 cents, postpaid.



ROMANCE ISLAND

By

Zona Gale

This is a complicated love story which is admirably handled by a clever and very popular writer. The book has been called an island of pure romance. The interesting characters are well-drawn, and it is just the sort of book which will satisfy those who wish for novelty and originality. Printed in open, readable type, nearly 400 pages, with many illustrations in halftone by Herman C. Wald. Cloth Binding. Former price 60 cents, postpaid.

DOWN HOME WITH JENNIE ALLEN

By **Grace Donworth**

This tells of Jennie Allen's adventures when she goes back to her childhood home with her family and then returns, as a married woman, to Providence, there to set up her own home and spread her spirit. Her philosophy of life is strengthened and brightened by her wider outlook on life and the larger field for her activities but the old Jennie Allen is still there with her all-embracing affection for the whole world, especially any who are sick and suffering. This book is bound in cloth and is illustrated by Frederick R. Gruger. Former price $1.25.

PART III. "Prince Charlie"

CHAPTER III—Continued.

SHE saw nothing more of him until evening, and then he was rather quiet, sitting beside Tillie and Miss Margaret, with occasional low-toned remarks to them, but not joining in the general conversation.

"What a queer remark that was for a man to make!" thought Rachel, looking at him across the room;—"a young man especially;" and that started her to thinking of his age, about which people would have widely different opinions. To see him sometimes, laughing and joking with the rest, he looked a boy of twenty. To hear him talking of scientific researches in his own profession and others, of the politics of the day, or literature of the age, one would imagine him at least forty. But sitting quietly, his face in repose, yet looking tired, his eyes so full of life, yet steeped in reveries, the rare mouth relaxed, unsmiling, then he looked what he probably was, thought the girl—about thirty; but it was seldom that he looked like that.

"Therefore," reasoned this feminine watcher, "it is seldom that we see him as he really is; query—why?"

"Perhaps I felt as a parent feels!" How frank his words had been, and how unlike most men he was, to give utterance to that thought with so much feeling, and how caressing to the child! Rachel had to acknowledge that he was original in many ways, and the ways were generally charming. His affections were so warm, so frankly bestowed; yet that gracious, tender manner of his, even when compared with the bluntness of the men around him, never made him seem effeminate.

Rachel, thinking of his words, wondered if he had a sweetheart somewhere, that made him think of a possible wife or children longingly—and if so, how that girl must love him!

So despite her semi-warlike attitude, and her delight in thwarting him, she had appreciation enough of his personality to understand how possible it was for him to be loved deeply.

Jim, under Miss Hardy's tuition, had been making an attempt to "rope in" an education, and that night was reading doubtfully the history of our glorious republic in its early days; garnishing the statements now and then with opinions of his own, especially the part relating to the character of the original lords of the soil.

"Say, Miss Rache, yer given' me a straight tip on this lay-out?" he said at last, shutting the book and eyeing her closely.

The question aroused her from the contemplation of the Hermes-like head opposite, though she had, like Hardy, been pretending to read.

"Do you mean, is it true?" she asked.

"Naw!" answered Jim with the intonation of supreme disgust; "I hain't no call to ask that; but what I'm curious about is whether the galoot as wrote the truck lied by accident—someone sort o' playin' it on him, ye see—er whether he thought the rest o' creation was chumps from away back, an' he just naturally laid himself out to sell them cheap—now say, which is it?"

In vain his monitor tried to impress on his mind the truth of the chronicles, and the fact that generations ago the Indian could be truly called a noble man, until his child-like faith in the straight tongue of the interloper had made a net for his feet, to escape which they had recourse only to treachery and the tomahawk, thus carving in history a character that in the beginning was not his, but one into which he was educated by the godly people who came with their churches and guns, their religion and whisky, to civilize the credulous people of the forests.

Jim listened, but in the supercilious disbelief in his eyes, Rachel read the truth. In trying to establish historical facts for his benefit, she was simply losing ground in his estimation at every statement made.

"An' you," he finally remarked, after listening in wonderful silence for him—"an' you've read it all, then?"

"Yes, most of it."

"An' swallowed it as gospel?"

"Well, not exactly such literal belief as that; but I have read not only this history, but others in support of those facts."

"Ye have, have yeh?" remarked her pupil, with a sarcastic contempt for her book learning. "Well, I allow this one will do me a lifetime, fer I've seen Flatheads, an' Diggers, an' Snakes!"

Thus ended the first lesson in history.

"Don't you think," said Tillie softly to Stuart, "that Rachel would win more glory as a missionary to the Indians than among her own race? She is always running against stumbling-blocks of past knowledge with the progressive white man."

Rachel cast one silencing glance at the speaker; Tillie laughed.

"Never mind," she said reassuringly; "I will say nothing about your other attempt, and I only hope you will be willing to confine yourself to the Indians near home, and not start out to see some Flatheads, and Diggers, and Snakes for yourself."

"Lawd bress yeh, honey!" spoke up Aunty Luce, whose ears were always open to anything concerning their red neighbors; "don yo' go to puttin' no sech thoughts in her haid. Miss Rache needs tamin' down, she do, 'stead o' 'couragement."

"Well, it's precious little encouragement I get here, except to grow rusty in everything," complained Rachel. "A crusade against even the Diggers would be a break in the monotony. I wish I had gone with you to the Kootenai village, Mr. Stuart; that would have been a diversion."

"But rather rough riding," he added; "and much of the life, and—well, there is a great deal one would not care to take a lady to see."

"You don't know how Rachel rides," said Tillie, with a note of praise in her voice; "she rides as hard as the men on the ranch. You must go together for a ride, some day. She knows the country very well already."

Rachel was thinking of the other part of his speech.

"I should not have asked to be taken," she said, "but would have gone on my own independence, as one of the party."

"Then your independence would have led you to several sights revolting to a refined nature," he said seriously, "and you would have wished yourself well out of it."

"Well, the Kootenais are several degrees superior to other tribes of the Columbia Basin; so you had better fight shy of Jim's knowledge. Why," she added, with a little burst of indignation that their good points were so neglected, "the Kootenais are a self-supporting people, asking nothing of the Government. They are independent traders."

"Say, Miss Rachel," broke in Jim, "was Kalitan a Kootenai Injun?"

"No, though he lived with them often. He was of the Gros Ventres, a race that belongs to the plains rather than the hills."

(To be continued.)

Most tankage manufacturers guarantee the analysis of their digester tankage. But we do more—we return money and freight charges if our brand of tankage does not please you. See General Catalog.

Did You Follow Our Advice In Last Week's Paper?

Then you have read the editor's story and our page announcement of the Hillsdale ranch in the issue of August 10th. And, anyway, we are pleased to have you read the following articles quoted from the August 31st issue of the Herald of Burns, Wyoming:

Conard Buys Four Section Farm.

Mr. E. C. Conard, of Rockwell City, Iowa, who purchased a farm from the Federal Land Co., last fall, which he expected to move onto with his family next spring, was in Burns Tuesday and Wednesday. His object here was to look over the Hillsdale ranch, now being colonized by the Federal people.

That he was pleased with it is shown by the fact that before starting for Iowa last night he closed a contract of purchase for Sec. 3-15-64 and Sec. 33-16-64, which corners Sec. 3 on the northwest. With the purchase Mr. Conard secures the state land leases on Secs. 34 and 4. This makes him a square farm of 2,560 acres.

Mr. Conard was more than pleased with crop conditions here. He says that having seen the grains grown in 1915 with normal rainfall, and this season of unprecedented drouth, he is satisfied that this is just as sure a crop country as in Calhoun county, Iowa, besides being much superior for cattle raising.

Mr. Conard will break and put into crop 640 acres next spring, and will stock his new ranch with several hundred head of cattle. He will move out with his family as soon as he has a public sale in December. Mrs. Conard was here with him last fall, and those who met her are delighted that this splendid family will soon be residents of the Golden Prairie District.

Increases Holdings by Additional Quarter.

G. W. Price, of Osceola, Neb., who came out to Burns last year and bought a quarter section of the Federal Land Co., returned this week and was so well pleased with the conditions, regardless of our dry-crop season, that he purchased another quarter section, which makes him a fine half section of property. He expects to move onto his place in the early spring and make his home on the Golden Prairie. Mr. Price subscribed to the Herald while here, as the best medium by which to keep track of the conditions in this vicinity. What the Golden Prairie needs more than anything else, is good farmers, and Mr. Price and his family will be a valuable addition to the community.

Also let us suggest that if you have not yet filled out and mailed us the coupon below, now is a splendid time to do so.

FEDERAL LAND COMPANY, Burns, Wyoming

Field of winter wheat in shock and binder at work on farm of Richard Spatz, adjoining the Hillsdale ranch. Photo taken July 20, 1916. This same field produced 50 bushels of oats per acre in 1915, the wheat shown being drilled into the oats stubble in September.

FEDERAL LAND COMPANY, BURNS, WYO.

Gentlemen: Please mail me at once full descriptive literature of your Hillsdale ranch and the Golden Prairie District of Wyoming.

Name.....

Address.....

Remember this: That we are protected from hot winds and extreme heat by the snowcapped Rockies, always on clear days in plain view to the southwest. This is fully explained on page 3 of the booklet entitled "Wheat Growing and General Farming Without Irrigation in the Golden Prairie District" which will be sent to all who fill out and mail us the above coupon.

ARE YOU GOING TO BUY LAND?

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

The Grant County Poland China Breeders' Boar Sale.

SOMETHING a little out of the ordinary will happen at Lancaster, Grant county, Wis., Tuesday, October 10th. The Poland China breeders of this county are live ones and last winter they formed a county association and on the above date the association will hold its first sale. The success of the future sales depends on the individuals that will go in this sale, the breeders realize this and consequently the best boars from each herd have been consigned. There will not only be a few good boars, but every lot in the catalog are boars that the owners have reason to feel proud of. The writer has visited the various herds from which boars have been selected and we are glad to say that this is an extraordinary offering in every respect and we sincerely hope that the buying public will appreciate this high-class lot of boars. It stands to reason that by picking the tops from seventeen herds one should get together an offering of boars seldom seen in one sale. Prospective buyers couldn't attend a sale where they would have a chance to bid on a greater assortment of popular breeding. No matter what breeding you have in your herd you can find breeding in this sale that will not interfere with your present blood lines. Frank Renalde is selling some of the largest spring boars we have seen, they are real herd-boar prospects. Chris Kartman is selling sons of King Joseph, he by Big Joe out of a daughter of Big Orange. He is also selling a son of Monster Big Bone, he by the noted Black Big Bone, the sire of the Iowa champions. C. S. Flesch will sell some outstanding boars by his champion, Jumbo's Equal 2d. When Dobson & Eastman say they will sell the best they have, that is enough said. We might mention that their futurity boars go in this sale, you'll want one or more. Some of the best ones will be consigned by F. A. Morehouse, sired by Ideal Jumbo, the prize-winning boar purchased in Minnesota. Space won't permit us to mention the various individual boars that go in this sale, you must get a catalog to get the full information, and then you won't be able to appreciate the offering unless you see it. You can make good connections from the east and south and those coming from the north or south along the river, on the C. B. & Q. should stop off at Potosi where free transportation will be furnished to the sale. In case you can't attend this sale in person be represented with a bid, for if you are going to want a Poland China boar you will not be disappointed with anything in this sale offering. T. P. Shreve will represent The Wisconsin Farmer at this sale and handle all mail bids. Write him in care of Burlie Dobson, Lancaster, Wis., and your instructions will be carried out in an honorable manner. Get a catalog at once and mention The Wisconsin Farmer. See page 19.—Adv.

Report of Horse Sale at State Fair.

THE consignment sale of stallions and mares held during the Wisconsin State Fair was well attended, but the crowd did not want registered horses of any breed. These sales have been held at various state fairs, but as a rule they are not successful. In many instances the animals consigned are not desirable and such was the case with some of the consignments of this sale—they brought, however, about what they were worth, but some of the outstanding stallions and mares sold far below their value and it took nerve on the part of the owners to sacrifice them at the prices offered. The Pabst Stock Farm sold many of their Hackneys, geldings and mares that had been prize winners for the Pabst stud. These, too, sold far below their value. It was a good day for the buyers and those that took advantage of the low prices that prevailed will certainly make money on their investment. The sale was well managed by Mr. Fred Pabst and it was no fault of his that the offering did not bring more money.—Adv.

Eglehof Chester Whites.

JOS. EGLEHOF, Edmund, Wis., has succeeded in raising seventy-five pigs of August farrow and for the time being they will be offered at very conservative prices. They are all from matured dams and from four different herd boars. Mr. Eglehof is one of the pioneer Chester breeders of the state and we have seen a great deal of his breeding in the various herds over the state. He is a good caretaker and we believe that you will be satisfied with what he sends you on your order. He can ship you a pair not related and for a short time the price on the pair will be $25. If interested write at once so as to get the pick. Please mention The Wisconsin Farmer. See page 22.—Adv.

Boars by the Grand Champion King Defender.

B. W. LITTLE, Janesville, Wis., is the man that "grew out" and developed the Wisconsin State Fair grand champion, King Defender. If you want a spring boar or gilt sired by a grand champion, Little can fill the bill, for he has a lot of them and they are good ones. You can add prestige to your herd by having a son of a grand champion at the head. Get his prices and description at once. Don't delay, for they will be in demand now. Don't forget to mention The Wisconsin Farmer. See page 22.—Adv.

J. W. Thomas Wins Silver Trophy.

J. W. THOMAS, the popular Duroc Jersey breeder of North Bend, Wis., is the winner of the silver trophy given by The Wisconsin Farmer for the best litter of pigs shown in the Duroc Jersey futurity at the Wisconsin State Fair. Competing with the best herds in the state, Mr. Thomas deserves credit for being able to win this coveted prize. Mr. Thomas is one of the best feeders in the state and his pigs are in the best of condition at all times. His winnings this year were on the get of Prof. King and Grandmaster. The first mentioned boar is a son of Indiana King, a first-prize winner at the Minnesota State Fair in 1915 and Grandmaster was the junior champion boar at the Wisconsin State Fair the same year. This boar is a grandson of the noted Orion Chief. At this time Mr. Thomas is offering thirty boars of spring farrow and they are good ones, two spring yearlings, and forty spring gilts. Now we do not hesitate to recommend this lot of Durocs, for we feel that they will give satisfaction. Those that want gilts can order them now and they will be held and bred to a son of King the Col. This boar was the pick of the O. S. Larson herd and is an outstanding individual in every respect and with the care he will receive in Mr. Thomas' hands we feel sure that he will be heard from in the future. The advertisement of this herd appears on page 22 and it will pay you to get his prices and description at an early date. Mention this paper, please.—Adv.

The Olathe Holstein Herd.

WITHOUT a doubt, one of the best herds of producing Holsteins in western Wisconsin is located at Eau Claire and owned by the Silver Springs Farm Co., Geo. H. Comings, Pres., and W. S. Comings, vice president and manager. Practically the entire herd is made up of animals of their own breeding. A high standard of efficiency is set and the cattle must come up to this standard or they are not maintained in the herd. The herd numbers forty-five females of Ormsby and Piebe breeding. At the head of the herd stands Sir Bess Ormsby Mercedes, a son of the noted Sir Pietertje Ormsby Mercedes 37th and Daisy Queen De Kol, A. R. O. 871.7 pounds butter in one year, average fat 3.92. This cow was one of the "ten best cows" in the Wisconsin cow competition. Remember, this firm are breeders exclusively and offer for sale young stock of their own raising. Complete records are kept and if you are interested it will pay you to write for details relative to the stock they have for sale. Their advertisement will appear regularly in The Wisconsin Farmer. Kindly mention this publication when writing. See page 21.—Adv.

The Sprain Durocs.

IF you haven't purchased that spring or fall boar get the prices and description of the Sprain Durocs. They have boars sired by five noted sires and individually they will please you and the prices asked are very reasonable. Geo. D. Sprain & Sons, West Salem, Wis., want to get a reputation and they will guarantee to give you your money's worth. Try them and in writing please mention The Wisconsin Farmer. See page 22—Adv.

McDonald at the Fairs.

DID you see those big-type Poland Chinas exhibited by J. D. McDonald, of North Bend, Wis., if you didn't you certainly missed a show worth seeing. Such sows were never before seen on the Wisconsin State Fair grounds and to say that they were the attraction in the swine barn would be putting it mildly. We had predicted for some time that his herd boar, Mac's Chief, was the best champion prospect that we had seen and our predictions came true. Here is a great boar, weighing over 1,000 pounds, very smooth, good spring of rib, plenty of bone and stands on good feet and pasterns. He was the biggest champion ever seen at the Wisconsin State Fair. At the Minnesota Fair McDonald had the grand champion sow and had there not been a mistake made in the entries at that fair he would have had the first prize herd. At the Wisconsin Fair he won all championships with the exception of junior champion sow. He won more points in the Poland China futurity than any other exhibitor, therefore, winning the silver trophy offered by The Wisconsin Farmer. We will not go into details relative to the winning of the McDonald herd, for these appeared in full in our September 21st issue. The judge tied the ribbons on the big ones and McDonald had them. Boars from this herd are being offered for sale and it is worth something to have a herd boar that comes from such a good herd as J. D. McDonald owns. Get his prices, but don't stop for a few dollars if you get what you want. Mention this paper. See page 23.—Adv.

Holsteins for Indiana.

MR. S. EVERETT STUBBS, of Wilkinson, Ind., has recently purchased near Janesville, Rock county, Wis., a very fine load of Holstein cows. Many of them were pure breds and the balance high grades. They were selected from the herds of John L. Fisher, W. C. Hugunin and A. M. Easton. Mr. Stubbs represents a large creamery concern in Indiana and the cattle he purchased will be sold to farmers at a very reasonable figure and on easy terms. Mr. Stubbs is a very competent man for the position and the farmers of Indiana should be well pleased with the class of Holsteins he purchased.—Adv.

Gray's Chester Whites.

A. L. GRAY, Mt. Hope, Wis., has a fine lot of Chester Whites for sale this fall. He showed his hogs at three fairs during the last few weeks and took nineteen firsts and nine seconds. He has twenty spring boars, four yearlings, and twenty gilts which he offers at reasonable prices and the farmer who is interested in Chester Whites will be pretty sure to find what he wants in Mr. Gray's herd. See his advertisement on page 22 and write him for further particulars about his prize-winning Chester Whites.—Adv.

A Cheap-Fuel Tractor.

A TRACTOR that will do the work of eight horses at the upkeep cost of two is what the Waterloo Gasoline Engine Co., Waterloo, Iowa, are offering in their Waterloo Boy kerosene tractor. It is splendidly adapted to the needs of the small farm. Besides the saving in fuel cost, and its reliable, steady work, its simplicity commends it to careful farm buyers. It can easily be handled by one man or a boy. The Waterloo Boy tractor plows eight acres a day and pulls three fourteen-inch plows. See the advertisement on page 10 and write for their illustrated catalog, mentioning this paper.—Adv.

Atwater's Big Winnings.

WE doubt if the people of Wisconsin really appreciate the fact that L. F. Atwater, Bangor, Wis., has one of the best herds of Duroc Jerseys in the United States. If this herd was owned by some of the "noisy" fellows of Iowa, Indiana or Ohio, they would be known all over the United States, for very few of them have anything on the Atwater herd. L. F. continues to sell Durocs at satisfactory prices, so he doesn't see the wisdom of making a lot of noise. Some time ago Illustrator King "went back" on his feed which left the owner without an aged show boar, but he certainly made up for that on his sow herd. At the Minnesota Fair Atwater had the junior champion boar and both sow championships besides other class prizes. At the Wisconsin State Fair he turned the same trick besides being the heaviest winner in the futurity thereby winning the silver trophy offered by the Duroc Bulletin for the premier exhibitor. The noted Brookwater Farm show herd owned by Professor Mumford was a "runner up" on Atwater, but we are glad to report that the Wisconsin Durocs had it on the Michigan entries. The boars that made up his winning futurity herd will be sold in the boar sale which will be held at the farm near Bangor, Wis., October 18th. For this sale forty head have been cataloged, the like of which has never been seen in the Northwest before. Plan now to attend this sale. First get your catalog, it is ready for you and can be had for the asking. Write L. F. Atwater, Bangor, Wis., and mention The Wisconsin Farmer. See page 22.—Adv.

Burts' Duroc Jerseys.

F. H. BURT & SONS, Brodhead, Wis., are offering about 150 boars and gilts this year sired by Porfessor B. 148913, Model Wonder 182445, Col. S. Jr. 43869, Cherry King's Rival and Owan Cherry King Jr. 56375. This breeding is as good as anything that can be procured in Duroc circles. Burts' pigs have done exceptionally well this year and now weigh from 125 to 200 pounds. Four pigs of one litter were shown at the Janesville Fair, taking five prizes. The boars are all big, long fellows, and the sows are exceptionally roomy. Burts have a new method of selling. They not only ship on approval, but allow ten days' free trial after which the purchaser may return the pigs at their expense if not satisfactory. Read their advertisement on page 22 and write for their new guaranteed descriptions. Mention that you saw the advertisement in this paper.—Adv.

Two Red Poll Bulls for Sale.

WE have just had a letter from J. W. Salter & Son, Unity, Wis advising that they have two Red Poll bulls of serviceable age that they will sell. We saw these bulls as calves and at that time they looked like real herd bull prospects and Mr. Salter advises us that they have done fine since that time, consequently we do not hesitate to recommend these bulls to anyone interested in this breed. To anyone wishing to buy a few heifers for foundation stock, they will price some of their best females. The recent sales made by the above firm are as follows: One sixteen-months-old bull to E. Schoenich, Dousman, Wis.; one eight-month-old bull to L. T. Watson, Marshfield, Wis.; one two-year-old heifer, three cows and one eight-month-old calf to Wm. J. Brown, Gilman, Wis. The Salters have good cattle, investigate. See page 20.—Adv.

The Grand Champion King Defender.

THERE was nothing in the Duroc Jersey aged boar class at the Wisconsin State Fair that caused King Defender any trouble—he was the outstanding boar of the class, winning over such noted boars as Cherry King's Rival, an excellent boar, however. It was generally conceded that there was no boar on the grounds that could beat King Defender for the championship and such was the ultimate outcome. This boar is owned by John L. Fisher, Janesville, Wis., and at a later date sows bred to this boar will be offered for sale. At the present time spring and fall boars are being offered at reasonable prices. Write Mr. Fisher and don't forget that this is the home of the grand champion, King Defender. See page 22.—Adv.

The Parker Durocs.

E. H. PARKER & SON, of Janesville, Wis., had a nice lot of boar pigs at the Wisconsin State Fair and the visitors were greatly impressed with the type of Durocs this firm raises. They have just as good Duroc boars at home as they had at the fair, though not in show condition, but in the proper shape to give satisfaction in the herd. You take no chance when you

Live Stock Advertisement Paid Well.

So George Wenham & Sons, of Fort Atkinson, Wisconsin, decided to take a yearly contract in The Wisconsin Farmer.

IT WAS EASY to convince George Wenham & Sons, of Fort Atkinson, Wisconsin, that a live stock advertisement in The Wisconsin Farmer paid well. These breeders of Short-horn cattle are now advertisers on a regular yearly contract. Read their letter:

We have decided to run an advertisement for the entire year in The Wisconsin Farmer, as we feel from the results obtained during the short time our advertisement has been running, that it will pay us very materially to have our names before the public all the time. We are convinced that it pays to let the people know what we have for sale and that The Wisconsin Farmer is the proper medium for us to use. We recently sold a carload of cows and heifers to a party in Michigan and we sold a great many bulls at satisfactory prices through our advertisement in The Wisconsin Farmer.

Evidence like this to prove the pulling power of The Wisconsin Farmer live stock advertisements is piling up all the time. That's one big reason why The Wisconsin Farmer runs so many more live stock advertisements than any other Wisconsin farm paper. Guaranteed weekly circulation, 90,000.

For rates and further information, address

THE WISCONSIN FARMER, Madison, Wisconsin.

orden from the Parkers, they will send you a good boar or none at all and you will find the pig just as represented. If you are going to want a Durroc Jersey boar, write for prices and description of the Parkhurst Durocs. In so doing kindly say you saw the advertisement in The Wisconsin Farmer. See page 22.—Adv.

Harry Crandall and the Great Schoolmaster.

WISCONSIN needs more and better Chester White herd boars and The Wisconsin Farmer gives its readers the name of another Chester White breeder with whom it will pay to correspond. All men that follow the Chester White breed have heard of Harry Crandall, Cass City, Mich., the breeder that had that great herd of Chester Whites fitted for 'Frisco last year. On October 17th he will sell fifty head of boars and sows and this will be an extraordinary offering from start to finish. As an attraction the noted Schoolmaster will be offered; this is the boar for which Mr. Crandall paid $800. He is sired by Comet, the grand champion boar at Indiana this year, he by old Wonder. Schoolmaster was grand champion at Detroit this year. The junior champion boar at Ohio and Wisconsin was a pig sired by Schoolmaster. His sale offering will be made up of the get of Schoolmaster and Post 3d. The latter boar is the sire of some of the greatest sows in the United States. Such sows as Arcadia, Tena 8th, Cass City Bell, and the boar, Abo, every one a grand champion. Write Mr. Crandall for his catalog and if you can't attend the sale in person send your bids to Fred Moore. He will handle your bid in an honorable manner. Please mention The Wisconsin Farmer when writing. See page 22.—Adv.

C. S. Flesch and Jumbo's Equal 2d.

WE think that one of our best "finds" is the herd of Poland Chinas owned by C. S. Flesch, Mt. Ida, Wis. Not that he has the best herd in the state at the present time, but Charlie is one of those progressive breeders always looking for something with which to improve his herd. He has a number of choice gilts to sell, yet he purchased several at the Wisconsin State Fair, and they were good ones, that he thinks will cross well with Jumbo's Equal 2d. If you attend some of the winter brood sow sales we venture to say that Mr. Flesh will be at some of them bidding on the best ones that enter the ring. He has a good herd of big Polands at this time and the few boars that he is offering are good ones. Only the very tops will be shipped on order. He will not make a sow sale this winter consequently a limited number of gilts will be offered for sale. Jumbo's Equal made the circuit of the southwestern Wisconsin fairs and was undefeated. He is some boar. Get his blood. See page 23. —Adv.

Coming Events of Interest.

BE sure to pay special attention to the October 5th issue of The Wisconsin Farmer, for it will contain the advertisement of several sales that should be of interest to our readers. On October 17th W. C. Jenkins will sell twenty-five Duroc Jersey sows and twenty-five boars of the same breed. We have recently seen this offering and we do not hesitate in recommending it. Several of the outstanding individuals will be mentioned in the advertisement. This sale will take place at Bangor, Wis. The following day L. F. Atwater will sell forty head of Duroc boars, the tops of his herd of "big Durocs." This will be one of the important boar sales of the season. The next day Geo. H. Willsie will sell forty boars at Prosper, Minn. This will be a Big Col. and Chief Defender sale and our Wisconsin readers that attend this sale will have an opportunity to get some new blood into their herd. This sale will be worth attending. Good connection from each sale. A noted Poland China sale is advertised in this issue. T. P. Shreve will attend all of these sales and if you wish him to make a selection for you write him in care of the man making the sale.—Adv.

Don't Forget the Big Col. Duroc Sale.

MAKE arrangements to attend the sale of Duroc boars to be held at Prosper, Minn., October 19th. Geo. Willsie is the man that owns those two good boars, Big Col. and Chief Defender. You should have some of that breeding. Be sure to write for a catalog and watch for October 5th issue of The Wisconsin Farmer. Write Geo. Willsie, Prosper, Minn., and mention this paper. See page 22.—Adv.

GRANT COUNTY BREEDERS' SALE

POLAND CHINA BOARS

LANCASTER, WISCONSIN

TUESDAY, OCTOBER 10, 1916

40 HEAD The Pick From 17 Herds 40 HEAD

THIS is a breeders' sale and each man is offering the best he has. No Poland China sale of the season will contain a better lot of **spring and fall boars.** There will not be a cull in the entire offering. The spring boars are of March farrow and have been well grown. The fall boars are outstanding herd boars. **Get the breeding from the catalog.** The consignors, all from Grant county, guarantee every animal they sell. What would you expect to find if you picked 40 head from 17 herds? They will not disappoint you. By all means attend this sale, it will be a real "hog show." If you can't attend in person send a bid to T. P. Shreve, The Wisconsin Farmer representative, we'll guarantee that he will please you. Address him in our care. Write the secretary for a catalog. Dobson & Eastman will sell 10 registered Oxford Ewes. Auctioneer, Ira Cottingham.

GRANT COUNTY POLAND CHINA BREEDERS' ASS'N

BURLEY DOBSON, Sec'y, LANCASTER, WISCONSIN

THE type of Brown Swiss females found in the Andrew Martin herd, West Salem, Wis. A first-prize winner at Wisconsin State Fair, first and champion at Chippewa Falls and La Crosse, 1915. Some outstanding bulls are being offered by this breeder. His advertisement appears on page 23.

Keep Your Eye on This Breeder.

GEO. W. PAGEL, Zumbrota, Minn., is a new name to many of The Wisconsin Farmer readers, but he is a breeder of Duroc Jerseys that will be heard from in the future, for he has the goods. His brood sow herd is made up of big, smooth sows, many of them coming from old Marion's Wonder breeding and you know what that is. The sire of some of the younger stuff is one of the best sons of the champion, Lee's Defender, that we have seen. The most recent addition to his good herd is the yearling boar, H. C. Wonder, second in class at the Minnesota fair this year. He is a son of the Iowa champion, Big Wonder, and is a boar of great breed character. Mr. Pagel has claimed February 26th for his annual sale of bred sows and we predict now that this will be a sale worth attending, for we know the class of sows that will be listed. Remember Geo. Pagel. —Adv.

Karlen's Holstein Dispersion.

EVERY Holstein breeder or farmer interested in Holstein cattle in the middle West should attend the dispersion sale of the Holstein herd of F. J. Karlen, Winslow, Illinois, on October 4th and 5th. There is probably no finer herd of Holsteins in the middle West, either in conformation, size of individuals, breeding or production ability. The herd consists of 170 head ranging in age from calves to mature animals. Nearly every animal of milking age has an A. R. O. record. Two have records over thirty pounds butter in seven days and several others from twenty-five to twenty-nine pounds. There are a large number of two and three year olds with records from twenty to twenty-five pounds butter in seven days. There will be fifteen young bulls for sale from heavy-producing cows and heifers. Several are from dams with records above twenty-five pounds. There will be an opportunity to buy several daughters of one sire, as there will be fifty daughters of one bull and twenty daughters of another bull. The herd sire is one of the good bulls of the West, being out of a thirty-six-pound cow. He and eighteen of his daughters will be put in the sale and offers an exceptional opportunity to make a great foundation herd or addition to any established herd, no matter how good it may be. Catalogs giving pictures, description and breeding are now ready for mailing and may be obtained by writing to F. J. Karlen, Winslow, Ill. Send bids to H. S. Hoard, field man for this paper. See page 21.—Adv.

Many Investigating Golden Prairie Farms.

MANY farmers of the grain belt states are investigating the farms offered in the Golden Prairie district of Wyoming by the Federal Land Company, Burns, Wyo. Their advertisement will be found on page 17 of this issue. This company has been selling land for a number of years. In the passed decade they have located a large number of farmers in the Golden Prairie district and scores of these farmers have made good and now have good homes and profitable acres. The passed season was dry in the Golden Prairie district the same as it was generally through the grain-belt states, but some good crops of wheat and oats were raised and cattle have fared well on the range through the summer. Many cattle shipped from Wyoming the present year have brought good prices and there are thousands of head ready for the winter markets which will bring good profits to their owners.—Adv.

Studebaker Superiority.

MOTOR, Motor Age and Automobile, three leading magazines of the motorists, recently made an unprejudiced analysis of cars and specifications. The result was decidedly favorable to the Studebaker. The Studebaker rating on the various different phases of automobile manufacture and sale, from

THE $800 Schoolmaster owned by Harry Crandall, Cass City, Mich. Grand champion boar at Detroit and a pig by him junior champion at Ohio and Wisconsin. This boar and twenty-five spring boars, also twenty-five gilts will be sold at the above address October 17th. See advertisement on page 22 and field note on page 18.

THIS cow, three daughters and several granddaughters to be sold in the Karlen sale to be held at Winslow, Ill., on October 4th and 5th as advertised on page 21 of this issue.

price to Timken bearings, is given in the advertisement on page 7. Every automobile owner and every person who is thinking of buying a car, will be interested in reading this page and should consider the facts revealed there carefully before deciding on a new car. Write The Studebaker Co., Detroit, Mich., for further information, and be sure to mention that you saw the advertisement in this paper.—Adv.

Better Than Stoves.

THE farm home will be more comfortably heated, with less work, and at a cheaper fuel cost, if the Mueller pipeless furnace is used in place of stoves. It is easy to install, there being no need to tear up walls and floors. It burns coal, wood or coke and cuts fuel bills one-fourth. Besides that it is cleaner, and because it distributes the heat more evenly through the house it is much better for the health of the family. Read the illustrated advertisement on page 8 and write to the manufacturers, the L. J. Mueller Furnace Co., 204 Reed St., Milwaukee, Wis., for their free booklet. Tell them you saw the advertisement in this paper.—Adv.

Reclaim Your Swamp Land.

SWAMP land may be reclaimed and made to yield good profits if drained with a tile that is strong and durable. Haeger Quality Tile, manufactured by the Haeger Brick & Tile Co., 1 State Bank Bldg., Dundee, Ill., is guaranteed. It is strong, straight, well-burned and lasts a lifetime. Watch for the trade-mark Diamond H, on the tile you buy. That is the Haeger quality mark. Haeger tile are shipped anywhere in Illinois and Wisconsin. See the advertisement on page 2 and write for free booklet telling how to reclaim swampy land. Tell them you saw the advertisement in The Wisconsin Farmer.—Adv.

Pulling Stumps by Hand.

ONE man can easily do the work of clearing stump land if equipped with a hand power K Stump Puller, manufactured by Walter J. Fitzpatrick, Box B, 182 Fifth Street, San Francisco, Cal. It works by leverage and gives an enormous pull. It is made of Krupp steel and is guaranteed against breakage. The manufacturers have an attractive special offer on these stump pullers. See their advertisement on page 2 and write for information about their offer and for a copy of their free book on land clearing. Don't forget to mention that you saw the advertisement in this paper.—Adv.

An Aid to Bigger Crops.

STUMPS have no place on the up-to-date farm. They must be cleared away in order that the farmer may raise bigger crops. The Kirstin one-man stump puller will clear the fields easily and quickly. No horses are necessary. It gives to the operator a giant's power. The farmer or his hired man can clear an acre from a single setting. It is sold by the A. J. Kirstin Co., 100 Ludington St., Escanaba, Mich., on a ten-day money-back guarantee. See the advertisement on page 5 and send for the free book on land clearing. Tell them you read the advertisement in this paper.—Adv.

Will Trade Land for Cows.

HERE'S a chance for some farmer to exchange his surplus heifers for a good tract of timber land on the lake shore in Itaska county. M. J. Barney needs a carload of high-grade Holstein cows and heifers, and he is willing to pay for them with land. It is an attractive bargain for the man with the stock that fills Mr. Barney's requirements. See his advertisement on this page and write to him if you have the stock.—Adv.

60% protein in our

Blanching Celery.

Proper blanching is half the battle of successful celery raising. Most markets refuse the unblanched article entirely and those of us who grow it for home use know that green celery is unwelcome on the table. The heart blanched by the plant itself is much better and proper blanched celery is all heart.

In the "new celery culture" the plants are set six inches apart each way in beds, so only the outer rows need shading, for blanching is really another name for shading. The plants are sometimes grown in double rows so as to reduce the labor and material to half of what is needed when single rows are used.

No matter which of the many methods of blanching is used the proper time is always the same—when cool fall weather has come to stay. Banking before hot, burning weather is over may induce rust, especially if earth is used.

Earth is the best and commonest blanching material, as it is usually the cheapest and imparts a nutty flavor not secured without it, but its use makes it necessary to set the rows or beds far enough apart so plenty of earth for banking can be secured.

Hilling may be done by hand with a small turning plow or with a celery hiller, but when horse tools are used it is usually necessary to finish the work with a hand hoe. A better job can always be done if tillage throughout the season has been so thorough and judicious that the soil is fine and easily handled.

The earth should cover the entire plant below the lower edges of the leaves in such a way as to drain the plants well, as too much moisture will result in dirty and perhaps rotten celery. Special care must be taken never to hill or handle the plants in any way while they are wet. As the plants grow and the soil settles a little more earth may be added to keep the mounds up to the leaves.

The greatest economy of garden space may be secured by using blanching boards, held together at the top by stiff, wire hooks and at the bottom by a little earth banked against them. The same boards can be used several years if carefully stored under cover, so the cost is not excessive.

Some less usual methods include the use of a drain tile carefully placed about each plant; building paper or even newspaper wrapped around the plants; and individual patented veneer sheets, similar to those sometimes used in protecting young trees from rabbits. These individual methods, however, require so much work, care and patience that they are unprofitable on any but very small plantings for home use. Earth blanching is best, especially for the late crop.—[J. S. Gardner, Missouri Experiment Station.

HOLSTEIN-FRIESIAN CATTLE.

175 HEAD

PURE-BRED A. R. O. HOLSTEINS ALL TO BE SOLD AT PUBLIC AUCTION. BREEDING, GROWTH AND INDIVIDUALITY COMBINED.

175 HEAD

BLUE LABEL HERD of A.R.O. HOLSTEINS

TO BE DISPERSED IN PUBLIC SALE AT WINSLOW, ILLINOIS OCTOBER 4 - 5, 1916

THE 175 head include 41 animals with records of better than 20 lbs. of butter made in seven-day official test, and in this number are two dozen or more two and three-year-old heifers. There are four cows with records of better than 30 lbs. butter, including a 33-lb. three year old, the best in her class in 1915 and winner of the Holstein-Friesian Association first prize for butter production. A son of hers is also to be sold, and fourteen other young bulls from good record dams. Several show every dam on the pedigree chart with seven-day official records ranging from 20 lbs. to over 36 lbs. butter. There are **thirteen** daughters of 30-lb. cows in this sale. In fact, no better bred herd has ever been sold. The individuality is equal to the breeding. Nearly every animal has been bred on the farm. It is the breaking up of a **breeder's herd,** bred for production. Tuberculin tested by Illinois and Wisconsin state approved veterinarians. All test certificates, registry certificates and signed transfer applications will be on the settling desk. No waiting for papers. You can take them when you pay for the cattle you buy.

Winslow is near the Illinois-Wisconsin boundary, is on the Illinois Central R. R. line from Freeport, Ill., to Dodgeville, Wis. Farm within quarter mile of depot. Conveyances provided. Inspection invited. Write for catalog and mention where you saw this advertisement.

2 Yearling Sons of the Richly-Bred Holstein Bull KING HENGERVELD PONDYKE

THIS bull has 20 A. R. O. daughters, 2 with records over 30 pounds of butter in 7 days. He was sired by King of the Pontiacs, that has 175 A. R. O. daughters, 2 with records over 40 pounds. Bull No. 1, born December 18, 1914, ¾ white, good and straight. Dam, Kinsman Beauty, 19.25 lb. 7-day record, 675 pounds butter and 16,032 pounds milk in a year. She is a granddaughter of Pontiac Aaggie Korndyke. Price of bull $150. Bull No. 2, born September 24, 1915, ¾ white, very straight. Dam, Roberta Fearless Johanna, a show cow, calved on show circuit so not yet tested, but will be this fall. Her dam and grandam both have 7-day and yearly records 757-784 pounds of butter for the year. Price $125. Send for extended pedigrees. Address **DR. DAVID ROBERTS, R. 4, WAUKESHA, WIS.**

THE 30.90-LB. SHOW BULL NORTH STAR VERA SIR BEETS 97406

AS we now have four crops of calves by this sire, we are compelled to offer him for sale. He is a show bull as his picture shows him. He is perfectly gentle and quiet, even with strangers, is a quick, sure server, and we guarantee him to be absolutely right in every way. He was born December 24, 1911. Sire, SIR BEETS CORNUCOPIA NETHERLAND, that was never defeated in the show ring. Dam, HAPPY HOME VERA ORMSBY, A. R. O. record 30.90. First check for $500 gets him.

FRED ALBRECHT WATERTOWN, WISCONSIN

A Richly Bred Aaltje Salo Bull

BORN February 28, 1915. Ready for immediate service. His dam, Aaltje Salo Netherland Mechthilde 78488, as a five year old made 23.35 pounds butter in seven days, 38 days after calving. She comes from a long line of heavy-producing ancestors. She not only has inherited this heavy-producing ability, but also transmits it. She has three A. R. O. daughters, one with a record of 28.63 pounds butter as a four year old. Her grandam, Aaltje Salo 5th's Netherland, has eight A. R. O. daughters holding the world's record for five years. The sire of the bull for sale is the 27-pound bull, DAISY JOHANNA 5TH, 1st prize two year old at the Wisconsin State Fair. Address

ARTHUR RUST WEST ALLIS, WISCONSIN

450 HOLSTEINS AND GUERNSEYS COWS, HEIFERS, CALVES AND

PURE-BRED bulls. Single shipments or carload lots. We have our own private sanitary shipping yard. We aim to please. Call, wire or write.

EDGEWATER STOCK FARM FORT ATKINSON, WISCONSIN

DUCHESS ORMSBY and ALCARTRA COWS

HOLD the world's 7-day and year records for both butter and milk. They have startled the world by their achievements during the past year. We are offering a few young bulls sired by King Pietertje Hengerveld Ormsby, that is a full brother to the former world's record cow, Pietertje Maid Ormsby. Several bulls are from Alcartra bred cows.

BONNIE MEAD STOCK FARMS, Randolph, Wis

10 REGISTERED HOLSTEIN COWS FROM 4 TO 10 YEARS OLD

5 SIRED by Sir Johanna Fayne Mooie, a line bred son of Sir Johanna Fayne, whose daughters are making wonderful 7-day and yearly records. 3 sired by Fobes Fayne De Kol, the 30-pound son of Homestead Jr. De Kol. All safe in calf to Johanna Chief De Kol, that is 62% the same blood as Johanna De Kol Van Beers. 2 bulls nearly ready for service. EDWARD O. MUELLER, Appleton, Wis.

HOLSTEIN-FRIESIAN CATTLE.

OLATHE-HOLSTEINS

STAND FOR BEAUTY-PRODUCTION

OUR HERD is composed of 45 registered females, of Ormsby and Piebe blood. Herd sire: Sir Bess Ormsby Mercedes, son of Sir Pietertje Ormsby Mercedes 37th and Daisy Queen DeKol, A. R. S. O. 871.7 lbs. butter in one year, average per cent fat 3.92. She was one of the "ten best cows" in Wisconsin Cow Competition. We are breeders exclusively, and offer **for sale** surplus stock of our own raising.

SILVER SPRINGS FARMS CO. - EAU CLAIRE, WISC.

MADSON'S BIG-TYPE POLAND CHINAS

SPRING boars, March and April farrow, well grown, good type, several now weigh close to 200 lbs., sired by CORRECT I AM, Junior champion at Minnesota and Illinois State Fairs. TRIUMPH by Hildestretcher, grand champion Wisconsin State Fair. Three milking Short-horn bulls for sale.
M. MADSON & SONS MADISON, WISCONSIN

The Columbia County Asylum
Will Sell
40 BIG-TYPE POLAND CHINAS
Thursday, October 19, 1916

BOARS and gilts from Columbia Pete, the biggest boned hog in the country. Others from Columbia Wonder, Columbia Orange, Smiley's Big Jumbo and E. W. Hendricks' Black Jumbo. Nothing better ever offered in the state. For catalog write to SUPT. S. O. CUSHMAN, Wyocena, Wisconsin.

BIG-TYPE POLAND CHINAS

BOARS and gilts for sale sired by **Big Bone Chief 224483, North Side Wonder 237211** and **Giant Mastodon 245127,** out of large matured sows. Eight sows farrowed 83 and raised 76 pigs. Also a few extra good fall boars. Prices right to move them quick. 23 years a breeder. Come and see them or write.
Fred Lathrop & Sons, R. 2, Wauzeka, Wis.

BIG POLANDS

Black Jumbo
THE KING OF BIG POLANDS

OFFERING a few boars at private treaty that will please you. Sows and gilts reserved for BRED SOW SALE, FEB. 14th. Write your wants.
E. W. HENDRICKS
Hazel Green Wis.

BIG-TYPE POLAND BOARS

READY to ship boars that please. No better breeding and good individually. Sired by MONSTER BIG BONE by Black Big Bone and KING JOSEPH by Big Joe, also other noted boars. Write or come.
CHRIS KARTMAN - CASSVILLE, WIS

POLANDS

BOARS and gilts of spring farrow ready to ship. Everything guaranteed and priced according to individuality and breeding. Write
R. MEINKING BANGOR, WIS.

BERKSHIRE SWINE.

CORTTE'S BERKSHIRES

FEBRUARY and March pigs of either sex for sale. These are sired by Pabst Rivaleer 3d—King of Rivals, well grown. Good prospects for next fall show rings. Reasonable prices on singles, pairs or trios. Address
A. B. CORTTE, LOMIRA, WISCONSIN

SHEEP.

R. CONNER CO.
OFFER FOR SALE

CARLOAD feeding sheep, 30 ewes, balance lambs, mostly Shropshires. January Short-horn bull, $125. Poland boar pig, $14. Four Yorkshire boar pigs, $15 each. Would buy straight Scotch heifers of breeding age.
R. CONNER CO. AUBURNDALE, WIS.

Shropshire Rams

DANE has the heavy shearing strain of blocky ram lambs at farmers' prices. Place your order early before stock is picked over. Address
Dane Stock Farm Oshkosh, Wis.

Hickory Dale
Shropshires

FOR SALE—25 choice yearling rams, sired by Minton and Tanner Rams. All are flock flock headers. Address
Arthur Broughton & Sons Albany, Wis.

VICTORIA SWINE.

Registered Victoria Swine

EXPERIENCE has proven that they are the best cross that can be used for economica pork production. Fall boars, gilts and spring pigs out of prize-winning sires and dams. Address
H. P. WEST RIPON, WISCONSIN

SMILEY POLANDS

BIG-TYPE POLANDS that make good. We have 200 spring pigs and the top boars are reserved for the mail order trade. Sired by great boars, MAJOR HADLEY, WISCONSIN JUMBO 2D, MONARCH and MAJOR MILLER, the best of big-type breeding. Satisfaction or no pay. Correspondence invited. Address
WM. SMILEY & SON, ALBANY, WIS.
GILTS RESERVED FOR SALE, FEBRUARY 22

MASTER'S GIANT 190781
AND
ORANGE WONDER 235901

TWO of the greatest breeding boars in the Northwest. If you want a HERD BOAR, I have them that must suit you. Quality Polands with size. Mention The Wisconsin Farmer and address
P. W. YOUNG PROSPER, MINN.

SEE THE SPOTTED POLAND EXHIBIT

A Real Automobile for Boys and Girls

BE THE FIRST TO OWN ONE

Has a Real Engine
Looks Like a Real Auto
Runs Like a Real Auto

Will Climb Any Hill
Carries Two or Three

BOYS AND GIRLS! We are going to send this beautiful

Culver Racer, freight prepaid, right to the home of some ambitious child who joins our Auto Club. You have the same chance as any other boy or girl if you GET STARTED NOW. Just look at the picture and see what a wonderful machine the Culver Racer is. Notice the proud little boy at the steering wheel. He's getting ready to speed away with two of his friends for a glorious spin over the road. He knows that his Culver has a real gasoline engine that will speed up to 25 miles an hour and run over 60 miles on a gallon of gasoline; that it will go up hills and pull him through sand and ruts just as easily as a big car will. No wonder he is proud and happy.

A girl can run a Culver Racer as easily as a boy—don't forget that.

The Culver Racer is not for Sale but will be Given Free

to you or some other boy or girl, who joins our Auto Club and does the best work. The contest is just starting and no one has any advantage over you. Send your name at once for a large picture of the Culver Racer and a Certificate of Membership so you can get a flying start with 15,000 FREE VOTES. Don't delay, send in your name today. Fill out the coupon below.

MAIL THIS COUPON

THE FARMER'S WIFE AUTO CLUB
307 Webb Building
St. Paul, Minn.

Please send me pictures of your CULVER RACER and tell me how I can get it free.

*My Name*_____

DESCRIPTION OF THE CULVER

FRAME made of Pressed Channel Steel and the body of 22 gauge body steel.
STEERING WHEEL is wood with metal spider.
WHEELS are interchangeable ball-bearing wire kind with 20x2 clincher rims and non-skid tires with inner tubes.
THE WHEEL BASE is 63 inches long and the tread or width of track is 36 inches. Note especially what a big fine car this is.
SPRINGS are easy riding cantilever type in back, semi-elliptic in front.
ENGINE—Five horsepower, air cooled, four cycle and specially designed for this car. Gives a speed up to 25 miles an hour on high gear and drives the car up steepest grades.
TRANSMISSION—Shaft drive, friction ball-bearing.
SPEEDS—Three forward—two reverse.
BRAKES—Foot and hand brake, expanding contracting 5-inch Raybestos.
IGNITION—Battery or set spark, high grade Heco magneto.
GAS TANK holds two gallons and the car runs 60 miles to the gallon. Think of it—120 miles to one filling of the tank.
EQUIPMENT—Tire pump and full kit of tools.
COLOR—Dark Red or Marine Blue.
GUARANTEE—Same as on any high grade automobile.

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

Questions and Answers.

Arrangement of Evener.

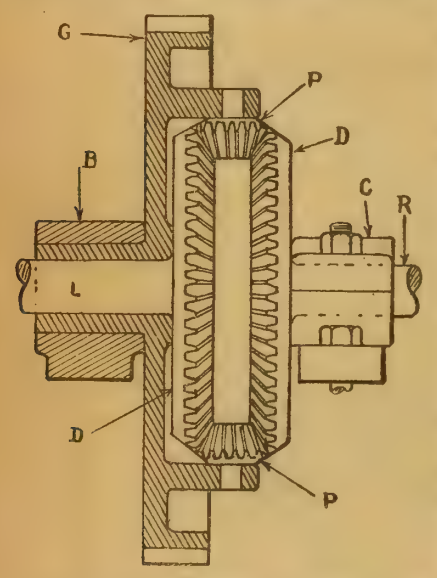
Would a three-horse evener arranged in the following way give each horse an equal load? The horses are hitched abreast, two to a doubletree and one to a singletree. The doubletree and singletree are hitched to the evener. From the doubletree hitch on the evener to the coupling pin is two feet. From the singletree hitch to the coupling pin is four feet.

Answer.—With the above arrangement, each horse will have an equal load. When an evener is proportioned so that the product of the number of horses times the distance from the hitch to the coupling pin on one end is equal to the product of the number of horses times the distance from the hitch to the coupling pin on the other end, each horse will have an equal load.

A Differential.

Please give a drawing showing how to make a differential for a tractor, or show how a differential is made.

Answer.—The figure shows a common method for the construction of a tractor differential. G is the large drive gear, supported in bearing B, or attached direct to the drive wheel; in which case the shaft L is not used. When constructed as shown, the bull pinions are placed on the ends of the



axles L and R. When G bolts to the drive wheel, the other drive wheel must be keyed to shaft R. The differential pinions PP have shanks bearing in lugs cast on the drive gear G. These bearing lugs have removable caps, so that the pinions may be removed. There are three or four of these pinions used. One of the differential gears, DD, is keyed to axle R. The other is keyed to axle L, or cast as a part of drive gear G.

Testing a Generator.

I have a 1914 Studebaker car. The generator does not charge the storage battery right. Can you tell me how to test the generator to find out whether the trouble is in the generator or somewhere else? The battery is new.

Answer.—It may be that you have connected your new battery wrong. The positive terminal of the battery must be connected to the positive terminal of the generator. The positive terminal of the battery is marked plus. To determine the positive terminal of the generator, dip the ends of the terminals in a glass of salt water while the generator is running, keeping the ends about an inch apart. Bubbles will be given off most freely from the negative end.

The generator itself may be tested by a volt meter, connected across the terminals; or an ammeter connected in the circuit.

Truing Up Wood Saw.

I have a 30-inch wood saw that has been put out of true, probably by pinching. One-half of the circumference is out one-sixteenth of an inch to the right, the other half one-sixteenth to the left of the true plane of rotation. Is there any remedy except to send the saw to the shop?

Answer.—You might be able to true up the saw yourself if you have a cold chisel, a hammer, and a smooth iron surface several inches square. An old flatiron might do. You should also have a straight edge of some kind to use in determining where the saw is bent. Lay the straight edge across the saw, holding it up to the light. Determine exactly where it is necessary to bend the saw in order to true it up. Mark these points. Then lay the saw on the smooth iron surface with the hollow side up. At the bottom of the hollow make several shallow marks with the cold chisel, which should be quite dull. The chisel marks spread the metal apart on the hollow side, bringing the saw back into line. This process is called "peening." Nearly all large saws are peened after hardening at the factory, in order to straighten them. Considerable care and judgment is required. Peening is often done with the ball end of a machinist's hammer.

Dodge County Fair.

The twenty-ninth annual Dodge County Fair brought together at Beaver Dam recently the greatest showing of sheep ever seen at this fair and a representative showing of horses, cattle and swine. While the last-named departments did not, from number of animals, come up to previous records, the live stock show was in keeping with the high standard set by this fair.

Dodge county has the reputation of holding one of the best county fairs in the country. Mr. C. W. Harvey, secretary for twenty-three years, seems to have hit on what the people want and the crowds come, rain or shine. This year was no exception. Rain on the opening day this year cut down the attendance, but, year in and year out, the Dodge County Fair has been well favored by weather and never in history, prior to this year, did it rain on the two big days.

Although considerable attention is given to amusements and races, the Dodge County Fair gives liberally to agricultural and live stock departments. The grain, vegetable and potato exhibits this year were very good and, although this is an off year in fruits, the horticulture display was up to standard. The poultry show brought out some of the best flocks in Dodge and adjoining counties and it was encouraging to look at the great tiers of mature corn and the many samples of fine barley, rye and oats grown in Dodge county this year.

The principal competition in cattle this year was in Short-horns with three herds, those of C. J. Schoenfeld & Son, of Fox Lake; H. B. Drake & Son, of Beaver Dam, and Maurer & Sons, of Fox Lake. W. O. Douglas, of Janesville, had everything practically his own way in Jerseys; Mrs. A. H. Clarke showed the only herd of Brown Swiss; Boynton Bros., of Janesville, had the only herd of Durhams and J. B. Ahlers, of West Bend, exhibited his Red Polls, which had just come off the state fair circuit. Unfortunately, no Guernseys were to be seen, while competition in Holsteins was confined to Edwin B. Gibbs, of Fox Lake, and S. T. White, of Beaver Dam.

The swine show brought out some good herds with these exhibitors of Poland Chinas: Charles W. Baker & Son, C. J. Schoenfeld & Son, James Derivan, of Fox Lake; W. J. Bartholf, of Burlington, and Emil Nitschke. The fight in Duroc Jerseys was between H. P. West, of Ripon, who also showed Berkshires, Cheshires and Victorias; Mr. Bartholf and P. F. Goodrich, of Burnett. A. H. & E. W. Kuhlman had the field alone in Chester Whites.

The sheep show was the largest in the history of the fair. All classes were well filled and among the exhibitors were: George A. Phillipi, of Bear Creek, with American Merinos, Oxfords, Cotswolds, Southdowns, Cheviots, Delaines, Shropshires and Rambouillets; Thomas Broyden, of Rusk Lake, with American Merinos, Hampshires, Oxfords, Dorset Horned, Cheviots, Rambouillets, Delanes and Lincolns; Smith Bros., of Union Center, with Lincolns, Cotswold, Hampshires, Oxfords, Cheviots, Delanes, Southdowns, Dorsets and Shropshires; Mike Hogan, of Waunakee, with Cotswolds and Oxfords; W. G. Miles, of Evansville, with Hampshires, Southdowns and Shropshires; Ed Boorman, of Mauston, with Hampshires, Oxfords, Southdowns, Cheviots and Shropshires; Clark Bros., of Union Center, with Hampshires, Oxfords, Cheviots and Shropshires, and J. C. Ellis & Sons, of Evansville, with Rambouillets.

In horses the principal showings were in Percherons, Morgans, Clydesdales and Belgians. Harvest Farms, of Mayville; Butler Babcock, of Beaver Dam; C. J. Schoenfeld & Sons, of Fox Lake, and O. Christianson, of Oshkosh, clashed in Percherons; F. E. Bird, of Beaver Dam, and George Madden, of Fox Lake, in Clydesdales; O. A. and J. Northrup, of Waupun, and Sam Indermuele, of Beaver Dam, in Morgans, and Stam Bushke, F. B. Waste, S. W. Flannigan and Louis Ganske, all of Beaver Dam, in Belgians.

Top-Notch Grain Yields.

Splendid yields of grain are reported from Lancaster. The following is clipped from the Fennimore Times:

Felix Wanazek threshed 1,416 bushels of oats off twenty-seven acres; Wessie Landon had 624 bushels of oats off ten acres; Ray Landon got 380 bushels of barley off eight and one-half acres; Gay Landon had 940 bushels of oats off fifteen acres. John Pollock's grain was 9,011 bushels of oats off eighteen acres, sixty-eight bushels of winter wheat, 135 bushels of barley off four acres; John Riemer got 430 bushels of oats from eight acres, 200 bushels of barley from six acres; Will Bruss got 873 bushels of oats from fifteen acres, thirty-five bushels of wheat off two acres; Otto Brendemuehl threshed 1,301 bushels of oats off nineteen acres, 194 bushels of barley off five acres.

My Big Factory Output Makes WITTE Prices Low

ED. H. WITTE

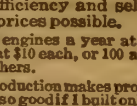
If I can only make $1 clear profit on an engine, I can buy a good farm each year. What more could I ask? Ed. H. Witte.

SO far as actual engine value is concerned, I would be justified in charging double the present prices for WITTE Engines. Great factory efficiency and selling direct from factory to user makes these prices possible.

I would rather manufacture 10,000 engines a year at a profit of one dollar each, than only 1000 engines at $10 each, or 100 at $100 profit each. Every engine I sell helps sell others.

It has been proven that quantity production makes production cost low. I could not build WITTE engines so good if I built only hundreds while I build thousands. A man, for example, who turns fly wheels all day can do a quicker job and better job than if he worked at it only a half hour each day and then ran a truck or swept the floor and worked on pistons the rest of the time. In the big WITTE factory, a man becomes an expert in making his particular part of the engine. My actual cost for high quality engine parts is from ⅓ to ½ what many others pay. My own private gas well to furnish power helps hold cost down.

GET THIS BIG BOOK FREE



WITTE Engines require only one-tenth of one gallon of fuel per horse-power per hour; develop from 30 to 60 percent surplus power over rating. Made in 2, 3, 4, 6, 8, 12, 16 and 22 H.P., sizes in different styles, as ordered to operate on Kerosene, Gasoline, Naphtha, Distillate or Gas, also in stationary, hand portable, portable and saw-rig. 30-Days' Trial; 5-Year Guarantee. Cash or Terms. Write today for big free book, "How to Judge Engines."—Ed. H. Witte.

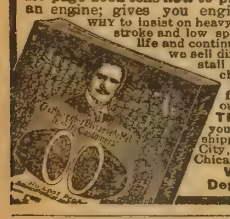
WANTED

Ten men or more in every township and county to get my big new book about engines. My new model is a mechanical masterpiece, built by master engine builders after the leading engine designers. It develops away above rated horsepower; bearings adjustable, special economy carburetor, worth $15 more on any engine, but costs nothing extra on a Galloway, cuts down fuel bills; uses any fuel, perfect vaporizer; valves in the head like all the modern automobile engines; large fly wheels, a big bore, long stroke, heavy weight, your choice of ignition systems, an easy starter, no cranking.

GALLOWAY'S ENGINES

Get a genuine Galloway, then you won't be disappointed as thousands of its users have testified. My new 250-page book tells how to pick out, size up and judge an engine; gives you engine secrets and facts, WHY to insist on heavy weight, large bore, long stroke and low speed, which mean long engine life and continuous user's satisfaction; WHY we sell direct at wholesale; HOW to install an engine and hook up machinery; HOW Galloway engines are built in our own factories in Waterloo; WHY our engine prices are so low. THIS FREE BOOK will save you from $50 to $250. Engines shipped from Waterloo, Kansas City, Council Bluffs, St. Paul or Chicago.



WM. GALLOWAY CO.
Dept. 35 Waterloo, Iowa

KEROSENE ENGINES
OTTAWA LATEST DESIGN

Durable, Powerful, Reliable, Massive. Built to last; to do hard, heavy work. Uses Cheapest Fuel. Pull ¼ to ⅓ horse-power more than rated. 3 Months Trial. Easy Terms. Sizes 1½ to 22 H-P. Easy to start. No Cranking. No batteries. 10 Year Guarantee. Most practical engine ever built. Engine book free. A Postal brings it.

The Wisconsin Farmer

THURSDAY, OCTOBER 12, 1916.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

UNCLE SAM DOESN'T PUT UP THE MONEY.

I FEAR that some of my readers have a wrong impression of the new federal farm-loan act, after all. Some of them seem to think that Uncle Sam regards the farmer as an applicant for charity, so he has devised some altogether new system of banking which grants alms to the farmer. This is far from being the case. Others seem to think that Uncle Sam has been imposed upon and that he will be obliged to go still more deeply into debt for the money with which to help farmers who cannot help themselves. This is likewise far from being the case. Let us all disabuse our minds of such ideas at once.

Perhaps I could not do better than to consider a letter written me last week by Mr. N. A. Sumner, of Brownsdale, Minn., as follows:

I have just been reading your version of the law, or the way for farmers to proceed to get money from Uncle Sam. Now, what I am interested in most is to know where our honest Uncle is to get the money to loan to a few million honest farmers. At last accounts the old gent was in debt a billion dollars, more or less, and with warships to build and the West India islands to pay for and congress to keep running and the Alaska railroad to build, with many other things to look after, our last congress used up quite a little over a billion dollars, and probably the next congress will not be much cheaper. Now, this loan business, if it was advertised by an individual or some company, would be set down as a gigantic swindle. This is the way it looks to me, to draw a few farmers' notes.

Let us see if there is any justification for Mr. Sumner's complaint. To begin with, Uncle Sam is not going to finance the federal land banks, except as a last resort. In the second place, Uncle Sam is not going to set aside any vast fortune to keep these banks going; he is merely going to supervise the issuance of bonds, which I predict will find such a ready market that enough private capital to keep the system running indefinitely will be available. Let me explain how the money which the farmers are to borrow is to be raised by the lenders.

The new federal farm-loan act provides for the establishment of twelve federal land banks, in as many different cities. Each of these banks is to start with a capital stock of at least $750,000. If, within thirty days after the opening of the books for subscription, there remains any part of the necessary capital stock unsubscribed, it shall be the duty of the secretary of the treasury to subscribe the balance on behalf of the United States. This is absolutely all the money that Uncle Sam is to put up permanently to carry the whole system through to successful fruition, and inasmuch as the bank stock is expected to pay dividends, it does not look like a bad investment for the "old gent," so far as I can see.

But this original capital stock of $750,000 for each of the twelve banks—a total of $9,000,000 for the nation—would not be sufficient to keep the banks running indefinitely, permitting them to loan to farmers year after year. So the law goes on to provide that when any one of these federal land banks deposits with the federal farm loan board first-class farm mortgages (upon which it has already loaned its money, under the law) or government bonds (always as good as gold) in amounts of at least $50,000, the board will issue farm-loan bonds, bearing not to exceed 5 per cent interest, in denominations of $25, $50, $100, $500 and $1,000, to run at least five years and as many more as may be determined upon in advance of issuance. Now, these bonds being backed by the capital stock of the banks, the farm mortgages and government bonds of an equal amount deposited as collateral, and having all the various farm-loan associations back of them, are bound to be looked upon as splendid investments. And as they are to be of low denominations, they will undoubtedly be snapped up by small investors—men and women who have $25 or $100 saved up and who can thus obtain government bonds at a good rate of interest.

In these two principal manners—by original private capital and by frequently issued bonds—the federal land banks will obtain the money which they in turn will loan to the farmers, on low rates of interest and for long periods of time. It is really an endless chain, for just as soon as any bank loans $50,000 to farmers it takes this $50,000 worth of farm mortgages to Uncle Sam and he keeps these mortgages and issues bonds for the amount, which the public—I am free to predict—will eagerly buy. Thus the available loaning fund is constantly replenished. But, should there ever come a time when any one or all of the land banks need money, the secretary of the treasury is authorized to make deposits, temporarily, with the land banks, to be secured by farm-loan bonds or other collateral, not to exceed the sum of $6,000,000 for all twelve banks. This is really the extent to which Uncle Sam is involved and, while it is a large sum, it is far from being the billion dollars which Mr. Sumner speaks about.

I am glad to have this opportunity to discuss this matter, for it is important that we understand the law thoroughly and that we do not get the altogether erroneous impression that Uncle Sam is making the farmer-borrower an object of charity. The whole affair is a business transaction, with the law establishing the farmer as a good business man, whose paper is as good as that of any other man living.

STOP, LOOK AND LISTEN.

I AM indebted to the general manager of one of the large railroads which traverses the grain belt (the Illinois Central) for some interesting statistics in regard to grade-crossing accidents. Taken in connection with the report issued this week by the department of agriculture to the effect that, proportionate to population, the grain belt has more automobiles than any other section of the country, the statistics should make us stop and consider this subject of accidents at railroad crossings most earnestly.

The statement made by the railroad official, which should impress itself upon the minds of all of us most firmly, is this: "All railway crossings are dangerous." What excuse can we possibly have for dashing across a grade crossing at a high speed, when it would be only a few seconds' delay to "stop look and listen," as caution and common sense should compel us to do? Nor is it the crossing, which is used the most often, which is the most dangerous, as a general rule, for the railroad official, whom I am quoting, says that "statistics prove that crossings which are used extensively, and, therefore, considered the most dangerous, are really the safest. The great majority of accidents occur at outlying crossings, which are the least used." The fact that, on this one line of railroad—among the many in the grain belt—eighteen persons have been killed and thirty-six injured in the last ninety days shows the seriousness of the situation as it exists today. Would we not all do well to heed most carefully the warning which this railroad system issues in this manner:

To those who drive or ride in automobiles: The constantly increasing number of automobile accidents at grade crossings prompts the issuance of this warning to all who own, drive or ride in automobiles to STOP, LOOK and LISTEN before passing over any railway grade crossing.

Crossing gates, automatic warning bells, electric headlights and engine signals, if not heeded by those for whose protection they are intended, are unavailing.

I will be glad to receive and consider suggestions intended to reduce automobile accidents at grade crossings, for the railroad is anxious to do its full part. However, if every person who owns, drives or rides in an automobile will STOP, LOOK and LISTEN at grade crossings, the danger will be entirely eliminated. T. J. FOLEY, General Manager.

A movement is on foot now to compel the railroads to dispense with the grade crossing and install either a viaduct or a subway, so that the road for automobiles and wagons will pass either over or under the railroad track. This is a splendid movement, but in view of the fact that this one railroad system alone (the Illinois Central) is said to have 8,000 grade crossings, and that to eliminate them in favor of the subway or viaduct would cost no less than $215,408,020 (to use the railroad's figures) or nearly twice as much as the capital stock of the company, it is doubtful if we will ever be able to eliminate the grade crossing altogether. But those of us who drive to town day after day, week after week, year after year, or even infrequently, shall we not resolve to be careful, in the interests of life and limb, to look both ways before we cross the track, to take no chances? "Stop, look and listen," rather than "Here lies the body."

THE DAYS OF OUR YOUTH.

AS A MAN grows older, he finds his mind turning back more frequently and more fondly to his childhood. He sees, in his mind's eye, persons and places "long lost to all save memory's aching sight." To an almost uncanny extent he hears voices whispering to him which he has not heard since he was a barefoot boy, knee deep in June, going "out to old Aunt Mary's." At least, this is my experience, and I believe it is not an uncommon one.

That is one reason why I never fail to appreciate letters from men and women whose hair, like mine, is silvering and whose years are approaching the three-score-and-ten of the prophets. It is not good to live too much in the past; on the other hand, I, for one, hope the day will never dawn when we will be ashamed, in our age, to revert to our youth and proudly assert that the times then were at least as good as they are today. For almost every convenience, comfort and communal pleasure that we have today, there was a recompense in the customs of yesterday. I have frequently lamented the passing of the corn husking, the barn raising and other "get-together" festivals of the days gone by; we must not forget them when the youth of today invoice their pleasures and assume that joy was unknown until the present generation was born. There were good times galore in the days of the pioneers, I know this, both from experience and hearsay.

A few weeks ago I printed a communication sent to me by a man who lived for ten years prior to 1862 upon a homesteaded farm on the Mississippi river, within sight of the side-wheel steamboats passing between St. Louis and St. Paul. The communication described the farm life of those early days. It pleased me very much, and I have had a number of letters, since then, in regard to it. One of the most interesting of these letters is from Mr. Joseph G. Waters, an attorney of Topeka, Kansas, who knows the author of the reminiscent article, Senator H. B. Kelly, of Kansas City, very well. Mr. Waters not only congratulates Senator Kelly on his article, but turns back the veil of years so that we may all look once more upon the scenes of our childhood. I want you all to enjoy his letter with me:

My father came to Iowa in 1838, when I was a puling infant. We settled near Fort Madison, at which place there was a garrison; and beyond the woods, the stream, the land and skies and Indians the territory was primeval. I remember a log cabin and a lean-to of sod that reached the roof. It was some time before we had a wood floor or glass in the windows. A rugged child needs but few accessories to make him happy. The little house may confine him nights and inclement days, but he has as a prime adjunct of such an humble place the whole world for a front door yard. The poverty of the frontier was a sort of richness that grows in value every year of one's life, and at the very end of his career, it brightens his entire sky.

I know Senator Kelly well; he was one of Kansas' great men until he went to Missouri. He is getting old and forgets things, but I do not blame him, it is not his fault. He forgot to say anything about Indian Summer along the Mississippi; October days; the bluffs of the big river swarded to its edge; the sun blood red, and through and through the great trees that crowned the sides and summits of the hills, the smoky air, in which you could almost tell what tribe had lit its campfires. The paths underneath the trees, in which the loosened leaves had flocked and fluttered and rustled as the boy's bare feet scuffled them out of his road. And here and there the call of the quail and partridge, the greatest things of boyhood, to hold him in the sturdy embrace of Nature and a lure to make him go back to the scene and live it over and over again in his last years.

The farm of my father was scanty in acres, little tilled, a poor house and the furniture limited. But the outlook belonged to it. I saw a steamboat for the first time, and the resounding whistle trembled the hills and ruffled the placid bosom of Skunk river. I thought the siren, hidden by the wooded hills, was the Angel Gabriel, and scared, I hid my face between my mother's knees. The Senator says nothing about wild honey, gathered from the trees, nor the pet shoats that, late in the fall, we murdered for food. Nor the flat boats and rafts that lazily came down that river; killed turkies hung on the poles of the rafts in process of ripening for food; nor the smell of the river; nor the leaping fish; nor through the brambles for berries. The picture has somewhat faded, but as I translate the glamored scene, I dub it the Garden of Iowa, instead of Eden. I wonder if anyone in all of rich and prosperous Iowa will remember its then poor relation, whose later years, spent in Kansas, atone for what he lost in giving up Iowa. I want to end this article by the prosaic statement that my memory of prices then is, hog meat anything a pound, wheat a little more, butter to give away, and mast and grasshopper-fed chickens, whose only market was the call of a neighbor or the welcome visit to us children, who waited for the second table, of

The circuit rider on his rounds,
Chock full of Bible lore and wearing jeans,
Who could, with might, the pulpit pound,
And sup pot licker with his pork and beans.

Do we not do well to recall these joys of the days long gone by, while those who experienced them are still among us, able to tell their tale and move us by their unstudied eloquence? We owe a debt, greater than many generations will be able to pay, to those hardy pioneers who grubbed a foothold in the virgin sod and from their homesteads developed the fertile farms and the teeming cities of today. To have their stories set forth as Senator Kelly and Mr. Waters have done is to me as refreshing as a cup of sparkling water from the old spring or a breath of rose-scented air in June.

James M. Pierce

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-In-Chief

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

1912 Grand Ave. Des Moines, Ia. | 201 Washington Bldg. Madison, Wis.

To either of which communications relating to subscription or advertising may be addressed.

MEMBER AGRICULTURAL PUBLISHERS' ASSOCIATION
MEMBER AUDIT BUREAU OF CIRCULATIONS

SUBSCRIPTION RATES—Single subscriptions, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of fifty or more, 25 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription prices in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing give the same name and initials as you gave before or state both the old and new names, and explain why you make the change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address WISCONSIN FARMER, MADISON, WISCONSIN

Wisconsin Farmer Live Stock Reports.

IN this issue will be found reports of the Waterloo Dairy Cattle Congress, and the National Swine Show, each event of the utmost importance to dairymen and hog breeders of the Central Western States. The Wisconsin Farmer was represented by members of its staff at each one of these shows and also by special photographers who have gathered a fine group of good showy animals which are reproduced in this issue.

Wisconsin is forging to the front so rapidly as a live stock state that we feel these reports are of special interest to a very large number of our readers. Even those who are not raising pure-bred stock are engaged in improving their grades by the use of pure-bred sires, and they will be interested in studying the types which are generally accepted as best by the foremost breeders of the nation. We believe that no other Wisconsin farm paper will give such comprehensive reports of these two great stock shows or have so many pictures of the animals which carried away the ribbons. Wherever Wisconsin stock has been entered in these competitions the individuals have made an excellent showing. There are, however, many herds of dairy cattle in Wisconsin and many hogs, which were not exhibited at these shows, and which would have made a good showing had they been entered. The show business has been somewhat demoralized the past few years by the fear of foot-and-mouth disease, but now that this is dispelled, our breeders are getting back into the ring and competing for the honors. We hope to see more Wisconsin breeders represented at both of these shows next year.

Potato Crop Short, But Prices High.

POTATO growers in Wisconsin, who still follow the hit-and-miss method of growing this crop in the selection of seed and care of the fields, will find, this year, in the success of those who follow the most advanced methods, a lesson to be taken strictly to heart. This was one year when good cultural methods meant a great deal, and general observations over the state have brought about the conclusions that these growers, in most every instance, are being fully repaid for their additional trouble by better stock and better yields than would have been obtained under ordinary care.

Every grower knows what a good yield and a good crop means this fall. Those who were fortunate enough to have good crops will realize heavily on their investments, as the crop is below normal. Prices are high now and they will undoubtedly go higher before the next crop is harvested. We know of one instance in an Upper Wisconsin county where a settler, with this year's potato crop, is virtually getting his start. He not only used the best methods in selecting his seed and in caring for his crop, but he was probably a little more favored than some of his neighbors, as his potatoes received a little more rain. But good methods are showing up during the harvest, and it is estimated that his fifteen acres will net him close to $2,500. This will be his working capital with which he can clear more of his land, get some better stock, and improve his buildings. He has a crop that is highly desired for commercial purposes and he is having no trouble in disposing of it as fast as it is dug. This is an instance which cites the fact that some splendid returns are going to be made in potatoes this fall, but it is a stronger testimonial to the necessity, especially under conditions like those that existed this year, of adopting the most advanced methods, such as field selection of seed, treatment for scab, improved cultural methods, and spraying against the common diseases.

Mr. J. G. Milward, secretary of the Wisconsin Potato Growers' Association, who has been over the potato-growing sections recently, says that Wisconsin, despite the general impression, is harvesting some splendid potatoes, and he expects the showing at the state show, at Eau Claire, next month to be up to that of future years from a quality standpoint. Some sections have been a little more favored than others with rainfall, but conditions, as a whole, were very trying this summer and Mr. Milward believes that never before did good cultural methods show up so effectively as this season. General observations indicate that growers who cultivated properly and used care in choosing their seed are harvesting better crops than those just across the fence, who followed the hit-and-miss methods. Weather was not only a factor, but there was a fight on the diseases attendant to a dry season. Late blight was not encountered, because of the hot weather, but considerable damage was done by the beetles and from tip burn in those fields which lacked the necessary care. Arsenical injury was also quite general, due to carelessness in spraying. The second inspection of certified fields is now being made, and these growers anticipate good prices for seed stock the coming spring with table stock at the high prices now being paid. Quality always tells, and this was one season when the grower, who used the best methods, will reap the reward.

Care in Operating Corn Shredder.

IT SEEMS that it should be unnecessary to warn persons of danger when they realize that it lurks near by, but if they did not forget the railroads undoubtedly would not have to provide each crossing with a bell that rings on the approach of a train, or with a big sign, "Look out for the cars." Most accidents are undoubtedly due to forgetfulness or carelessness, and it is, therefore, quite appropriate at this time that the warning should be sent out to Wisconsin farmers who use corn shredders, of the dangers of this machine. Every year there are quite a number of arms and hands lost in shredders on Wisconsin farms, and occasionally a death is reported. In 1911, the Wisconsin Industrial Commission reports four farmers were killed with shredders, six arms were lost and twenty-one hands. It is pleasing to note, however, that the list of injuries is decreasing with the improved guards on the newer types; but there are a large number of old-type shredders in operation that are without guards, which the commission reports demand annually a sacrifice of flesh and bone and blood. So the commission has issued the following rules for operating shredders with the idea of safety in mind:

Never use the hands to unclog the rolls. Use a stick or stop the machine.

Every husker and shredder should be equipped with a self-feed so the operator will not have to stand within reach of the rolls.

Every husker and shredder on which it is possible for the operator to get caught in the rolls should be provided with a safety lever so attached that the feeder's body will strike it if his hands are caught in the rolls.

It is always dangerous for the feeder to cut bands while standing within reach of the snapping rolls, especially if the knife is tied to the wrist.

Every gear should be covered to make it impossible for fingers to get caught.

Although farming is considered a safe occupation, there are many dangers, and few manufacturing industries involve hazards more dangerous than the corn shredder. The fact is, if every Wisconsin boy, and man, too, for that matter, could be made to exercise caution while operating corn shredders, there would be fewer missing hands and arms in the rural communities.

Wisconsin Woman's View of the Farm Home.

THE problem of the farm woman, we believe, is one often neglected, although she is the essential partner on every well-kept farm. Too often is her recreation and her happiness overlooked, not intentionally probably, but in the rush of other matters. Then, too, many women belong to that type who can't rest or enjoy themselves as long as there is a corner to dust or a bit of work to be done. Life is largely what we make it, and Miss Nellie Maxwell, of the department of farmers' institute of the college of agriculture, in a recent contribution on "the recreation of the farm wife," touches very strongly the philosophy of life by calling attention to the little things that can often be left undone; to the improved methods of housekeeping that the wife may have more leisure, and the fact that the first duty of woman is to keep a home—not a house.

Miss Maxwell realizes the problem of the house mother to get away from her daily cares and how little they appreciate the value and necessity of a vacation, but this can be largely solved by teaching the children to help and be of some assistance from the tiny yearling to the grown daughter. Children are trained to help—not because their assistance is so valuable, but because it is essential to the development of the men and women who are to take up the world's work. Fresh air is free to everyone—a play or a walk in it is always enjoyable, especially at this season—and nothing dispels so quickly that tired, exhausted feeling as pure air. In speaking of consideration for mother, Miss Maxwell points out that, if she doesn't care to walk or go to town, or read or spend an afternoon sewing, or with her neighbors, she can have recreation in other ways. But, by all means, she should have her day of rest, as Miss Maxwell says:

If, instead of the best dinner of the week on Sunday, consideration is given the mother, letting her have her day of rest, there would be fewer breakdowns. She is entitled to her day of rest as well as any member of the family, but she is usually the last one to assert her right.

Let the housewife learn to take a vacation from some of the non-essentials, like ironing knitted underwear, hose and turkish towels. Sheets, when ironed well on the hems and folded, will look quite well in the drawer or on the bed. If sheets are well hung and dried, then folded when taken from the line, little ironing is needed to make them smooth. All these things, left out, will give many precious hours for rest and recreation.

The farm wife who "keeps her nose to the grindstone" is sacrificing health, "liberty and the pursuit of happiness." Get a wire dish drainer and remove the task of wiping dishes. Simply scald them, take a nap or read the paper, and in a few minutes they will be ready to put away upon the shelves with scarce a touch of the towel.

Teach the children to wait upon themselves and you. It is hard, but it pays. The mother who accepts attention from her family is usually the one who is loved and respected, while the woman who makes a doormat of herself may be treated like one and it more than often is her own fault.

Cultivate the sense of proportion and remember it is not necessary for the comfort and happiness of the family that everything should be turned over, dusted and scrubbed every week. It is far better that a few cobwebs go unbrushed, if by right living we can keep them out of our brains. This does not mean that work should be slighted, but that the first duty of a woman is to keep a home, not a house.

The essential thing is that mother play—that she do something each day that is restful. Community gatherings, such as rural clubs, etc., hold much to foster a community spirit, and by beginning with the children, their parents may be included. In these friendly gatherings the older ones may learn from the younger how to plan—how to do those things that mean good health and happiness.

Cost of Wisconsin Butter Production.

LITTLE things on the farm count for more than the average farmer realizes, and it is the stopping of small leaks that often result in a showing on the right side of the ledger at the end of the year. There was a time when it was thought a little thing to weigh a cow's milk and test it; or test corn or utilize the fertility that once went to waste. But today cow testing has become essential on every farm if the dairyman is to know, dollar for dollar, what his cows are doing for him. It is the aggregate that mounts up.

Few buttermakers or farmer-patrons of creameries probably realize what the shrinkage in butter churned each year in Wisconsin is costing them. It does not seem like a very large matter when a tub shrinks a pound, but this very problem alone is a loss to the dairymen of Wisconsin of 1,000,000 pounds of butter a year. It was such little things as these that Mr. C. E. Lee, assistant dairy commissioner and dairy specialist of Wisconsin, discussed at the dairy congress last week at Waterloo in an address on "The Buttermaker of Tomorrow." Mr. Lee went at his subject from both the farmer's and the buttermaker's standpoint for the creamery that gets the highest prices for its butter pays the most per pound for fat to its patrons and efficiency is the crying demand of today. In pointing out that little thiugs count, Mr. Lee said:
